PART IV.

Acts of the Governor General's Council assented to by the Governor General.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of the Governor General on the 22nd March, 1901, and is hereby promulgated for general information :—

ACT NO. VII OF 1901.

An Act to place Native Christians in the same position as Hindus, Muhammadans and Buddhists in the matter of obtaining letters of administration and for other purposes.

WHEREAS it is expedient to place Native Christians on the same footing as Hindus, Muhammadans and Buddhists in the matter of obtaining letters of administration; to exempt them from the operation of certain provisions of the Administrator General's Act, 1874, from which Hindus, Muhammadans, Parsis and Buddhists are exempted; and to enable them to obtain certificates under the Succession Certificates Act, 1889, in certain cases; It is hereby enacted as follows :— II of 1874. VII of 1889.

1. (*1*) This Act may be called the Native Christian Administration of Estates Act, 1901; and

Short title and commencement.

(*2*) It shall come into force at once.

2. In this Act, the expression "Native Christian" means a native of India who is, or in good faith claims to be, of unmixed Asiatic descent and who professes any form of the Christian religion.

Definition.

3. Sections 190 and 239 of the Indian Succession Act, 1865, shall not apply to any part of the property of a Native Christian who has died intestate. X of 1865

Exemption of Native Christians from sections 190 and 239, Act X, 1865.

4. In sections 16, 17, 18, 37 and 64 respectively of the Administrator General's Act, 1874, before the word "Hindu," wherever it occurs, the word "Native Christian" shall be inserted. II of 1874

Exemption of Native Christians from certain sections of Act II of 1874.

Provided that nothing contained in this section shall affect any probate, letters of administration or certificate granted or vested under the said Act.

5. Nothing contained in section 1, sub-section (*4*), of the Succession Certificates Act, 1889, shall be deemed to prevent the grant of a certificate to any person claiming to be entitled to the effects of a deceased Native Christian, or to any part thereof, with respect to any debt or security, by reason that a right thereto can be established by letters of administration under the Indian Succession Act, 1865. VII of 1889 X of 1865

Grant of certificates under Act VII of 1889 to Native Christians in certain cases.

J. M. MACPHERSON,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of the Governor General on the 22nd March, 1901, and is hereby promulgated for general information:—

ACT NO. VIII OF 1901.

An Act to provide for the Regulation and Inspection of Mines.

WHEREAS it is expedient to provide for the regulation and inspection of mines; It is hereby enacted as follows:—

Preliminary.

1. (*1*) This Act may be called the Indian Mines Act, 1901.

Short title, extent and commencement.

(*2*) It extends to the whole of British India, including British Baluchistan, the Santhal Parganas and the Pargana of Spiti; and

(*3*) It shall come into force at once.

2. Nothing in this Act shall be construed to affect the provisions of the Upper Burma Ruby Regulation, 1887.

Saving of Regulation XII, 1887.

XII of 1887.

3. In this Act, unless there is anything repugnant in the subject or context,—

Definitions.

(*a*) "agent," when used in relation to a mine, means any person appointed as the representative of the owner in respect of the management of the mine or of any part thereof, and as such superior to a manager under this Act:

(*b*) "child" means a person under the age of twelve years:

(*c*) a person is said to be "employed" in a mine who works, under appointment by or with the knowledge of the manager, whether for wages or not, in any mining operation, or in cleaning or oiling any part of any machinery used in or at the mine, or in any other kind of work whatsoever incidental to, or connected with, mining operations:

(*d*) "mine" includes every shaft in the course of being sunk, and every level and inclined plane in the course of being driven for commencing or opening any mine or for searching for or proving minerals, and all the shafts, levels, planes, works, machinery, tramways and sidings, both below ground and above ground, in and adjacent to and belonging to the mine; but it does not include any pit, quarry or other excavation the depth of no part of which measured from the level of the adjacent ground exceeds twenty feet and no part of which extends beneath the superjacent ground:

(*e*) "owner," when used in relation to a mine, means any person who is the immediate proprietor or lessee or occupier of the mine or of any part thereof, and does not include a person who merely receives a royalty, rent or fine from the mine, or is merely the proprietor of the mine subject to any lease, grant or license for the working thereof, or is merely the owner of the soil, and not interested in the minerals of the mine; but any contractor for the working of a mine or any part thereof shall be subject to this Act in like manner as if he were an owner, but not so as to exempt the owner from any liability:

(*f*) "prescribed" means prescribed by rules made under this Act: and

(*g*) "shaft" includes pit.

Inspectors.

4. (*1*) The Governor General in Council shall, by notification in the Gazette of India, appoint a duly qualified person to be Chief Inspector of Mines throughout British India.

Inspectors.

(*2*) The Local Government may, with the previous sanction of the Governor General in Council, by notification in the local official Gazette, appoint persons, qualified by experience, to be Inspectors of Mines within such local areas or for such groups or classes of mines as it may assign to them respectively.

(*3*) Every Inspector of Mines appointed under sub-section (*2*) shall, in the performance of his duties, be subordinate to the Chief Inspector of Mines appointed under sub-section (*1*) in such respects and to such extent as may be prescribed by the Governor General in Council.

(*4*) The Chief Inspector and every Inspector of Mines appointed under this section shall be deemed to be a public servant within the meaning of the Indian Penal Code, and shall be subordinate to such authority as the Governor General in Council or the Local Government, as the case may be, may direct.

XLV of

(*5*) No Chief Inspector or Inspector of Mines shall be a partner or have any interest, direct or indirect, in any mine or mining rights in India.

(*6*) When rules are made under this Act, the Inspector of Mines shall give information to owners, agents and managers of mines within the local area, or the group or class of mines, for which he has been appointed as to any rules which concern them respectively, and as to the places where copies of such rules may be obtained.

Powers of District Magistrate.

5. The District Magistrate may exercise such of the powers and perform such of the duties of an Inspector of Mines as the Local Government may, by general or special order, direct:

Provided that nothing in this section shall be deemed to empower a District Magistrate to exercise any of the powers conferred by section 15 or section 21.

Powers of Inspectors of Mines.

6. The Chief Inspector of Mines may, anywhere within British India, and an Inspector of Mines may, within the local area or with respect to the group or class of mines for which he is appointed,—

(*a*) make such examination and inquiry as he thinks fit in order to ascertain whether the provisions of this Act and of the rules and orders made thereunder are observed in the case of any mine;

(*b*) enter, with such assistants (if any) as he thinks fit, inspect and examine any mine and any part thereof at all reasonable times by day or by night, but not so as unreasonably to impede or obstruct the working of the mine;

(*c*) examine into, and make inquiry respecting, the state and condition of any mine or any part thereof, the ventilation of the mine, the sufficiency of the special rules for the time being in force in and at the mine and all matters and things connected with or relating to the safety of the persons employed in or about the mine;

(*d*) order that any person shall not be employed in, or admitted to, or shall be removed from, a mine where there is ground for believing that his employment in or admission to or presence in such mine would be dangerous to himself or others: Provided that an appeal shall lie to such authority as the Governor General in Council or the Local Government, as the case may be, may direct from any order made under this clause, and that the order shall be complied with until the decision of such authority shall be received at the mine;

(*e*) do all other things required of him by or under this Act.

Facilities to be afforded to Inspectors.

7. Every owner, agent and manager of a mine shall furnish the Chief Inspector and every Inspector of Mines, on requisition, with the means necessary for making any entry, inspection, examination or inquiry in relation to the working of the mine under this Act.

Information acquired to be deemed official secrets within meaning of Act XV, 1889.

8. (*1*) All copies of, and extracts from, registers or other records appertaining to any mine, and all other information acquired by the Chief Inspector or an Inspector of Mines, or by any one assisting him, in the inspection of any mine under this Act, shall be regarded as strictly confidential.

(*2*) If any such person discloses to any one, other than a Magistrate or an officer to whom he is subordinate, any such informatton as aforesaid without the consent of the Governor General in Council or the Local Government, as the case may be, he shall be guilty of a breach of official trust, and shall be punishable in the manner provided by section 4 of the Indian Official Secrets Act, 1889. XV of 1889.

(*3*) No Court shall take cognizance of any offence under this section unless on a prosecution at the instance of the Governor General in Council, or the Local Government, or of a person aggrieved by the same.

Mining Boards and Committees.

Mining Boards.

9. (*1*) The Local Government may constitute for the Province, or for any part of the Province, or for any group or class of mines in the Province, a Mining Board consisting of—

(*a*) a public officer, not being the Chief Inspector or an Inspector of Mines, nominated by the Local Government to act as chairman;

(*b*) the Chief Inspector or the Inspector of Mines;

(*c*) one other person, not being the Chief Inspector or an Inspector of Mines, nominated by the Local Government; and

(*d*) two persons nominated by owners of mines or their representatives in such manner as the Local Government may direct.

(*2*) The Chairman shall appoint a person to act as secretary of the Board.

(*3*) The Local Government may give directions as to the payment of travelling expenses incurred by the chairman, secretary or any member of a Mining Board in the performance of his duty as such chairman, secretary or member.

Committees.

10. (*1*) Where under this Act any question relating to a mine is referred to a Committee, the Committee shall consist of—

(*a*) a chairman nominated by the Local Government or by such officer or authority as the Local Government may direct;

(*b*) one or more persons qualified by experience to dispose of the question referred to the Committee and nominated by the chairman; and

(*c*) one or more persons equal in number to the person or persons nominated under clause (*b*) and nominated by the owner, agent or manager of the mine concerned.

(*2*) The Inspector of Mines shall not serve as Chairman or member of a Committee appointed under this section.

(*3*) No person employed in or in the management of the mine concerned shall serve as chairman or member of a Committee appointed under this section.

(*4*) Where an owner, agent or manager fails to exercise his power of nomination under sub-section (*1*), clause (*c*), the Committee may, notwithstanding such failure, proceed to inquire into and dispose of the matter referred to them.

(*5*) The Committee shall hear and record such information as the Chief Inspector or the Inspector of Mines or the owner, agent or manager of the mine concerned may place before them, and shall intimate their decision to the Chief Inspector or the Inspector of Mines and to the owner, agent or manager of the mine concerned, and shall report their decision to the Local Government, or, where a Mining Board has been constituted, to the Local Government through the Mining Board.

(*6*) On receiving such report the Local Government may, if the Inspector of Mines, or the owner, agent or manager, has lodged an objection to the decision of the Committee, proceed to review such decision and to pass such orders in the matter as it may think fit.

(*7*) The Local Government may give directions as to the remuneration (if any) to be paid to the members of the Committee or any of them, and as to payment of the expenses of the inquiry, including such remuneration.

Powers of Mining Boards and Committees.

11. (*1*) A Mining Board constituted under section 9 or a Committee appointed under section 10 may exercise such of the powers of an Inspector of Mines as they may think it necessary or expedient to exercise for the purpose of deciding or reporting upon any matter referred to them.

(*2*) A Mining Board constituted under section 9 or a Committee appointed under section 10 shall have the powers of a Civil Court for the purpose of enforcing the attendance of witnesses and compelling the production of documents; and every person required by any such Committee to furnish information before it shall be deemed to be legally bound to do so within the meaning of section 176 of the Indian Penal Code. XLV of 1860.

Recovery of expenses.

12. When the Local Government directs that the expenses of any inquiry conducted by a Mining Board constituted under section 9 or by a Committee appointed under section 10 are to be borne in whole or in part by the owner, agent or manager of the mine concerned, the amount so directed to be paid may be recovered on application by the Chief Inspector or the Inspector of Mines to a Magistrate having jurisdiction at the place where the mine is situate or where such owner, agent or manager is for the time being resident by the distress and sale of any moveable property within the limits of the Magistrate's jurisdiction belonging to such owner, agent or manager.

Mining Operations and Duties and Responsibilities of Owners, Agents and Managers.

Managers.

13. (*1*) For every mine there shall be a manager, who shall have the prescribed qualifications.

(*2*) The manager shall be responsible for the superintendence of all parts of the mine.

Duties and responsibilities of owners, agents and managers.

14. (*1*) The owner, agent and manager of every mine shall be responsible that all operations carried on in connection therewith are conducted in accordance with the provisions of this Act and the rules and orders made thereunder.

(*2*) In the event of any contravention of, or failure to comply with, any such provisions on the part of any person whomsoever, the owner, agent and manager shall each be liable to be found guilty of an offence against this Act, unless he proves that he had taken all reasonable means, by publishing and to the best of his power enforcing the said provisions, to prevent such contravention or non-compliance, and that such contravention or non-compliance occurred without his consent.

Powers of Inspector when causes of danger not expressly provided against exist or when employment of women or children is dangerous.

15. (*1*) If, in any respect which is not provided against by any express provision of this Act, or of the rules or orders made thereunder, the Chief Inspector or any Inspector of Mines finds that any mine, or any part thereof, or any matter, thing or practice in or connected with the mine, or with the control, management or direction thereof, is dangerous to human life or safety, or defective so as to threaten, or tend to, the bodily injury of any person, he may give notice in writing thereof to the owner, agent or manager of the mine, and shall state in the notice the particulars in which he considers the mine, or part thereof, or the matter, thing or practice, to be dangerous or defective, and require the same to be remedied.

(*2*) If, for reasons to be recorded in the order, the Chief Inspector or the Inspector of Mines is of opinion that there is urgent and immediate danger to the life or safety of women or children employed in or at any mine, he may, by order in writing, prohibit the employment of such women and children.

(3) The Chief Inspector or the Inspector giving notice under sub-section (1) or making an order under sub-section (2) shall forthwith report the same to the Mining Board, or, where there is no Mining Board, to such officer or authority as the Local Government may by general or special order appoint in this behalf.

(4) If the owner, agent or manager of the mine objects to remedy the matter complained of in a notice under sub-section (1) or to comply with an order made under sub-section (2), he may within twenty days after the receipt of the notice or order send his objection in writing, stating the grounds thereof, to the Board or other authority to which the Inspector's report is made under sub-section (3).

(5) On receiving an objection made under sub-section (4), the said Board or other authority shall refer the matter to a Committee.

(6) In case objection is taken to an order made under sub-section (2), the order shall be complied with until the decision of the Committee is received at the mine.

(7) Nothing in this section shall affect the powers of a Magistrate under section 144 of the Code of Criminal Procedure, 1898.

Notice to be given of mining operations.

16. The owner, agent or manager of a mine shall, in the case of existing mines within three months after the commencement of this Act, and in the case of new mines within three months after the commencement of mining operations, give notice in writing to the Inspector of Mines appointed under section 4, sub-section (2), for the local area in which the mine is situate, or for the group or class of mines to which the mine belongs, or, if no Inspector of Mines has been appointed for such area or group or class of mines, to the Chief Inspector of Mines, of the address to which he desires his letters to be directed, the kind of minerals worked or to be worked, the name of the person under whom the mining operations are or are to be conducted, and the nature of the moving power which is or is to be used.

Notice to be given of accidents.

17. When any accidental explosion occurs in a mine, or when any accident occurs in or at a mine, causing loss of life or serious bodily injury, the owner, agent or manager of the mine shall give such notice of the explosion or accident to such authorities, in such form, and within such time, as may be prescribed.

Power for the Government to order formal inquiry into accidents.

18. (1) When in or at any mine an explosion or other accident has occurred, if it appears to the Governor General in Council or the Local Government that a formal inquiry into the causes of, and circumstances attending, the accident ought to be held, the Governor General in Council or the Local Government may give directions accordingly, and may appoint a competent person to hold the inquiry, and may also appoint any person or persons possessing legal or special knowledge to act as assessor or assessors in holding the inquiry.

(2) The person or persons so a shall have all the powers of a Civil Court for the purpose of enforcing the attendance of witnesses and compelling the production of documents; and every person required by such person or persons as aforesaid to furnish any information shall be deemed to be legally bound to do so within the meaning of section 176 of the Indian Penal Code. XLV of 1860

(3) The person or persons holding an inquiry under this section may exercise such of the powers of an Inspector of Mines as he or they may think it necessary or expedient to exercise for the purposes of such inquiry.

(4) The person or persons holding an inquiry under this section shall make a report to the Local Government, stating the causes of the accident and its circumstances, and adding any observations which he or they may think fit to make.

Publication of reports.

19. The Local Government may cause any report submitted under section 15 or section 18 to be published at such time and in such manner as it may think fit.

Rules.

Power for Government to make rules.

20. (1) The Governor General in Council may, for the whole or any part of British India, and each Local Government, with the previous sanction of the Governor General in Council, may, for the whole or any part of the Province, by notification in the Gazette of India or the local official Gazette, as the case may be, make rules for carrying out the purposes and objects of this Act in respect of all mines or any groups or classes of mines.

(2) In particular and without prejudice to the generality of the foregoing power, such rules may—

(a) regulate the duties and powers of the Chief Inspector and of Inspectors of Mines in respect of the inspection of mines under this Act, and provide for appeals from the orders of the Chief Inspector and Inspectors of Mines;

(b) provide for the appointment of chairmen and members of Mining Boards and Committees and regulate the procedure of such Boards and Committees;

(c) prescribe the duties of owners, agents and managers of mines and of all persons acting under them;

(d) prescribe the qualifications of managers and of all persons acting under them;

(*e*) regulate the manner of ascertaining, by examination or otherwise, the qualifications of managers and persons acting under them, and the granting and renewal of certificates of competency;

(*f*) fix the fees (if any) to be paid in respect of such examinations and the grant and renewal of certificates as aforesaid;

(*g*) provide for the making of inquiries into charges of misconduct or incompetency on the part of managers and persons acting under them, and for the suspension and cancellation of certificates of competency;

(*h*) prescribe the matters in respect of which notices, returns and reports shall be furnished by owners, agents and managers, the forms of such notices, returns and reports, the persons and authorities to whom they are to be furnished and the particulars to be contained in them;

(*i*) prescribe the plans (if any) to be kept by owners, agents and managers, and the manner and places in which they are to be kept for purposes of record;

(*j*) regulate, subject to the provisions of the Indian Explosives Act, 1884, and the rules thereunder, the storage and use of explosives;

(*k*) provide for the safety of the persons employed in mines, their means of entrance thereinto and exit therefrom, the number of shafts or outlets to be furnished, the fencing of shafts, outlets and passages, and the care of all machinery;

(*l*) prohibit, restrict or regulate the employment of women or children either below ground or on particular kinds of labour where such employment is attended by danger to the life, safety or health of such women or children;

(*m*) require owners or agents to maintain registers of women and children employed, and prescribe the forms of such registers;

(*n*) provide for the water-supply, sanitation and conservancy of mines;

(*o*) provide for the safety of the roads and working-places in mines;

(*p*) provide for the ventilation of mines and the action to be taken in respect of noxious gases;

(*q*) require and regulate the use of safety lamps in mines;

(*r*) provide against the accumulation of water in mines;

(*s*) regulate the procedure on the occurrence of accidents in mines and the supply of medical appliances and comforts for the benefit of persons injured therein;

(*t*) provide for the fencing of any mine or part of a mine, whether the same is being worked or not, where such fencing is necessary for the protection of the public;

(*u*) provide for the protection of public property and works from injury in respect of any mine when the workings are discontinued; and

(*v*) prescribe the notice to be given by the owner, agent or manager of a mine before extending any mining operations under his control at or to any point within fifty yards of any railway subject to the provisions of the Indian Railways Act, 1890, or of any public works or clauses of public works which the Local Government may, by general or special order, specify in this behalf. X of 1890.

(*3*) The power to make rules conferred by this section is subject to the condition of the rules being made after previous publication.

(*4*) The date to be specified in accordance with clause (*3*) of section 23 of the General Clauses Act, 1897, as that after which a draft of rules proposed to be made under this section will be taken into consideration, shall not be less than three months from the date on which the draft of the proposed rules was published for general information. X of 1897.

(*5*) Where a Mining Board has been constituted under section 9, any rule to be made under this Act shall, before it is published for criticism under sub-section (*3*), be referred to the Mining Board, and the rule shall not be so published until the said Board has reported as to the expediency of making the proposed rule and as to the suitability of its provisions.

(*6*) All rules made under this section shall be published in the Gazette of India or in the local official Gazette, as the case may be, and, on such publication, shall have effect as if enacted in this Act.

Power for owners, etc., to make special rules.

21. (*1*) The owner, agent or manager of a mine may frame and transmit to the Inspector of Mines or, when there is no Inspector for the local area in which the mine is situate or the group or class to which the mine belongs, to the Chief Inspector, a draft of such special rules, not being inconsistent with this Act or any rules for the time being in force under section 20, for the control and guidance of the persons acting in the management of, or employed in or about, the mine as he may deem necessary to prevent accidents and provide for the safety, convenience and discipline of the persons employed in or about the mine.

(*2*) If any such owner, agent or manager—

(*a*) fails within a period of two months after the receipt of a notice from the Inspector or Chief Inspector to transmit a draft of such special rules as are referred to in sub-section (*1*), or

(*b*) submits a draft of such special rules as aforesaid, which is not in the opinion of the Inspector or Chief Inspector sufficient,

the Inspector or Chief Inspector may either—

(*i*) propose a draft of such special rules as appear to him to be sufficient, or

(*ii*) propose such amendments in the draft submitted to him by the owner, agent or manager as will, in his opinion, render them sufficient,

and shall send such draft rules or draft amendments to the owner, agent or manager for consideration.

(*3*) If within a period of two months from the date on which any draft rules or draft amendments are sent by the Inspector or Chief Inspector to the owner, agent or manager of a mine under the provisions of sub-section (*2*), the Inspector or Chief Inspector and the owner, agent or manager are unable to agree as to the terms of the special rules to be made under sub-section (*1*) or as to the terms of any of such rules, the said Inspector or Chief Inspector shall refer the draft rules for settlement to the Mining Board or, where there is no Mining Board, to such officer or authority as the Local Government may, by general or special order, appoint in this behalf.

(*4*) A copy of the draft rules as agreed to by the owner, agent or manager and the Inspector or Chief Inspector, or, when they are unable to agree, as settled by the Mining Board or such officer or authority as aforesaid, shall, together with a notice intimating that any objection or suggestion in respect thereof may be submitted in writing by any person employed in the mine to the said Inspector or Chief Inspector for consideration, be posted up for not less than thirty days in legible characters in English and in the vernacular of the district in some conspicuous place in the mine for the information of the persons employed therein, and a certificate to the effect that this has been done signed by the owner, agent or manager of the mine shall be transmitted to the said Inspector or Chief Inspector, together with two copies of the draft rules.

(*5*) When the publication required by sub-section (*4*) has been carried out, the Inspector or Chief Inspector shall forward a copy of the draft rules so published, together with a copy of any objections or suggestions in respect thereof received by him, to the Local Government.

(*6*) The special rules, when approved by the Local Government, with such modifications (if any) as it may think fit, shall be published in like manner as is provided in sub-section (*4*) respecting the publication of the draft, and, on such publication, shall have effect as if enacted in this Act:

Provided that the Local Government may at any time, by order in writing, which shall be published in like manner as aforesaid, rescind, in whole or in part, any rules so made, and that thereupon such rules shall cease to have effect accordingly.

Penalties.

Penalties for offences.

22. (*1*) Whoever—

(*a*) obstructs the Chief Inspector or an Inspector of Mines in the discharge of his duties under this Act, or refuses or wilfully neglects to furnish him with the means necessary for making any entry, inspection, examination or inquiry thereunder in relation to any mine; or

(*b*) counterfeits, or knowingly makes a false statement in, any certificate or in any official copy of a certificate granted under this Act; or

(*c*) knowingly uses as true any such counterfeit or false certificate; or

(*d*) makes or produces or uses any false declaration, statement or evidence knowing the same to be false for the purpose of obtaining, for himself or for any other person, a certificate or the renewal of a certificate, or any employment under this Act; or

(*e*) contravenes any provision of this Act or any rule or order thereunder for the breach of which no penalty is otherwise provided, where the act done has resulted in loss of life or serious bodily injury to any person;

shall be punishable with imprisonment for a term which may extend to three months, or with fine which may extend to five hundred rupees, or with both.

(*2*) Whoever—

(*a*) falsifies any plan or register or record required to be maintained by or under this Act; or,

(*b*) being the owner, agent or manager of a mine, omits to give the prescribed notice of an accident in the mine or to make or furnish any prescribed plans or returns; or

(*c*) makes, gives or delivers any such plan, register, record, notice or return containing a statement, entry or detail which is not, to the best of his knowledge or belief, true;

shall be punishable with fine which may extend to five hundred rupees.

(*3*) Whoever—

(*a*) employs or allows to be employed in or about a mine, or allows to enter a mine or part of a mine, any person in contravention of any provision of this Act or of any rule or order thereunder; or

(*b*) allows any person to perform any work forbidden by, or to work in contravention of, any such provision; or

(*c*) fails to comply with any requisition or order made under any such provision ; or,

(*d*) being the owner, agent or manager of a mine, fails to maintain correctly, or to produce, any prescribed plan ; or

(*e*) contravenes any provision of this Act or any rule or order thereunder for the breach of which no penalty is otherwise provided ;

shall be punishable with fine which may extend to two hundred rupees, and, in the case of a continuing breach under clause (*c*) of this sub-section, with a further fine which may extend to fifty rupees for every day during which the breach is proved to have been persisted in after the date of the receipt by him of the order or requisition referred to in such clause.

Miscellaneous.

Prosecution of owner, agent or manager.

23. No prosecution shall be instituted against any owner, agent or manager for any offence against this Act or any rule or order thereunder except at the instance of the Chief Inspector or an Inspector of Mines.

Limitation of prosecutions.

24. No Court shall take cognizance of any offence against this Act or any rule or order thereunder unless complaint thereof is made within six months of the date on which the offence is alleged to have been committed.

Cognizance of offences.

25. No Court inferior to that of a Magistrate of the first class or Sub-divisional Magistrate shall try any offence against this Act or any rule or order thereunder which is alleged to have been committed by any owner, agent or manager of a mine or any offence which is punishable with imprisonment.

Reference to Mining Board or Committee in lieu of prosecution in certain cases.

26. If the Court trying any case instituted on the complaint of the Chief Inspector or an Inspector of Mines under this Act is of opinion that the case is one which should, in lieu of a prosecution, be referred to a Mining Board or a Committee, it may stay the criminal proceedings, and report the matter to the Local Government with a view to such reference being made.

Decision of question whether a mine is under this Act.

27. If any question arises as to whether any excavation or working is a mine within the meaning of this Act, the Local Government may decide the question, and a certificate, signed by a Secretary to the Local Government, shall be conclusive on the point.

Evidence of age.

28. If in any inquiry or proceeding under this Act it is necessary to decide the question whether a person is or is not under the age of twelve years, a certificate in writing, signed by a duly qualified person practising medicine or surgery, who states that he has examined such person, and that the age of such person, as nearly as can be ascertained from such examination, is or is not under twelve years, shall be received as *primâ facie* evidence of the age of such person.

Power to exempt from operation of Act.

29. The Governor General in Council may, by notification in the Gazette of India, and subject to such limitations and conditions as may seem to him expedient, exempt from the operation of the whole or any part of this Act any local area, or any mine or group or class of mines, or any class of persons.

Power of Government of India to alter or rescind orders.

30. The Governor General in Council or any Local Government shall have authority to reverse or modify any order passed under this Act by any authority subject to his or its control.

Application of Act to Crown mines.

31. This Act shall apply to mines belonging to the Crown.

Exercise of power by Governor General in Council.

32. The Governor General in Council may, if he thinks fit, exercise any power which is by this Act conferred upon a Local Government.

Temporary Provision.

Bar of prosecutions for certain offences committed within one year of commencement of Act.

33. No Court shall take cognizance of any offence punishable under section 22, sub-section (*1*), clause (*e*), or sub-section (*3*), which is alleged to have been committed by any person within one year from the commencement of this Act.

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 23.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Report of the Select Committee on the Bill further to amend the Administrator General's Act, 1874, was presented to the Council of the Governor General of India for the purpose of making Laws and Regulations on the 20th March, 1901 :—

WE, the undersigned, Members of the Select Committee to which the Bill further to amend the Administrator General's Act, 1874, was referred, have considered the Bill and the papers noted in the margin, and have now the honour to submit this our Report, with the Bill as amended by us annexed thereto.

From Government, Madras, No. 766 Judicial, dated 15th May, 1899; from ditto, No. 962, dated 20th June, 1899, and enclosures; to ditto, No. 1322, dated 11th September, 1899; to Local Governments and Administrations (except Madras), Nos. 1323—1331, dated 11th September, 1899; from Government, Madras, No. 142 Judicial, dated 30th January, 1900, and enclosure; from Government, Bombay, No. 636, dated 25th January, 1900, and enclosures; from Government, Bengal, No. 665 J. D., dated 10th May, 1900; from Government, North-Western Provinces and Oudh, No. 128, dated 9th February, 1900, and enclosures; from ditto, No. 163, dated 19th February, 1900, and enclosure; from Government, Punjab, No. 275, dated 10th February, 1900, and enclosures; from Government, Burma, No. 820—3-D.—20, dated 28th December, 1899, and enclosure; from Chief Commissioner, Central Provinces, No. 10365, dated 21st December, 1899, and enclosure; from Chief Commissioner, Assam, No. 163 L. & L.-4191-J., dated 5th October, 1899; from Chief Commissioner, Coorg, No. 2601, dated 31st October, 1899; from Resident, Hyderabad, No. 371, dated 9th December, 1899, and enclosures [Papers No. 1].

From Indian Christian Association, North-Western Provinces and Oudh, to the Hon'ble Kunwár Sir Harnam Singh, Ahluwalia, K.C.I.E., No. 21, dated 28th January, 1901 [Paper No. 2].

Office memorandum by Private Secretary to Viceroy, No. 325, dated 11th March, 1901, and enclosure (memorial of Indian Christians of Bellary) [Papers No. 3].

2. It will be seen that we have considerably enlarged the scope of the Bill as introduced, which, for the reasons explained in the Statement of Objects and Reasons, was restricted to the exemption of Native Christians from the operation of certain provisions of the Administrator General's Act, 1874, from the operation of which Hindus, Muhammadans, Parsis and Buddhists are exempt. In the provisions which were designed to confer this exemption we have no amendments to suggest; but, after giving further consideration to the matter, and after hearing the arguments of our Hon'ble colleagues (Mr. Ananda Charlu and Sir Harnam Singh) who represented the views of the Native Christians, we have come to the conclusion that, though the reasons for not exempting Native Christians from the provisions of section 187 of the Indian Succession Act, 1865, which make the probate of a will a condition precedent to establishing any rights as an executor in a Court of Justice, still hold good, strong arguments exist for giving Native Christians exemption from the provisions of section 190 of the same Act, which relates to the grant of letters of administration. It seems to us further that, if Native Christians are to be relieved of the necessity for taking out letters of administration by being exempted from the provisions of section 190 of the Succession Act, they ought also

to get the benefit of the Succession Certificates Act, 1889, to a like extent by being empowered to take out a certificate under that Act on payment of duty on the amount of the debt comprised in the certificate, instead of being compelled, whenever they have to resort to a Court for the recovery of a debt, to take out letters of administration on payment of duty practically on the entire estate.

3. We have given effect to these views in clauses 3 and 5 of the revised Bill appended to this Report. Clause 3 exempts Native Christians from section 239 as well as section 190 of the Succession Act, as the exemption from that section, which enables the District Judge to intervene for the protection of property until an administrator of the estate of a deceased person is constituted, seems to follow, as a matter of course, on the exemption from section 190. Clause 5 declares that certificates may be granted to representatives of deceased Native Christians under the Succession Certificates Act, notwithstanding that the debt or security is one in respect of which a right could be established by letters of administration under the Indian Succession Act, 1865, as it obviously could be in the case of Native Christians, who, though exempted from section 190, will still remain governed by the other provisions of that Act.

4. The alterations made in the preamble and short title are consequential on the additions described in the two preceding paragraphs.

5. The publication ordered by the Council has been made as follows:—

6. Though the alterations we have made in the Bill are important, inasmuch as they materially extend its scope, they are at the same time entirely in the nature of further concessions to the community in whose interests this legislation has been undertaken. For this reason we do not think that the Bill has been so altered as to require republication, and we recommend that it be passed as amended by us.

[The amendments proposed by the Select Committee are printed in italics.]

No. II.

A Bill to place Native Christians in the same position as Hindus, Muhammadans and Buddhists in the matter of obtaining letters of administration and for other purposes.

WHEREAS it is expedient to place Native Christians on the same footing as Hindus, Muhammadans and Buddhists in the matter of obtaining letters of administration; to exempt them from the operation of certain provisions of the Administrator General's Act, 1874, from which Hindus, Muhammadans, Parsis and Buddhists are exempted; and to enable them to obtain certificates under the Succession Certificates Act, 1889, in certain cases; It is hereby enacted as follows:—

II of 1874.

VII of 1889.

Short title and commencement.

1. (*1*) This Act may be called the *Native Christian Administration of Estates Act, 1901*; and

(*2*) It shall come into force at once.

Definition.

2. In this Act, the expression "Native Christian" means a native of India who is or in good faith claims to be of unmixed Asatic descent and who professes any form of the Christian religion.

Exemption of Native Christians from sections 190 and 239, Act X, 1865.

3. Sections 190 and 239 of the Indian Succession Act, 1865, shall not apply to any part of the property of a Native Christian who has died intestate.

X of 1865.

Exemption of Native Christians from certain sections of Act II of 1874.

4. In sections 16, 17, 18, 37 and 64 respectively of the Administrator General's Act, 1874, before the word "Hindu" wherever it occurs, the word "Native Christian" shall be inserted:

II of 1874.

Provided that nothing contained *in this section* shall affect any probate, letters of administration or certificate granted or vested under the said Act.

Grant of certificates under Act VII of 1889 to Native Christians in certain cases.

5. Nothing contained in section 1, sub-section (4), of the Succession Certificates Act, 1889, shall be deemed to prevent the grant of a certificate to any person claiming to be entitled to the effects of a deceased Native Christian, or to any part thereof, with respect to any debt or security, by reason that a right thereto can be established by letters of administration under the Indian Succession Act, 1865.

PART VI.

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House, Calcutta, on Wednesday, the 20th March, 1901.

PRESENT:

His Excellency Baron Curzon, P.C., G.M.S.I., G.M.I.E., Viceroy and Governor General of India, *presiding*.
His Honour Sir John Woodburn, K.C.S.I., Lieutenant-Governor of Bengal.
The Hon'ble Major-General Sir E. H. H. Collen, G.C.I.E., C.B.
The Hon'ble Sir A. C. Trevor, K.C.S.I.
The Hon'ble Sir C. M. Rivaz, K.C.S.I.
The Hon'ble Mr. T. Raleigh.
The Hon'ble Sir E. FG. Law, K.C.M.G.
The Hon'ble M. R. Ry. Panappakkam Ananda Charlu Vidia Vinodha Avargal, Rai Bahadur, C.I.E.
The Hon'ble Kunwar Sir Harnam Singh, Ahluwalia, K.C.I.E., of Kapurthala.
The Hon'ble Mr. J. Buckingham, C.I.E.
The Hon'ble Mr. H. F. Evans, C.S.I.
The Hon'ble Rai Bahadur B. K. Bose, C.I.E.
The Hon'ble Sir Allan Arthur, Kt.
The Hon'ble Sir A. Wingate, K.C.I.E.
The Hon'ble Mr. D. M. Smeaton, C.S.I.
The Hon'ble Mr. C. W. Bolton, C.S.I.
The Hon'ble Rai Sri Ram Bahadur.
The Hon'ble Mr. R. P. Ashton.
The Hon'ble Mr. R. H. Henderson.

ADMINISTRATOR GENERAL'S ACT (AMENDMENT) BILL.

The Hon'ble SIR CHARLES RIVAZ presented the Report of the Select Committee on the Bill further to amend the Administrator General's Act, 1874. He said that he proposed, with His Excellency's permission, to ask the Council, at its next meeting, on Friday, the 22nd instant, to take the Report into consideration.

FINANCIAL STATEMENT FOR 1901-1902.

The Hon'ble SIR EDWARD LAW introduced and explained the Financial Statement for 1901-1902. He said :—

Introduction. "1. IT is my duty to lay before the Legislative Council, statements showing the actual financial results of the year 1899-1900: the results according to Revised Estimates for the year 1900-1901; and the Budget Estimates for the coming financial year 1901-1902.

"2. In their briefest form and leaving out Capital, Debt, and Remittance transactions, the figures are as follows :—

	1899-1900 (Accounts).
	£
Revenue	68,637,164
Expenditure (charged against Revenue)	65,862,541
Surplus	2,774,623

	1900-1901 (Revised Estimate).
	£
Revenue	75,166,000
Expenditure (charged against Revenue)	73,525,600
Surplus	1,640,400

	1901-1902 (Budget Estimate).
	£
Revenue	72,191,900
Expenditure (charged against Revenue)	71,501,000
Surplus	690,900

"3. Before proceeding to the detailed consideration of the figures composing the above totals, I think it would be well to explain a slight modification of system which we have decided to adopt in our Accounts.

nges e form ccounts. "4. We have had under consideration the advisability of some simplification in the General Statement of Accounts and Estimates of Revenue and Expenditure, and Receipts and Disbursements.

"5. It has appeared to us that by submitting this Statement under two heads, separating Ordinary Revenue and Expenditure, from Receipts and Expenditure on Capital Account and Debt and Remittance transactions, the general result will be made clearer to the public.

"6. We have therefore, with the consent of the Secretary of State, adopted a form showing, first, all purely Revenue Receipts, and Expenditure charged against the same, and indicating differences between the respective totals as 'surplus' or 'deficit' according to circumstances. We then show separately, Capital Receipts and Expenditure, the Debt and Remittance transactions, and the opening and closing cash balances, including in the proper columns, the surplus or deficit resulting from the difference between Ordinary Revenue and Expenditure.

"7. This change is not in itself of great importance, but I think that it offers the advantage of presenting the Accounts, in a more readily intelligible form, and, moreover, that it is technically correct.

"8. It would seem expedient to strike a balance at the end of the first section of the Statement, to show as Surplus or Deficit, in the body of the account, the difference between Ordinary Revenue, and Ordinary Expenditure charged against that Revenue, and to make a very marked distinction between the two main heads of the Statement, (1) Ordinary Revenue and Expenditure charged against Revenue and (2) Capital, Debt, and Remittance transactions. The final result of the second section of the Statement is the closing cash balance in hand at the end of the financial year.

"9. We have at the same time adopted certain minor changes which I will proceed to indicate.

"10. There seems no reason why the comparatively unimportant expenditure on 'Construction of Railways charged against Revenue, in addition to that under Famine Insurance,' should be shown separately in the General Statement, which is designed to exhibit only the leading and important figures. The expenditure under this head is now

insignificant in amount and is either 'Provincial' or 'Local.' We have therefore combined it with that under Buildings and Roads, giving to the group the title of 'Other Public Works.'

"11. In view of the importance of the heads Post Office, and Telegraph (the figures for which are specially watched by many observers interested in the general and economic progress of a country), we think there will be an advantage in giving a separate line to each of them, even in the General Statement, and, in view of the decision to treat the profits of coinage specially, we think it desirable also to show the Mint figures separately.

"12. Further, with the object of bringing together all the entries connected with capital expenditure on Railways and Irrigation Works, we have adopted another change which will, in our opinion, be a distinct improvement. It is to group together under the heading 'Railway and Irrigation Capital not charged to Revenue,' the figures relating to the Capital of Railway Companies, which are at present shown under 'Debt, Deposits and Advances,' and those for the similar direct capital transactions of the Government, which are now shown under the heading 'Expenditure not charged to Revenue.' We shall thus have a perfectly distinct Capital account, with the advantage of showing in one place, the whole capital outlay on railways, whether by Government, or through Companies.

"13. Being convinced of the value and improving position of the Government property in railways, we are anxious that the Railway Accounts should be readily understood by the investing public, and we consider the changes relating to railway accounting, now proposed as a step in the direction of attaining desired simplicity, in a somewhat complicated technical question of accounting.

"14. The closing of the Accounts of the financial year 1899-1900 shows an improvement in Actual Receipts of £712,164 over the Original Estimates and £104,764 over the Revised Estimate, as submitted by my predecessor last year. Accounts, 1899-1900.

"15. The differences between the Original and Revised Estimates were explained by Mr. Dawkins last March, and the differences between the items of Revenue in the Revised Estimate and those of the final Accounts are insignificant and call for no special remarks. I need only mention that the final Accounts show an improvement of £123,545 in Railway Receipts, with the result that Railway Revenue Accounts brought out a net profit of £76,756.

"16. In Expenditure charged against Revenue the final Accounts show an increase of £559,341 as compared with the Original Estimate, and a decrease of £117,059 as compared with the Revised Estimate, the largest item in the latter being a decrease of £144,374 under 'Army.'

"17. The difference between the original and the revised Estimate of Receipts is very considerable, the increase amounting to £5,010,200; but, of this increase, a sum of approximately £2,900,000 comes under the head of Mint, and is balanced by a correspondingly large increase under the same head in Expenditure. These considerable differences are due to the large coinage of rupees, which could not be foreseen; but, deducting the sum due to this cause, we still have to account for an increase of Revenue exceeding £2,100,000. Revised Estimate, 1900-1901.

"18. It is certainly very gratifying to note that, in spite of all the troubles of the past year, every main head of Receipts except Land Revenue shows a more or less important increase.

"19. The most notable augmentations are:—under Opium, about £572,000, due to the high price of opium; £106,000 in Salt, due to increasing consumption, although under this head we have cause to be dissatisfied with the Burma returns; £138,000 in Excise; £190,000 in Customs, a certain sign of consuming capacity and therefore of progressive well-being; £86,000 from Telegraphs, partly due to exceptional circumstances connected with Famine and partly to the increasing demand for news owing to the wars in South Africa and China, and the fatal illness of the late Queen-Empress; £965,000 in Railway Receipts, partly due to the large movement of food-stuffs for famine requirements and partly to increased mileage and general development; £208,000 under Irrigation; and finally an increase of £130,000 under Military Department Receipts, which is purely fortuitous, and represents the value of Military Stores sent abroad and debited to the Home Government. The totals of the items I have mentioned account for an increase in Receipts of about £2,395,000.

"20. Against this satisfactory increase in the great majority of items of Revenue we have to record a heavy deficiency, as between the Revised and original Estimates of Land Revenue, amounting to £382,900. This is the only main heading of Revenue which shows a falling-off, and the unfortunate result tabulated is sufficiently accounted

for by the severity and prolongation of famine in some of the western and central districts.

"21. When we turn to Expenditure, we find that the total of the Revised Estimate exceeds that of the original Budget Estimate by about £3,530,000. But here again we must make a reduction of about £2,900,000 under 'Mint,' the amount of the net profit on coinage to be credited to the Gold Reserve Fund, and consequently we have only to account for between £600,000 and £700,000 of increased Expenditure, above the original Estimate.

"22. The most important item of increase in Expenditure is under the group 'Famine Relief and Insurance,' which amounts to about £876,000. This unfortunately needs no explanation. The next in importance is an increase of £323,000 under 'Railway Revenue Account,' but this augmentation was due to, and more than compensated for, by increased traffic yielding the larger Revenue already indicated. The charge under 'Interest' also exceeds the Budget Estimate by about £200,000 and Miscellaneous Civil Charges by £74,500.

"23. On the other hand, 'Other Public Works' decreased by about £118,000, out of which about £42,000 is to be attributed to reduced expenditure on Military Works, and 'Army Services' cost less than anticipated by about £1,185,000, the saving being chiefly due to the absence of troops in China and South Africa. There was also a decrease of £124,900 under Salaries and Expenses of Civil Departments, and finally, the differences in the Accounts under Provincial Deficits and Surpluses increased the expenditure as shown in the Statement by £576,400.

"24. The grand result indicated by the Revised as compared with the Original Estimate for 1900-1901 is to increase the originally estimated surplus of £160,300 to a fairly assured surplus of £1,640,400.

Budget Estimate, 1901-1902.

"25. We may now turn to the consideration of the Budget for the coming financial year.

"26. It will be observed that, if the abnormal receipt under 'Mint,' included in last year's Estimates, is omitted, the difference between the totals of Receipts, according to the Revised Estimates of the closing year, and the Estimates for 1901-1902, now presented, is very small, and amounts only to an anticipated increase of Revenue of £71,900 in the coming year.

"27. Under certain heads, however, the differences are considerable and demand attention.

"28. Land Revenue is estimated to produce £474,800 more than last year, and in view of improved prospects throughout the greater part of India, this Estimate is unlikely to prove too sanguine, although, until we are sure of a favourable monsoon, the most moderate Estimates may be suddenly and hopelessly falsified.

"29. The only other main heading of Revenue which is expected to yield an important increase is 'Railways,' where Receipts are expected to exceed those of last year by £331,400. The anticipated increase is chiefly due to the inclusion of gross instead of net Receipts from the Great Indian Peninsula Railway for 12 months in the coming year, as against 9 months only in the closing year, and also, to some extent, to increased mileage opened to traffic.

"30. Besides the above-noted increases, variations in the items included under 'Other Heads' are estimated to produce, on balance, an additional £183,400, the more important improvements being £160,800 in Provincial Rates, and £62,600 in Tributes from Native States.

"31. Other minor improvements make up the total increase of Revenue, as compared with the Revised Estimate for 1900-1901, to £1,086,500.

"32. Against these improvements we have, however, (always excluding Mint) to note a considerable reduction under various important heads. Opium is estimated to yield £589,300 less than last year, since it would not be prudent to count on the continuation of the abnormally high prices which have lately prevailed. Customs are estimated at £136,100 less, the most important variation in detail being a lower Estimate for imports of Sugar, the duties on the extraordinarily large importation of which have abnormally swelled our Receipts during the past year. Irrigation Receipts necessarily fluctuate with the increase or decrease of the demands of agriculturists for water, and are higher in bad seasons; we therefore anticipate for next year a smaller return by £127,400.

"33. The above are the more important heads of decrease, and other minor variations account for, approximately, a further £161,800, making up the total of items of decrease to £1,014,600.

"34. I now turn to Expenditure, which as a total, and again excluding 'Mint,' shows an increase of £1,131,900 reduced to £923,500 by the differences under the Provincial Deficits and Surpluses.

"35. The total increase under various heads is £4,446,900, of which £2,062,100 is for Army Services, £728,400 for 'Other Public Works,' and £652,400 for Railway Revenue Account. Concerning these three items I shall have some remarks to make when I deal specially with Military and Public Works Expenditure. Other heads including 'Direct Demands on Revenue,' £161,600, 'Salaries and Expenses of Civil Departments,' £493,200, and Miscellaneous Civil Charges, £123,900, make up the total figure of increase above indicated.

"36. Expenditure in all directions has been so greatly and necessarily restricted during the period of financial distress that, now that we may fairly estimate for an improvement in Revenue and a very important diminution of Charges for Famine Relief, we have been glad to show some comparative liberality in meeting urgent administrative demands. The Famine Charges, including £250,100 for Reduction or Avoidance of Debt, are taken at £3,245,000 less than for the past financial year.

"37. We have examined the more important figures of the Budget. I will now endeavour to sum up the situation.

"38. Our estimate of Revenue and Expenditure chargeable against Revenue closes with a surplus of £690,900. This surplus we carry forward to the second part of our Statement dealing with Capital Account and including Deposits, Remittances and Advances.

"39. Our total Estimate for Capital Expenditure (not chargeable to Revenue) on Railways and Irrigation amounts to £5,395,600, of which sum £2,019,400 is for State Railways and £2,709,500 for the Account of Railway Companies, the balance being for Irrigation Works. In addition to the above, we have to find £301,900 for discharging Temporary Debt, and also to provide for other minor Capital Expenditure amounting to £944,500, including an over-payment in India of £330,200 on account of Secretary of State's Bills, and we finally arrive at a gross total of Capital requirements amounting to £6,642,000.

"40. To meet this outlay, we have, in addition to our surplus of £690,900, a sum of £1,663,400 raised by Railway Companies. We further anticipate procuring £2,240,000 by addition to our Permanent Debt, of which sum we contemplate raising two crores of rupees in India, £502,500 from addition to the Unfunded Debt, and £111,200 from repayment of Loans and Advances.

"41. These sums amount in the aggregate to £5,208,000, and the balance required to meet the total Capital Expenditure of £6,642,000 is found by a reduction of £1,434,000 in our Closing Balances in India and England.

"The final result will be a Closing Balance on March 31, 1902, of £10,500,327 in India and £2,605,943 in England.

"42. The present intention of the Secretary of State is to draw bills amounting to £16,500,000 during the course of the coming year. I have omitted this figure from both sides of the account I have summarised.

"43. There is a point in connection with our Treasury operations which is perhaps likely to be the object of remark, or question, and on which I think it may be well to give some explanation beforehand. I refer to the fact that, whilst our Estimates show a comparatively large cash balance in hand in India, at the end of the coming financial year, we nevertheless announce our intention of adding to our permanent indebtedness by raising a loan in India during the course of the year.

"44. The necessity obliging us to take this course arises from the fact that during the earlier part of the financial year our Revenue collections are very small, as compared with monthly expenditure, and our balances gradually diminish, until in November, they fall so low that we have to calculate our ways and means and assure our supplies with great care, so as to tide over the critical period till the last four months of the financial year, when Revenue Receipts begin to pour in.

"45. It will be understood then, that it is the anticipated condition of our resources in the month of November which necessarily fixes the amount of our borrowings without regard to the possibility of a relative plethora of cash in our Treasuries, three or four months later.

"46. The Government of India is at a great disadvantage in this respect, owing to the non-existence of any financial institution sufficiently strong to be able at all times to provide such funds, for short terms, as may be required to satisfy the temporary needs of the Treasury.

Governme Balances with the Presidenc Banks.

"47. It has, I believe, often been urged that the relatively high rates of discount prevailing in the busy winter season from December to the end of March are due to the low figures of Government balances with the Presidency Banks, during those months.

"48. I give below the figures showing these balances during the last four years. They are as follows :—

	1897.	1898.	1899.	1900.	1901.
	₹	₹	₹	₹	₹
January	2,84,69,815	3,10,74,779	3,22,88,586	2,83,49,286	3,31,13,363
February	3,00,23,776	3,22,51,227	3,30,81,480	3,01,62,613	3,09,44,761
March	3,77,40,338	3,27,96,275	3,16,44,816	2,64,87,648	
December	2,88,20,840	2,92,33,557	2,73,30,372	2,74,96,162	

"49. I think that, although special circumstances reduced these balances last year, the above quoted figures show that the Government of India is not unmindful of the advantage to the business community of placing comparatively large balances at their disposal, during the busy season.

"50. In my general summary which includes under various main heads, the different items of Provincial Finance, I have not discussed any details of this branch of accounts, as I have nothing to add to, or to explain in, the very clear statement on this head, prepared by Mr. Finlay with his usual ability and industry and to which I would specially invite attention. This statement is to be found in Section VI, Part II* of the Financial Statement.

Expenditure on the Army and Public Works.

"51. In all countries in the world, the greatest drain on financial resources and in some respects the most difficult to justify, is that caused by the combined heavy demands for military requirements and for public works.

"52. But our whole existence depends on proper provision for the defence of our frontiers, and without continual expenditure on public works, the development of communications so absolutely necessary for economic progress, could never be realised, whilst the large sums spent on irrigation are more than justified by the magnificent results obtained from this class of expenditure, yielding, as a rule, not only direct and immediate profit, but also providing for the sustenance of millions, who would otherwise be included among the sufferers from recurring droughts.

"53. As regards military expenditure, although we have granted very large sums for the improvement of our military position as regards defence, every additional item which has been agreed to, has not only been most jealously scrutinised in the Finance Department, but has also been submitted to the close examination of the Governor General in Council.

"54. The lessons derived from the war in South Africa could not be neglected. It was our responsible duty to take them to heart, and we have done our best under the guidance of the military advisers to Government to profit by them.

"55. Fortunately, the savings realised in our general military expenditure owing to the temporary absence of our troops in South Africa and China have enabled us to provide for a portion of the urgent needs of the army without adding to our general burdens; for the rest, we have done what is for the moment in our power, but we cannot yet say that our task is completed.

"56. The following figures show the Net Military Expenditure during the last few years :—

	£
1898-99, Accounts	15,385,042
1899-1900 ,,	14,165,743
1900-1901, Revised	14,239,100
1901-1902, Budget	16,345,500

"57. The increase in the estimates for the coming year is very considerable. Items classed as new expenditure amount to about 142 lakhs charged under Army in addition to about 18 lakhs connected therewith, charged to Military Works. Of this total, amounting to, approximately, 160 lakhs, about 127 lakhs are non-recurring, and 33 lakhs recurring. It includes, among other heads, provision for the expenditure of 94 lakhs on artillery, rifles, ammunition and ordnance stores; approximately 8½ lakhs for the establishment of the gun-carriage factory at Jubbulpore and the cordite factory in the Neilgherries; and 21½ lakhs for the establishment of an efficient transport service, including the purchase of animals.

"58. The expenditure on factories for manufacturing munitions of war in India, will not only have the effect of increasing our military independence, but also the highly satisfactory result, from the economic point of view, of substituting expenditure in India for expenditure abroad, of increasing the productive power of the country, and of training a large body of mechanics and other skilled artisans.

"59. As regards expenditure on public works, we have given our special attention to rendering existing railways more efficient, by the provision of additional rolling

* *Vide* Gazette of India Extraordinary, 20th March, 1901, p. 53.

stock and other requirements for their satisfactory and profitable working. We have also set aside a large sum for expenditure on irrigation works as a protection from famine. The grant under this head for the coming year amounts to one crore and is the same as that sanctioned last year, whilst in considerable excess of the sums allotted in the immediately preceding years for the same purpose. But we are convinced that the money will be well spent.

"60. The following figures show the comparative capital expenditure on public works, during the last few years, classed under the more important heads, and the programme for expenditure in 1901-1902 :—

	R
1898-99—	
Railways	8,84,21,189
Irrigation	65,35,482
	9,49,56,671
1899-1900—	
Railways	8,96,77,803
Irrigation	89,69,400
	9,86,47,203
1900-1901 (Revised Estimate)—	
Railways	8,30,75,000
Irrigation	90,08,000
	9,20,83,000
Programme, 1901-1902—	
Capital expenditure on open lines	4,59,97,000
Ditto lines under construction	4,59,47,000
Ditto new lines only recently commenced	1,13,00,000
Ditto Irrigation	1,00,00,000
TOTAL	11,32,44,000
Classification.	
Capital expenditure for Railway Construction—	
To be raised by Government	2,22,86,000
Ditto Companies	8,09,58,000
TOTAL	10,32,44,000

"61. I think that after consideration of the above figures showing comparative capital expenditure, I should invite special attention to the comparative net results of the working of our railway system. The following figures give the net deficit or surplus since 1897-98 :—

1897-98.	1898-99.	1899-1900.	1900-1901 (Revised Estimate).	1901-1902 (Budget Estimate).
£	£	£	£	£
—709,304	—620,165	+76,756	+156,200	—164,800

"62. In noting the relatively unsatisfactory estimate of net results for the coming year, it must be borne in mind that the traffic of last year, due to transport of famine supplies, was exceptionally large, and that we have now made specially large provision for repairs, renewals of rolling stock, and other improvements to be charged against next year's revenue.

"63. Further, I must point out that, if we take only the figures of traffic receipts, £18,427,600—and those of working expenses £8,655,300,—the results anticipated for the coming year, are somewhat better than those for the year 1900-1901, and show a net profit (thus calculated) of £9,772,300 as against £9,701,600 last year. The final estimated falling-off is due to an increase of expenditure under the heads of Interest and Annuities, in connection with new construction and the purchase of the Great Indian Peninsula Railway. These are temporary drawbacks, and the decrease in net revenue is temporary as the lines under construction will add to revenue when opened for traffic.

"64. It is unnecessary for me to enter into further details concerning expenditure under the two heads I have now been discussing, since it is the main principles guiding such expenditure, and the possibility of satisfying recognised requirements, which alone concern the Finance Department. Questions of detail lie outside the province of that Department and are the immediate concern of the Honourable Members of Council at the head of the Military and Public Works Departments.

Results of the Famine.

"65. During the past financial year this great Indian Empire has been suffering from an appalling calamity, quite unprecedented, I think, in the recent history of any country on the globe's surface. Not only have we been the victims of a famine of extraordinary severity, the inevitable outcome of the early cessation of the rains in the year 1899, but to the consternation of all men, responsible for, or interested in, the welfare of the millions of agricultural population, the coming of the periodical rains, required to refresh the thirsty soil and restore the fecundity of mother-earth, was so delayed last season, that the trials of the long suffering populations were prolonged in the most distressing and unexpected manner. But this was not all. In addition to the calamity of famine, the plague pestilence is still with us, and the terrible list of its victims is daily to be counted in the official returns from the plague-stricken districts. And this too weighs heavily on the resources of the country.

"66. The Government of India has followed with the keenest anxiety the course and results of these awful afflictions, so entirely beyond its control, and it has recognised with profound admiration the splendid spirit with which millions of sufferers have faced the calamities from which they were powerless to escape.

"67. The suffering condition of our fellow-subjects has been brought home to us, in the most incisive manner, through the continued and heart-rending appeals for assistance which have reached the Government of India. It is however my duty, and a happy duty, to state that, under the instructions of the Secretary of State and the Government of India, all such appeals have been considered by the Departments concerned, in a most liberal spirit, and no single appeal examined in that spirit by the competent authorities, has remained unsatisfied. The national purse and national credit have been freely placed at the disposal of all whose genuine distress might, it was hoped, be relieved by the prompt expenditure of money.

"68. Such has been the spirit guiding our action, and it now falls to my duty to state the cost of our gigantic undertaking.

"69. To count it with any approximation to accuracy is impossible, for it is not the direct expenditure of money which alone is involved: there has been an expenditure of life, health and energy of the numerous Government servants, both European and Native, who have nobly done their duty in facing the storm: in addition to the direct cost, of gratuitous famine relief and relief works, of remissions of taxation, of agricultural loans, of loans to assist afflicted Native States, of provision of medical assistance, and of special payments to famine officers, there has also been the indirect cost of loss of revenue, both as regards land revenue and miscellaneous taxes, and the incalculable, but probably still greater future cost of checked economic development.

"70. We can fairly count the direct cost; the indirect cost must necessarily escape accurate calculation.

The following are the principal items of direct loss and expenditure:—

	R
Famine relief	6,32,76,000
Remissions and Suspensions of Land Revenue and Provincial Rates	1,47,16,000
Compensation for dearness of provisions and other charges	66,03,000
TOTAL	8,46,95,000

"In addition to the above, we have provided:—

	R
Loans to Native States	4,11,00,000
Special Agricultural Advances	1,42,00,000
TOTAL	5,53,00,000

"This is an appalling total, but the calamity was also appalling. And the tale is not yet told. Expenditure will continue in the coming year. Already we have been called upon to provide approximately a crore for direct famine expenditure in the coming year, chiefly in Bombay, and we have been obliged to allot 164½ lakhs as grants-in-aid to Provincial Revenues, to restore financial equilibrium, thrown out of balance by famine and plague requirements.

"71. It has been a serious and responsible task to meet all these heavy demands, but, thanks to the recuperative power of the country, directly due to the frugal habits and industry of the people, the task has been accomplished, and the Government of India can say with no inconsiderable satisfaction, that, with the aid of the ruled, the Rulers have done their duty, and the results have been such as to leave a memorable record in the history of mankind.

Countervailing Duties

"72. The countervailing duties on bounty-fed sugar came into practical effect in May 1899, and consequently we have not yet had two years' experience of their working. Two years is too short a period to permit of the formation of a definite opinion as to the effect of these duties, and considering also the abnormal conditions of plague and famine which have prevailed during the whole time, I think that it would be very premature to draw definite conclusions from the statistics of recent imports of sugar.

"73. The general question of the sugar trade and industry is, however, one of such wide-spread interest, that it may be useful to invite attention to the figures showing the imports of sugar into India, during the last four years, classified according to the countries of origin.

"74. I may call attention to the fact that the United Kingdom, and the interested British Colonies, the Straits Settlements, Hongkong and Mauritius, appear to have had their full proportionate share in the remarkable increase of importation into India, during the expiring financial year. It is also interesting to note that the greatest relative advance in the supply of sugar has been made by Germany, although that country is far from having recovered the predominant position which she occupied at the beginning of the period under review. Among foreign countries Austria-Hungary still keeps the lead, as an exporter of sugar to India, but does not come within measurable distance of Mauritius.

"75. I may mention that the net receipts from the countervailing duties amounted to R8,17,555 in the eleven months of the last financial year, during which the extra duties were in force, and to R15,29,552 during the first ten months of the current financial year. We may reasonably hope to encash 17 or 18 lakhs from this source before the close of this year, and it is perhaps not an unsatisfactory reflection that this addition to our Revenue has been realised at the expense of the European tax-payers, taxed by their respective Governments to provide the bounties which enable foreign sugar refiners to sell their sugar in India, at prices below prime cost.

"76. The fact is that the Government of India has added 17 lakhs to its resources by taking for Revenue purposes, the approximate difference between cost price, and the artificially maintained selling price of bounty-fed imported sugars, whilst the Indian consumer pays no more for his sugar than he would have to pay if the bounty system were abolished.

"*Imports of Sugar into British India by sea from other Countries.*

* The imports from Mauritius classed under unrefined sugar are molasses.

Exchange and Coinage.

"77. The course of exchange throughout the financial year, ending on the 31st of this month, has been remarkably steady, and I may with satisfaction repeat the statement made by my predecessor, on this question, last March, namely, that the object of Government, the maintenance of a stable exchange, has been realised during the past year; and I may add that this stability has been maintained by following lines already laid down and without involving the necessity of any further special measures or serious effort on our part:—

The average rate for Council Drafts, throughout the twelve months now drawing to a close, has been 15·979*d*.
The maximum, reached in the month of December, was 16·037*d*.
The minimum, in the month of August, was 15·933*d*.

"78. What has been done as regards the sale of Council Drafts and the coinage of rupees (and to the latter question I will return more particularly) has been done in accordance with a general policy of limiting, as far as possible, the action of Government, in exchange matters, to following and satisfying the demands of the market. I believe this to be the proper safe policy. It has been suggested that such a policy should be firmly established by legislative enactment, but I am not convinced that any enactment would give greater security than now exists for continuity of guiding principle. I fear that any possible form of enactment would bind our hands in an undesirable manner, in questions of detail, and on general grounds, it is desirable to avoid frequent recourse to legislation on exchange and currency questions.

"79. During the past year there has been no hesitation to sell Council Drafts and Telegraphic Transfers to meet demands, although during the slack season of trade sales were shorter, whilst later on the Secretary of State found himself obliged to increase his offers of Bills so as to compete with the export of sovereigns which were being largely despatched to India, by parcel post, for conversion into rupees, at our mints and treasuries.

"80. We have, without legislation, established a Gold Reserve Fund into which will be paid all profits of coinage accruing since the beginning of the closing financial year, and that Fund will serve as a guarantee for the conversion into gold, if required, of the rupee token coinage with which, to meet positive requirements, we have supplied the public so largely.

"81. The great strain on our resources, due to disastrous famine, forced us to use for current requirements, the profits of coinage during the past calendar year, but since January 1, 1901, we have commenced paying our further profits directly into the Gold Reserve Fund, and the amount thus paid in, already amounts to £800,000, to which a further sum of £400,000 will almost immediately be added, on account of coinage profits in March.

"82. As regards the profits from April 1 to December 31, 1900, amounting to about £1,730,000, these will be paid into the Gold Reserve Fund as our resources may permit, and it is our earnest desire to expedite such payments as much as possible. A special source will become available for these payments, by the reimbursement of the large advances to Native States and takavi loans provided by Government, in connection with famine necessities. The advances made to Native States alone amount to over four crores of rupees.

"83. I may here state that it is the intention of Government to invest, from time to time, in British Consols or other Sterling Securities, the sums which may be accumulated in the Gold Reserve Fund.

"84. With regard to the control of coinage operations, I think that a practical rule of conduct is to be found in maintaining as closely as possible, a sufficient sum in rupees in the Currency Reserve, to meet all demands which experience shows may reasonably be anticipated, and, for the present, we may hold in sovereigns, the balance of our Currency Reserve exclusive of the ten crores invested in Rupee Paper.

"85. This is what we have resolved to do, and although we have not yet been able to accumulate in our Currency Reserve the full sum in rupees which it is in our opinion desirable to maintain, the failure to secure this accumulation is due solely to the limited capacity of our mints and to their inability to turn out rupees as quickly as they have been required to meet an extraordinary and unprecedented demand.

"86. I submit a statement showing the results of our rupee coinage operations during the past financial year :—

Amount of Rupees, coined 1900-1901.

1900.									1901.		
April.	May.	June.	July.	August.	September.	October.	November.	December.	January.	February.	TOTAL FOR 11 MONTHS.
											₹
67,70,538	86,95,312	1,26,47,856	74,38,228	88,28,057	1,45,95,261	1,59,72,707	1,54,65,446	1,60,30,063	2,44,35,608	1,99,01,678	15,07,80,754

"Of the above total coinage exceeding 15 crores, 3 crores and 23 lakhs were coined for, and issued to, Native States.

"The monthly outturn for account of the Government of India varies considerably, but this variation must not be taken as an index of the opinion of Government as regards requirements, for the coinage of rupees for our own requirements has been hampered by the fact that our mints have been under obligations to coin, besides rupees for our own needs, both dollars for the Colonies, and rupees for Native States, and, as

regards the latter operation, no one will dispute the great advantages from every point of view of having a uniform currency circulation throughout the Indian Empire. This desirable end we now appear to be in a fair way of attaining, and apart from the advantages of securing a uniform currency, we were bound, at no matter what inconvenience to ourselves, to fulfil our contracts to Native States. We have, however, taken such measures as were possible to increase the capacity of our mints, with the result of reaching an average monthly outturn exceeding two crores of rupees in the last two months for which we have the returns.

"The figures of the Table submitted, show a total coinage for 11 months (the figures for March are not yet available) exceeding 15 crores, and for the 12 months of the financial year we shall presumably reach approximately 17 crores, of which between 13 and 14 crores constitute an addition to the rupee currency of British India. This is an enormous and surprising addition, but we have not allowed ourselves to be tempted by the large possible profits of the operation. We have not gone beyond supplying possible demands, and we have taken adequate precautions to insure the realizable value of this extraordinary addition to our token currency. I believe that what we have done has been both necessary and safe.

"87. On this question I may point out that the figures of outturn show conclusively that there has been no hesitation on the part of Government to take every possible measure to provide all the necessary circulating medium which current demand has indicated as required for the business of the country.

"88. To sum up, I may say that we have endeavoured, and will endeavour, to regulate the sale of Council Drafts in accordance with trade demands; that we have endeavoured, and will endeavour, to maintain a stock of rupees in our Currency Reserve sufficient to satisfy all reasonably to-be-anticipated demands, and even if such demands continue beyond reasonable anticipation, we still hope to maintain and improve our position. Finally, we shall accumulate from coinage profits a substantial gold reserve, independent of the Currency Reserve, and we shall from time to time invest the gold accumulated in Sterling Securities.

"89. I venture to hold that this system which we have adopted in accordance with a deliberate policy, is as nearly automatic as any that could be devised, and I think that there are practical difficulties in the way of any attempt to stereotype such a system by legislative enactment.

"90. First, I may observe that the effects of legislation are necessarily so restrictive that, though they may enforce automatic action under one set of conditions, they inevitably limit automatic action if those conditions are changed. Thus, under existing conditions, and with due regard to the present average circulation of notes, we may think that we ought to keep a certain amount of rupees in the Currency Reserve, and that we can afford to hold a certain number of sovereigns in the same fund. But the circulation of currency notes may increase or diminish (I hope and anticipate the former), and the general requirements for rupee currency may also increase or diminish; if such changes of condition occurred, what would be our position if the proportion of rupees to sovereigns in the Currency Reserve were fixed by law?

"91. We have fixed this proportion in our own minds, but, if the conditions on which our estimate is based should change, we are quite prepared to change the proportion which we have temporarily accepted as our guide. This, as we now stand, can be done immediately without recourse to legislative enactment, and without that undesirable disturbance of the public mind, which legislation on such delicate questions is liable to produce.

"92. In concluding my remarks on this subject, I think it will be of interest to state what is our position to-day as regards note circulation, rupees and silver bullion in the Currency Reserve, gold in the Currency Reserve, and gold in the Gold Reserve Fund.

The figures on March 7, were as follows:—

Notes in circulation	R28,09,15,765
Rupees in the Currency Reserve	„ 5,87,12,865
Value of silver bullion in the Currency Reserve	„ 1,78,48,764
Gold in the Currency Reserve	£ 6,956,946
Gold in the Gold Reserve Fund	£ 800,000
Total silver	R7,65,61,629
Total gold	£ 7,756,946

"93. The Government of India some time ago addressed inquiries to the Local Governments, Presidency Banks, and Chambers of Commerce, soliciting their opinion as to the best method of increasing the circulation of currency notes. Circulation of Currency Notes.

"94. I think that this is a very important question, and that the entire banking and commercial community will admit that it is desirable, if possible, to increase the circulation

of notes. But the problem how best to do so, without incurring undesirable risks and expenditure, bristles with difficulties.

"95. I cannot say that the numerous valuable communications, which we have received from the authorities whom we have consulted, have gone very far towards furnishing a definite solution of the problem, for the divergency of the opinions offered is remarkable. Difficulties, of which we were already aware, are emphasised, and the only general conclusion to be drawn is, that it is practically impossible to take any heroic measures; that we can only safely venture on some very limited experiment; and that it will take a very long time for important results to be achieved.

"96. With reference to this question, I may perhaps say a word regarding the criticisms on the circular of inquiry issued by the Government of India which have appeared freely in the press. It has been stated more than once that it is evident from the terms of the circular that the Government of India did not know its own mind on the question propounded. I am very willing to admit that, when making the inquiry, the Government of India had arrived at no definite decision as to how best to arrive at a desirable end. But I cannot admit that this is fair ground for hostile criticism.

"97. The business public undoubtedly desire that Government should take them into their confidence, and ask their opinions on such important questions. But it seems to me that it would be rather late in the day to ask opinions when we had definitely made up our own minds. I am not deprecating press criticism; on the contrary, if intelligently conducted, as it very frequently is, it is most valuable. But I think that it is not quite logical, both to blame Government for autocratic decisions, as is sometimes done, and also to accuse Government of indecision, when it is seeking the solution of a difficult problem, and asks the opinion of competent advisers.

"98. It is unnecessary to recapitulate all the difficulties of this particular question, for they are well known to all who have studied the subject. I will only say that Government recognize as the most serious difficulty to be met, the probable use of notes for large remittances, and the expense of maintaining at out-treasuries a sufficient stock of rupees to cash notes when suddenly presented for large sums. Even with the existing circulation, under existing conditions and limitations as regards encashment, we are not always able to supply rupees to those who present notes and ask for them. I am, however, strongly of opinion that if the use of currency notes became more general, and larger amounts were held in circulation, the percentage of rupees required to meet demands for encashment, would be considerably less than that which is required to-day, when, unfortunately, the circulation of notes is still hampered by the fact, that the holder of the note cannot be assured of converting it into rupees at the Treasury, and is therefore willing, and sometimes obliged, to dispose of his note in the bazar, at a discount. I hope, however, that considerable improvement may gradually be made in this respect, and that before long we may go even further and find ourselves able to adopt some limited measure in the direction of encouraging and increasing the circulation.

"99. Before quitting this subject, it may be of interest if I quote some figures showing the tendency to increase in the circulation of notes during the last few years.

I.—Statement showing the gross circulation of paper currency for all India.

	1897-98.	1898-99.	1899-1900.	1900-1901.*
	R	R	R	R
Average	24,24,00,000	25,63,00,000	27,96,00,000	28,79,00,000
Maximum	24,76,00,000	28,20,00,000	29,27,00,000	30,78,00,000
Minimum	22,86,00,000	23,25,00,000	26,26,00,000	27,90,00,000

* Eleven months only.

II.—Statement showing in lakhs the circulation of paper currency excluding amounts held by the Government Reserve Treasuries and by the Presidency Banks at their head offices.

	1897-98.	1898-99.	1899-1900.	1900-1901.†
	R	R	R	R
Average	20,35,00,000	20,79,00,000	23,09,00,000	23,84,00,000
Maximum	21,20,00,000	22,49,00,000	24,41,00,000	25,02,00,000
Minimum	19,44,00,000	19,43,00,000	21,94,00,000	22,85,00,000

† Eleven months only.

"100. The above tables show a decided and satisfactory increase in the average note circulation in the hands of the public during the last four years, and I think that the indication thus given by facts, is a sufficient encouragement to persevere in the policy of seeking to augment our note circulation.

"101. We have reviewed the financial situation in its more important features. We may now turn to the consideration of the economic situation. Economic Progress.

"102. In my opinion, the question of economic development is one in which those responsible for the financial situation must take the keenest interest. It has always appeared to me that it is comparatively easy for a Government, to take money out of the pockets of the public, provided that those pockets are sufficiently well-filled. Hence, I think that we are specially interested in doing all that is in our power to promote economic progress.

"103. I pass to the consideration of certain facts and figures indicative of the economic situation.

"104. In dealing with the great question of meeting famine requirements, I have already alluded to the recuperative power of India. The fact that we have been able to meet the extraordinary demands on our resources, due to famine and plague, and that we are to-day able to present a budget showing, notwithstanding the simultaneous serious depression in three such important industries as cotton, tea, and indigo, a distinct and satisfactory increase of revenue obtained without increase of taxation, is in itself the strongest evidence of that recuperative power. But I think that close examination of certain material facts will afford further proof that our belief in this recuperative power is not an idle assumption.

"105. We may first consider the more important indications of the figures of revenue returns during the last four years.

"106. It was natural and inevitable, that the land revenue in certain provinces should suffer and diminish through the direct influence of the calamities which have befallen us, but, whilst land revenue has necessarily fallen off in some afflicted provinces, in others, more favoured by Providence, the collections have increased with the prosperity of the people. Fortunately too we are not dependent on land revenue alone, and I observe, with some satisfaction, that on the whole, over a series of years, the proportion of land revenue to the total of our resources shows a diminishing tendency.

"107. In 1897-98 the proportion of land revenue to general revenue was 26·63 per cent, in 1898-99 27·08 per cent, in 1899-1900 25·07 per cent, in 1900-1901 it will be 23·54 per cent, and the estimates for 1901-1902 result in a proportion of 25·17 per cent.

"108. There are certain other sources of revenue, which I trust will, year by year, assume greater importance, and in the returns from which we may find indications of general economic progress. In particular I think that such indications may be noted in the increasing revenue derived from Salt, Customs, and Post Office. The following are the figures under these respective heads:—

	Accounts, 1897-98. R	Accounts, 1898-99. R	Accounts, 1899-1900. R	Revised, 1900-1901. R
Salt Revenue . .	8,59,42,250	9,09,98,713	8,77,56,944	8,92,66,000
Customs Revenue—				
Import duties .	3,73,51,650	3,59,25,090	3,61,39,583	3,89,65,000
Excise duty on cotton goods .	11,61,880	13,72,910	13,36,623	10,88,000
Export duty . .	72,48,190	1,01,12,130	87,63,905	90,09,000
Land Customs and Miscellaneous .	6,51,230	6,11,490	7,66,751	8,00,000
TOTAL .	4,64,12,950	4,80,21,620	4,70,06,862	4,98,62,000
Post Office Revenue .	1,87,91,630	1,91,40,671	1,96,24,722	2,03,04,000

"I think that the Salt revenue returns are particularly encouraging as indicating not only a steadily increasing tendency, but in particular, as showing that even in the past disastrous year of famine and pestilence, the general consuming power of the population, as a whole, not only suffered no diminution, but, on the contrary, showed an improvement over the preceding year.

"109. The same considerations apply to the figures of Customs Revenue, though even in a more remarkable manner, for whilst we find a diminution of about 2½ lakhs in the yield of Excise duty on cotton goods, a diminution due to an industrial crisis and having no connection with the general condition of the country, under all other heads, there was a marked increase, resulting in a total improvement, over the previous

year, of nearly 29 lakhs, and producing the highest total figure of revenue recorded by the Customs Department, since the duties on cotton yarns were abolished in 1896.

"110. As regards Post Office revenue, the same absolute conclusions cannot be drawn from the fluctuations of revenue as may be fairly assumed in the case of Salt and Customs. Post Office profits are necessarily seriously affected by arbitrary reductions of postage rates, which, however necessary and profitable in the long run, must cause an immediate, though temporary, falling off in receipts.

"111. I think, however, that when, as in the case of the Indian Post Office returns, a steady progress of revenue is observable, we are entitled to consider such progress as strong evidence of satisfactory economic development, a development which has not only material, pecuniary results, but is important, as evidence of general moral progress.

"112. I have already alluded to the growth of Railway revenues, and, although the task of drawing conclusions from the figures of railway receipts is complicated by the difficulty of distinguishing increase due to increased mileage, from increase due to increased traffic, nevertheless, the actual increase of gross railway receipts affords positive proof of greater movement on the railways, and, in so far, of general development.

"113. The most important industry in India and the one directly interesting the innumerably larger proportion of the population is agriculture.

"114. The prosperity of the agricultural population, the deepest concern of the Government of India, has, in the last five years, received apparently crushing blows through the unprecedented recurrence of famine. The effect of repeated droughts is indeed far reaching, and the terrible loss of cattle is a most distressing incident of the late famine, which will long make itself felt in Gujarat and other similarly affected districts; but the figures of Land Revenue, which I have quoted, conclusively show that, whilst some unfortunate territories have suffered most severely, others have prospered, with the general result that, as a whole, the agricultural population in the Indian Empire is somewhat better off to-day than it was a year ago.

"115. *Primâ facie*, this is certainly an astonishing conclusion, but if the whole situation be examined it is perfectly natural and logical. Bengal, the Punjab and Madras show by the land revenue returns that they have been doing well, Assam has held its own, and Burma, favoured with a magnificent rice crop, was able to export its staple produce, on the most profitable terms, to feed the famished peoples of Western and Central India, and is in a condition of remarkable prosperity. Further it may here be mentioned that the unprecedented transport of food-stuffs on the railways, swelled Railway Receipts, and contributed a useful addition of Revenue wherewith to meet the demands of famine sufferers.

"116. Two special branches of agricultural industry, indigo and tea, are unfortunately now passing through a serious crisis. Indigo is being hard pushed by the competition of a foreign chemical product, and the easily made profits of former days have become a thing of the past. But, when the first stages of consideration and research have already revealed that there has been room for economy in administration, that superior crops can be raised by manuring, scientific rotation and selection of seed, and that the actual product of the vats can be increased up to 30 per cent by the use of the 'blower,' there would appear to be reasonable hope for a return to more prosperous days.

"117. The history of the tea industry in India has been a very chequered one, alternating between periods of great prosperity and the deepest depression, and it may, therefore, be hoped that the present crisis, which seems to be generally attributed to over-production, may in its turn be succeeded by a renewed period of prosperity.

"118. Manufacturing industries still hold but a very small proportionate place in the economy of India, but their importance is increasing and there is every reason to desire that it should increase. The cotton industry, the most important hitherto, is unfortunately passing through a period of considerable depression, and in some quarters it is held that the introduction of spinning high numbers will be necessary to secure a full revival.

"119. Cotton is, however, the only manufacturing industry which appears to be in even temporary difficulties, and the rapid increase in the number of important factories and workshops during the last few years is really remarkable and most encouraging.

"120. I may cite a few examples of industrial development.

"121. In the year 1895 there were 350 cotton factories including spinning and weaving mills, and there were 586 such factories in 1899. The number of engineering workshops and foundries, including railway workshops, rose from 72 in 1895 to 82 in 1899, and jute mills and presses from 62 to 82. Rice mills numbered 65 in 1895 as against 84 in 1899, and sugar factories 9 in 1895 as against 14 in 1899.

" 122. The imports of machinery and mill-work and of iron and steel, also afford important indications of progress. These have, as might have been expected, been recently adversely affected by the serious depression in the cotton industry, by far the most important manufacturing interest in the country. Nevertheless, if we take into consideration the natural effects of this special depression during the last two years, it is most satisfactory to find that the average value of imports of machinery and mill-work during the last five years, has surpassed that of the previous quinquennial period, by, approximately, 75 lakhs, equivalent to an increase of nearly 30 per cent.

" 123. Perhaps, however, the most satisfactory statistics are those showing the production and export of coal during the last few years. The exports of coal, which only amounted to 222,380 tons in the year 1897, reached 490,490 tons in 1900, and there appears every reason to anticipate further progressive development in this direction.

" 124. As regards the total output of coal, in 1897 it was 4,063,127 tons, whilst in 1899 it reached 5,089,392 tons, showing an increase in two years of about 25 per cent, and the figures so far available for the subsequent period, show that progress is being well maintained.

" 125. Other interesting figures bearing on the question of economic welfare are to be found in the statistics of the Savings Banks and Provident Institutions.

" 126. Between 1895-96 and 1899-1900 the balance at the credit of depositors increased by ₹1,88,111 notwithstanding the two disastrous periods of famine with which the country was afflicted during this short term of years.

" 127. As regards the condition of trade, as apart from industry, it is rather difficult to fix on any special figures from which to generalise or draw sound conclusions. I give, however, below, a table showing the value of exports and imports, exclusive of treasure and Government stores, during the last four financial years, and for ten months of the current year. This table shows a slight falling off in exports during the year 1899-1900, amounting, however, to less than 4 per cent, but taking all the figures of both export and import together, the total value of trade is only about 1 per cent less than for 1898-99, and considerably in excess of the preceding years tabulated. Considering the numerous disadvantages under which the export trade has been labouring since the recommencement of famine, I think that on the whole these figures indicate commercial strength, and a generally satisfactory situation.

	1896-97.	1897-98.	1898-99.	1899-1900.	1900-1901. Ten months, 1st April to 31st January.
	₹	₹	₹	₹	₹
Total Imports . .	71,79,38,293	69,26,66,625	68,38,03,412	70,71,18,634	62,06,92,778
" Exports (including re-exports) .	1,03,91,42,972	97,53,72,730	1,12,72,14,730	1,08,97,61,873	86,98,70,628
Total Exports and Imports . . .	1,75,70,81,265	1,66,80,39,355	1,81,10,18,142	1,79,68,80,507	1,49,05,63,406
Excess Exports over Imports . . .	32,12,04,679	28,27,06,105	44,34,11,318	38,26,43,239	24,91,77,850

" 128. Another point connected with the question of the general trade situation, and which affects traders very closely, is the bank rate for the use of money.

" 129. The annexed Table shows the rate of the Bank of Bengal month by month, since January 1897, and it will be observed that since August 1898, a fairly uniform tendency has prevailed, and that a maximum rate of 8 per cent has rarely been reached and never passed. I think that an 8 per cent rate during the busiest season of the year is no serious hindrance to business in India, although, if we could reduce our normal maximum to 6 per cent, it would be an advantage. But we must remember that if the rate of interest in India were brought down to the low averages prevailing in Western Europe, there would no longer be any temptation to capital to seek investment so far afield.

" 130. In connection with this question I may point out that, according to the figures tabulated, there is much less relation, in India, between the volume of trade and the rate of interest than would naturally be supposed.

" 131. It will be observed from the subjoined Table that, whilst a 7 per cent rate existed concurrently with the comparatively small exports during October and November 1897, no higher rate was induced by the comparatively large exports in the first three months of 1899; and that, whilst a 10 per cent rate was maintained in April 1897, when the value of exports was below average, a 5 per cent rate sufficed for the large exports of October 1900.

" 132. These figures would seem to indicate that the rate of discount, and therefore the demand for loanable capital, has been at times, more dependent on speculation and the nervous apprehensions of traders, than on the real requirements of trade.

"133. The consideration of these figures leads me to hope, that provided our money markets do not become the victims of speculators (and to avoid this we must rely on the prudence and good sense of the banking community), we are now reaching a more permanently stable monetary condition, than that which existed three or four years ago.

"134. A factor tending in this direction is, I think, to be found in the development of communications and increasing facilities of credit, which must tend to prolong the seasons for export of such staples as rice, jute, cotton and seeds, and thus facilitate the financing of the trade.

Conclusion.

"135. I may now endeavour to sum up the general situation.

"136. It has been shown that our economic situation, on which our financial situation depends, is, notwithstanding checks in certain directions where it has been prejudicially affected by known causes, on the whole good: that, wherever not prejudiced by such special, and it may be anticipated, temporary difficulties, it is progressive, and that the evidences of general recuperative power are many and satisfactory.

"137. At the same time, in a country where the returns of Revenue depend so largely upon meteorological conditions impossible to foresee or to control, it behoves us to frame our Estimates with great caution. This we have done, and still our Estimates of Revenue Receipts show an increase of over £2,000,000 above those framed by my predecessor for the closing financial year, and if we remove from the Account the purely fortuitous receipt of, approximately, £3,000,000 on account of Mint operations, they are slightly in excess of the realisations of 1900-1901.

"138. It is indeed fortunate that we are able to present such satisfactory figures, for, as already stated, we are not yet free from the charges and consequences of famine.

"139. It has been our first care to afford relief from the financial prostration affecting so many Provinces, where not only necessary Balances have been exhausted, but where also, stern need for the strictest economy has most unduly curtailed expenditure necessary to meet many primary needs of society, such as public works, education, medical requirements, and administrative improvements. We have been as liberal in this direction as prudence permitted, and have made grants-in-aid to Provincial Revenues amounting in the aggregate to 164½ lakhs.

"140. In addition to this abnormal charge on our Revenues, we must devote one crore of rupees from the Famine Insurance Grant to direct famine expenditure in the still afflicted districts, and to this again, as a consequence of the lessons of the South African War, is added a large sum for Army Services, increasing the estimated charge on this account by £876,500 above the sum sanctioned for 1900-1901.

"141. These large extraordinary charges, amounting together to over £2,600,000 are, however, more than balanced by an estimated reduction, as compared with last year of £3,245,000 in general famine expenditure, and by the exercise of strict economy

where permissible, we are finally able to show a surplus of £690,900 to be carried forward to Capital Account and to reduce by so much the amount which we shall be obliged to borrow for railway construction and irrigation works, on the prosecution of which we are so largely dependent both for general economic progress and for protection from the direct and indirect effects of recurring famine.

"142. In conclusion I may say that the Estimates for 1901-1902 are of good promise, and that, unless our reasonable anticipations are falsified by an unprecedented recurrence of serious disasters, we are entitled to look forward with some confidence to the future, and to hope for the early dawn of a period of considerable prosperity."

The Council adjourned to Friday, the 22nd March, 1901.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 22nd March, 1901.

FINANCIAL STATEMENT FOR 1901-1902.

PART I.

INTRODUCTION.

1. IT is my duty to lay before the Legislative Council, statements showing the actual financial results of the year 1899-1900: the results according to Revised Estimates for the year 1900-1901; and the Budget Estimates for the coming financial year 1901-1902.

2. In their briefest form and leaving out Capital, Debt, and Remittance transactions, the figures are as follows:—

	1899-1900 (Accounts).
	£
Revenue	68,637,164
Expenditure (charged against Revenue)	65,862,541
Surplus	2,774,623

	1900-1901 (Revised Estimate).
	£
Revenue	75,166,000
Expenditure (charged against Revenue)	73,525,600
Surplus	1,640,400

	1901-1902 (Budget Estimate).
	£
Revenue	72,191,900
Expenditure (charged against Revenue)	71,501,000
Surplus	690,900

3. Before proceeding to the detailed consideration of the figures composing the above totals, I think it would be well to explain a slight modification of system which we have decided to adopt in our Accounts.

Changes in the form of Accounts.

4. We have had under consideration the advisability of some simplification in the General Statement of Accounts and Estimates of Revenue and Expenditure, and Receipts and Disbursements.

5. It has appeared to us that by submitting this Statement under two heads, separating Ordinary Revenue and Expenditure, from Receipts and Expenditure on Capital Account and Debt and Remittance transactions, the general result will be made clearer to the public.

6. We have therefore, with the consent of the Secretary of State, adopted a form showing, first, all purely Revenue Receipts, and Expenditure charged against the same, and indicating differences between the respective totals as 'surplus' or 'deficit' according to circumstances. We then show separately, Capital Receipts and Expenditure, the Debt and Remittance transactions, and the opening and closing cash balances, including in the proper columns, the surplus or deficit resulting from the difference between Ordinary Revenue and Expenditure.

7. This change is not in itself of great importance, but I think that it offers the advantage of presenting the Accounts, in a more readily intelligible form, and, moreover, that it is technically correct.

8. It would seem expedient to strike a balance at the end of the first section of the Statement, to show as Surplus or Deficit, in the body of the account, the difference between Ordinary Revenue, and Ordinary Expenditure charged against that Revenue, and to make a very marked distinction between the two main heads of the Statement, (1) Ordinary Revenue and Expenditure charged against Revenue and (2) Capital, Debt, and Remittance transactions. The final result of the second section of the Statement is the closing cash balance in hand at the end of the financial year.

9. We have at the same time adopted certain minor changes which I will proceed to indicate.

10. There seems no reason why the comparatively unimportant expenditure on "Construction of Railways charged against Revenue, in addition to that under Famine Insurance", should be shown separately in the General Statement, which is designed to exhibit only the leading and important figures. The expenditure under this head is now insignificant in amount and is either "Provincial" or "Local." We have therefore combined it with that under Buildings and Roads, giving to the group the title of "Other Public Works."

11. In view of the importance of the heads Post Office, and Telegraph, (the figures for which are specially watched by many observers interested in the general and economic progress of a country) we think there will be an advantage in giving a separate line to each of them, even in the General Statement, and, in view of the decision to treat the profits of coinage specially, we think it desirable also to show the Mint figures separately.

12. Further, with the object of bringing together all the entries connected with capital expenditure on Railways and Irrigation Works, we have adopted another change which will, in our opinion, be a distinct improvement. It is to group together under the heading "Railway and Irrigation Capital not charged to Revenue," the figures relating to the Capital of Railway Companies, which are at present shown under "Debt, Deposits and Advances," and those for the similar direct capital transactions of the Government, which are now shown under the heading "Expenditure not charged to Revenue." We shall thus have a perfectly distinct Capital account, with the advantage of showing in one place, the whole capital outlay on railways, whether by Government, or through Companies.

13. Being convinced of the value and improving position of the Government property in railways, we are anxious that the Railway Accounts should be readily understood by the investing public, and we consider the changes relating to railway accounting, now proposed, as a step in the direction of attaining desired simplicity, in a somewhat complicated technical question of accounting.

Accounts, 1899-1900.

14. The closing of the Accounts of the financial year 1899-1900 shows an improvement in Actual Receipts of £712,164 over the Original Estimates and £104,764 over the Revised Estimate, as submitted by my predecessor last year.

15. The differences between the Original and Revised Estimates were explained by Mr. Dawkins last March, and the differences between the items of Revenue in the Revised Estimate and those of the final Accounts are insignificant and call for no special remarks. I need only mention that the final Accounts show an improvement of £123,545 in Railway Receipts, with the result that Railway Revenue Accounts brought out a net profit of £76,756.

16. In Expenditure charged against Revenue the final Accounts show an increase of £559,341 as compared with the Original Estimate, and a decrease of £117,059 as compared with the Revised Estimate, the largest item in the latter being a decrease of £144,374 under 'Army.'

Revised Estimate, 1900-1901.

17. The difference between the original and the revised Estimate of Receipts is very considerable, the increase amounting to £5,010,200; but, of this increase, a sum of approximately £2,900,000 comes under the head of Mint, and is balanced by a correspondingly large increase under the same head in Expenditure. These considerable differences are due to the large coinage of rupees, which could not be foreseen; but, deducting the sum due to this cause, we still have to account for an increase of Revenue exceeding £2,100,000.

18. It is certainly very gratifying to note that, in spite of all the troubles of the past year, every main head of Receipts except Land Revenue shows a more or less important increase.

19. The most notable augmentations are:—under Opium, about £572,000, due to the high price of opium; £106,000 in Salt, due to increasing consumption, although under this head we have cause to be dissatisfied with the Burma returns; £138,000 in Excise; £190,000 in Customs, a certain sign of consuming capacity and therefore of progressive well-being; £86,000 from Telegraphs, partly due to exceptional circumstances connected with Famine and partly to the increasing demand for news owing to the wars in South Africa and China, and the fatal illness of the late Queen-Empress; £965,000 in Railway Receipts, partly due to the large movement of food-stuffs for famine requirements and partly to increased mileage and general development; £208,000 under Irrigation; and finally an increase of £130,000 under Military Department Receipts, which is purely fortuitous, and represents the value of Military Stores sent abroad and debited to the Home Government. The totals of the items I have mentioned account for an increase in Receipts of about £2,395,000.

20. Against this satisfactory increase in the great majority of items of Revenue we have to record a heavy deficiency, as between the Revised and original Estimates of Land Revenue, amounting to £382,900. This is the only main heading of Revenue which shows a falling-off, and the unfortunate result tabulated is sufficiently accounted for by the severity and prolongation of famine in some of the western and central districts.

21. When we turn to Expenditure, we find that the total of the Revised Estimate exceeds that of the original Budget Estimate by about £3,530,000. But here again we must make a reduction of about £2,900,000 under 'Mint,' the amount of the net profit on coinage to be credited to the Gold Reserve Fund, and consequently we have only to account for between £600,000 and £700,000 of increased Expenditure, above the original Estimate.

22. The most important item of increase in Expenditure is under the group "Famine Relief and Insurance," which amounts to about £876,000. This unfortunately needs no explanation. The next in importance is an increase of £323,000 under "Railway Revenue Account," but this augmentation was due to, and more than compensated for, by increased traffic yielding the larger Revenue already indicated. The charge under 'Interest' also exceeds the Budget Estimate by about £200,000 and Miscellaneous Civil Charges by £74,500.

23. On the other hand, "Other Public Works" decreased by about £118,000, out of which about £42,000 is to be attributed to reduced expenditure on Military Works, and "Army Services" cost less than anticipated by about £1,185,000, the saving being chiefly due to the absence of troops in China and South Africa. There was also a decrease of £124,000 under Salaries and Expenses of Civil Departments, and finally, the differences in the Accounts under Provincial Deficits and Surpluses increased the expenditure as shown in the Statement by £576,400.

24. The grand result indicated by the Revised as compared with the Original Estimate for 1900-1901 is to increase the originally estimated surplus of £160,300 to a fairly assured surplus of £1,640,400.

Budget Estimate, 1901-1902.

25. We may now turn to the consideration of the Budget for the coming financial year.

26. It will be observed that, if the abnormal receipt under 'Mint,' included in last year's Estimates, is omitted, the difference between the totals of Receipts, according to the Revised Estimates of the closing year, and the Estimates for 1901-1902, now presented, is very small, and amounts only to an anticipated increase of Revenue of £71,900 in the coming year.

27. Under certain heads, however, the differences are considerable and demand attention.

28. Land Revenue is estimated to produce £474,800 more than last year, and in view of improved prospects throughout the greater part of India, this Estimate is unlikely to prove too sanguine, although, until we are sure of a favourable monsoon, the most moderate Estimates may be suddenly and hopelessly falsified.

29. The only other main heading of Revenue which is expected to yield an important increase is 'Railways,' where Receipts are expected to exceed those of last year by £331,400. The anticipated increase is chiefly due to the inclusion of gross instead of net Receipts from the Great Indian Peninsula Railway for 12 months in the coming

year, as against 9 months only in the closing year, and also, to some extent, to increased mileage opened to traffic.

30. Besides the above-noted increases, variations in the items included under 'Other Heads' are estimated to produce, on balance, an additional £183,400, the more important improvements being £160,800 in Provincial Rates, and £62,600 in Tributes from Native States.

31. Other minor improvements make up the total increase of Revenue, as compared with the Revised Estimate for 1900-1901, to £1,086,500.

32. Against these improvements we have, however, (always excluding Mint) to note a considerable reduction under various important heads. Opium is estimated to yield £589,300 less than last year, since it would not be prudent to count on the continuation of the abnormally high prices which have lately prevailed. Customs are estimated at £130,100 less, the most important variation in detail being a lower Estimate for imports of Sugar, the duties on the extraordinarily large importation of which have abnormally swelled our Receipts during the past year. Irrigation Receipts necessarily fluctuate with the increase or decrease of the demands of agriculturists for water, and are higher in bad seasons; we therefore anticipate for next year a smaller return by £127,400.

33. The above are the more important heads of decrease, and other minor variations account for, approximately, a further £161,800, making up the total of items of decrease to £1,014,600.

34. I now turn to Expenditure, which as a total, and again excluding 'Mint,' shows an increase of £1,131,900 reduced to £923,500 by the differences under the Provincial Deficits and Surpluses.

35. The total increase under various heads is £4,446,900, of which £2,062,100 is for Army Services, £728,400 for 'Other Public Works,' and £652,400 for Railway Revenue Account. Concerning these three items I shall have some remarks to make when I deal specially with Military and Public Works Expenditure. Other heads including 'Direct Demands on Revenue,' £161,600, 'Salaries and Expenses of Civil Departments,' £493,200, and Miscellaneous Civil Charges, £123,900, make up the total figure of increase above indicated.

36. Expenditure in all directions has been so greatly and necessarily restricted during the period of financial distress that, now that we may fairly estimate for an improvement in Revenue and a very important diminution of Charges for Famine Relief, we have been glad to show some comparative liberality in meeting urgent administrative demands. The Famine Charges, including £250,100 for Reduction or Avoidance of Debt, are taken at £3,245,000 less than for the past financial year.

37. We have examined the more important figures of the Budget, I will now endeavour to sum up the situation.

38. Our estimate of Revenue and Expenditure chargeable against Revenue closes with a surplus of £690,900. This surplus we carry forward to the second part of our Statement dealing with Capital Account and including Deposits, Remittances and Advances.

39. Our total Estimate for Capital Expenditure (not chargeable to Revenue) on Railways and Irrigation amounts to £5,395,600, of which sum £2,019,400 is for State Railways and £2,709,500 for the Account of Railway Companies, the balance being for Irrigation Works. In addition to the above, we have to find £301,900 for discharging Temporary Debt, and also to provide for other minor Capital Expenditure amounting to £944,500, including an over-payment in India of £330,200 on account of Secretary of State's Bills, and we finally arrive at a gross total of Capital requirements amounting to £6,642,000.

40. To meet this outlay, we have, in addition to our surplus of £690,900, a sum of £1,663,400 raised by Railway Companies. We further anticipate procuring £2,240,000 by addition to our Permanent Debt, of which sum we contemplate raising two crores of rupees in India, £502,500 from addition to the Unfunded Debt, and £111,200 from repayment of Loans and Advances.

41. These sums amount in the aggregate to £5,208,000, and the balance required to meet the total Capital Expenditure of £6,642,000 is found by a reduction of £1,434,000 in our Closing Balances in India and England.

The final result will be a Closing Balance on March 31, 1902, of £10,500,327 in India and £2,605,943 in England.

42. The present intention of the Secretary of State is to draw bills amounting to £16,500,000 during the course of the coming year. I have omitted this figure from both sides of the account I have summarised.

43. There is a point in connection with our Treasury operations which is perhaps likely to be the object of remark, or question, and on which I think it may be well to

give some explanation beforehand. I refer to the fact that, whilst our Estimates show a comparatively large cash balance in hand in India, at the end of the coming financial year, we nevertheless announce our intention of adding to our permanent indebtedness by raising a loan in India during the course of the year.

44. The necessity obliging us to take this course arises from the fact that during the earlier part of the financial year our Revenue collections are very small, as compared with monthly expenditure, and our balances gradually diminish, until in November, they fall so low that we have to calculate our ways and means and assure our supplies with great care, so as to tide over the critical period till the last four months of the financial year, when Revenue Receipts begin to pour in.

45. It will be understood then, that it is the anticipated condition of our resources in the month of November which necessarily fixes the amount of our borrowings without regard to the possibility of a relative plethora of cash in our Treasuries, three or four months later.

46. The Government of India is at a great disadvantage in this respect, owing to the non-existence of any financial institution sufficiently strong to be able at all times to provide such funds, for short terms, as may be required to satisfy the temporary needs of the Treasury.

Government Balances with the Presidency Banks.

47. It has, I believe, often been urged that the relatively high rates of discount prevailing in the busy winter season from December to the end of March are due to the low figures of Government balances with the Presidency Banks, during those months.

48. I give below the figures showing these balances during the last four years. They are as follows :—

	1897.	1898.	1899.	1900.	1901.
	₹	₹	₹	₹	₹
January .	2,84,69,815	3,10,74,779	3,22,88,586	2,83,49,286	3,31,13,363
February .	3,00,23,776	3,22,51,227	3,30,81,480	3,01,62,613	3,09,14,761
March . .	3,77,40,338	3,27,96,275	3,16,44,816	2,64,87,648	
December .	2,88,20,840	2,92,33,557	2,73,30,372	2,74,96,162	

49. I think that, although special circumstances reduced these balances last year, the above quoted figures show that the Government of India is not unmindful of the advantage to the business community of placing comparatively large balances at their disposal, during the busy season.

50. In my general summary which includes under various main heads, the different items of Provincial Finance, I have not discussed any details of this branch of accounts, as I have nothing to add to, or to explain in, the very clear statement on this head, prepared by Mr. Finlay with his usual ability and industry and to which I would specially invite attention. This statement is to be found in Section VI, Part II of this Financial Statement.

Expenditure on the Army and Public Works.

51. In all countries in the world, the greatest drain on financial resources and in some respects the most difficult to justify, is that caused by the combined heavy demands for military requirements and for public works.

52. But our whole existence depends on proper provision for the defence of our frontiers, and without continual expenditure on public works, the development of communications so absolutely necessary for economic progress, could never be realised, whilst the large sums spent on irrigation are more than justified by the magnificent results obtained from this class of expenditure, yielding, as a rule, not only direct and immediate profit, but also providing for the sustenance of millions, who would otherwise be included among the sufferers from recurring droughts.

53. As regards military expenditure, although we have granted very large sums for the improvement of our military position as regards defence, every additional item which has been agreed to, has not only been most jealously scrutinised in the Finance Department, but has also been submitted to the close examination of the Governor General in Council.

54. The lessons derived from the war in South Africa could not be neglected. It was our responsible duty to take them to heart, and we have done our best under the guidance of the military advisers to Government to profit by them.

55. Fortunately, the savings realised in our general military expenditure owing to the temporary absence of our troops in South Africa and China have enabled us to provide for a portion of the urgent needs of the army without adding to our general burdens; for the rest, we have done what is for the moment in our power, but we cannot yet say that our task is completed.

56. The following figures show the Net Military Expenditure during the last few years :—

	£
1898-99, Accounts	15,385,042
1899-1900 „	14,165,743
1900-1901, Revised	14,239,100
1901-1902, Budget	16,345,500

57. The increase in the estimates for the coming year is very considerable. Items classed as new expenditure amount to about 142 lakhs charged under Army in addition to about 18 lakhs connected therewith, charged to Military Works. Of this total, amounting to, approximately, 160 lakhs, about 127 lakhs are non-recurring, and 33 lakhs recurring. It includes, among other heads, provision for the expenditure of 94 lakhs on artillery, rifles, ammunition and ordnance stores; approximately 8¼ lakhs for the establishment of the gun-carriage factory at Jubbulpore and the cordite factory in the Neilgherries; and 21½ lakhs for the establishment of an efficient transport service, including the purchase of animals.

58. The expenditure on factories for manufacturing munitions of war in India, will not only have the effect of increasing our military independence, but also the highly satisfactory result, from the economic point of view, of substituting expenditure in India for expenditure abroad, of increasing the productive power of the country, and of training a large body of mechanics and other skilled artisans.

59. As regards expenditure on public works, we have given our special attention to rendering existing railways more efficient, by the provision of additional rolling stock and other requirements for their satisfactory and profitable working. We have also set aside a large sum for expenditure on irrigation works as a protection from famine. The grant under this head for the coming year amounts to one crore and is the same as that sanctioned last year, whilst in considerable excess of the sums allotted in the immediately preceding years for the same purpose. But we are convinced that the money will be well spent.

60. The following figures show the comparative capital expenditure on public works, during the last few years, classed under the more important heads, and the programme for expenditure in 1901-1902 :—

	R
1898-99—	
Railways	8,84,21,189
Irrigation	65,35,482
	9,49,56,671
1899-1900—	
Railways	8,96,77,803
Irrigation	89,69,400
	9,86,47,203
1900-1901 (Revised Estimate)—	
Railways	8,30,75,000
Irrigation	90,08,000
	9,20,83,000
Programme, 1901-1902—	
Capital expenditure on open lines	4,59,97,000
Ditto lines under construction	4,59,47,000
Ditto new lines only recently commenced	1,13,00,000
Ditto Irrigation	1,00,00,000
TOTAL	11,32,44,000
Classification.	
Capital expenditure for Railway Construction—	
To be raised by Government :—	2,22,86,000
Ditto Companies	8,09,58,000
TOTAL	10,32,44,000

61. I think that after consideration of the above figures showing comparative capital expenditure, I should invite special attention to the comparative net results of the working of our railway system. The following figures give the net deficit or surplus since 1897-98:—

1897-98.	1898-99.	1899-1900.	1900-1901 (Revised Estimate).	1901-1902 (Budget Estimate).
£	£	£	£	£
709,304	—620,165	+76,756	+156,200	—164,800

62. In noting the relatively unsatisfactory estimate of net results for the coming year, it must be borne in mind that the traffic of last year, due to transport of famine supplies, was exceptionally large, and that we have now made specially large provision for repairs, renewals of rolling stock, and other improvements to be charged against next year's revenue.

63. Further, I must point out that, if we take only the figures of traffic receipts, £18,427,600—and those of working expenses £8,655,300,—the results anticipated for the coming year, are somewhat better than those for the year 1900-1901, and show a net profit (thus calculated) of £9,772,300 as against £9,701,600 last year. The final estimated falling-off is due to an increase of expenditure under the heads of Interest and Annuities, in connection with new construction and the purchase of the Great Indian Peninsula Railway. These are temporary drawbacks, and the decrease in net revenue is temporary as the lines under construction will add to revenue when opened for traffic.

64. It is unnecessary for me to enter into further details concerning expenditure under the two heads I have now been discussing, since it is the main principles guiding such expenditure, and the possibility of satisfying recognised requirements, which alone concern the Finance Department. Questions of detail lie outside the province of that Department and are the immediate concern of the Honourable Members of Council at the head of the Military and Public Works Departments.

Results of the Famine.

65. During the past financial year this great Indian Empire has been suffering from an appalling calamity, quite unprecedented, I think, in the recent history of any country on the globe's surface. Not only have we been the victims of a famine of extraordinary severity, the inevitable outcome of the early cessation of the rains in the year 1899, but to the consternation of all men, responsible for, or interested in, the welfare of the millions of agricultural population, the coming of the periodical rains, required to refresh the thirsty soil and restore the fecundity of mother-earth, was so delayed last season, that the trials of the long suffering populations were prolonged in the most distressing and unexpected manner. But this was not all. In addition to the calamity of famine, the plague pestilence is still with us, and the terrible list of its victims is daily to be counted in the official returns from the plague-stricken districts. And this too weighs heavily on the resources of the country.

66. The Government of India has followed with the keenest anxiety the course and results of these awful afflictions, so entirely beyond its control, and it has recognised with profound admiration the splendid spirit with which millions of sufferers have faced the calamities from which they were powerless to escape.

67. The suffering condition of our fellow-subjects has been brought home to us, in the most incisive manner, through the continued and heart-rending appeals for assistance which have reached the Government of India. It is however my duty, and a happy duty, to state that, under the instructions of the Secretary of State and the Government of India, all such appeals have been considered by the Departments concerned, in a most liberal spirit, and no single appeal examined in that spirit by the competent authorities, has remained unsatisfied. The national purse and national credit have been freely placed at the disposal of all whose genuine distress might, it was hoped, be relieved by the prompt expenditure of money.

68. Such has been the spirit guiding our action, and it now falls to my duty to state the cost of our gigantic undertaking.

69. To count it with any approximation to accuracy is impossible, for it is not the direct expenditure of money which alone is involved: there has been an expenditure of life, health and energy of the numerous Government servants, both European and Native, who have nobly done their duty in facing the storm: in addition to the direct cost, of gratuitous famine relief and relief works, of remissions of taxation, of agricultural

loans, of loans to assist afflicted Native States, of provision of medical assistance, and of special payments to famine officers, there has also been the indirect cost of loss of revenue, both as regards land revenue and miscellaneous taxes, and the incalculable, but probably still greater future cost of checked economic development.

70. We can fairly count the direct cost; the indirect cost must necessarily escape accurate calculation.

The following are the principal items of direct loss and expenditure:—

	R
Famine relief	6,33,76,000
Remissions and Suspensions of Land Revenue and Provincial Rates	1,47,16,000
Compensations for dearness of provisions and other charges	66,03,000
TOTAL	8,46,95,000

In addition to the above, we have provided:—	R
Loans to Native States	4,11,00,000
Special Agricultural Advances	1,42,00,000
TOTAL	5,53,00,000

This is an appalling total, but the calamity was also appalling. And the tale is not yet told. Expenditure will continue in the coming year. Already we have been called upon to provide approximately a crore for direct famine expenditure in the coming year, chiefly in Bombay, and we have been obliged to allot 164½ lakhs as grants-in-aid to Provincial Revenues, to restore financial equilibrium, thrown out of balance by famine and plague requirements.

71. It has been a serious and responsible task to meet all these heavy demands, but, thanks to the recuperative power of the country, directly due to the frugal habits and industry of the people, the task has been accomplished, and the Government of India can say with no inconsiderable satisfaction, that, with the aid of the ruled, the Rulers have done their duty, and the results have been such as to leave a memorable record in the history of mankind.

Countervailing Duties.

72. The countervailing duties on bounty-fed sugar came into practical effect in May 1899, and consequently we have not yet had two years' experience of their working. Two years is too short a period to permit of the formation of a definite opinion as to the effect of these duties, and considering also the abnormal conditions of plague and famine which have prevailed during the whole time, I think that it would be very premature to draw definite conclusions from the statistics of recent imports of sugar.

73. The general question of the sugar trade and industry is, however, one of such wide-spread interest, that it may be useful to invite attention to the figures showing the imports of sugar into India, during the last four years, classified according to the countries of origin.

74. I may call attention to the fact that the United Kingdom, and the interested British Colonies, the Straits Settlements, Hongkong and Mauritius, appear to have had their full proportionate share in the remarkable increase of importation into India, during the expiring financial year. It is also interesting to note that the greatest relative advance in the supply of sugar has been made by Germany, although that country is far from having recovered the predominant position which she occupied at the beginning of the period under review. Among foreign countries Austria-Hungary still keeps the lead, as an exporter of sugar to India, but does not come within measurable distance of Mauritius.

75. I may mention that the net receipts from the countervailing duties amounted to R8,17,555 in the eleven months of the last financial year, during which the extra duties were in force, and to R15,29,552 during the first ten months of the current financial year. We may reasonably hope to encash 17 or 18 lakhs from this source before the close of this year, and it is perhaps not an unsatisfactory reflection that this addition to our Revenue has been realised at the expense of the European tax-payers, taxed by their respective Governments to provide the bounties which enable foreign sugar refiners to sell their sugar in India, at prices below prime cost.

76. The fact is that the Government of India has added 17 lakhs to its resources by taking for Revenue purposes, the approximate difference between cost price, and the

artificially maintained selling price of bounty-fed imported sugars, whilst the Indian consumer pays no more for his sugar than he would have to pay if the bounty system were abolished.

Imports of Sugar into British India by sea from other Countries.

* The imports from Mauritius classed under unrefined sugar are molasses.

Exchange and Coinage.

77. The course of exchange throughout the financial year, ending on the 31st of this month, has been remarkably steady, and I may with satisfaction repeat the statement made by my predecessor, on this question, last March, namely, that the object of Government, the maintenance of a stable exchange, has been realised during the past year; and I may add that this stability has been maintained by following lines already laid down and without involving the necessity of any further special measures or serious effort on our part:—

The average rate for Council Drafts, throughout the twelve months now drawing to a close, has been 15.979*d*.
The maximum, reached in the month of December, was 16·037*d*.
The minimum, in the month of August was 15 933*d*.

78. What has been done as regards the sale of Council Drafts and the coinage of rupees (and to the latter question I will return more particularly) has been done in accordance with a general policy of limiting, as far as possible, the action of Government, in exchange matters, to following and satisfying the demands of the market. I believe this to be the proper safe policy. It has been suggested that such a policy should be firmly established by legislative enactment, but I am not convinced that any enactment would give greater security than now exists for continuity of guiding principle. I fear that any possible form of enactment would bind our hands in an undesirable manner, in questions of detail, and on general grounds, it is desirable to avoid frequent recourse to legislation on exchange and currency questions.

79. During the past year there has been no hesitation to sell Council Drafts and Telegraphic Transfers to meet demands, although during the slack season of trade sales were shorter, whilst later on the Secretary of State found himself obliged to increase his offers of Bills so as to compete with the export of sovereigns which were being largely despatched to India, by parcel post, for conversion into rupees at our mints and treasuries.

80. We have, without legislation, established a Gold Reserve Fund into which will be paid all profits of coinage accruing since the beginning of the closing financial year, and that Fund will serve as a guarantee for the conversion into gold, if required, of the rupee token coinage with which, to meet positive requirements, we have supplied the public so largely.

81. The great strain on our resources, due to disastrous famine, forced us to use for current requirements, the profits of coinage during the past calendar year, but since January 1, 1901, we have commenced paying our further profits directly into the Gold Reserve Fund, and the amount thus paid in, already amounts to £800,000, to which a further sum of £400,000 will almost immediately be added, on account of coinage profits in March.

82. As regards the profits from April 1 to December 31, 1900, amounting to about £1,730,000, these will be paid into the Gold Reserve Fund as our resources may permit, and it is our earnest desire to expedite such payments as much as possible. A special source will become available for these payments, by the reimbursement of the large advances to Native States and takavi loans provided by Government, in connection with famine necessities. The advances made to Native States alone amount to over four crores of rupees.

83. I may here state that it is the intention of Government to invest, from time to time, in British Consols or other Sterling Securities, the sums which may be accumulated in the Gold Reserve Fund.

84. With regard to the control of coinage operations, I think that a practical rule of conduct is to be found in maintaining as closely as possible, a sufficient sum in rupees in the Currency Reserve, to meet all demands which experience shows may reasonably be anticipated, and, for the present, we may hold in sovereigns, the balance of our Currency Reserve exclusive of the ten crores invested in Rupee Paper.

85. This is what we have resolved to do, and although we have not yet been able to accumulate in our Currency Reserve the full sum in rupees which it is in our opinion desirable to maintain, the failure to secure this accumulation is due solely to the limited capacity of our mints and to their inability to turn out rupees as quickly as they have been required to meet an extraordinary and unprecedented demand.

86. I submit a statement showing the results of our rupee coinage operations during the past financial year :—

Amount of Rupees, coined 1900-1901.

1900.									1901.		TOTAL FOR 11 MONTHS.
April.	May.	June.	July.	August.	September.	October.	November.	December.	January.	February.	
67,70,538	86,95,312	1,26,47,856	74,38,228	88,28,057	1,45,95,261	1,59,72,707	1,54,65,446	1,60,30,063	2,44,35,608	1,99,01,678	15,07,80,754

Of the above total coinage exceeding 15 crores, 3 crores and 23 lakhs were coined for, and issued to, Native States.

The monthly outturn for account of the Government of India varies considerably, but this variation must not be taken as an index of the opinion of Government as regards requirements, for the coinage of rupees for our own requirements has been hampered by the fact that our mints have been under obligations to coin, besides rupees for our own needs, both dollars for the Colonies, and rupees for Native States, and, as regards the latter operation, no one will dispute the great advantages from every point of view of having a uniform currency circulation throughout the Indian Empire. This desirable end we now appear to be in a fair way of attaining, and apart from the advantages of securing a uniform currency, we were bound, at no matter what inconvenience to ourselves, to fulfil our contracts to Native States. We have, however, taken such measures as were possible to increase the capacity of our mints, with the result of reaching an average monthly outturn exceeding two crores of rupees in the last two months for which we have the returns.

The figures of the Table submitted, show a total coinage for 11 months (the figures for March are not yet available) exceeding 15 crores, and for the 12 months of the financial year we shall presumably reach approximately 17 crores, of which between 13 and 14 crores constitute an addition to the rupee currency of British India. This is an enormous and surprising addition, but we have not allowed ourselves to be tempted by the large possible profits of the operation. We have not gone beyond supplying possible demands, and we have taken adequate precautions to insure the realizable value of this extraordinary addition to our token currency. I believe that what we have done has been both necessary and safe.

87. On this question I may point out that the figures of outturn show conclusively that there has been no hesitation on the part of Government to take every possible measure to provide all the necessary circulating medium which current demand has indicated as required for the business of the country.

88. To sum up, I may say that we have endeavoured, and will endeavour, to regulate the sale of Council Drafts in accordance with trade demands; that we have endeavoured, and will endeavour, to maintain a stock of rupees in our Currency Reserve sufficient to satisfy all reasonably to-be-anticipated demands, and even if such demands continue beyond reasonable anticipation, we still hope to maintain and improve our position. Finally, we shall accumulate from coinage profits a substantial gold reserve, independent of the Currency Reserve, and we shall from time to time invest the gold accumulated in Sterling Securities.

89. I venture to hold that this system which we have adopted in accordance with a deliberate policy, is as nearly automatic as any that could be devised, and I think that there are practical difficulties in the way of any attempt to stereotype such a system by legislative enactment.

90. First, I may observe that the effects of legislation are necessarily so restrictive that, though they may enforce automatic action under one set of conditions, they inevitably limit automatic action if those conditions are changed. Thus, under existing conditions, and with due regard to the present average circulation of notes, we may think that we ought to keep a certain amount of rupees in the Currency Reserve, and that we can afford to hold a certain number of sovereigns in the same fund. But the circulation of currency notes may increase or diminish (I hope and anticipate the former) and the general requirements for rupee currency may also increase or diminish; if such changes of condition occurred, what would be our position if the proportion of rupees to sovereigns in the Currency Reserve were fixed by law?

91. We have fixed this proportion in our own minds, but, if the conditions on which our estimate is based should change, we are quite prepared to change the proportion which we have temporarily accepted as our guide. This, as we now stand, can be done immediately without recourse to legislative enactment, and without that undesirable disturbance of the public mind, which legislation on such delicate questions is liable to produce.

92. In concluding my remarks on this subject, I think it will be of interest to state what is our position to-day as regards note circulation, rupees and silver bullion in the Currency Reserve, gold in the Currency Reserve, and gold in the Gold Reserve Fund.

The figures on March 7, were as follows:—

Rupees in the Currency Reserve . . .	R 5,87,12,865
Value of silver bullion in the Currency Reserve	„ 1,78,48,764
Gold in the Currency Reserve	£ 6,956,946
Notes in circulation . .	R28,09,15 765
Gold in the Gold Reserve Fund	£ 800,000
Total silver . . .	R7,65,61,629
Total gold	£ 7,756,946

Circulation of Currency Notes.

93. The Government of India some time ago addressed inquiries to the Local Governments, Presidency Banks, and Chambers of Commerce, soliciting their opinion as to the best method of increasing the circulation of currency notes.

94. I think that this is a very important question, and that the entire banking and commercial community will admit that it is desirable, if possible, to increase the circulation of notes. But the problem how best to do so, without incurring undesirable risks and expenditure, bristles with difficulties.

95. I cannot say that the numerous valuable communications, which we have received from the authorities whom we have consulted, have gone very far towards furnishing a definite solution of the problem, for the divergency of the opinions offered is remarkable. Difficulties, of which we were already aware, are emphasised, and the only general conclusion to be drawn is, that it is practically impossible to take any heroic measures; that we can only safely venture on some very limited experiment; and that it will take a very long time for important results to be achieved.

96. With reference to this question, I may perhaps say a word regarding the criticisms on the circular of inquiry issued by the Government of India which have appeared freely in the press. It has been stated more than once that it is evident from

the terms of the circular that the Government of India did not know its own mind on the question propounded. I am very willing to admit that, when making the inquiry, the Government of India had arrived at no definite decision as to how best to arrive at a desirable end. But I cannot admit that this is fair ground for hostile criticism.

97. The business public undoubtedly desire that Government should take them into their confidence, and ask their opinions on such important questions. But it seems to me that it would be rather late in the day to ask opinions when we had definitely made up our own minds. I am not deprecating press criticism; on the contrary, if intelligently conducted, as it very frequently is, it is most valuable. But I think that it is not quite logical, both to blame Government for autocratic decisions, as is sometimes done, and also to accuse Government of indecision, when it is seeking the solution of a difficult problem, and asks the opinion of competent advisers.

98. It is unnecessary to recapitulate all the difficulties of this particular question, for they are well known to all who have studied the subject. I will only say that Government recognize as the most serious difficulty to be met, the probable use of notes for large remittances, and the expense of maintaining at out-treasuries a sufficient stock of rupees to cash notes when suddenly presented for large sums. Even with the existing circulation, under existing conditions and limitations as regards encashment, we are not always able to supply rupees to those who present notes and ask for them. I am, however, strongly of opinion that if the use of currency notes became more general, and larger amounts were held in circulation, the percentage of rupees required to meet demands for encashment, would be considerably less than that which is required to-day, when, unfortunately, the circulation of notes is still hampered by the fact, that the holder of the note cannot be assured of converting it into rupees at the Treasury, and is therefore willing, and sometimes obliged, to dispose of his note in the bazar, at a discount. I hope, however, that considerable improvement may gradually be made in this respect, and that before long we may go even further and find ourselves able to adopt some limited measure in the direction of encouraging and increasing the circulation.

99. Before quitting this subject, it may be of interest if I quote some figures showing the tendency to increase in the circulation of notes during the last few years.

I.—Statement showing the gross circulation of paper currency for all India.

	1897-98.	1898-99.	1899-1900.	1900-1901. *
	R	R	R	R
Average	24,24,00,000	25,63,00,000	27,96,00,000	28,79,00,000
Maximum	24,76,00,000	28,20,00,000	29,27,00,000	30,78,00,000
Minimum	22,86,00,000	23,25,00,000	26,26,00,000	27,90,00,000

* Eleven months only.

II.—Statement showing in lakhs the circulation of paper currency excluding amounts held by the Government Reserve Treasuries and by the Presidency Banks at their head offices.

	1897-98.	1898-99.	1899-1900.	1900-1901. †
	R	R	R	R
Average	20,35,00,000	20,79,00,000	23,09,00,000	23,84,00,000
Maximum	21,20,00,000	22,49,00,000	24,41,00,000	25,02,00,000
Minimum	19,44,00,000	19,43,00,000	21,94,00,000	22,85,00,000

† Eleven months only.

100. The above tables show a decided and satisfactory increase in the average note circulation in the hands of the public during the last four years, and I think that the indication thus given by facts, is a sufficient encouragement to persevere in the policy of seeking to augment our note circulation.

Economic Progress.

101. We have reviewed the financial situation in its more important features. We may now turn to the consideration of the economic situation.

102. In my opinion, the question of economic development is one in which those responsible for the financial situation must take the keenest interest. It has always appeared to me that it is comparatively easy for a Government, to take money out of the pockets of the public, provided that those pockets are sufficiently well-filled. Hence, I think that we are specially interested in doing all that is in our power to promote economic progress.

103. I pass to the consideration of certain facts and figures indicative of the economic situation.

104. In dealing with the great question of meeting famine requirements, I have already alluded to the recuperative power of India. The fact that we have been able to meet the extraordinary demands on our resources, due to famine and plague, and that we are to-day able to present a budget showing, notwithstanding the simultaneous serious depression in three such important industries as cotton, tea, and indigo, a distinct and satisfactory increase of revenue obtained without increase of taxation, is in itself the strongest evidence of that recuperative power. But I think that close examination of certain material facts will afford further proof that our belief in this recuperative power is not an idle assumption.

105. We may first consider the more important indications of the figures of revenue returns during the last four years.

106. It was natural and inevitable, that the land revenue in certain provinces should suffer and diminish through the direct influence of the calamities which have befallen us, but, whilst land revenue has necessarily fallen off in some afflicted provinces, in others, more favoured by Providence, the collections have increased with the prosperity of the people. Fortunately too we are not dependent on land revenue alone, and I observe, with some satisfaction, that on the whole, over a series of years, the proportion of land revenue to the total of our resources shows a diminishing tendency.

107. In 1897-98 the proportion of land revenue to general revenue was 26·63 per cent, in 1898-99 27·08 per cent, in 1899-1900 25·07 per cent, in 1900-1901 it will be 23·54 per cent, and the estimates for 1901-1902 result in a proportion of 25·17 per cent.

108. There are certain other sources of revenue, which I trust will, year by year, assume greater importance, and in the returns from which we may find indications of general economic progress. In particular I think that such indications may be noted in the increasing revenue derived from Salt, Customs, and Post Office. The following are the figures under these respective heads:—

	Accounts, 1897-98.	Accounts, 1898-99.	Accounts, 1899-1900.	Revised, 1900-1901.
	R	R	R	R
Salt Revenue . .	8,59,42,250	9,09,98,713	8,77,56,944	8,92,66,000
Customs Revenue—				
Import duties .	3,73,51,650	3,59,25,090	3,61,39,583	3,89,65,000
Excise duty on cotton goods .	11,61,880	13,72,910	13,36,623	10,88,000
Export duty . .	72,48,190	1,01,12,130	87,63,905	90,09,000
Land Customs and Miscellaneous .	6,51,230	6,11,490	7,66,751	8,00,000
TOTAL .	4,64,12,950	4,80,21,620	4,70,06,862	4,98,62,000
Post Office Revenue .	1,87,91,630	1,91,40,671	1,96,24,722	2,03,04,000

I think that the Salt revenue returns are particularly encouraging as indicating not only a steadily increasing tendency, but in particular, as showing that even in the past disastrous year of famine and pestilence, the general consuming power of the population, as a whole, not only suffered no diminution, but, on the contrary, showed an improvement over the preceding year.

109. The same considerations apply to the figures of Customs Revenue, though even in a more remarkable manner, for whilst we find a diminution of about 2½ lakhs in the yield of Excise duty on cotton goods, a diminution due to an industrial crisis

and having no connection with the general condition of the country, under all other heads, there was a marked increase, resulting in a total improvement, over the previous year, of nearly 29 lakhs, and producing the highest total figure of revenue recorded by the Customs Department, since the duties on cotton yarns were abolished in 1896.

110. As regards Post Office revenue, the same absolute conclusions cannot be drawn from the fluctuations of revenue as may be fairly assumed in the case of Salt and Customs. Post Office profits are necessarily seriously affected by arbitrary reductions of postage rates, which, however necessary and profitable in the long run, must cause an immediate, though temporary, falling off in receipts.

111. I think, however, that when, as in the case of the Indian Post Office returns, a steady progress of revenue is observable, we are entitled to consider such progress as strong evidence of satisfactory economic development, a development which has not only material, pecuniary results, but is important, as evidence of general moral progress.

112. I have already alluded to the growth of Railway revenues, and, although the task of drawing conclusions from the figures of railway receipts is complicated by the difficulty of distinguishing increase due to increased mileage, from increase due to increased traffic, nevertheless, the actual increase of gross railway receipts affords positive proof of greater movement on the railways, and, in so far, of general development.

113. The most important industry in India and the one directly interesting the innumerably larger proportion of the population is agriculture.

114. The prosperity of the agricultural population, the deepest concern of the Government of India, has, in the last five years, received apparently crushing blows through the unprecedented recurrence of famine. The effect of repeated droughts is indeed far reaching, and the terrible loss of cattle is a most distressing incident of the late famine, which will long make itself felt in Gujarat and other similarly affected districts, but the figures of Land Revenue, which I have quoted, conclusively show that, whilst some unfortunate territories have suffered most severely, others have prospered, with the general result that, as a whole, the agricultural population in the Indian Empire is somewhat better off to-day than it was a year ago.

115. *Primâ facie*, this is certainly an astonishing conclusion, but if the whole situation be examined it is perfectly natural and logical. Bengal, the Punjab and Madras show by the land revenue returns that they have been doing well, Assam has held its own, and Burma, favoured with a magnificent rice crop, was able to export its staple produce, on the most profitable terms, to feed the famished peoples of Western and Central India, and is in a condition of remarkable prosperity. Further it may here be mentioned that the unprecedented transport of food-stuffs on the railways, swelled Railway Receipts, and contributed a useful addition of Revenue wherewith to meet the demands of famine sufferers.

116. Two special branches of agricultural industry, indigo and tea, are unfortunately now passing through a serious crisis. Indigo is being hard pushed by the competition of a foreign chemical product and the easily made profits of former days have become a thing of the past. But, when the first stages of consideration and research have already revealed that there has been room for economy in administration, that superior crops can be raised by manuring, scientific rotation and selection of seed, and that the actual product of the vats can be increased up to 30 per cent, by the use of the 'blower' there would appear to be reasonable hope for a return to more prosperous days.

117. The history of the tea industry in India has been a very chequered one, alternating between periods of great prosperity and the deepest depression, and it may, therefore, be hoped that the present crisis which seems to be generally attributed to overproduction, may in its turn be succeeded by a renewed period of prosperity.

118. Manufacturing industries still hold but a very small proportionate place in the economy of India, but their importance is increasing and there is every reason to desire that it should increase. The cotton industry, the most important hitherto, is unfortunately passing through a period of considerable depression and in some quarters it is held that the introduction of spinning high numbers will be necessary to secure a full revival.

119. Cotton is, however, the only manufacturing industry which appears to be in even temporary difficulties, and the rapid increase in the number of important factories and workshops during the last few years is really remarkable and most encouraging.

120. I may cite a few examples of industrial development.

121. In the year 1895 there were 350 cotton factories including spinning and weaving mills, and there were 586 such factories in 1899. The number of engineering

workshops and foundries, including railway workshops, rose from 72 in 1895 to 82 in 1899, and jute mills and presses from 62 to 82. Rice mills numbered 65 in 1895 as against 84 in 1899, and sugar factories 9 in 1895 as against 14 in 1899.

122. The imports of machinery and mill-work and of iron and steel, also afford important indications of progress. These have, as might have been expected, been recently adversely affected by the serious depression in the cotton industry, by far the most important manufacturing interest in the country. Nevertheless, if we take into consideration the natural effects of this special depression during the last two years, it is most satisfactory to find that the average value of imports of machinery and mill-work during the last five years, has surpassed that of the previous quinquennial period, by, approximately, 75 lakhs, equivalent to an increase of nearly 30 per cent.

123. Perhaps, however, the most satisfactory statistics are those showing the production and export of coal during the last few years. The exports of coal which only amounted to 222,380 tons in the year 1897 reached 490,490 tons in 1900, and there appears every reason to anticipate further progressive development in this direction.

124. As regards the total output of coal in 1897 it was 4,063,127 tons, whilst in 1899 it reached 5,089,392 tons, showing an increase in two years of about 25 per cent, and the figures so far available for the subsequent period, show that progress is being well maintained.

125. Other interesting figures bearing on the question of economic welfare are to be found in the statistics of the Savings Banks and Provident Institutions.

126. Between 1895-96 and 1899-1900 the balance at the credit of depositors increased by R1,88,111 notwithstanding the two disastrous periods of famine with which the country was afflicted during this short term of years.

127. As regards the condition of trade, as apart from industry, it is rather difficult to fix on any special figures from which to generalise or draw sound conclusions. I give, however, below, a table showing the value of exports and imports, exclusive of treasure and Government stores, during the last four financial years, and for ten months of the current year. This table shows a slight falling off in exports during the year 1899-1900 amounting, however, to less than 4 per cent, but taking all the figures of both export and import together, the total value of trade is only about 1 per cent less than for 1898-99, and considerably in excess of the preceding years tabulated. Considering the numerous disadvantages under which the export trade has been labouring since the recommencement of famine, I think that on the whole these figures indicate commercial strength, and a generally satisfactory situation.

	1896-97.	1897-98.	1898-99.	1899-1900.	1900-1901. Ten months, 1st April to 31st January.
	R	R	R	R	R
Total Imports . .	71,79,38,293	69,26,66,625	68,38,03,412	70,71,18,634	62,06,92,778
„ Exports (including re-exports) .	1,03,91,42,972	97,53,72,730	1,12,72,14,730	1,08,97,61,873	86,98,70,628
Total Exports and Imports . . .	1,75,70,81,265	1,66,80,39,355	1,81,10,18,142	1,79,68,80,507	1,49,05,63,406
Excess Exports over Imports . . .	32,12,04,679	28,27,06,105	44,34,11,318	38,26,43,239	24,91,77,850

128. Another point connected with the question of the general trade situation, and which affects traders very closely, is the bank rate for the use of money.

129. The annexed Table shows the rate of the Bank of Bengal month by month, since January 1897, and it will be observed that since August 1898, a fairly uniform tendency has prevailed, and that a maximum rate of 8 per cent has rarely been reached and never passed. I think that an 8 per cent rate during the busiest season of the year is no serious hindrance to business in India, although, if we could reduce our normal maximum to 6 per cent, it would be an advantage. But we must remember that if the rate of interest in India were brought down to the low averages prevailing in Western Europe, there would no longer be any temptation to capital to seek investment so far afield.

130. In connection with this question I may point out that, according to the figures tabulated, there is much less relation, in India, between the volume of trade and the rate of interest than would naturally be supposed.

131. It will be observed from the subjoined Table that, whilst a 7 per cent rate existed concurrently with the comparatively small exports during October and November 1897, no higher rate was induced by the comparatively large exports in the first three

months of 1899; and that, whilst a 10 per cent rate was maintained in April 1897, when the value of exports was below average, a 5 per cent rate sufficed for the large exports of October 1900.

132. These figures would seem to indicate that the rate of discount, and therefore the demand for loanable capital, has been at times, more dependent on speculation and the nervous apprehensions of traders, than on the real requirements of trade.

133. The consideration of these figures leads me to hope, that provided our money markets do not become the victims of speculators, (and to avoid this we must rely on the prudence and good sense of the banking community,) we are now reaching a more permanently stable monetary condition, than that which existed three or four years ago.

134. A factor tending in this direction is, I think, to be found in the development of communications and increasing facilities of credit, which must tend to prolong the seasons for export of such staples as rice, jute, cotton and seeds, and thus facilitate the financing of the trade.

(1) No bills were drawn in these months on account of the famine. * Average rate. † Approximate.

Conclusion.

135. I may now endeavour to sum up the general situation.

136. It has been shown that our economic situation, on which our financial situation depends, is, notwithstanding checks in certain directions where it has been prejudicially affected by known causes, on the whole good: that, wherever not prejudiced by such special, and it may be anticipated, temporary difficulties, it is progressive, and that the evidences of general recuperative power are many and satisfactory.

137. At the same time, in a country where the returns of Revenue depend so largely upon meteorological conditions impossible to foresee or to control, it behoves us to frame our Estimates with great caution. This we have done, and still our Estimates of Revenue Receipts show an increase of over £2,000,000 above those framed by my predecessor for the closing financial year, and if we remove from the Account the purely fortuitous receipt of, approximately, £3,000,000 on account of Mint operations, they are slightly in excess of the realisations of 1900-1901.

138. It is indeed fortunate that we are able to present such satisfactory figures, for, as already stated, we are not yet free from the charges and consequences of famine.

139. It has been our first care to afford relief from the financial prostration affecting so many Provinces, where not only necessary Balances have been exhausted, but where also, stern need for the strictest economy has most unduly curtailed expenditure necessary to meet many primary needs of society, such as public works, education, medical

requirements, and administrative improvements. We have been as liberal in this direction as prudence permitted, and have made grants-in-aid to Provincial Revenues amounting in the aggregate to 164½ lakhs.

140. In addition to this abnormal charge on our Revenues, we must devote one crore of rupees from the Famine Insurance Grant to direct famine expenditure in the still afflicted districts, and to this again, as a consequence of the lessons of the South African War, is added a large sum for Army Services, increasing the estimated charge on this account by £876,500 above the sum sanctioned for 1900-1901.

141. These large extraordinary charges amounting together to over £2,600,000 are, however, more than balanced by an estimated reduction, as compared with last year, of £3,245,000 in general famine expenditure, and by the exercise of strict economy where permissible, we are finally able to show a surplus of £090,900 to be carried forward to Capital Account and to reduce by so much the amount which we shall be obliged to borrow for railway construction and irrigation works, on the prosecution of which we are so largely dependent both for general economic progress and for protection from the direct and indirect effects of recurring famine.

142. In conclusion I may say that the Estimates for 1901-1902 are of good promise, and that, unless our reasonable anticipations are falsified by an unprecedented recurrence of serious disasters, we are entitled to look forward with some confidence to the future, and to hope for the early dawn of a period of considerable prosperity.

March 20, 1901. E. FG. LAW.

PART II.

BEING A MEMORANDUM BY THE FINANCIAL SECRETARY EXAMINING THE DETAILS OF THE ACCOUNTS AND ESTIMATES.

Section I.—The Accounts of 1899-1900.

1899-1900. General Result.

143. The surplus of the year in the Accounts was £2,774,623, being larger by £221,823 than that anticipated when the Revised Estimate was framed in March last.

144. The variations between the figures finally entering into the Accounts and those taken in the Budget and Revised Estimates of the year are fully explained in the Appropriation Report published in the *Gazette of India* of the 16th instant.

1899-1900. Statement of the gross figures.

145. The following is a general comparison of the Revised Estimates with the Accounts of the year:—

	Revised.	Accounts.	Accounts, better.	Accounts, worse.
REVENUE.	£	£	£	£
India	68,284,700	68,373,621	88,921	...
England	247,700	263,543	15,843	...
TOTAL	68,532,400	68,637,164	104,764	...
EXPENDITURE.				
India—				
Imperial, Provincial, and Local	49,681,200	49,675,915	5,285	...
Adjustment of Provincial and Local Surplus or Deficit	—199,000	—206,220	7,220	...
NET	49,482,200	49,469,695	12,505	...
England	16,497,400	16,392,846	104,554	...
TOTAL	65,979,600	65,862,541	117,059	...
SURPLUS	2,552,800	2,774,623	221,823	...

1899-1900. Revenue in India.

146. The increase in the Revenue in India occurred under Railway Revenue, which improved to the extent of £123,492, and Stamps, under which the increase was £33,776, distributed over all the Provinces. The other heads yielded rather less than the Revised Estimate, the larger decreases being, Land Revenue £35,744—in Madras, Bombay, and the Central Provinces—, Salt £28,637—in Madras and Bombay—, Customs £19,509, Provincial Rates £15,717, Irrigation £15,338—chiefly in the Punjab—, Forest £8,275, and Interest £2,119.

1899-1900. Expenditure in India.

147. The actual expenditure in India was, on the whole, very slightly less than the Revised Estimate. The largest decrease was one of £103,617 under Army, and the largest increase of £31,438 in Minor Irrigation Works, and of £21,701 in Famine Relief.

1899-1900. Revenue and Expenditure in England.

148. The increase in Sterling Revenue occurred under Interest and Army. The decrease in Sterling Expenditure occurred chiefly under Army Stores, £24,474; Marine Subsidy to the Admiralty, £14,600, owing to the postponement of a payment to the Admiralty pending settlement of a doubtful point; Sundry Marine items, £15,339; Telegraph stores, £6,108; Interest, £11,314; Pension Fund payments, £7,981; Military furlough allowances and pay of British Forces during the voyage to India, £10,355; Indian Troop Service, £5,006.

Section II.—The Revised Estimate of 1900-1901.

1900-1901. Statement of the gross figures.

149. The following is a general comparison of the Budget Estimate with the Revised Estimate of 1900-1901 :—

	Budget.	Revised.	Revised, better.	Revised, worse.
REVENUE.	£	£	£	£
India	69,978,300	74,951,900	4,973,600	...
England	177,500	214,100	36,600	...

England	17,249,000	17,175,500	73,500	...
TOTAL .	69,995,500	73,525,600	...	3,530,100
SURPLUS .	160,300	1,640,400	1,480,100	...

1900-1901. General features.

150. An entirely novel feature of this year is to be noticed in the enormous receipts and charges under Mint. The new receipts are the profits on the very large coinage of rupees which has been undertaken this year, and the new charges represent the transfer of the net profit to the Gold Reserve Fund, the Government, as is explained elsewhere in this Statement, having decided to hold the profit on any coinage of rupees which occurs in any year in the Reserve Fund, instead of allowing it to swell the surplus of the year. For comparison of the figures of this year with those of previous years, a deduction of about 4½ crores of rupees, or £3,000,000, has to be made from both sides of the account.

The Estimates were framed on the assumption that the monsoon would be normal, and would bring its priceless rain at the normal date. It was somewhat late throughout India; and in Bombay the quantity of rain and the dates on which it fell were so unsuitable that the continuance of famine reli f till the next monsoon is necessary in that Province. In consequence, the Estimate of the Expenditure on Famine Relief—a very liberal one on the assumption made—has proved insufficient and has had to be increased by nearly £880,000, and the collections of Land Revenue and Provincial Rates, and of Tributes from Native States affected by famine will fall short of the Estimate by £474,000. On the other hand, there are savings in connection with the despatch of troops to China and the continued absence of the troops in Africa, which including the reductions connected with that absence in payments in England may be taken at about £900,000, as well as other savings on the Military Estimates. The high prices of Opium have increased the Opium receipts by over £500,000. The net Railway earnings yield another increase of about the same amount: this being largely due to special famine traffic. Irrigation shows an increase of about £180,000. And other heads of Revenue have also improved considerably in spite of the famine. The net result is an improvement of nearly a million-and-a-half sterling, which raises the surplus of the year from the nominal amount taken in the Budget Estimate to the substantial amount of £1,640,400.

151. The Mint receipts and charges being omitted, there is an increase in Revenue in India of R3,25,19,000 or £2,167,900, and an increase in Expenditure in India of R10,54,000 or £70,200. Of this net improvement of R3,14,65,000 or £2,097,700, the sum of R2,28,19,000 or £1,521,300 is in the Imperial Section of the Accounts, and R86,46,000 or £576,400 in the Provincial-Local Section. In England the Revenue exceeds the Budget Estimate by £36,600, while the Expenditure is less by £73,500, the whole sterling improvement being £110,100. This sum being added to the improvement in the Imperial Section in India

gives an increase in the surplus of £1,631,400. The deduction of £151,300, which is the increase in the net expenditure of the Mints, yields the improvement in the surplus of £1,480,100 shown in the table in paragraph 149.

1900-1901. Decreases of Revenue in India.

152. The important decreases of Revenue in India are :—

	R
Land Revenue	57,43,000
Provincial Rates	7,69,000
Tributes	6,02,000

These are all caused by the intensification of the famine in consequence of the delay in the monsoon.

1900-1901. Land Revenue. Provincial Rates.

153. Larger suspensions and remissions are expected to reduce the collections to the following extents :—

	Land Revenue. R	Provincial Rates. R
In Bombay	49,28,000	4,18,000
„ the Punjab	10,65,000	1,95,000
„ the Central Provinces	12,75,000	2,83,000

There are also small decreases in Madras, the North-Western Provinces, and Assam, and a small increase in Bengal: these are ordinary variations, the reduction in Assam being, however, caused by floods in September last. Burma, as usual, yields a large increase, amounting this year to R19,55,000 under Land Revenue, and R50,000 under Provincial Rates.

1900-1901. Tributes.

154. The present famine affected not only districts of British India, but also many important Native States. The States have, with the assistance of Government officers, combated the famine in a most creditable way, and have borne the expenditure. To enable them to do this, however, very many have required help in the shape of loans, which have been freely granted as will be seen from a reference to the figures in paragraph 242. In some cases also the payment of tribute by the States has been suspended, and the receipts under this head of Revenue have accordingly fallen short of the Budget Estimate.

1900-1901. Increases of Revenue in India.

155. The important increases of Revenue in India are :—

	R	R
Opium		85,82,000
Salt		15,90,000
Stamps		11,45,000
Excise		20,65,000
Customs		28,49,000
Forest		13,62,000
Post Office		4,96,000
Telegraph		12,00,000
Mint		4,20,85,000
Marine		5,89,000
State Railways, Gross Receipts	1,43,32,000	
Guaranteed Railways, Net Receipts	1,62,000	1,44,94,000
Irrigation, Major Works		26,84,000
Army		20,71,000

1900-1901. Opium Receipts.

156. The receipts from the pass duty on the exports of Malwa Opium in Bombay are expected to yield a small increase of R2,00,000 above the Budget Estimate. But almost the whole of the increase in Opium Revenue occurs in Bengal, R83,75,000. The chief cause is that the average price realised at the monthly sales has been R1,361 a chest, whereas the price assumed in the Budget Estimate was R1,200: on the 44,400 chests taken as for sale in the Estimate, this rise in price yields an improvement of R71,48,400. The sales in the last three months of the year were also increased by 900 chests, the receipts from which at the actual average rate of the year amount to R12,24,900.

1900-1901. Salt Revenue.

157. Salt is the one head of Revenue in Burma which fails to give indications of the great prosperity of that Province; and the Burma Salt Revenue is expected this year to fall short of the Budget Estimate by R2,27,000. The Government of India has for some years been in correspondence with the Local Government in the hope of removing the causes which so strangely cause this exception to the general rule in Burma; but the results have not as yet produced any effect visible in figures.

In all other Provinces the Salt Revenue shows a satisfactory improvement over the Budget Estimate: the increases being —

	R
Bombay	7,30,000
Northern India Salt Department	3,92,000
Bengal	3,77,000
Madras	3,18,000

1900-1901. *Stamp Revenue.*

158. The Stamp Revenue has declined appreciably in the Punjab and the Central Provinces, and to a small extent in Assam and Bombay, but has developed to a remarkable extent in the other Provinces, the increases being —

	R
North-Western Provinces and Oudh	6,50,000
Madras	3,16,000
Bengal	3,00,000
Burma	2,00,000

1900-1901. *Excise Revenue.*

159. The improvement in Excise Revenue has been still greater, and it is distributed over all the Provinces except Bombay—where the decline which began last year has continued with the result of a fall of ₹5,85,000 below the Budget Estimate—and in the Punjab—where the moderate increase over the previous year which the Budget Estimate anticipated will not be quite reached. The decline which began three years ago in Madras has now ceased. The larger increases are :—

	R
Bengal	7,00,000
Madras	7,64,000
Burma	5,00,000
North-Western Provinces and Oudh	5,50,000

1900-1901. *Customs Revenue.*

160. The Customs Revenue shows a small decline in Madras, but a large improvement in the other three Maritime Provinces, the improvement on the whole amounting to the very large sum of ₹28,49,000.

The duties on silver are declining. They yielded in 1899-1900 over 24 lakhs: the Budget Estimate took for them 20½ lakhs: they are now expected to yield this year only 14½ lakhs. The duties on Arms, on Liquors, on Chemicals and Drugs, and on Cotton Goods also show decreases, of smaller amounts. Those on Metals, on Oils, on Manufactured Articles and on Raw Materials and Unmanufactured Articles and the Rice Export Duties show substantial increases. But the most remarkable figures are those connected with the large imports of sugar: there are increases in the Countervailing Sugar Duties of 11½ lakhs, and in the Duties on Articles of Food and Drink (including, and mainly in, the ordinary duty on Sugar) of 12 lakhs.

1900-1901. *Forest Revenue.*

161. The increase under Forest occurs in Burma, ₹9,57,000; Bombay, ₹3,31,000; Bengal, ₹1,51,000; the North-Western Provinces and Oudh, ₹90,000; Madras, ₹1,31,000; and Assam, ₹35,000. There are decreases of ₹2,83,000 in the Punjab and of ₹72,000 in the Central Provinces.

1900-1901. *Post Office Receipts.*

162. The Post Office Receipts increase every year with the development of the Department: the increase this year is rather above the normal.

1900-1901. *Telegraph Receipts.*

163. As explained in paragraphs 51 and 83 of Part II of the last Financial Statement, the increase of Telegraph Receipts in 1899-1900 was abnormally large in consequence of the use of telegrams connected with war and famine, and it was anticipated that the high level reached in that year would not be maintained. But similar causes have continued to act and the receipts are expected to exceed the Budget Estimate by 12 lakhs.

1900-1901. *Mint Receipts.*

164. As mentioned in paragraph 150 above, the enormous increase in the Mint Receipts is one which does not affect the surplus of the year as it is counterbalanced by a corresponding entry on the Expenditure side. The need for further coinage of rupees arose towards the end of last financial year: about a crore of rupees were coined in the last two months of it, and when the last Financial Statement issued it had been decided to coin another crore in the opening months of 1900-1901. The profits on the coinage of these two sums amounted to about 32 lakhs in each year. The Indian Currency Committee had

recommended that any profit on the coinage of rupees should not be credited as Revenue, but should be kept in gold as a special reserve entirely apart from the Paper Currency Reserve and the ordinary Treasury balances. When the Government of India considered the report in August 1899, it did not seem probable that the need for the coinage of additional rupees would occur for some time, and a decision on that recommendation was deferred. When the need for coinage arose somewhat suddenly in consequence of the very large imports of gold in the latter part of 1899-1900, the necessary communications with the Secretary of State regarding the recommendation and the method of giving effect to it had not been made. The profits on the coinage of the amounts above mentioned were accordingly treated in March last in ordinary course as Revenue. The orders of the Secretary of State have since been obtained: the principle of the recommendation has been accepted ; and it has been decided to continue to show the profits as Mint Revenue, but to show the net profits as Expenditure, crediting the amount to the Gold Reserve Fund, for remittance to England for investment in sterling securities: the remittance will be made either by actual shipment of the gold, or, if there is a sufficient demand, by the sale of Council Bills in excess of the amount required for the regular disbursements in London. This decision has effect from April 1900, the small credit to Revenue in the Accounts of 1899-1900 being left undisturbed. The coinage in the current year has far exceeded the crore mentioned in the last Financial Statement : the profits on the coinage of the year, shown as Mint Receipts, are expected to amount to R4,58,30,000 and the net profits, shown as Mint Expenditure and transferred to the credit of the Gold Reserve Fund for ultimate remittance to England, to R4,39,50,000. The difference between the two amounts is due to the fact that in calculating the net profits the cost of remittance of gold to London and silver to India, the cost of coinage, and incidental expenses connected with the transactions are taken into account. The whole of the last-named amount is not immediately available for remittance and investment in sterling securities. The enormous demands on the Treasury balances in the earlier part of the year caused by the famine in the way of direct expenditure on famine relief, of indirect expenditure and reduction of revenue, of agricultural advances, and of loans to Native States affected by famine, compelled the Government of India to use the profits on the coinage up to the end of December in aid of the general balances in order to keep the borrowing of the year within the amount which there was a prospect of raising on reasonable terms. The profits on the coinage from January 1901 are being transferred in sovereigns to the Gold Reserve Fund month by month as the coinage proceeds: the amount for the three months, January to March, is estimated at 180 lakhs or £1,200,000; and that sum is held in gold in India pending remittance for investment. The net profit on the coinage of the year transferred to the credit of the Gold Reserve Fund being R4,39,50,000, and the portion held in gold ready for remittance being R1,80,00,000, there will remain on March 31, 1901, a balance of R2,59,50,000 or £1,730,000 not yet converted into gold: that balance will be converted into gold for remittance gradually as the Government of India is able to provide the money out of surplus receipts. It is hoped that this may be possible in February or March 1902 in respect of the larger part of the balance. The profits on all coinage in 1901-1902 and future years will be transferred in sovereigns to the Gold Reserve Fund month by month according to the coinage of the month.

1900-1901. Marine Receipts.

165. The bulk of the increase in the Marine Receipts represents recoveries in connection with the employment of Royal Indian Marine vessels on the service of His Majesty's Imperial Government. The Pilotage Receipts in Bengal and the Coast Light Receipts in Burma have also increased.

1900-1901. Railway Earnin

166. The Railway Revenue in 1899-1900 showed an exceptionally large improvement, so much so that in the Budget Estimate of 1900-1901 it was considered prudent to assume that the high figure of the previous year would not be maintained. The results have been much more favourable than that cautious anticipation, and the Budget Estimate will be exceeded by the very large amount shown in paragraph 155. To this improvement practically every railway in the country contributes, with the one exception of the North Western Railway, the receipts of which are expected to fall short by 41 lakhs. The

causes are general development and exceptionally heavy traffic connected with the famine.

1900-1901. Irrigation Revenue.

167. The increase in Irrigation Revenue occurs mainly in the North-Western Provinces and the Punjab, larger areas having been irrigated during both the *rabi* and *kharif* seasons, and the development of irrigation from the Chenab Canal having been rapid.

1900-1901. Army Receipts.

168. The increase in Army Receipts represents recoveries from His Majesty's Government of the cost of stores and animals sent to China.

1900-1901. Increase of Expenditure in India.

169. The important increases of Expenditure in India are :—

	R
Mint	4,43,55,000
Jails	9,06,000
Miscellaneous	8,31,000
Famine Relief	1,32,33,000
State Railways	60,91,000
Irrigation Major Works	5,36,000

1900-1901. Mint Charges.

170. The reason for the very large increase in the Mint charges has been explained in paragraph 164 above.

1900-1901. Jail Expenditure.

171. With the exception of Burma, the Central Provinces (in which the estimate was specially high), and Assam, all the Provinces show considerable excesses over the Budget Estimate for expenditure in Jails. The Bengal Government increased its expenditure on Jail manufactures; and the Superintendent of Port Blair had to make an exceptional purchase of provisions; but the general causes of the excesses are that the Jail population was larger and the prices of food higher than anticipated, both being connected with the famine.

1900-1901. Miscellaneous Expenditure.

172. The charges for the remittance of coin have been very high in every Province, the lowness of the rupee balances having necessitated frequent remittances: the excess of these charges over the Budget Estimate amounts to ₹2,49,000.

The cost, ₹59,000, of the Famine Commission and another Commission of Inquiry was not provided for in the Budget Estimate.

But more than half of the increase in the Miscellaneous Expenditure is connected with the famine. As explained in paragraph 241, very large allotments for agricultural advances in the famine-stricken Provinces were sanctioned. Among other concessions connected therewith the Government of India gave the Local Governments authority to write off as irrecoverable half the amounts of some of the advances in cases in which they thought that desirable. The Bombay Government estimates that ₹2,70,000 and the Central Provinces Government that ₹2,60,000 will be so written off this year. These charges appear under this head.

1900-1901. Famine Relief Expenditure.

173. The causes for the increase in Famine Relief Expenditure are those mentioned in paragraph 150 above.

1900-1901. Railway Expenditure

174. The increase in the Working Expenses of Railways was necessitated by the larger traffic, which earned the still larger increase in Revenue mentioned above.

1900-1901. Irrigation Expenditure

175. The larger part, ₹4,04,000, of the increase in the Working Expenses of Irrigation Major Works occurs in the Punjab. It was required to repair damages caused by floods and to meet larger collection charges for the increased Revenue. Special repairs of flood damages caused smaller increases in Madras and the North-Western Provinces.

1900-1901. Decreases of Expenditure in India.

176. The important decreases of Expenditure in India are :—

	R
3—Land Revenue	6,41,000
Education	5,29,000
Political	19,82,000
Scientific and Minor Departments	6,29,000
Construction of Railways charged to Provincial and Local Revenues	10,05,000
Subsidized Railways, Land	8,85,000
Military Works	10,09,000
Army	1,25,98,000

177. The diminution in the charges under 3.—Land Revenue is distributed over all the Provinces except Bombay, in which there is an increase of R94,000 caused by sanctions during the year to schemes for the division and demarcation of waste land in Sind. The decrease may be said to be generally due to the tendency of Local Governments to make fuller provision in the Budget Estimate for payment of salaries and other charges than is actually required. *1900-1901. Land Revenue Charges.*

178. The same general explanation applies to the decrease under Education, which is distributed over all the Provinces except Madras. *1900-1901. Education Expenditure.*

179. The main decreases in Political Expenditure are the following:— *1900-1901. Political Expenditure.*

A provision of two lakhs was made in the Estimate for the purchase of Hastings House, Calcutta, which was then in contemplation. The purchase has since been completed: the payment will be made as soon as the legal formalities have been complied with: it is doubtful whether it will be made before or after April 1, but, when made, it will be charged to the head 45.—Civil Works.

The expenditure this year on the Tochi Militia will be less than the Estimate by nearly two lakhs.

The charges on the Punjab Frontier,—the Khyber, Kohat, Chitral and Gilgit,—will be less than the Estimate by over a lakh.

His Highness the Amir of Afghanistan draws his subsidy at irregular intervals, and this year it is expected that there will be on March 31 undrawn arrears of about 20 lakhs, and that the payments to him will be less than the Budget Estimate by about 15 lakhs.

180. The reduction under Scientific and Minor Departments is distributed over all the Provinces. A large part of it is due to the general cause mentioned in paragraph 177 in regard to Land Revenue Expenditure. Only two items need be mentioned; a decrease of over a lakh in Survey Expenditure and a decrease of three quarters of a lakh in the expenditure on aluminium manufactures in the Madras School of Arts, the last being more than counterbalanced by decreased receipts from the sale of the ware. *1900-1901. Expenditure on Scientific and Minor Departments.*

181. The decrease under Construction of Railways charged to Provincial and Local Revenues is due to a change in the programme for the construction of the extension of the Mayaveram-Mutupet Railway, a local charge of the Tanjore District Board. The construction is to be spread over three years instead of two, and the expenditure is consequently less than in the Budget Estimate by about 10 lakhs. *1900-1901. Construction of Railways charged to Provincial and Local Revenues.*

182. Provision to the extent of 5⅛ lakhs was made in the Estimate for the purchase of land for the Tilgaon-Sylhet, Akhaura-Bhairab Bazaar, the Chandipur Taki and the Bezwada-Masulipatam Branch Railways. The schemes have not yet arrived at the stage requiring the purchase of land, and nothing has been spent on them this year. The expenditure on land for other branch railways has also been less than the provision made. *1900-1901. Subsidised Railways—Land.*

183. The reduction in the Expenditure in India on Military Works represents partly a transfer of Expenditure from India to England and partly the usual lapses which always occur under this head. *1900-1901. Military Works Expenditure.*

184. There are, as usual, a large number of variations between the Budget and the Revised Estimates of Military Expenditure. But the large decrease, of a crore-and-a-quarter, is mainly due to the absence of troops in China and the prolonged absence of troops in South Africa: the saving caused by the absence of the China Contingent till the end of this year is estimated at 40 lakhs, the additional saving caused by the absence of Indian troops in Africa after September last, at 39⅛ lakhs, and the expenditure on the purchase of local stores to replace those issued to the absent contingents will be less by 21 lakhs than the credits for the issues. In addition, the cost of food supplies has been less than the Estimate by nearly 15 lakhs; and the grants under several heads have proved higher than the actual requirements by over 40 lakhs. The savings would have been much larger had it not been decided, in consideration of the savings from the absence of troops, to sanction new Military Expenditure, aggregating 64 lakhs, of which 12 lakhs will be spent in India: it was also necessary to incur expenditure exceeding 13 lakhs in chartering transports to carry troops to England. *1900-1901. Army Expenditure.*

1900-1901. Revenue in England.

185. There is an increase in the Revenue in England of £36,600 due to larger temporary investments of the cash balances and higher rates of interest which raised the Interest receipts above the Budget Estimate by £41,000.

1900-1901. Expenditure in England.

186. The expenditure in England is expected to be less than the Budget Estimate by £73,500. The Interest charges are increased by £143,000, the discount on the issue of £3,000,000 stock, and by £78,000, the increased interest payable in the year in consequence of that issue and on India Bills. Some of the India Bills were issued for six months and replaced within the year by Bills for twelve months, involving an interest charge for eighteen months; and the rates payable on the Bills were also higher than anticipated. On the other hand, the payment on account of the annuities in purchase of the Great Indian Peninsula Railway will be £53,200 less than estimated, and the Army Expenditure less by £345,700, due chiefly to the dislocation of the arrangements for the Indian Reliefs owing to the despatch of troops to South Africa, which caused reductions in the cost of the Troop Service and in the furlough allowances and pay during voyage of British Forces serving in India.

Section III.—The Budget Estimate of 1901-1902.

1901-1902. Statement of the gross figures.

187. The following is a general comparison of the Budget Estimate of 1901-1902 with that of 1900-1901:—

	1900-1901.	1901-1902.	1901-1902, better.	1901-1902, worse.
	£	£	£	£
REVENUE.				
India	69,978,300	71,795,300	1,817,000	...
England	177,500	396,600	219,100	...
TOTAL	70,155,800	72,191,900	2,036,100	...
EXPENDITURE.				
India—				
Imperial, Provincial and Local	53,297,100	53,539,700	...	242,600
Adjustment of Provincial, and Local Surplus or Deficit	—550,600	—182,600	...	368,000
NET	52,746,500	53,357,100	...	610,600
England	17,249,000	18,143,900	...	894,900
TOTAL	69,995,500	71,501,000	...	1,505,500
SURPLUS	160,300	690,900	530,600	...

1901-1902. General features.

188. Though famine expenditure unhappily will not cease next year, it is expected to amount to only about one crore of rupees, as compared with the Budget Estimate for 1900-1901 of over five crores: the Famine Insurance Grant will, however, be maintained at the fixed sum of one crore-and-a-half: so that the saving on this account affecting the surplus will amount to only 3½ crores. The Revenue next year is estimated to exceed the Budget Estimate of 1900-1901 by about two crores, the Railway earnings being taken net. On the other hand, the Expenditure Grants for next year have been largely increased. New expenditure to improve the efficiency of the Army has been sanctioned to the extent of over a crore-and-a-half: large increases of Imperial expenditure under other heads have been sanctioned; and grants-in-aid of Provincial Revenues, aggregating 164½ lakhs, have been made to Local Governments to enable them to incur expenditure from Provincial Revenues.

A surplus of a little over a crore of rupees has been retained and devoted to increasing the capital expenditure on the construction of Railways and Irrigation Works.

189. In India an increase in total Revenue of ₹2,72,54,000 or £1,817,000, and an increase in total Expenditure of ₹36,40,000 or £242,600, are estimated. The improvement of ₹2,36,14,000 or £1,574,400 is divided thus, after the transfer from Imperial to Provincial of the grants-in-aid of ₹1,64,43,000 or £1,096,200, explained in paragraph 266: in the Imperial Sections of the Accounts ₹1,80,95,000 or £1,206,400, and in the Provincial-Local Section ₹55,19,000 or £368,000. The Revenues in England are estimated to exceed the last Budget Estimate by £219,100, and the Expenditure in England to exceed by £894,900, being an increase in net Sterling Expenditure of £675,800. The net improvement in the Imperial Section is, therefore, £530,600, which raises the surplus to £690,900.

190. The only important decreases in Revenue in India are :— *1901-1902. Decreases in Revenue in India.*

	₹
Mint	36,05,000
Army	20,66,000

and both of these are for the most part nominal rather than real.

191. The larger part of the decrease under Mint is due to the omission of any provision for profits on coinage next year, whereas a sum of 32 lakhs was entered in the last Budget Estimate. This omission does not mean that the Government of India expects that there will be no coinage of rupees in the coming year. On the contrary, it is certain that there will be some; but the Government is unable now to form any reliable estimate of the amount; and, as under the decision explained in paragraph 164, the item will not affect the surplus of the year, it has been thought best to make no entry either for the receipts or for the charge on the transfer of the net profits to the Gold Reserve Fund. *1901-1902. Mint Receipts.*

The issues of copper coin during the famine having been large, it is expected that there will be no net issue in the coming year This causes a decrease on the "Gain on copper coinage" of 4 lakhs, the amount taken for the head in the Budget Estimate of 1900-1901.

192. The decrease in Army Receipts is due to the absence of any provision for recoveries from His Majesty's Government of the value of horses sent to South Africa. *1901-1902. Army Rece*

193. The following are the more important increases of Revenue in India :— *1901-1902. Increases of Revenue in*

	₹
Land Revenue	13,79,000
„ due to Irrigation	6,62,000
Salt	13,92,000
Stamps	11,98,000
Excise	22,16,000
Provincial Rates	16,43,000
Customs	8,08,000
Forest	9,84,000
Interest	8,25,000
Telegraph	4,50,000
Railway Earnings—	
State + 2,24,48,000	
Guaranteed —30,99,000	1,93,49,000

194. The restriction of the famine to the one Province of Bombay accounts for the increases in Land Revenue and Provincial Rates. *1901-1902. Land Rev*

In Bombay we have to face a further decline, and the Estimates allow for a falling-off in the collections of ₹47,00,000 under Land Revenue including that due to Irrigation.

In the North-Western Provinces and Oudh a decrease of ₹11,44,000 is expected: there were considerable arrear collections from the earlier famine to be collected this year. In Madras also a smaller diminution of ₹2,10,000 has been taken.

In all other Provinces there are substantial increases.

It may be mentioned that in Bombay, the Central Provinces and the Punjab, the Government of India substantially reduced the estimates proposed by the Local Governments. The Estimates of other Local Governments were accepted.

901-1902. 'alt Revenue.

195. The progress of the Revenue in the present year fully justifies the increase anticipated in Salt Revenue. The Estimate is for a total somewhat less than the probable collections this year.

901-1902. 'ustoms Revenue.

196. The same remarks apply to Customs Revenue. In this case the reduction below the probable collections of this year is substantial, as it was not considered prudent to assume that the very high level of the duties on some articles of the import tariff will be maintained next year. In particular the duties on sugar (ordinary duty and additional countervailing duty) are taken more than 15 lakhs lower than the probable collections this year.

901-1902. tamps and xcise Revenues.

197. Under Stamps and Excise, the Estimates assume that the improvement attained this year will be maintained next year, with a further improvement under Excise in the two Provinces—Bombay and the Central Provinces—where the receipts this year are abnormally low.

)01-1902.)rest Revenue.

198. The increase in Forest Revenue represents the usual increase under the head.

)01-1902. iterest Receipts.

199 The interest on the very large loans made to Native States this year accounts for ₹7,38,000 of the increase in Interest Receipts; and an increase in the overdrawn Capital of Railway Companies for the remainder.

01-1902. legraph ceipts.

200. The increase in Telegraph Receipts represents the normal progress of the Department moderately estimated.

01-1902. ilway rnings.

201. The Estimate for net Railway earnings has been taken slightly above the amount of the probable earnings this year. It is assumed that the normal increase will not much more than counterbalance the absence of the specially heavy traffic connected with the famine.

01-1902. creases in penditure in dia.

202. The following are the more important decreases in Expenditure in India:—

	₹
Famine Relief	3,99,14,000
Construction of Railways charged to Provincial and Local Revenues	6,30,000
Guaranteed Railway, Surplus Profits	9,33,000

)1-1902. mine Relief penditure.

203. Bombay is the only Province in which large famine expenditure is required next year. The Estimate of the Local Government is for ₹99,91,000. The Chief Commissioner of the Central Provinces thinks that some small relief will be required before the rains come next year in one pergana of the Balaghat District, and also possibly in an adjacent corner of the Seoni District, and in one or two remote localities in other parts of the Province; and one lakh has been entered for the Central Provinces.

)1-1902. struction of ilways from vincial and al Revenues.

204. As explained in paragraph 181 above, the expenditure under this head is Local Expenditure for the extensions of the Mayaveram-Mutupet Railway by the Tanjore District Board. The estimated expenditure next year is ₹12,30,000, of which ₹5,88,000 will be charged to the loan which the Board has raised, and the remainder to this head against the Revenues of the Board.

1-1902. ment of plus Profits to aranteed lway mpanies.

205. The Great Indian Peninsula Railway having been acquired by the State, no payments of its surplus profits will be made next year; and the payments to the Bombay, Baroda and Central India Railway Company are expected to be less than in the Budget Estimate for 1900-1901.

206. The following are the more important increases in Expenditure in India:— *1901-1902. Increases in Expenditure in India.*

	R
3.—Land Revenue	10,07,000
Post Office	6,74,000
Telegraph	6,96,000
Law and Justice, Courts	5,04,000
Police	17,56,000
Education	7,11,000
Medical	6,08,000
Political	12,21,000
Scientific and Minor Departments	13,32,000
Miscellaneous	23,67,000
Protective Irrigation Works	6,37,000
Railways, Working Expenses	1,00,02,000
„ Interest on Debt	10,77,000
„ Interest on Capital deposited by Companies	5,31,000
Irrigation, Working Expenses	5,54,000
„ Interest on Debt	3,91,000
Minor Irrigation Works	6,31,000
Military Works	16,65,000
Civil Works	79,66,000
Army	53,37,000

207. Practically every Province shows an increase in Land Revenue Expenditure. The returning prosperity of the Provincial Revenues of most Provinces and the grants-in-aid made from Imperial Revenues, enable the Local Governments to undertake new expenditure. *1901-1902. Land Revenue Expenditure.*

208. The Expenditure on the Post Office and Telegraph increases every year. The increases next year are above the normal amounts as reforms and improvements are contemplated in both Departments. *1901-1902. Post Office and Telegraph Expenditure.*

209. Improvement in the efficiency of the Police is a pressing need throughout India, and necessitates increased expenditure in every Province. But the main item of the large increase under this head occurs in Burma, R12,44,000. It is proposed to make a large increase to the Military Police in order to release detachments of the Army from frontier stations in Burma. *1901-1902. Police Expenditure.*

210. All Local Governments provide for increased Expenditure on Education, that being one of the objects to which it is desired to allot larger grants. *1901-1902. Education Expenditure.*

211. The largest increase in Medical Expenditure occurs in Bengal, R5,09,000, the cause being plague prevention: smaller increases occur in the Punjab, the North-Western Provinces and Oudh, and Burma: there are decreases in Bombay, the Central Provinces, and Madras. *1901-1902. Medical Expenditure.*

212. The cause of the increase in Political Expenditure is a provision of 15 lakhs made for arrears of His Highness the Amir of Afghanistan's subsidy. Ordinarily provision is made only for a full year's subsidy, on the assumption that the arrears at the beginning and end of the year will be about the same. But the large arrears outstanding this year rendered a departure from the ordinary rule advisable for next year's Estimate. *1901-1902. Political Expenditure.*

213. The Census causes the increase under Scientific and Minor Departments. The amount entered in the Budget Estimate of this year on this account was R7,32,000, and the provision for next year is R18,10,000, making a total of R25,42,000. Other increases have also been allowed under this head by the Government of India and Local Governments. *1901-1902. Expenditure on Scientific and Minor Departments.*

214. The increase in Miscellaneous Expenditure is mainly due to the remission of the recovery of the famine loans mentioned in paragraph 172 above: the Bombay Government provides R13,75,000, and the Chief Commissioner, Central Provinces, R6,00,000 on this account. *1901-1902. Miscellaneous Expenditure.*

Fuller provision has also been made for remittance charges.

1901-1902. Expenditure on Protective Irrigation Works.

215. Every effort is being made to push on the construction of Irrigation Works which promise to afford protection against famine, and the Estimates provide for expenditure on all the schemes which are likely to be ready for the commencement of work next year.

1901-1902. Railway Working Expenses.

216. The increase in the Working Expenses of Railways is required to earn the increased Revenue.

1901-1902. Irrigation Expenditure.

217. The increase in the Working Expenses of Irrigation Works is necessary to maintain and work the new canals on which Capital Expenditure is being incurred.

1901-1902. Railway and Irrigation Interest Charges.

218. The increase in the Railway and Irrigation interest charges is the interest on the new Capital Expenditure.

1901-1902. Expenditure, Minor Irrigation Works.

219. The importance of Minor Irrigation Works, as a subsidiary preventive of famine, is recognised by increased expenditure both from Imperial and Provincial Funds.

1901-1902. Civil Works Expenditure.

220. The restriction of expenditure in recent years has been specially felt in the case of Public Works; and the position now admits of largely increased expenditure both by the Imperial and Provincial Governments to provide some of the new buildings and communications which are everywhere required. Of the total increase of ₹79,66,000, the sum of ₹26,65,000 is in the Imperial Section, ₹47,50,000 in the Provincial Section, and ₹5,51 000 in the Local Section. Of the Provincial increase a portion may be diverted to other heads by Local Governments. When the grants-in-aid of 164½ lakhs, mentioned in paragraph 188, were made, additions, aggregating ₹25,63,000, being the amount available after raising the closing Provincial balances of the year to the prescribed minimum for each Province, were made by the Government of India to the Provincial grants for 45.—Civil Works, the Local Governments being at liberty either to spend the additions on Public Works or to reappropriate them for other expenditure.

1901-1902. Army Expenditure.

221. The Budget Estimate of this year provided for savings of ₹38,50,000 in consequence of the absence of troops in South Africa: the troops are still absent in Africa and other troops have been sent to China: it is probable that they will be absent for a part of next year; but it was not considered sufficiently certain that they will be absent for any prolonged period to justify the Government in taking credit for the savings in the Estimate. The Estimate of this year also provided for savings in consequence of the absence of three Native Regiments in Ceylon, Singapore, and Mauritius. As new regiments have been raised to replace these as well as two other new regiments required for service outside India, making five in all, there is no similar saving in next year's Estimate. This causes an increase of ₹8,85,000. On the other hand, the fall in prices admits of a decrease of 40 lakhs in the grant for the cost of food supplies, and the absence of special provision to replace horses sent to South Africa reduces the estimate for the purchase of remounts by ₹29,37,000. The net result of these figures is a decrease in the Army Expenditure from accidental causes of ₹22,02,000.

The addition of that sum to the increase of ₹53,37,000, shown in paragraph 206, gives a total increase of ₹75,39,000 to be explained. This is mainly the portion incurred in India of the new Expenditure for increasing the efficiency of the Army, aggregating about 160 lakhs, which the Government of India, with the approval of the Secretary of State, has recently sanctioned. The remainder appears on the Home Estimates under Army £520,800, see paragraph 223 below, and in the Military Works Grant ₹17,75,000.

1901-1902. Revenue in England.

222. The Estimate of Sterling Revenue exceeds the Budget Estimate for the current year by £219,100. This is caused by the contributions to be paid by His Majesty's Imperial Government in consequence of the recommendations of the Royal Commission on Indian Expenditure, namely, £130,000 towards the cost of the transport of Troops, and £100,000 towards the Military charges for Aden. On the Expenditure side payments to His Majesty's Imperial Government, amounting to about £27,500, are to be withheld, raising the total relief to Indian Revenues, as a result of the Commission, to £257,500.

223. There is an increase in Sterling Expenditure of £894,900. *1901-1902. Expenditure in England.*
The permanent loans of this year and next and a rise in the rate of interest for temporary loans increase the interest charges by £136,900. There is a net increase in the interest and annuity payments connected with the Great Indian Peninsula Railway of £163,900, caused by the purchase of the Railway. Further receipts of capital cause a further increase in the interest payments on Railway Capital. The Army Expenditure shows an increase of £520,800, mostly under Ordnance Stores.

Section IV.—Statements comparing the figures of the Estimates under the more important heads of Revenue and Expenditure with those of past years.

Other Charges .	901	1,255	645	600	400	600

224. The effect of the famines are apparent in these figures. It will be observed that the total Revenue is taken for next year at an amount slightly below the Revenue realised in 1898-99. It was considered prudent to frame the total estimate cautiously in view of the expediency of leniency in Provinces just recovering from famine.

225. As stated in paragraph 156, the prices realised at the sales of Bengal Opium in the present year have been high. The fluctuations in these prices being large from year to year and the state of affairs in China at present being such as to add a special element of uncertainty to this always uncertain head of Revenue, the Budget Estimate does not assume a continuance of these specially high prices, but takes the average price for next year at the moderate amount of R1,100 a chest. The price assumed in the Budget Estimate of this year was R1,200. The difference of R100 causes a decrease in the Estimate of next year as compared with that of this year of R44,40,000, most of which is counterbalanced by an increase in the quantity to be sold. The quantity of Bengal Opium taken as to be sold next year exceeds that taken in the Budget Estimate of this year by 3,600 chests yielding an increase, at the assumed price of R1,100 a chest, of R39,60,000. The monthly quantity to be sold up to December next has been finally fixed: the quantity to be sold in the remaining three months of the financial year will be fixed in June when the outturn of the poppy crop is known: for Budget purposes it is assumed that the present monthly quantity will continue till the end of the year.

The outturn of the crop in the current year was above the average, and the payments to the cultivators consequently exceeded the Budget Estimate by five lakhs. Next year provision is, as usual, made for an average crop.

The exports of Malwa Opium from Bombay in the current year are expected slightly to exceed those of the year 1899-1900 on which the Budget Estimate was based; and a continuance of this small improvement is assumed in the Estimate for next year.

(*a*) Chiefly excise on local manufacture. (*b*) Chiefly duty on imported salt.

226. As explained in paragraph 157, the Salt Revenue has improved considerably this year in spite of the famine, and there is every reason to expect that the greater part of the improvement will be maintained next year. The estimate for next year is a moderate estimate of what is now the normal Revenue from Salt.

The increase in expenditure occurs in Madras, where the Local Government is largely increasing its purchases in pursuance of the policy adopted in its Salt Administration. Those purchases will yield a return in future years.

228. The decline in Excise Revenue anticipated in the Budget Estimate of this year in consequence of the famine has occurred in Bombay to more than the extent taken, and in the Central Provinces to nearly the extent taken. But there have been much larger increases in other Provinces. For next year it is estimated that the level of this year will be maintained in other Provinces, and that in Bombay and the Central Provinces there will be some recovery, there being signs of improvement in the later months of the present year in both these Provinces.

Chiefly Rice	72,48,190	1,01,12,130	87,63,905	87,25,000	90,09,000	90,08,000
LAND CUSTOMS AND MISCELLANEOUS	6,51,230	6,11,190	7,66,751	7,32,000	8,00,000	8,16,000
GRAND TOTAL	4,64,12,950	4,80,21,620	4,70,06,862	4,70,13,000	4,98,62,000	4,78,21,000
Charges	21,13,790	21,48,440	23,06,176	23,53,000	24,32,000	24,65,000

230. The above table shows a most satisfactory increase in the Customs Revenue. The most striking feature is the very large increase this year in the duties on sugar. The additional countervailing duties yield 11½ lakhs more than the Budget Estimate and 10¾ lakhs more than the actuals of 1899-1900. The ordinary five per cent duty on sugar appears under the head "Articles of Food and Drink" in which the increase is over 12 lakhs, nearly all of it being in the duty on sugar. The imports of sugar having been so abnormally large this year, it is not considered prudent to assume that these very large receipts will continue next year: the amount for the countervailing duty is, therefore, taken in the Budget Estimate of next year 7 lakhs lower than the Revised Estimate of this year, and that for "Articles of Food and Drink" 8½ lakhs less.

The duties on silver have declined considerably: we have not assumed any substantial recovery next year.

The duties on Oils, Manufactured Articles, and Raw Materials all show substantial increases, which we estimate to retain only partially next year.

The Export duties on rice show an increase of nearly 3 lakhs, which we estimate to retain next year, with the great restriction in the famine-stricken area.

On the other hand, there are declines, not serious, in the duties on Arms, Liquors, Chemicals, and Cotton Goods.

ASSESSED TAXES.

	Accounts, 1897-98.	Accounts, 1898-99.	Accounts, 1899-1900.	1900-1901.		1901-1902, Budget.
				Budget.	Revised.	
	R	R	R	R	R	R
Deduction by Government from Salaries, Pensions, and Interest payments . . .	44,44,940	43,62,540	43,84,515	43,70,000	44,87,000	44,66,000
Other Collections . .	1,45,09,710	1,48,59,370	1,51,19,901	1,52,07,000	1,51,33,000	1,50,93,000
TOTAL .	1,89,54,650	1,92,21,910	1,95,04,416	1,95,77,000	1,96,20,000	1,95,59,000
Charges . . .	3,22,780	3,28,120	3,32,364	3,44,000	3,36,000	3,64,000

231. The decrease of the Estimate for next year below the Revised Estimate for this year is due to the purchase by the Government of the Great Indian Peninsula Railway: the income-tax on the surplus profits of that Railway Company now disappears.

FOREST.

	Accounts, 1897-98.	Accounts, 1898-99.	Accounts, 1899-1900.	1900-1901.		1901-1902, Budget.

TOTAL NET REVENUE	179,348	36,115	105,891	—7,300	82,100	—39,200

235. The increase in Revenue having been abnormally large this year, and being due to special causes, the estimate for next year, though in excess of the Budget Estimate of this year, is 7½ lakhs less than the Revised Estimate. Increased expenditure is necessary to enable the Department to cope with the increasing traffic.

TOTAL ENGLAND	2,180,086	2,286,235	2,355,624	2,322,600	2,329,700	2,327,600

238. Political pensions are decreasing slowly: Superannuation Allowances and Pensions are increasing steadily with additions to the pension list: Stationery and Printing Charges must increase with the growing needs of the administration of the country. The large increases in Miscellaneous Expenditure have been explained in paragraphs 172 and 214. As regards Exchange, it may be explained that the entries under the head XXIV.—Exchange or 31.—Exchange represent (1) the difference between the net Sterling Expenditure at 1*s.* 4*d.* the rupee and the actual average rate of the year, and (2) the difference between the amounts of remittances between England and India at the rate of 1*s.* 4*d.* the rupee and the rate at which the sums are brought to account under various contracts with Railway Companies and others. In the Revised Estimate of this year the transactions result in a small entry on the Expenditure side: next year they result in a larger entry on the Revenue side.

FAMINE RELIEF AND INSURANCE.

TOTAL .	3,11,23,771	5,00,25,000	6,33,76,000	1,01,11,000

240. The following table gives an estimate of the indirect expenditure and loss of revenue :—

	1899-1900, Accounts.	1900-1901, Revised.	1901-1902, Budget.
	R	R	R
Loss of Revenue—			
Land Revenue . . .	1,90,85,000	1,30,27,000	41,50,000
Provincial Rates . . .	17,28,000	16,89,000	1,35,000
Other Heads . . .	47,02,000	27,22,000	8,70,000
	2,55,15,000	1,74,38,000	51,55,000
Deduct—Net Gain of—			
Railway Revenue .	*79,82,000*	*40,00,000*	...
Irrigation . . .	*11,14,000*	...	...
	1,64,19,000	1,34,38,000	51,55,000
Increase of Expenditure—			
Compensation for dearness of provisions and other charges	40,88,000	66,03,000	3,58,000
Total estimated cost of famine in addition to the charge under 33.—Famine Relief .	2,05,07,000	2,00,41,000	55,13,000

241. The Budget allotments for increased agricultural advances connected with the famine were about 20 lakhs this year: additional allotments, aggregating 122 lakhs, were sanctioned during the year. The increase on this account in the Estimate of next year amounts to about 30 lakhs, chiefly in Bombay.

242. The loans to Native States to help them in dealing with famine relief in their territories have far exceeded the provision of 75 lakhs mentioned in paragraph 135 of Part II of the last Financial Statement. The loans actually sanctioned during the year amount to the large total of over four crores of rupees. This includes the large loan of two crores to the Hyderabad State, about a crore advanced to the Berar Administration, 65 lakhs to Bombay States, and 38 lakhs to Rajputana States.

Guaranteed Railways—						
Miles open on April 1	2,588	2,588	2,588	2,627	2,612*	1,305

* Includes the mileage of the Great Indian Peninsula Railway as it was a Guaranteed Railway for the first three months of the year.

243. The Revised Estimate of net receipts on State Railways in 1900-1901 is higher than the Budget Estimate by ₹82,41,000 or £549,400. The improvement is a very general one though it is most marked in the case of the East Indian, Rajputana-Malwa, Indian Midland and Great Indian Peninsula Railways. It is due to a general development of traffic, to increased open mileage, and to heavy traffic in food stuffs consequent on famine.

244. The net receipts from State Railways in 1901-1902 are estimated at R42,05,000 or £280,300 more than the Revised Estimate for 1900-1901. This increase is due to the inclusion, under this head, of the transactions of the Great Indian Peninsula Railway for the whole year, whereas this year it was a State Railway for nine months only: to large additions to the open mileage: to the consequent development of traffic; and to an expected return to normal conditions on the North-Western Railway, the only Railway on which there was an important decline in earnings this year. The increase in working expenses is due to increased traffic which causes in the other side the increase in earnings and to provision having been made for heavier repairs and renewal of rolling stock. The increase in interest and other charges in India is due to the progress of Capital outlay, and in England chiefly to provision having been made for a full year's interest and annuity payments in respect of the Great Indian Peninsula Railway as against only a half-year's payments provided for in the Revised Estimate.

245. The Revised Estimate of net receipts from Guaranteed Railways is R1,62,000 or £10,800 higher than the original Estimate, due almost entirely to an improvement in traffic on the Great Indian Peninsula Railway during the first three months of the year, during which period this line continued to be classed under this head. The Budget Estimate of net receipts for 1901-1902 is R32,61,000 or £217,400 lower than the Revised Estimate for the current year and is due to the exclusion of the transactions of the Great Indian Peninsula Railway, which are now shown under "State Railways."

246. The decrease in the Budget Estimate of surplus profits and other charges for 1901-1902, as compared with the Revised Estimate for 1900-1901, is due to the Great Indian Peninsula Railway having become a State Railway.

IRRIGATION.

Irrigation.	Accounts, 1897-98.	Accounts, 1898-99.	Accounts, 1899-1900.	1900-1901.		1901-1902, Budget.
				Budget.	Revised.	
Major Works.	R	R	R	R	R	R
Revenue — Direct Receipts	2,37,77,440	2,21,29,300	2,36,77,938	2,30,74,000	2,57,58,000	2,34,43,000
Revenue — Land Revenue	96,47,380	1,00,87,584	1,00,52,606	1,06,71,000	1,09,59,000	1,13,33,000

Minor Works.						
Receipts—Direct	22,73,820	24,13,856	22,67,383	23,49,000	24,91,000	25,22,000
Expenditure	96,77,170	94,03,466	1,05,29,591	1,07,67,000	1,03,35,000	1,13,97,000
Statistics of Major Works.						
Capital Outlay to March 31	32,63,98,030	33,31,93,752	34,26,13,013	35,31,57,720	35,19,94,013	36,32,74,013

247. The Revised Estimate of receipts from Major Works is higher than the Budget Estimate by R29,72,000. The increase is due to the larger demand for water from the canals in the North-Western Provinces and Oudh and the Punjab, in consequence of a failure of the rains, as well as to the development of irrigation from the Chenab Canal and the opening of the Jamrao Canal in Sind. The increase in the receipts from Minor Works occurs also in the North-Western

Provinces and Oudh and the Punjab, and is due to the same cause. The increased Revenue of 1900-1901 caused an increase in the collection charges, and damages by floods rendered special repairs necessary in the Punjab and Madras. The Budget Estimate of direct receipts from Major Works anticipates a decrease of R23,15,000. Seasonable rainfall has considerably reduced the area irrigated by the canals in Upper India during the present *rabi* season, except by the Chenab Canal, in the revenue of which an increase of R5,05,000 is expected. The increase in the indirect receipts is due to the further development of irrigation from the Chenab and Jamrao Canals.

248. The financial results obtained during 1898-99 and 1899-1900 from Irrigation Works, for which Capital and Revenue Accounts are kept, are given below :—

	1898-99.	1899-1900.
MAJOR WORKS.	R	R
Capital Outlay—		
Direct and Indirect . During the year . .	70,71,840	97,06,074
Direct and Indirect . To end of year . .	34,83,46,160	35,80,52,223
Revenue Account—

249. The expenditure on Imperial Military Works in India is expected to be less than the Budget Estimate by R10,09,000, while that in England has been increased by R3,84,000. The grant of the year was increased by R2,20,000 transferred from the Military Estimates for expenditure on certain mobilization works, but a lapse of R7,48,000 on the total grant is anticipated. A special addition of R17,75,000 has been made to the Budget grant for 1901-1902: this is part of the large new expenditure mentioned in paragraph 221, as having been sanctioned to increase the efficiency of the Army. It is given for the following purposes:—

	R
The new Cordite Factory . . . . . (in addition to 2 lakhs provided from the ordinary grant)	6,00,000
The new Gun Carriage Factory . . . . . (in addition to 2 lakhs from the ordinary grant)	2,20,000
Mounted Infantry Schools	2,50,000
Accommodation for a third Howitzer Battery . . .	5,00,000
Coast Defence Electric Lights	75,000
A new Small Arms Factory	50,000
Accommodation for increase in personnel of the Sub-Marine Mining Establishment in India	80,000

250. The expenditure on Imperial Civil Works during 1900-1901 is expected to be more than the Budget Estimate by R1,49,000; the increase being due to special grants having been sanctioned during the year for the Military Secretariat, Calcutta, and for the purchase of a site for the Bagdad Residency. The Budget grant for 1901-1902 is higher than that for 1900-1901 by R26,65,000, special grants having been allotted for new public offices at Calcutta, Simla, Chittagong, and Bangalore, and a further contribution having been made towards the Simla Extension project. The expenditure on Provincial Civil Works during 1900-1901 is expected to be more than the Budget Estimate by R3,39,000, while that on Local Civil Works is expected to be less than the Budget Estimate by R6,92,000. The Provincial Budget Estimates for 1901-1902 exceed those of the

present year by the large amount of R47,50,000. This is possible in consequence of the returning prosperity of most of the Provinces and of the special contributions made from Imperial as mentioned in paragraph 188.

The Budget grant for 1901-1902 for Local Civil Works is slightly in excess of that for 1900-1901, as in Bengal and Madras it has been found possible to devote additional funds to the construction of roads and other works.

251. With regard to the Expenditure in 1900-1901, it may be mentioned that from the large savings that have accrued by the absence of the Indian Contingents in South Africa and China, the Government of India has sanctioned special new expenditure with the object of improving the efficiency of the Army. Among the more important of these measures are the following :—

Purchase of six batteries of German guns and an additional 20,000 Lee-Enfield rifles at a cost of £262,000.

300 artillery horses have been procured for £18,000.

The equipment of four general hospitals of the Field Army has been completed at a cost of £9,000.

£10,000 have been incurred for 10 miles of light tramway material and for railway sidings and water-supply arrangements at rest-camps.

£24,000 have been spent on light railway material.

The acquisition of land for tactical instruction has cost £6,000.

The grant of compensation to Australian shippers of horses has cost £10,000, and bounties to British soldiers extending their colour service has involved an expenditure of £15,000.

£12,000 have been spent on account of the addition of a howitzer battery to the Field Artillery in India, and £7,000 on temporarily increasing the Native Army reserves.

The total cost of all these measures exceeds £425,000.

With regard to the Expenditure of next year, those causes of increase may first be stated which are beyond the control of the Government of India. In the Budget for next year it has been assumed that there will be no savings owing to the despatch of troops out of India without replacement, and as compared with the current year's Budget there will be an increase of £316,000 on this account. The rise in price of metals and home stores accounts for an increase of about £100,000. The abatement of famine in many parts of the country gives, on the other hand, a reduction of £267,000, so that the net addition to the expenditure due to unavoidable causes may be approximately taken at £149,000.

The Government of India has also deemed it necessary to sanction several measures involving new expenditure for the improvement of the efficiency of the Army. Foremost comes the re-armament of the Native Army, for which £395,000 have been provided. £105,000 have been set aside for the reorganisation of the Transport Service.

The purchase of 81 maxim guns for the Field Army and coast defences will cost about £34,000, and the purchase of new 10-pr. guns for mountain batteries in India will cost £27,000.

The addition of two howitzer batteries to the Field Army and of one company of Royal Garrison Artillery accounts for an increase of £79,000.

The formation of five schools for mounted infantry in India will involve an expenditure of £43,000, while £26,000 represent the increase due to the addition of one British officer per regiment of Native Infantry in India and of eight officers for the Commissariat-Transport Department.

Provision has also been made for the following :—

Two 6″ B. L. guns for the re-armament of Choki Point battery, £11,000; purchase of 18 machine guns of different patterns for trial, £8,000; provision of Grenfell sights for the Field Artillery, £8,000; improvement of the equipment of field batteries and ammunition column units in India, £18,000; provision of cordite ammunition for 6″ B. L. guns of coast defences, £8,000; for increasing the popularity and improving the efficiency of the Volunteer Forces in India, £7,000; Bandolier equipment for the Field Army, £13,000; augmentation of the submarine mining establishments £7,000; and the purchase of 294 horses for the artillery, £25,000.

The total cost of the measures involving new expenditure exceeds £944,000, in addition to £118,000 provided in the Military Works Estimates.

Section V.—Capital Expenditure on Railways and Irrigation Works not charged to Revenue.

RAILWAY CONSTRUCTION.

252. The expenditure on Railway Construction for which the Government of India undertakes any financial responsibility or gives any direct guarantee will be ₹8,30,75,000 in the current year and ₹10,32,44,000 in 1901-1902, the amount having been ₹8,96,77,803 in 1899-1900 and ₹7,30,84,000 in the Budget Estimate of this year. The distribution of the total expenditure on Railway Construction between State and Companies' Agency in each of the three years from 1899-1900 to 1901-1902 is as follows :—

TOTAL .	35,345	2,73,000	12,36,000

IRRIGATION CONSTRUCTION.

261. The figures are :—

Accounts, 1899-1900.	Budget, 1900-1901.	Revised, 1900-1901.	Budget, 1901-1902.
₹	₹	₹	₹
89,69,400	1,00,00,000	90,08,000	1,00,00,000

The expenditure during the current year will probably fall short of the Budget Estimate by ₹9,92,000. The progress of works has been slower than anticipated in all Provinces except Madras. In order to provide for an adequate rate of progress on the large projects, now in hand, the Budget Grant for 1901-1902 has been fixed at ₹1,00,00,000 as in the current year.

262. The following table shows the projects included in the programme of this and next year, and the amounts to be spent on each :—

NAME OF PROJECT.	Expenditure in 1900-1901.	Expenditure in 1901-1902.
	₹	₹
Mandalay canal	9,00,000	7,00,000
Shwebo „	1,44,000	8,00,000
Bari Doab „	2,50,000	5,57,000
Chenab „	7,50,000	7,35,000
Jhelum „	33,97,000	24,98,000
Desert „	3,33,000	3,97,000
Jamrao „	9,25,000	5,61,000
Other projects	23,09,000	37,52,000
TOTAL .	90,08,000	1,00,00,000

Section VI.—Provincial Finance.

263. In view especially of the grants-in-aid of Provincial Revenues, aggregating 164½ lakhs, which have been mentioned more than once in this Statement, it is proposed in this Section to give some figures and explanations relating to the Provincial Revenues and Expenditure of the several Provinces.

264. The current Provincial Settlements were arranged in 1897, to have effect for the five years 1897-98 to 1901-1902. In estimating the figures for each Settlement the Provincial heads of Revenue and Expenditure are taken at amounts representing the normal Revenue and Expenditure at the stage of growth existing at the time, future increases of Expenditure being left to be met from future increases of Revenue. A fixed adjustment is made, either by deduction or by addition, of the amount required to place the Revenue in equilibrium with the Expenditure. The following table shows for each Province the Estimate of the Settlement, the opening Provincial balance on April 1, 1897, the Revenue and Expenditure in each year since 1897-98, and the closing balance of each year :—

	Estimate for the Settlement of 1897-98 to 1901-1902.	Accounts.			Revised, 1900-1901.	Budget, 1901-1902.
		1897-98.	1898-99.	1899-1900.

265. The circumstances of the years during which the present Settlement has been current have been of an abnormal character, and have affected Provincial Revenues most unfavourably. The famine of 1896 and 1897 affected the North-Western Provinces and Oudh, the Central Provinces, and Bombay most severely, Madras, Bengal, and the Punjab seriously, and Burma slightly. The famine of 1899 and 1900 has affected Bombay and the Central Provinces most severely, the Punjab very seriously, and some of the other Provinces slightly. Assam, though unaffected by either famine, suffered very severely from the great earthquake of June 1897. All Provinces have had to incur heavy expenditure on plague preventive measures.

To enable the Local Governments to cope with those calamities, it was necessary for the Government of India to come to the aid of Provincial Revenues. The great bulk of the expenditure on famine relief was specially treated as Imperial, and, in addition, the Government of India has in the past four years from 1897-98 to 1900-1901 made the following special grants-in-aid of Provincial Revenues :—

	1897-98.	1898-99.	1899-1900.	1900-1901.
	R	R	R	R
Central Provinces	7,72,000	5,00,000	19,32,000	34,15,000
Assam	8,00,000	18,00,000	...	...
Bengal	...	17,00,000	...	...
North-Western Provinces and Oudh	10,27,000	10,00,000	...	...
Punjab	...	5,00,000	95,000	5,98,000
Madras	...	16,96,000	3,49,000	...
Bombay	12,18,000	48,75,000	34,37,000	64,79,000

These amounts are included in the total Provincial Revenues of the several years in the table in paragraph 264, a fact for which allowance must be made in drawing any deductions as to the progress of Provincial Revenues in the period.

266. The strain thrown on Provincial Revenues has been so great that these grants of the past have not been sufficient to place all the Provinces in a satisfactory financial position, or to enable them to undertake even a moderate portion of the many useful measures involving expenditure which want of funds have compelled them to postpone. The evil of excessive economy, hampering the progress of the numerous and vital interests for which Provincial Revenues are allotted, is so great that the Government of India has decided to devote a considerable portion of the anticipated Imperial surplus of 1901-1902 to giving further aid to Provincial Revenues. The following grants-in-aid are accordingly provided in the Estimates of next year :—

	R
Central Provinces	26,89,000
Assam	2,00,000
Punjab	12,40,000
Madras	32,14,000
Bombay	91,00,000
TOTAL	1,64,43,000

These amounts also are included in the total Revenues for the year 1901-1902 in the table in paragraph 264.

267. The grants are to be devoted, first, to restoring the closing balance to the minimum prescribed for each Province, and, in the second place, to increasing the grants for Provincial Expenditure. The effect of raising the balance to the minimum will be to allow the Local Governments to devote all their current Revenues to Expenditure.

268. The following is a short account of the present financial condition of each Province, from which the reasons for making the grants will be apparent.

CENTRAL PROVINCES.

269. This small Province has been severely tried during the whole of the period under review, having suffered from two very serious famines almost in succession, the first of which had been preceded by three or four distinctly unfavourable seasons. The estimates of expenditure next year after elimination of the special expenditure of 6 lakhs mentioned in paragraph 214, are all moderate, and could not be further restricted. The grant-in-aid required to avoid a *minus* closing balance was R16,64,000: this has been increased to R26,89,000 which, after restoring the Provincial closing balance to the prescribed minimum of 8 lakhs, admitted of an increase of R2,25,000 to the grant proposed by the Chief Commissioner under 45.—Civil Works, raising that grant to R19,45,000, as compared with R15,00,000, the amount taken for the head in the Settlement in 1897.

The Revenues, without the special grants-in-aid, have every year been below the standard of 1897, and the expenditure has been restricted so as to prevent its increasing above that standard at anything like the normal rate of increase.

BURMA.

270. The Provincial Revenues of Burma are in a most prosperous condition. The Revenues have increased very much above the standard of 1897, and the Lieutenant-Governor is in the fortunate position of finding difficulty in usefully spending all the funds at his disposal. The Settlement estimate for 45.—Civil Works was R53,47,000: the grant for 1901-1902 is R88,00,000. There is no question of this Province requiring aid from Imperial Revenues.

ASSAM.

271. The large cost of repairing the damages caused by the earthquake constitutes the sole reason for Assam requiring aid from Imperial Revenues. The Provincial Revenues show a fairly satisfactory increase over the standard of 1897, and similar increases of expenditure have been possible.

The estimates, as submitted by the Chief Commissioner, resulted in a closing balance slightly above the prescribed minimum of 5 lakhs; but to secure that result he had restricted the grant for Civil Works 2½ lakhs below what he considered to be required for the proper continuance of the work of repairing earthquake damages. A grant-in-aid of R2,00,000 was made, and the grant under 45.—Civil Works was increased by R2,50,000 to R16,05,000, as compared with the Settlement estimate of R14,35,000.

BENGAL.

272. This Province has quite recovered from the effects of the famine, and has entered on what promises to be a period of prosperity. The Revenues have increased considerably above the standard of 1897, and the expansion of Expenditure (after 1897-98, in which year the expenditure on Famine Relief increased the Provincial Expenditure) has not yet kept pace with the improvement; and the opening balance of 1901-1902 will be R22,04,000 in excess of the prescribed minimum of 20 lakhs. But the Bengal Government proposes, and has been allowed, to spend, in addition to the current Revenues, the whole of this excess

next year, so that the closing balance will be just the minimum. The Settlement estimate for 45.—Civil Works was R32,44,000: the grant for 1901-1902 is R48,64,000. Bengal stands in no need of aid from Imperial Revenues.

NORTH-WESTERN PROVINCES AND OUDH.

273. The position of this Province is very similar to that of Bengal, and the same remarks apply, except that the Provincial Revenues were not able to bear any part of the famine expenditure in 1897-98, and the increases above the standard have not been quite so great as in Bengal. The opening balance of 1901-1902 will be R25,64,000 in excess of the prescribed minimum of 20 lakhs, and the Local Government proposes to spend next year almost the whole of the excess in addition to the current Revenues. The Settlement estimate for 45.—Civil Works was R27,80,000: the grant for 1901-1902 is R48,62,000. The Revenue for next year has been cautiously estimated. This Province also stands in no need of Imperial assistance.

PUNJAB.

274. The Punjab Provincial finances have been very seriously crippled by the two famines, in spite of the very great restrictions in expenditure which the Local Government effected in view of the calamities. In the first year of the new Settlement the Revenues increased slightly above the standard of 1897, but there has been practically no further increase since: the Local Government in view of the very favourable prospects of the present season takes a sanguine view and estimates for a large increase of Revenue next year, and it is to be hoped that its anticipation will prove correct, though that is the most doubtful of all the figures in this Financial Statement. The Provincial balances have been exhausted. The estimates proposed by the Local Government for next year resulted in a surplus of R6,59,000—an amount insufficient to raise the balance to the prescribed minimum of 10 lakhs—and the Local Government, in view of the urgent need for larger expenditure, asked permission to spend the surplus instead of devoting it to building up again the Provincial balance. The grant-in-aid for this Province was fixed at R12,40,000—an amount which will enable the Local Government to spend all the current Revenues and close the year with the prescribed minimum. The Settlement estimate for 45.—Civil Works was R27,40,000: the grant for 1901-1902 is R37,33,000.

MADRAS.

275. The Provincial Revenues in Madras have increased moderately above the standard of 1897, but the Expenditure has increased in a greater proportion; and the financial position is consequently unsatisfactory. On the estimates, as submitted by the Madras Government, the grant-in-aid required to avoid a *minus* closing balance next year was R6,14,000 and it was decided to make a special grant-in-aid of R32,14,000—an amount which will enable the Local Government to spend over 13 lakhs in addition to the current Revenues and to close the year with the prescribed minimum of 20 lakhs. The Settlement estimate for 45.—Civil Works was R22,00,000: the grant for 1901-1902 is R34,05,000.

BOMBAY.

276. The two famines have hopelessly disorganised the Provincial finances of Bombay: special grants from Imperial have been required in every one of the four years of the current Settlement; and, unlike all other Provinces, an era of more hopeful future prospects has not yet dawned on Bombay: we must wait for the next monsoon before we can look forward to any improvement in its Provincial finances. In addition to bearing as Imperial, as in the past, all the direct famine expenditure in 1901-1902, it was necessary to make a grant-in-aid of R62,48,000 to avoid a *minus* closing balance. The Government of India decided to increase this grant to 91 lakhs, which admits of an addition of 8½ lakhs to the very restricted grant for 45.—Civil Works proposed in view of the need for economy by the Local Government, and will still enable it to close the year with the prescribed minimum of 20 lakhs, provided that the estimates are realised. In the presence of severe famine it is difficult to say with confidence that the estimates will be realised, but they have been framed with caution. The Settlement estimate for 45.—Civil Works was R31,66,000: the grant for 1901-1902 is R36,17,000.

Section VII.—Ways and Means.

HOME TREASURY.

277. The following are the details of the transactions of the Home Treasury in the Budget and Revised Estimates for 1900-1901 and in the Budget Estimates for 1901-1902:—

TOTAL	33,629,268	39,445,343	30,872,143

1900-1901. Home Treasury Ways and Means.

278. In framing the Budget Estimates of the current year it was assumed that the cash balance in the Home Treasury on the 1st of April 1900 would be £2,223,668, and that the Secretary of State would sell Bills on India to the extent of £16,440,000 during the year. The Estimate also provided for the release of £500,000 of the gold held on Currency account in the Bank of England, and for a net addition of £500,000 to the Temporary Debt by the issue of India Bills. The issue of a permanent Sterling Loan was not contemplated, but the raising in England of funds for the expenditure of Railway Companies was expected to result in a net receipt by the Secretary of State of £672,900. With these several receipts and a reduction of £202,100 in the cash balance of the Home Treasury, it was intended that the Secretary of State should meet the net disbursements in England on account of Government Expenditure and Miscellaneous Family and other Remittances which in March last were estimated at £18,315,000.

The actual cash balance on the 1st April 1900 was higher than that taken in the Budget Estimate of the current year by £1,107,275. Of this improvement, a sum of £663,600 was due to the repayments by the Imperial Government on account of Indian Expenditure in connection with the war in South Africa having been larger than was assumed in the Revised Estimate. There was also a decrease of £376,653 in the net disbursements of the Home Treasury as compared with the Revised Estimate of 1899-1900, and the receipts from the sale of Council Bills were higher by £67,022.

The large increase of the Famine Expenditure in India during the current year and the heavy demands for famine loans to Native States and to agriculturists, in excess of the liberal provision made on these accounts in the Budget Estimate, imposed a severe strain on the Indian treasury balances, and it was found necessary to restrict the drawings of the Secretary of State. The Revised Estimate of Council Bills is now placed at £13,500,000 or less than the amount entered in the Budget Estimate by £2,940,000. A decline of £158,500 in the net receipts by the Secretary of State on account of the Capital of Railway Companies is also anticipated in the Revised Estimate of 1900-1901. On the other hand, the net disbursements at the Home Treasury for Government Expenditure and the deposit and ordinary remittance transactions of the year are estimated to be less than the Budget by £345,900, and it is expected that the recoveries from the Imperial Government on account of the charges incurred in India in connection with the war in South Africa and the China Expeditionary Force will amount to £1,386 300. Nothing was entered on the latter account in the Budget Estimate as the long continuance of field operations in South Africa was doubtful, and the expedition to China was not contemplated when the estimates were framed.

The heavy demands for rupees in India have necessitated large purchases of silver, and the payments in England on this account are now estimated at £6,033,000. To cover these payments, gold to the extent of about four millions has been remitted from India in instalments from October 6, 1900, to March 9, 1901, £3,988,000 being entered as the receipts during the currrent year by the sale in England of the gold remitted; and the gold held in London on April 1, 1900, on account of the Currency Department, £1,500,000, has been released. Of the latter amount, £500,000 were entered in the Budget Estimate; the improvement in the receipts of the Home Treasury due to this cause is, therefore, £1,000,000.

The only payment of gold to the Bank of England on Currency account during the current year has been a sum of £100,000, which was set apart and held under the Act, VIII of 1900, in December 1900. This amount was a few weeks later released to be used for the purchase of silver, and at present no reserve of gold is held in England on account of the Indian currency note circulation.

The result of the several variations from the Budget Estimate above explained is a reduction of £2,411,300 in the balances of the Home Treasury during the current year. When it was known that there would be so large a reduction, it became necessary to raise a public loan in England, and in July last the Secretary of State invited tenders for India 3 per cent Stock for £3,000,000. The loan was issued at the fixed price of 95½ per cent; the applications received amounted to over five million pounds sterling.

The closing cash balance of the current year is now estimated at £3,717,543, or higher than that taken in the Budget Estimate by £1,695,975, being the difference between the reduction in the balances of £2,411,300 above explained and the sum of the public loan of £3,000,000, and of the increase of £1,107,275 in the cash balance on the 1st of April 1900.

279. The Budget programme provided for the issue of £5,000,000 of India Sterling Bills, of which £4,500,000 were in renewal of Temporary Debt the liability for which would fall within the current financial year. An addition to the Temporary Debt of £500,000 has been made as contemplated in the Budget Estimate. But of the Bills issued in September 1900 a sum of £500,000 was borrowed for a period of six months, and the liability for discharge falls, therefore, within the present financial year. A further issue of £500,000 in renewal of these Bills has, therefore, been made, raising the gross amount issued and

1900-1901. *Temporary Sterling Loa*

discharged during 1900-1901 to £5,500,000 and £5,000,000, respectively. The results of these Temporary Loans have been as follows:—

Month of Issue.	Amount endered.	Amount accepted.		Average rate of interest per cent per annum.
	£	£		£ s. d.
June 1900 .	588,000	2,000,000	for twelve months.	3 6 2
September „ .	290,000	1,000,000	ditto	3 16 7
		500,000	for six months.	3 16 2
November „ .	545,000	1,000,000	for twelve months.	3 17 9
March 1901 .	547,000	1,000,000	ditto	3 12 0

The rates of interest payable on the temporary loans continue to rule high. The stringency in the London Money Market accounts for this as well as for the low price at which the India Stock was issued.

280. The net issues to Railway Companies in England during 1900-1901 are now estimated at £47,600 against a net receipt of £302,900 taken in the Budget Estimate, or an increase of £350,500 in the net outgoings. The usual details are as follow: —

	Budget.	Revised.
RECEIPTS.	£	£
Subscribed Capital—		
(*a*) State Lines	363,500	773,500
(*b*) Guaranteed Lines	174,200	600,000
Miscellaneous	3,000	3,100
TOTAL	540,700	1,376,600
ISSUES.		
For Discharge of Debentures—		
(*a*) State Railways	1,200,000	45,000
(*b*) Guaranteed Railways	574,200	132,800
For Stores, Establishment Charges, etc.—		
(*a*) State Railways	703,400	789,700
(*b*) Guaranteed Railways	760,200	456,700
TOTAL .	3,237,800	1,424,200

The decrease of £2,164,200 in the receipts on account of Subscribed Capital is made up as follows:—

Debentures renewed instead of being replaced by fresh Capital—	£
Bengal-Nagpur Railway	155,000
Indian Midland Railway	1,000,000
Madras Railway	321,400
Bombay, Baroda and Central India Railway . . .	120,000
	1,596,400
Receipts on account of Capital, less by—	
Bengal Central Railway	20,000
Bengal-Nagpur Railway	45,000
Indian Midland Railway . . .	370,000
Bombay, Baroda and Central India Railway	112,000
Madras Railway	20,800
	567,800
TOTAL .	2,164,200

The conditions obtaining in the London Money Market led to postponement, as far as possible, of the raising of fresh Capital by Railway Companies.

281. The bulk of the decrease of £217,200 in the Revised Estimate of drawings for expenditure on stores, etc., is caused by the withdrawals on account of the Great Indian Peninsula Railway, after the purchase of the undertaking, having been shown under the Remittance Account between England and India instead of under the Capital Account of Railway Companies as provided for in the Budget Estimate.

282. The following are the details of the remittance transactions of Railway Companies working State lines in India to whom advances are made in England for the purchase of stores, etc., against adjustments in India by debit to the Railway accounts:—

	Budget. £	Revised. £
Advances for Purchase of Stores—		
East Indian Railway	1,000,000	839,900
Rajputana-Malwa Railway	90,000	154,300
South Indian Railway	62,000	100,000
Bengal and North-Western Railway	130,000	172,800
Great Indian Peninsula Railway	...	199,700
TOTAL	1,282,000	1,466,700
East Indian Railway Debentures (net)	1,600,000	1,775,500
South Indian Railway Debentures	50,000	250,000
Transfer fees, etc.	2,000	3,200
TOTAL	1,652,000	2,028,700
Net Remittance from India	370,000	562,000

The Budget Estimate provided for the issue of £2,199,700 of Debentures by the East Indian Railway Company, of which £599,700 were for the discharge or exchange of Debentures expiring in February 1901. The Company issued £1,000,000 of Debenture Stock in April last, which realised £951,300; a further issue, in the last quarter of the year, of £926,000 realized £850,200: the bulk of the Debentures which it was intended to discharge have been renewed and only £26,000 will be discharged. The South Indian Railway Company have issued £200,000 of Debentures in excess of the amount entered in the Budget Estimate, to meet the expenditure on the Madura-Paumben and the Tinnevelly-Quilon Railways.

The aggregate advances for purchase of stores is expected to exceed the Budget Estimate by £184,700. This is due to the Budget provision for withdrawals by the Great Indian Peninsula Railway having been made under the Capital Account of Railway Companies as already explained in paragraph 281.

1900-1901. Family and Other Remittances.

283. The Family and Other Remittances are now expected to result in a net payment of £294,000, or £38,500 less than the amount entered in the Budget Estimate. The repayments in England of advances of various kinds made in India will be larger, and the disbursements on account of Indian money orders and remittances by the Administrators General less, than was anticipated in March last.

1901-1902. Home Treasury Ways and Means.

284. The net disbursements at the Home Treasury on account of Government Expenditure and the Ordinary Remittance, Deposit and Railway Companies' transactions are estimated at £19,415,600 during 1901-1902. Of this, it is proposed to provide £16,500,000 by the sale of Bills on India, and £1,000,000 by the issue of India Stock. The balance of £1,915,600 will be met in the following way, namely:—

(1) £500,000 of the sum spent by the Secretary of State in the purchase of silver this year will be reimbursed to the Home Treasury by a further remittance of gold from India of that amount.

(2) It is estimated that a sum of £304,000 will be recovered from the Imperial Government on account of the expenditure incurred in India in connection with the China Expeditionary Force and the war in South Africa.

(3) The cash balance of the Home Treasury will be drawn upon to the extent of £1,111,600. As stated in paragraph 278, the balance on the 1st April 1901 is estimated at £3,717,543. The reduction of this amount taken in the Budget Estimate provides for a closing cash balance of £2,605,943 on the 31st March 1902.

ry Loans.

285. No increase to the Temporary Debt is contemplated, but it is proposed to issue India Bills for £5,000,000 during 1901-1902 to replace Bills of a corresponding amount which will fall due.

286. The Budget programme of the Secretary of State's drawings on India and of the transactions in connection with the Government Sterling Debt is announced with the usual reservation, and no pledge is given that it will be adhered to.

INDIA.

287. The following is a summary of the Estimates of Ways and Means in India during 1900-1901 and 1901-1902 :—

	1900-1901.				1901-1902.

Add—Closing Balance	13,60,04,040	9,066,969	16,23,41,405	10,822,747	15,75,94,405	10,500,327
Total	43,92,07,040	29,280,369	59,12,62,405	39,417,627	48,24,90,405	32,165,927

The headings in italics are connected with, and explained by, the corresponding figures of the Secretary of State's account in England. The others refer to purely Indian transactions.

288. The actual cash balances in the treasuries on the 1st of April 1900 were less than the amount taken in the Budget Estimate by more than 59 lakhs. The excess of Revenue over the Expenditure chargeable to Revenue is now expected to exceed the amount taken in the Budget Estimate by 8,05 lakhs: the causes of this improvement have been explained in the preceding Sections of this Statement. The expenditure of Local Governments chargeable to Provincial balances will be less than the Budget Estimate by 86 lakhs. The Capital Outlay of the Government shews an increase of about 84 lakhs, and the issues to Railway Companies for Capital Outlay an increase of about 31 lakhs, additional grants having been sanctioned to hasten the progress of Railway Construction. The main points, however, to be noticed in a comparison between the Revised and Budget Estimates of the expiring year are (1) the heavy disbursements on account of loans, principally famine loans to Native States and to agriculturists; (2) the payment of about 3,72 lakhs on account of recoverable expenditure in connection with the Indian contingents employed in China and South Africa on Imperial Service; and (3) the large profit which has accrued on the heavy coinage of rupees. The gain on the last account is estimated at more than 4,39 lakhs, and that amount will be credited to the newly constituted Gold Reserve Fund; but, as explained in paragraph 164 of this Statement, only 1,80 lakhs will be converted into gold during the current year, and this is the amount shewn in the Statement in paragraph 287 as the portion of the Gold Reserve Fund paid for remittance to London. The balance of the profit, 2,59 lakhs, has been temporarily utilized for the grant of famine loans by the Government, but will be paid gradually to the Gold Reserve Fund. In the Revised Estimate the famine loans to Native States are taken at more than 4 crores, while only 75 lakhs were provided in the Budget Estimates. Additional allotments for loans to agriculturists were sanctioned during the year to the extent of 1,22 lakhs. To enable the Government to meet these large additional rupee outgoings it was necessary to curtail the sale of Council Bills during the first nine months of the year. The result is that the payments for Bills are now expected to be less than the Budget Estimate by 4,70 lakhs.

1900-1901. General Summary

289. This restriction of the Secretary of State's resources, coupled with the heavy disbursements in England for the purchase of silver for coinage, rendered it necessary otherwise to strengthen the Home Treasury balances. This was done partly by the issue of the sterling loan, partly by setting free the whole balance of the gold which the Bank of England held on Currency Account on the 1st of April 1900, namely, £1,500,000, and partly by remittances of gold to England during the course of the year to the extent of about £4,000,000. The gold so remitted has been sold by the Secretary of State and the proceeds credited to the Home Treasury in repayment of the outgoings for the purchase of silver bullion.

290. The pressing demand for rupees caused the Government to purchase in India about 15 lakhs worth of silver for coinage, and over 45 lakhs worth was obtained from the Gwalior Durbar. It was arranged with His Highness the Maharaja Scindia that the value of the silver should be treated as a temporary loan to the Government repayable in full in September 1901. This explains the two entries of ₹45,29,000 against the third line "Temporary Debt" in the table in paragraph 287.

1900-1901. Temporary Debt.

291. In the last Financial Statement it was announced that the Government of India contemplated raising a rupee loan of three crores during 1900-1901. A 3½ per cent loan for this amount was accordingly issued. Tenders were opened on the 4th of July last. The results of the loan were:—

1900-1901. Rupee Loan.

Month of issue.	Amount tendered.	Amount accepted.	Average rate of accepted tenders.
	₹	₹	₹ a. p.
July 1900 . .	3,98,10,400	3,00,00,000	94 0 1·17

292. The year 1901-1902 is expected to open with a cash balance of 16,23 lakhs, and the surplus of Revenue in India is estimated at about 27,66 lakhs. The Capital Outlay on State Railways and Irrigation Works is estimated at 1,80 lakhs, the issues to Railway Companies for Capital Outlay at 1,56 lakhs, and the Expenditure chargeable to the Provincial balances of the Local Governments at 27 lakhs. The disbursements on account of the Secretary of State's sales of

1901-1902. Main Features

Bills on India are estimated at 25,25 lakhs, and it is proposed to pay a further portion, two crores, of the Gold Reserve Fund for remittance to London, in reduction of the balance of 2,59 lakhs mentioned in paragraph 288. Gold of the value of 75 lakhs of rupees will be remitted to England in repayment of the balance of the Secretary of State's outgoings during 1900-1901 for the purchase of silver bullion, and it is estimated that the disbursements in India in connection with the China Expeditionary Force and the troops absent in South Africa will amount to 86 lakhs. The temporary loan from the Gwalior Durbar of 45 lakhs will be repaid. Inclusive of the Deposit and other Remittance transactions of the year, the net outgoings from the treasuries in India are placed at 3,23 lakhs in the Budget Estimate, of which it is expected that about 75 lakhs will be counterbalanced by an increase in the "Unfunded Debt" consisting principally of Savings Bank Deposits. A rupee loan of two crores is entered in the Estimates. The balance of 48 lakhs it is proposed to meet by a reduction in the cash balances.

Savings Banks, etc.

293. The following table gives the details of the transactions of Savings Banks during the last few years and the estimated transactions for 1900-1901 and 1901-1902 :—

Year.	Net additions to deposits, cash.	Interest.	Total addition.
	R	R	R
1892-93	54,89,000	33,94,000	88,83,000
1893-94	17,99,000	36,80,000	54,79,000
1894-95	— 8,45,000	29,70,000	21,25,000
1895-96	24,77,000	33,85,000	58,62,000
1896-97	—58 11,000	34,66,000	—23,45,000
1897-98	—65 71,000	32,70,000	—33,01,000
1898-99	— 8,84,000	32,29,000	23,45,000
1899-1900	1,40,000	33,48,000	34,88,000
1900-1901, Budget	—12,31,000	35,17,000	22,86,000
1900-1901, Revised	14,86,000	34,80,000	49,66,000
1901-1902, Budget	31,33,000	36,46,000	67,79,000

294. The Savings Bank Accounts consist mainly of the Post Office Banks, but the transactions of the various departmental Provident Funds and the Regimental Savings Banks are also included.

295. In preparing the Budget Estimate of the current year, a net withdrawal from the Post Office Savings Banks of 20 lakhs, apart from interest, was assumed, but the transactions of the first eight months of the year resulted in a net increase in the deposits of over 30 lakhs, and allowing for withdrawals usually made in the closing months of the year, it is now expected that there will be an increase in the net deposits of over 9 lakhs on account of the Post Office Banks.

296. The cessation of famine is likely to lead to larger deposits in the Post Office Savings Banks in the immediate future, and in the Budget Estimates of 1901-1902 a net deposit of 20 lakhs, apart from interest, is anticipated.

297. The other Savings Bank Accounts included in the figures in the above table do not shew any important variations.

Loans by Government.

298. The transactions during the year 1900-1901 under the head of Loans granted by the Government were seriously affected by the famine. The net disbursements are now expected to amount to R5,08,41,000 against R90,52,000 entered in the Budget Estimate.

299. The total provision for loans next year is taken at 1,10 lakhs, but the recoveries are expected to exceed this amount by about 9 lakhs, due to the repayments in connection with the heavy disbursements made during the current year. Of the gross provision of 1,10 lakhs, a sum of 45 lakhs is for agricultural advances in the Bombay Presidency, where famine lingers.

1901-1902. New Rupee Loan.

300. According to the programme now announced, it is the intention of the Government of India to raise a new loan in India of two crores of rupees, but full liberty is reserved, as usual, to vary the programme, as now announced, to any extent that may be considered desirable.

Section VIII.—Summary.

301. The principal features in this Statement are :—

(*a*) The Accounts of 1899-1900 closed with a surplus of £2,774,623.

(*b*) 1900-1901—

(1) The Revised Estimates of 1900-1901 show a total Revenue of £75,166,000, a total Expenditure charged to Revenue of £73,525,600, and a surplus of £1,640,400, an amount higher by £1,480,100 than the surplus estimated last March.

(2) There has been a very large coinage of rupees in the current year, which will amount to about 17 crores in the 12 months. The gross profits on the coinage amount to £3,055,000 and are shown as a Mint Receipt. But this does not affect the surplus as it has been decided to devote the profits to the formation of a Gold Reserve Fund, and the net profits, £2,930,000, are shown as a Mint charge for transfer to the Gold Reserve Fund. Of this, the amount held in gold for investment is £1,200,000 leaving a balance of £1,730,000 to be converted into gold gradually as surplus receipts allow.

(3) The expenditure on Famine Relief has exceeded the Budget Estimate by £880,000, and the collections of Land Revenue, Provincial Rates and Tributes have fallen short of the Budget Estimate by £474,000.

(4) The Army Expenditure has been less than the Budget Estimate by nearly £1,200,000, chiefly in consequence of the absence of troops in China and South Africa.

(5) The Opium Revenue has exceeded the Budget Estimate by over £500,000. The net Railway traffic earnings have exceeded the Estimate by over £500,000. And Irrigation and most other heads of Revenue also yield substantial increases.

(6) Loans to Native States affected by famine exceeding 4 crores of rupees, and additional allotments for agricultural advances amounting to 122 lakhs were sanctioned during the year.

(7) A loan of £3,000,000 was issued in England and a loan of three crores of rupees in India.

(8) The drawings of Council Bills in 1900-1901 are now expected to be £13,500,000, as compared with the Budget Estimate of £16,440,000.

(*c*) 1901-1902—

(1) The Budget Estimates of 1901-1902 show a total Revenue of £72,191,900, a total Expenditure charged to Revenue of £71,501,000, and a surplus of £690,900.

(2) Though it is probable that coinage of rupees will be necessary next year, nothing is entered in the Estimates on this account, as the amount of the coinage is uncertain and the entries would not affect the surplus. It is hoped that £1,333,300 of the arrear profits of coinage balance of £1,730,000 will be converted into gold for remittance before the end of the year.

(3) The expenditure on Famine Relief will amount to about a crore of rupees, almost all in Bombay. As the Famine Insurance Grant will be maintained at the fixed sum of 1½ crores or £1,000,000, the saving under this head, as compared with the Budget Estimate of 1900-1901, will amount to 3½ crores of rupees or 2⅓ millions sterling.

(4) The net Railway traffic earnings, and the other Revenue heads are expected to yield two crores of rupees or 1⅓ millions sterling more than in the Budget Estimate for 1900-1901.

(5) Grants to Local Governments in aid of Provincial Revenues exceeding £1,000,000, new Military Expenditure exceeding £1,000,000, and other considerable increases of expenditure have been sanctioned.

(6) Subject to the usual reservations, loans of £1,000,000 in England and of two crores of rupees in India are announced as contemplated for capital expenditure on Railway and Irrigation Works, and the drawings of Council Bills are entered at £16,500,000.

(*d*) The following table shows the capital expenditure on Railways and Irrigation Works:—

	Accounts, 1899-1900.	Revised Estimate, 1900-1901.	Budget Estimate, 1901-1902.

H. J. BRERETON,
Deputy Comptroller General.

A. F. COX,
Comptroller General.

J. F. FINLAY,
Secretary to the Government of India.

APPENDIX II.

Memorandum by the Hon'ble Major-General Sir Edwin Collen, G.C.I.E., C.B., on Military, Military Works, and Marine Expenditure for the years 1900-1901 and 1901-1902.

The estimates with which the Military and Marine Department of the Government of India is concerned are the following:—

I.—Indian Military Estimates.
II.—Home (India) Military Estimates.
III.—Military Works Estimates.
IV.—Marine Estimates.

2. They will be dealt with in the order given above. But I will preface my examination of them, as usual, with some explanation of the more important measures which have been carried out or initiated during the past year.

3. Taking the Indian and the Home (India) Military Estimates together, the expenditure for the year 1901-1902 is estimated to exceed the amount provided in the Budget for 1900-1901 by £791,100. This figure, however, does not give the true increase to military expenditure in the coming year, as compared with the provision in the Budget of the current year. To arrive at the true figure abnormal causes of variation must be eliminated. In the first place, the excess provision amounting to £266,666, which was provided in the Budget for the current year to meet the expected rise in the cost of food supplies for men and animals, must be thrown out. Again, the savings amounting to £280,000 on account of the absence of the troops lent for service in South Africa and the Colonies must be taken into consideration as, in the Budget for next year, full provision has been made for the established strength. For the first time, also, a credit of £230,000 has been afforded in the Home Estimates for 1901-1902 in consequence of the recommendation of the Royal Commission on Indian Expenditure. Throwing out the above items, the increase in the Budget for next year comes to £1,008,000.

4. Some of the reasons which make this increase necessary are similar to those which were indicated by me in my memorandum of the 21st March last year; but, in addition to these, we have had brought home to us, by the striking lessons of the war in South Africa, the urgent need for improvement in many directions. Following the plan pursued in 1899 we drew up last autumn a list of our more pressing military requirements, and selected from this such items as we could at that moment make provision for, from savings due to the absence from India of troops in South Africa and China, or for which we foresaw the possibility of making provision in the coming year. Lately, we have further prepared a similar and more complete list from which selections have again been made, up to the limit of our financial resources. The savings referred to have supplemented to an important degree the funds ordinarily available so that in one way and another the year under review has seen an exceptionally large number of important military measures carried through, or at least instituted and put in a fair way towards completion.

5. Some of the principal of these measures I will briefly enumerate, dividing them into the following headings: Field Army, Frontier Defence, Frontier Railways, Internal Defence, Coast Defence, Ordnance Factories, and General requirements.

Field Army.

6. Foremost among the requirements of the field army is the introduction of the ·303" rifle for all troops. This important measure is being pushed forward as much as possible, but unfortunately for us in India the very large demands on the manufacturing establishments in England consequent on the South African war have prevented the contractors from fulfilling their promises, and it is inevitable that the completion of the re-armament should be somewhat delayed. No less important is the improved armament of our artillery. Various improvements which were introduced experimentally in England eighteen months

or so ago have now successfully withstood the severe test of field service and are being adopted in our field batteries; they include the "spade" brake and the "Grenfell" sight, both of which have been found very satisfactory in South Africa. The year has passed without our being able to obtain any new guns for our mountain batteries, but a satisfactory type of gun has at length been decided on at home, and we hope to complete this very necessary measure next year at a cost of ₹4,00,000 (£26,600). Further, intended improvements to the artillery branch are an increase of 594 horses to field batteries costing ₹5,40,000 (£36,000), half of which has been met from savings; an increase to the establishments of mountain batteries at an initial cost of ₹3,50,000 (£23,300), and an annual expenditure of ₹6,37,000 (£42,460); and an addition of three howitzer batteries, two of which will we hope be provided next year. The necessity for an extended use of machine guns is another evident result of the South African war, and we are obtaining immediately sufficient Maxims to give two each to all regiments of the 1st and 2nd divisions of the field army, as well as to all other British regiments in India. These guns, sixty-eight in number, will cost ₹3,42,000 (£22,800). At the same time we are obtaining several machine guns of other descriptions from England for thorough trial, at a cost of ₹1,66,000 (£11,060).

7. I mentioned last year an important increase of 92 British officers to the Native army. The necessity of a further step in the same direction has now been recognized, and we propose to add another officer to every Native infantry regiment, or a total further increase of 133 officers. The cost of this for a whole year will be about ₹6,00,000 (£40,000), half of which sum only has been entered in the Estimates of 1901-1902.

8. The increased use of mounted infantry must be a distinct feature in future warfare, and provision for the training of such troops has therefore become very necessary. With this object we propose to form five schools of instruction and have provided ₹9,00,000 (£60,000) in the estimates of the coming year for the purpose.

9. In matters of equipment two items resulting from the experience of the South African war are the issue of a number of Zeiss and other binoculars and telescopes to mounted troops, and the adoption of a bandolier for the carriage of ammunition. The pattern in the latter case has not yet been decided on, but we have provided two lakhs (£13,300) in the estimates which will suffice for the first two divisions of the field army.

10. Turning to the important question of transport, the reorganization which I alluded to in my memorandum of March last could not be adopted in its entirety owing to the large expenditure involved, and we have been obliged to content ourselves with a scheme which will at least give us a definite organization and one which will be capable of rapid development and expansion on mobilization. This scheme has been approved by the Secretary of State, and the cadres of mule corps, cart trains, and camel corps, which are its salient feature, are being formed. The eventual cost of the organization will be nineteen-and-a-half lakhs annually (£130,000), and fifteen-and-three-quarter lakhs (£105,000) have been provided on this account in the Estimates of 1901-1902. Meanwhile the necessities of the supply branch of the Commissariat-Transport Department will be partly met by an addition of eight officers and eight probationers, which has been sanctioned by the Secretary of State.

11. Other measures towards increasing the preparedness and efficiency of the field army are the provision of equipment required from England for four more general hospitals, costing ₹50,000 (£3,300); the organization of a corps of military staff clerks, involving extra expenditure to the extent of ₹56,000 (£3,700); an increase to the annual allowance of practice ammunition for field artillery, costing ₹63,000 (£4,200); and a similar increase at a cost of ₹68,000 (£4,530) for native infantry on their being rearmed with the ·303" rifle.

Frontier Defence.

12. Under the headings Frontier Defence and Railways fall the construction of a new fort at Drosh which is nearly finished; the completion of the Khyber defences, which have been handed over to the Khyber Rifles; the provision of additional water-supply and accommodation for the garrison, and the completion of the defences at the Malakand. Under the same heading is a road from Kohat to Peshawar which is being executed by the Public Works Department

at a cost of R2,47,000 (£16,460); about one-third of this work is already completed. Then it has been decided to make a 2-foot 6-inch railway from Khushalgarh to Kohat and Thal, the formation as far as Kohat being for a 5-foot 6-inch gauge in view of the eventual bridging of the Indus. The work was begun in January and is being pushed on rapidly. The Nowshera-Dargai Railway to which I alluded last year is practically completed and is attracting a good amount of traffic. *Frontier Railways.*

13. The rearmament of the volunteers which is an important item under the heading Internal Defence is perforce delayed for the unavoidable reason which retards the rearmament of the field army, but we hope to give at least a percentage of volunteers the ·303" rifle before very long. In the same category is the addition of a company of garrison artillery to the army in India, which we have recommended. *Internal D*

14. In connection with Coast Defence some long-deferred requirements have been taken in hand during the past year, although the more pressing needs of the land forces have compelled a further postponement of other measures which must before long receive attention. We are about to supply the 6-inch guns of the defences at Bombay with cordite ammunition at a cost of R1,37,000 (£9,130) and in 1902-1903 similar provision will be made for the guns of that calibre in the Karachi and Hughli defences. We have provided a lakh and seventy thousand rupees (£11,300) in the estimates of 1901-1902 for the provision of breech-loading guns for the Rangoon defences instead of the 40-pounder muzzle-loading guns now mounted there. A number of new machine guns have also been ordered for all coast defence works at a cost of R1,66,000 (£11,060). Not the least important measure for the better security of our coast defences is the establishment at the fortress of Aden of an ordnance workshop, fitted up with all necessary machinery to admit of repairs to the guns, etc., in the defences there being executed on the spot. This necessary work has been put in hand and will, it is hoped, be completed next year. To assist in the defence of important seaports we propose to make arrangements for the more efficient training of volunteers; and with the same object in view the establishment of regular troops employed on submarine mining will be increased next year. *Coast Defen*

15. Many of the measures mentioned above have thrown extra work on, or have shown the necessity for increasing the capacity of, our ordnance factories, and some large items of extra expenditure in the present and coming years are the result of the increasing necessity that India should be as far as possible independent of England in the matter of warlike stores. This is shown particularly clearly in the difficulty which we are experiencing in obtaining our requirements of rifles to rearm the native troops. At the same time our manufacturing establishments have so improved of late years that we propose to establish a small-arms factory in India. This measure will, however, take some time to carry out and the expenditure on it in 1901-1902 will be trifling. The lyddite filling factory at Kirkee which I referred to last March will, I hope, soon be working; the new cordite factory at Wellington has progressed during the year, and we hope that the preliminaries for the central gun-carriage factory which is to be built at Jubbulpore will soon be completed. *Ordnance Factories.*

16. We now come to my final heading, general requirements of the army, which includes a number of very important measures. I have only sufficient space to allude in the briefest way to the following. We propose to introduce an improved system of recruiting in Madras, through the agency of special staff officers, a measure which has already proved most satisfactory in Bengal, Punjab and Bombay. The cost of this will be only some R44,000 (£3,000) a year. An expenditure of R83,000 (£5,530) a year has been sanctioned on improving the pay and prospects of warrant officers of the Indian army departments, a class whose duties are generally arduous and who are often entrusted with great responsibility. The system of training regimental orderlies to supplement our small staff of nurses in military hospitals has been so successful that we are expending a further R12,000 (£800) so as to provide extra duty pay for a larger number of men so trained. A most important measure in the interests of the health of the British army is the substitution of a metal tank to be packed on mules, for the carriage of drinking water, instead of the time-honoured *pakhal* and *massak*, both of which are constant sources of danger and probably of disease in barracks; and equally important from the point of *General requirement*

view of efficiency as well as of the prevention of disease, is the gradual introduction in British regiments of patent cooking stoves, with a view to allowing of all cooking being done—as is the case in England and the Colonies—by soldier cooks. Last year an experiment was tried of sending sickly soldiers for short sea trips, and we propose to extend this useful practice in 1901-1902; I hope that the results may materially benefit the British troops in India. Further measures with a similar object are the extension of the employment of medical officers on special sanitary and bacteriological research work; the gradual development of our system of dairies; the completion of installation of Pasteur-Chamberland filters at two stations; continued experiments in incineration; and efforts to arrive at a satisfactory system for the removal of rubbish and thorough cleansing of cantonments. We have given much attention during the year to the question of mechanical punkah-pulling, the adoption of which is, we consider, most desirable. A number of experiments have been made, with the result that those systems which will allow of combined lighting of barracks and punkah-pulling by electricity seem likely to be the most satisfactory. We have decided to obtain the assistance of an expert adviser in the matter, and we have provided four lakhs (£26,600) in next year's estimates in the hope of being able to instal a satisfactory system at some stations at least in the course of 1901-1902. In connection with the usual peace training of troops, the annual grant for camps of exercise and instructions was reduced in the current year's estimates from one lakh to 75,000 rupees. For next year we have been able to increase the amount to two lakhs (£13,300). Finally, I should mention an increase of seven officers to the Army Veterinary Department in India, which for some years past has been unequal to the numerous duties required of it.

17. The last-mentioned item brings me to one or two points which are worthy of notice, although they do not fall under the various categories into which I have divided the foregoing measures. I referred last year to the large numbers of horses which we were purchasing to replace those sent with troops to South Africa. These extra purchases have been trained partly by batteries of artillery in this country and the remainder at temporary remount depôts which were established at Umballa and Bangalore. The result of these arrangements is that we are now in a position to supply trained horses to the cavalry regiments and batteries of the Indian establishment now in South Africa as soon as ever the course of events shall permit of their return to India. The supply of horses and ordnance mules to the army has again been hampered by the prevalence of contagious disease at the Hapur Depôt to which I alluded in my memorandum of March last. The origin of the disease which is diagnosed by the Imperial Bacteriologist as lymphangitis, is traced by that gentleman definitely to the ship-load of Italian mules imported in 1899. The important question of remounting the army and of improving the breed of horses in India has been under consideration during the past cold weather by a commission of which Major-General Tyler, Inspector General of Artillery, was President, and I hope that their report may be of assistance in the future consideration of these much discussed problems.

18. A measure which is of considerable Imperial as well as of Indian importance is the raising of five new regiments of native infantry to replace those serving in certain colonial garrisons. The employment of native regiments in these places enables the Imperial Government to withdraw the British troops hitherto required there, but it is not advisable that the Indian army should be permanently reduced on this account, and the Secretary of State has accordingly agreed to a corresponding increase, the whole cost of which will be borne by the Imperial Government.

19. The past year has seen a continuance of that assistance which I said in March last we had been able to render to the army in South Africa. A large number of officers of the Indian Staff Corps are still serving there, many in very responsible posts, and a great number with distinction and credit, as has already been shown in the published despatches of the Generals in the field. We have also sent great quantities of supplies, including as many as 200,000 pairs of boots and shoes, 180,000 helmets and 100,000 warm coats, other garments in lesser numbers, considerable numbers of tents as well as hospital equipment, food-stuffs, etc.

20. But in addition to this we have had to fit out and despatch a considerable expedition of our own, and one to which special interest attaches, as the regiments of the Indian army which compose it have for the first time in history fought side by side with the allied forces of the other great powers of the world. The expeditionary force to China which was despatched in July and August last, under Lieutenant-General Sir Alfred Gaselee, consists of one cavalry and four infantry brigades and line of communication troops, numbering in all about 20,000 officers and men, 11,000 transport, hospital, and other non-combatants, 4,000 coolies for pack work, and 9,500 horses and transport animals. The despatch of the force was effected without a hitch notwithstanding the adverse circumstances at Calcutta of great heat and a strike among the Chinese carpenters. Forty-seven transports were chartered and fitted, thirty-two at Calcutta, and fifteen at Bombay in addition to the use of the Royal Indian Marine ships *Clive*, *Canning*, and *Dalhousie*. The whole arrangements reflect very great credit on Captain Goodridge, Director, Royal Indian Marine, Captain Wilson, Deputy Director (who directed the whole of the first preparations in the absence of the Director in South Africa), and the dockyard staffs of Bombay and Calcutta. Since the expedition started large quantities of food-stuffs have been despatched to China, as well as a very complete supply of warm clothing. Statements have appeared in the press to the effect that our Native soldiers have been insufficiently clad during the great cold of the winter in North China. Such rumours are without foundation. Ample supplies were sent of warm under-clothing, blankets, Balaclava caps, gloves, mittens, poshtins, thick overcoats, etc., and I have ascertained from Sir A. Gaselee, in reply to a special enquiry, that what was provided left nothing to be desired. Special attention was also paid to the medical arrangements: besides a liberal supply of field hospitals, a hospital ship was fitted out (for the first time in Indian waters) and this was supplemented by the munificence of His Highness the Maharaja Scindia who has supplied, fitted out and maintained another ship, the *Gwalior*, entirely at his own expense. His Highness as well as His Highness the Maharaja of Bikanir and Colonel Sir Partab Singh of Jodhpore have personally taken part in the campaign, and for the first time on record we have regiments of Imperial Service Troops joining with the regular troops of the Indian army in an over-sea expedition.

The special Commissioners, Colonels Hutchinson and Wingate, who were directed to report on compensation for dearness of provisions, commissariat procedure and accounts, to whom I alluded in March last, extended their enquiries to other matters connected with commissariat administration and have submitted admirable reports, from which we shall derive much benefit in the improvement of the system. Their proposals are now under consideration. A committee is now sitting on the whole subject of the system under which the accounts of the army and its departments are prepared; another committee has considered the question of increasing the powers of General Officers Commanding Districts, and a third has dealt in great detail with matters connected with the expenditure and accounting for hospital stores, etc. A number of the recommendations made by the latter have already been adopted, and I hope that business will be much accelerated thereby. I am also able to record with satisfaction a very large reduction, especially by the Commissariat Department, in the numbers of reports and returns hitherto in use.

As this is the last memorandum on the estimates which I shall have the honour of laying before the Council, I have attached a paper, which may be of some interest, showing the principal improvements in the efficiency of the army and our defences since 1885. I now turn to the details of the various estimates.

I.—Indian Military Estimates.

Revised Estimates, 1900-1901.

Comparison—
Revised for 1900-1901
and
Budget for 1900-1901.

The revised Indian military estimates for 1900-1901, compared with the budget for the year, show a net saving of ₹1,46,69,000 caused by an increase in receipts of ₹20,71,000 and a decrease in expenditure of ₹1,25,98,000.

4. The increase in receipts is chiefly due to credits on account of the value of animals and stores sent to China, the cost of which is debitable to the Imperial Government.

5. The more important causes which have led to the decrease in expenditure are as under :—

(*a*) There is a decrease of R40,00,000 on account of the pay and subsistence of the force sent to China, India being relieved of all expenditure in connection therewith.

(*b*) The budget assumed that the Indian Contingent sent to South Africa in 1899-1900 would return or be replaced by the middle of the current year, but as this prospect has not been realised, the provision made for the last six months becomes a saving (R39,50,000).

(*c*) The difference between the credits taken by debit to Imperial Government for local stores issued from stock to the South Africa, China, and Jubaland Forces, and the amounts likely to be spent on their replacement, accounts for a net decrease of R21,00,000.

(*d*) An increase of R47,30,000 was anticipated owing to rise in prices of food supplies for men and animals, but this is not now expected to be fully realised as rates have somewhat fallen. The probable saving on this account is put at R14,80,000.

(*e*) A sum of R3,93,000 has been appropriated from the Indian estimates to meet the cost of supplementary demands from England.

(*f*) Smaller expenditure is anticipated to the extent of (i) R8,60,000 for army reliefs and commissariat services, (ii) R6,00,000 for regimental pay and allowances, (iii) R5,69,000 for medical establishments, supplies and services, (iv) R5,00,000 under the Remount Department grant, (v) R1,13,000 for barrack supplies and services, and (vi) R1,00,000 for army and garrison staff.

(*g*) The military estimates will be relieved of the pay and allowances of officers and others deputed on plague duty, which are debitable to the Civil Department (R1,90,000), while a saving of R1,35,000 is anticipated on account of exchange compensation allowance.

6. On the other hand, there have been increases in expenditure, the more important of which are the following :—

(*a*) More sea transport charges due chiefly to chartering of transports to convey details to England (R13,25,000).

(*b*) Cost of special expenditure to be incurred *in India* against the military estimates from savings due to the absence of troops in China and South Africa (R12,00,000).

(*c*) In the Ordnance Department the expenditure is expected to show an increase of R2,55,000, while the deduction of R4,25,000 made in the Indian estimates to counterbalance an excess provision in the Home estimates accounts for an increase to that extent.

(*d*) Some minor increases are (i) R1,44,000 on account of special services and military operations due chiefly to expenditure in connection with the blockade of the Mahsud Waziris; (ii) additional grants-in-aid to cantonment funds, R1,01,000; (iii) new cantonment general hospitals, R95,000; (iv) improvement of the equipment of the field artillery in India, R1,36,000; and (v) expenditure in connection with the contingent sent from India to take part in the Commonwealth celebrations at Sydney, R1,09,000.

Estimates, 1901-1902.

7. The estimates for 1901-1902, in the net, amount to R17,07,58,000, or R74,03,000 more than the budget for 1900-1901. This is due to a decrease in receipts of R20,66,000 and an increase in expenditure of R53,37,000.

Comparison—
Budget for 1900-1901
and
Budget for 1901-1902.

8. The decrease in receipts is accounted for by the fact that a special credit of R20,57,000 was taken in the budget for 1900-1901 for the value of horses forming the peace complement of the units despatched to South Africa, which was chargeable to the Imperial Government.

9. The more important causes of the increase in expenditure are the following:—

(*a*) In the Budget for 1900-1901 a deduction of ₹38,50,000 was made on account of the absence of the Indian Contingent on service in South Africa, whereas no such deduction has been made for next year.

(*b*) A deduction was similarly made on account of Native infantry regiments serving in the Colonies, but as new regiments have been raised to replace them the necessary provision appears in next year's estimates (₹8,85,000).

(*c*) Larger provision for reorganisation and improvement of the commissariat-transport service, for purchase of transport animals, and for grass farms, ₹11,54,000.

(*d*) Larger provision for ordnance establishments and stores chiefly on account of the cordite and central gun-carriage factories, and in connection with the re-armament of the Native army and improvement of field artillery equipment, ₹7,00,000.

(*e*) The addition of two howitzer batteries and of one company royal garrison artillery accounts for an increase of ₹10,23,000; for the re-armament of the Native army an additional sum of ₹4,16,00 has been provided.

(*f*) The formation of five schools for mounted infantry in India involves an expenditure of ₹6,50,000, while ₹3,86,000 represents the increase due to the addition of one British officer per regiment of Native infantry in India and of eight officers for the Commissariat-Transport Department.

(*g*) Provision has also been made for the following:—₹2,03,000 for the completion of new 10-pounder mountain battery guns. ₹2,84,000 for railway works and water-supply for mobilisation rest-camps, ₹2,00,000 for bandolier equipment for units of the 1st and 2nd divisions of the field army, ₹1,24,000 for "Grenfell" sights for field artillery, ₹1,20,000 for purchase of machine guns and pack mountings for trial, and ammunition and components for "pompoms," ₹1,03,000 for increasing the popularity and efficiency of the volunteer force, ₹1,09,000 for improvement of submarine mining defences, and ₹88,000 for electric lights for coast defences at Bombay and Rangoon.

10. Among other causes of increased expenditure may be mentioned the following: Larger provision for an additional native mountain battery and for increased establishments (₹97,000), increased regimental pay and allowances (₹2,00,000), provision for full authorised reserves for the Native army (₹1,98,000), no deduction having been made as in the current year's budget for excess provision in the home estimates (₹4,25,000), improved sanitation of the Rangoon Cantonment sudder bazar (₹1,04,000), increased provision for camps of exercise and volunteer corps (₹2,01,000).

11. The foregoing increases will, however, be partly counterbalanced by certain decreases, the more important of which are the following:—

(*a*) Lower prices for food supplies for men and animals, ₹40,00,000.

(*b*) The provision for purchase of remounts and their road expenses is ₹29,37,000 less, as special provision was made in 1900-1901 for replacement of horses sent to South Africa and other requirements.

II.—Home (India) Military Estimates.

Revised Estimates, 1900-1901.

Comparison—
Revised for 1900-1901
and
Budget for 1900-1901.

The second of the estimates with which the Military Department is concerned is the home estimate for army effective and non-effective charges. The Home Budget Estimates for 1900-1901 provided for a gross expenditure of £4,707,700, while in the Revised Estimates provision has been made to the extent of £4,362,200 or £345,700 less than the Budget Estimate.

2. This saving of £345,700 in the Revised, as compared with the Budget Estimate for 1900-1901, is chiefly due to the dislocation of the arrangements regarding Indian reliefs resulting in smaller payments on account of furlough allowances and pay, during the voyage, of British forces serving in India, and

"Indian Troop Service;" to decrease in the payments for stores, furlough allowances of officers of the Indian Service, pay and pensions of non-effective and retired officers of the Indian Service and retired pay, etc., of British forces for service in India.

The net figures of the Revised Estimate show a saving of £337,500 on those of the Budget Estimate for 1900-1901, due to a decrease in expenditure of £345,700 as explained above, and a decrease in receipts of £8,200.

Estimates, 1901-1902.

Comparison—Budget for 1900-1901 and Estimate for 1901-1902.

The receipts and expenditure for 1901-1902 are as follows :—

	Receipts.	Expenditure.	Net expenditure.
	£	£	£
Effective	248,300	2,814,800	2,566,500
Non-effective	18,500	2,413,700	2,395,200
TOTAL .	266,800	5,228,500	4,961,700

The receipts for 1901-1902 include contributions to be made to the extent of £230,000 by the Imperial Government in respect of the cost of the transport of troops, and of military charges for Aden, and in consequence of the recommendations of the Royal Commission on Indian Expenditure; and compared with the Budget for 1900-1901 they show an anticipated total increase of £223,300. The total gross expenditure for 1901-1902 is higher by £520,800 than the amount provided in the budget for the preceding year. This amount is chiefly accounted for by the increased provision for ordnance and other army stores and to the expected return of troops from South Africa, and the resumption of transfers to the Army [illegible] the de.

The [illegible] of which charges on account of effective services, as estimated in the coming year, are [illegible]de payments to the War Office in respect of the British forces serving in India (£760,000); furlough allowances and pay during the voyage of British forces serving in India (£108,000); furlough allowances of officers of the Indian Service (£230,000); Indian Troop Service (£250,000); passage of officers and troops otherwise than in transports (£19,000); miscellaneous (£20,600); and stores for India (£1,427,200).

The gross charges on account of non-effective services are made up of the retired pay, etc., of the British forces for service in India (£600,000); pay of the non-effective Colonels of Royal Artillery (£22,700); pay and pensions of non-effective and retired officers of the Indian Service (£1,670,000), miscellaneous pensions, etc. (£84,000), and the Indian Military Service Family Pensions (£37,000).

The net expenditure for 1901-1902 is more by £297,500 than that for the preceding year, and, as explained above, this is due to an increase of £223,300 in receipts and £520,800 in gross expenditure.

III.—Military Works Estimates.

Excluding English expenditure, the Budget Estimate for 1900-1901 amounted to R1,15,09,000 (£767,267); the revised estimate of expenditure is taken at R1,05,00,000 (£700,000). There will, therefore, have been less expenditure in India of R10,09,000 (£67,267), which is due mainly to the transfer of funds to meet additional expenditure in England on stores and to an anticipated lapse of R7,48,000 (£49,867) on grants for works.

2. The Budget Estimate for 1901-1902, excluding English expenditure, is R1,31,74,000 (£878,267) or R16,65,000 (£111,000) more than that of 1900-1901. The difference is due to a special grant of R17,74,900 (£118,327)

being allowed for certain works which have been recognized by the Government of India as being of special urgency and importance.

3. The main heads of expenditure in the Military Works estimate amount to the following sums, in round figures:—

	R
For original works, including those in progress and those to be commenced . . .	62,88,000 (£419,200)
„ repairs	34,63,000 (£230,867)
„ establishments and tools and plant . .	29,62,000 (£197,467)
„ Barrack Department establishment supplies and tools and plant	8,12,000 (£54,133)

4. Expenditure, amounting to R3,50,800 (£23,387), will be incurred on water-supply projects, R1,22,370 on sanitary works, R3,17,000 (£21,133) for coast and inland fortifications, and R1,74,000 for works on the North-West Frontier: R4,00,000 (£26,667) will be spent on the installation of mechanical punkah-pulling in barracks, and provision has been made in the budget for R8,00,000 (£53,333) for the cordite factory in the Nilgiris, R4,20,000 (£28,000) for the central gun-carriage factory at Jubbulpore, and also R3,00,000 (£20,000) for renewals of buildings, etc. The remaining works consist of those for new hospitals, barracks, etc., and will provide for the ordinary requirements of the Ordnance, Commissariat, Remount, and Marine Departments.

Excluding renewals, provision is made for 99 new works, of which 55 are in progress and 44 have yet to be commenced. A sum of R5,35,000 (£35,667) is provided for minor works costing less than R2,500 each.

IV.—Marine.

Revised Estimates, 1900-1901.

Comparison—
Revised for 1900-1901
and
Budget for 1900-1901.

The net total of the Budget Estimate of the Royal Indian Marine for 1900-1901 was R14,20,000 (£94,667), the Revised Estimate stands at R10,23,000 (£68,200), showing a decrease of R3,97,000 (£26,467).

The decrease is chiefly due to large recoveries from the Home Government in connection with the employment of Royal Indian Marine vessels on Imperial service. Also to larger deductions on account of recoveries for dockyard labour in connection with the China Expeditionary Force, and to reduced expenditure on repairs and on coal for His Majesty's ships of war in Indian seas, counterbalanced to some extent by increased expenditure under other heads owing to the troopships having been kept working throughout the year and to large local purchases of coal to meet requirements usually met by importing coal from England.

Estimates, 1901-1902.

Comparison—
Budget for 1900-1901
and
Estimate for 1901-1902.

The net total of the Marine Estimate for 1901-1902 is R14,40,000 (£96,000) against R14,20,000 (£94,667), the total of the Budget for 1900-1901 showing an increase of R20,000. This is caused by an increase in expenditure amounting to R75,000 (£5,000), due to the addition of the *Hardinge* to the establishment of vessels of the Royal Indian Marine and to other causes, counterbalanced by increased receipts of R56,000 (£3,733).

APPENDIX.

Statement of important measures of improvement in the army and in the defence of India since 1885.

1885.

Increase to the strength of the army.

In 1885 the permanent establishment of British troops was increased by the addition of—

Cavalry	1,332
Artillery	1,373
Infantry	7,952
TOTAL	10,657

The strength of the Native Army was increased by—

Cavalry	4,704
Infantry	11,968
Artillery, approximately	3,000
TOTAL	19,672

The approximate cost was calculated at £1,196,800 a year, excluding non-effective charges.

Increase and redistribution of garrison batteries.

Six companies of garrison artillery were added to the Indian establishment, and two of these were located at Roorkee and one each at Barrackpore, Bombay, Karachi, and Quetta. The garrison companies in India were redistributed in 1892.

The cost was approximately R3,18,000 initial, R9,12,000 annual.

Equipment of mountain batteries with 2·5-inch R. M. L. guns.

It was decided to re-arm the mountain batteries, and eventually all mountain batteries were gradually equipped with the 2·5-inch R. M. L. gun. It has now been decided to re-arm the mountain batteries with a new 10-pounder gun at a cost of R4,05,000.

Special defence works.

The question of improving the coast and frontier defences of India was taken up vigorously in 1885. Schemes were prepared by the Defence Committee and approved by the Secretary of State, and the cost of the proposed works was spread over a number of years. A new head of account called the "special defence works" was accordingly opened and special defence divisions formed at the various ports and on the frontier for the execution of the works. In 1890, after a general forecast of the expenditure on special defence works had been submitted to the Secretary of State, His Lordship's sanction was received to a total expenditure against Indian revenues of five crores and three lakhs, including the moiety of the cost of the works at Aden.

The works were practically completed in 1897 at an expenditure chargeable to Indian revenues of R4,08,00,850, *viz.* :—

	R
On works, including establishments and tools and plant	2,67,11,391
On armaments, floating defences, etc.	1,40,89,459
TOTAL	4,08,00,850

In addition, a sum of ₹11,78,435 was charged to the Home Government for a share of the cost of the Aden defences, and a sum approximating 50 lakhs was allowed for establishment charges for carrying out the works, tools and plant, etc.

Coast defences of India.

Designs for the principal defensive works at Aden were elaborated in 1883, were put in hand in the latter part of 1884 and were in progress until 1897. In 1885 the sanction of the Secretary of State was obtained to proposals for the defence of Bombay, Karachi, Calcutta, and Rangoon. In 1890 it was finally decided that the expenditure on coast defence works should be limited to ₹3,13,26,818,* including the cost of armament and floating defences. Special arrangements were made for the execution of the works which were completed in 1897 at a cost of ₹2,69,62,203 as shown below:—

	₹
* Works	1,54,47,600
Armaments and floating defences	1,58,79,218
TOTAL .	3,13,26,818

These sums do not take account of expenditure on establishment, tools and plant:

PORTS.	Works.	Armaments and floating defences.	TOTAL.
	₹	₹	₹
Aden (excluding Imperial share)	27,85,138	16,28,941	44,14,079
Karachi .	16,15,929	16,66,171	32,82,100
Bombay .	96,73,111	39,98,567	1,36,71,678
Hooghly .	6,08,388	14,07,120	20,15,508
Burma .	9,42,848	18,40,612	27,83,460
General .	6,45,286	1,50,092	7,95,378
TOTAL	1,62,70,700	1,06,91,503	2,69,62,203

The expenditure on works, besides providing the necessary batteries complete with arrangements for range and position-finding, etc., at the various ports, includes the cost of the following additional works:—At Aden, barracks for three batteries of Royal Artillery (₹5,93,663); at Karachi, a new lighthouse (₹1,11,865) and the removal of deep-water point and the extension of the east groyne (₹3,50,000); at Bombay, a wet basin (₹15,41,018); and in the Hooghly, land communications and new jetty (₹2,39,240), also a harbourage for two torpedo boats (₹1,27,501); at Rangoon, the protection of Syriam Bank against erosion which was threatening the battery (₹2,96,188), and accommodation for one garrison battery of Royal Artillery (₹1,07,363) at this place.

The outlay on armaments represents the provision of 10-inch B.-L. guns, 6-inch B.-L. guns, quick-firing guns, and R. C. machine guns with the necessary ammunition.

The floating defences comprise seven 1st class torpedo-boats, two torpedo gun-boats, and two turretships at Bombay re-armed with breech-loading guns.

Frontier defences of India.

Proposals for providing defence works on the North-West Frontier of India were submitted to the Secretary of State for the first time in 1885, although in 1883 and 1884 large proposals were made—and in some cases the work begun—for strategic railways and roads. In 1887 sanction was obtained to revised proposals, and in 1890 the Secretary of State finally sanctioned an expenditure of ₹1,88,47,312 * on both works and armament.

	₹
* Works	1,39,09,200
Armament	49,38,112
TOTAL .	1,88,47,312

These frontier defences may be divided into three main groups, those in advance and rear of the Bolan pass and Peshin plateau, those for the defence of the Khyber pass and its debouchure, and thirdly those for strengthening certain important strategical points in rear and for the protection of our supply depôts.

The works have been completed and the armament provided, the final outlay being—

	R
On works	1,04,40,691
„ armament	33,97,956
TOTAL	1,38,38,647

Strategic Railways, Roads, and Bridges.

The expenditure on these has been R14,44,87,000 or £9,632,467.

Appointments and Organisation.

(Commissariat-Transport Department.)

Consequent on the recommendations of the Army Organisation Commission, the appointment of Commissary General-in-Chief was created in 1885. No change was made at that time in the status of the Commissariat Departments of the three Presidencies, but that of Bengal was divided into two circles, each under a Commissary General. In 1889 all three administrations were brought under the Government of India; and in 1899, with the introduction of a system of promotion for officers by length of departmental service, the former separate lists for each Presidency were amalgamated into one list for all future appointments.

1886.

Formation of reserves for the Native Army.

In 1886 a plan to provide a reserve for the Native Army was sanctioned by which men passing into the reserve, still belonged to their respective regiments. Reservists are required to do an annual training, and when called up for service rejoin their regimental depôts.

The scheme was limited at first to the Bengal Army and Punjab Frontier Force, and subsequently extended in 1887 to the Madras and Bombay Armies.

Two reserve forces were originally formed:—the active reserve and the garrison reserve; the former was limited to 218 men per battalion of infantry in Bengal, and 160 per battalion in Madras and Bombay, and the following in the artillery:—

Native mountain artillery—

Gunners 22
Drivers 34 } per battery.

British mountain batteries—

Native Drivers 34 per battery.

The garrison reserve was abolished in 1892.

In 1899 the reserve per regiment was raised to—

In infantry regiments of the Punjab and Bengal Commands, exclusive of Gurkha battalions and local corps. In Burma battalions of Madras infantry, excluding the 10th Burma (Gurkha) Rifles. In the 24th, 26th, 27th, 28th, 29th, and 30th Bombay Infantry.	280 reservists per regiment.
In the corps of Bengal Sappers and Miners	250 reservists.
In regiments of the Bombay Command, including the Bombay Sappers and Miners, but excluding the 24th, 26th, 27th, 28th, 29th, and 30th Bombay Infantry and local corps.	160 reservists per regiment.
In regiments of the Madras Command, including the Corps of "Queen's Own" Madras Sappers and Miners but excluding the Burma battalions of Madras Infantry.	60 reservists per regiment.

Raising of military police in Bengal and Bombay for service in Burma.

The military police force required for the pacification of Burma was raised in India in 1886 and 1887.

In March 1886 a force of 3,000 was raised in Northern India.

In July 1886 two additional police battalions were raised and in October 1886 the raising of 2,000 additional military police was ordered.

In December 1886 4,000 additional police was raised.

In 1887 a military police battalion of 500 men was raised and another force of 4,000 police.

In 1888 three additional levies were raised as follows :—

Shan States Levy	600 Punjabis.
Mogaung Levy	500 Gurkhas and hillmen.
Chin Levy	400 Punjabis and 200 Hindustanis.

The total number of Indian police sanctiond for Upper Burma amounted to about 18,500. The military police in Burma is a highly efficient force.

Mobilisation of the army.

A general mobilisation committee was formed in 1886, and it was decided that the plan of mobilisation should be by "army corps" for service beyond the frontier, and "divisions" or "brigades" of all arms, according to circumstances, for service within the frontiers of India, or beyond sea.

This was changed in 1890 to the system of mobilisation by divisions. The basis of the plan is mobilisation by stations, *i.e.*, certain stations are detailed from which the troops will be withdrawn in order to form the field army. Obligatory garrisons for all India have been laid down.

Special grants have been made from time to time to facilitate mobilisation arrangements.

Raising of additional Native mountain batteries.

To provide for the requirements of Burma, two additional Native mountain batteries were raised in 1886, at an approximate cost of ₹3,20,000 initial and ₹2,80,000 annual.

Water-supply of cantonments.

Special attention has been given to the subject of the water-supply of cantonments, and for some years nine lakhs of rupees were expended annually on works of this class. The following important projects have been carried through since 1886:—Chakrata, Peshawar, Mhow, Allahabad, Dum-Dum, Lucknow, Agra, Dagshai, Subathu, Murree, Rawal Pindi, Bangalore, Meerut, Quetta, Secunderabad. The mobilisation camps have been provided with supplies of piped water.

I

Enlargement of the arsenal at Rawal Pindi.

In January 1887, in connection with the scheme for the defence of the North-West Frontier, the Secretary of State sanctioned such extension of the Rawal Pindi arsenal as appeared to the Government of India to be necessary. A scheme for providing the additional accommodation required to fully meet existing or immediately prospective conditions was drawn up and sanctioned in May 1888, and the enlargement was completed in 1891-92 at a cost of ₹1,41,000. A further extension of the arsenal was sanctioned in 1898 on the recommendation of a special committee and is being carried out at an estimated cost of ₹1,98,930.

Scheme of regimental institutes.

In 1887, with a view to increase the comfort and well-being of the British soldier in India, it was decided, with the approval of the Secretary of State, to combine, improve and develop the reading and general recreation rooms and the canteens and

refreshment shops which were then maintained for British troops in India under th designation of regimental institutes. A scale of accommodation was laid down and th scheme has been carried out as far as funds have permitted.

Amalgamation of the Supply and Transport Branches, Commissariat Department.

The Supply and Transport Branches of the Commissariat Departments in th three Presidencies were amalgamated in February 1887.

1888.

Reorganisation of the commands and staff in India.

The reorganisation of the commands and staff in India was carried out in 1888 The principal changes introduced were:—

The Generals' commands were reduced from 33 to 30 and were divided into 1s class districts commanded by Major-Generals, and 2nd class districts commandec by Colonels with the temporary rank of Brigadier-General.

The larger stations were placed under the command of Colonels on the Staff.

The divisional and district staff (musketry staff excluded) in the Adjutant General's and Quartermaster General's Departments were amalgamated, the combinec duties being performed by officers designated "District Staff Officers, 1st class," and "District Staff Officers, 2nd class." These designations have since been altered tc Assistant Adjutant General and Deputy Assistant Adjutant General. The estimatec saving by the above measures was R2,21,052.

Introduction of improvements in the organisation of the Hyderabad Contingent.

In 1888 the conditions of service in the Hyderabad Contingent were improved:

(i) The establishment of British officers was increased from four to six per regiment (subsequently increased in 1890 to eight).

(ii) The artillery, cavalry and infantry, respectively, were linked together.

(iii) The rates of good-conduct pay and pensions and half-mounting allowance were assimilated to those in force for the regular army.

Transfer of the Horse-Breeding Department from the Military to the Revenue and Agricultural Department.

The question of the transfer of the administration of the Horse-Breeding Department from the Military to the Revenue and Agricultural Department was considered by a conference at Delhi in 1888, and the transfer was carried out in 1889.

Re-armament of the turretships and provision of seven torpedo and two gun-boats for coast defences.

In 1888 8-inch B.-L guns were substituted for the old 10-inch M.-L. guns on board the turretships *Abyssinia* and *Magdala*, which form part of the defences of Bombay, costing, with sundry alterations to the ships, £47,430.

Provision of gun-boats for Bombay and torpedo-boats for the several ports in India, and transfer of the India defence vessels to the control of the Admiralty.

In 1886—88 two additional gun-boats were sanctioned for Bombay, costing £130,000, as well as seven torpedo-boats for the several Indian ports, costing about £89,000.

The last of these arrived in India in July 1889. In 1891 the vessels referred to were handed over to the control of the Admiralty under certain conditi

Organisation of Mounted Infantry in Upper Burma.

n 1889 325 British and 680 Native mounted infantry were raised for service in Burma.

Engineer Field and Siege Parks.

n 1889 measures were taken to complete the engineer field parks at Rawal Pindi and Quetta and to keep this equipment separate from all other stock and ready for immediate ssue when required. Similar precautions have since been taken as regards the field ark units at Karachi.

Re-armament of Royal Horse and Field Artillery in India.

In 1889 horse and field batteries were re-armed with 12-pounder B.-L. guns, and during 1897—99 sanction was accorded to the substitution of pole for shaft draught in batteries of horse and field artillery and the conversion of field artillery guns to take 15-pounder projectiles at an estimated cost of six lakhs. Cordite ammunition was gradually introduced for these services at an eventual cost of £46,500. In 1900 the introduction of the spade brake, the tray system of carrying ammunition, and the assimilation of all carriages and wagons to one pattern with pole draught was sanctioned for field artillery at a cost of R12,59,740.

Reorganisation of the establishment of officers of the Military Accounts Department.

This was undertaken to meet the requirements of the second circle of military accounts and audit in the Bengal Presidency, and also to provide travelling inspectors of accounts. Consolidated rates of salaries were introduced.

Extension of the Foundry and Shell Factory at Cossipore.

To enable the Foundry and Shell Factory at Cossipore to undertake the manufacture of the fuzes used with the new 12-pounder B.-L. guns and to carry out the repairs of these guns, it became necessary to extend the foundry. The work was put in hand n 1889 and completed during 1892-93 at a cost of R1,72,000.

1890.

Amalgamation of the three Staff Corps.

(*a*) In 1890 the Bengal, Madras, and Bombay Staff Corps were amalgamated as he Indian Staff Corps under Royal Warrant, dated 28th January 1891.

(*b*) The "General List" of cavalry and infantry ceased to exist as separate bodies except for succession to Colonel's allowance.

Increase to ammunition columns.

In 1890 the number of wagons per ammunition column unit was increased from three to six, the 33 additional wagons required being sent at once to the ammunition column stations.

Re-arrangement of the commands and staff of the Royal Artillery.

In 1890 India was divided for the purpose of artillery commands into six artillery circles. The artillery and the forts in each circle were placed under the supervision of a Colonel on the Staff so far as armament, equipment, and inspection are concerned. On the abolition of the presidential army system in 1895 the commands and staff were re-arranged: the artillery in each command was placed under the supervision of a Colonel on the Staff with the temporary rank of Brigadier-General.

Construction of a wet basin in the Dockyard at Bombay and deepening of the Duncan Dock.

In 1890 projects were sanctioned for the construction of a wet basin in the Dockyard at Bombay, and for deepening the Duncan Dock at a total estimated cost of R18,32,641. The works were completed in 1898 and 1893, respectively.

Military Works.

The Military Works Department was extended to the Madras and Bombay Presidencies.

1891.

Reconstitution of the 24th and 26th Bombay Infantry.

In 1891 the reconstitution of the 24th and 26th Bombay Infantry as frontier (Baluchistan) regiments was undertaken.

In 1898 their composition was again changed to—

Classes.	24th Bombay Infantry Companies.	26th Bombay Infantry Companies.
Hazaras	2	2
Pathans { Khattaks	1	1
Pathans { Waziris	1	1
Punjabi Mahomedans	2	0
Baluchis and Brahuis	0	2
Sikhs, other than Jat Sikhs	2	2

Grant of increased pay to the Native Cavalry.

In 1891 the pay of silladar cavalry was raised as notified in G. G. O. No. 224 of 1891. The cost was appoximately R8,68,500.

Artillerymen for the armaments of the coast and frontier defences and inland forts.

In 1891, in order to increase the number of artillerymen for coast and frontier defences, 25 men were added to each of the 23 garrison artillery companies in India at a cost of R3,75,000. The existing 222 lascars were increased to 650 and placed on the footing of fighting men. This measure cost R53,489 initial and R1,50,919 annually.

Manufacture of steel in India.

In 1891 the manufacture of steel for projectiles and gun-carriages was recommended to the Secretary of State, and the proposals having been approved, the steel factory at Cossipore commenced work in June 1892. The result has been most satisfactory, and the scope of the factory has been considerably developed. The initial cost of the measure was R1,25,000; the annual cost R5,700.

Establishment of a harness and saddlery factory in Southern India.

In 1891 the establishment of a second factory in India for the supply of harness, saddlery, and accoutrements was determined on, but owing to lack of funds the complete scheme was never accomplished. In 1898, however, the harness and saddlery workshops in the Bombay Arsenal were abolished and the similar workshops at Madras were enlarged so as to meet the requirements of both Madras and Bombay Commands in this respect with a resulting saving of R6,337 a year.

1892.

Establishment of recruiting centres.

Recruiting centres in each of which a depôt was established were established for the regiments of the Bengal Army in 1892 at a cost of about a lakh for the first year, with a recurring annual charge of ₹75,000, each to form the centre of a recruiting district. Each centre is under the control of the recruiting staff officer with or without one or more assistant recruiting staff officers. The system of recruiting centres was extended to the Native troops in the Bombay Command in 1896 at a cost of about ₹32,500 per annum.

Reorganisation of the Intelligence Branch.

In 1892 the Intelligence Branch of the Quartermaster General's Department was reorganised at a cost of about ₹55,000 per annum—

(*a*) An Assistant Quartermaster General was appointed head of the branch.

(*b*) The branch was divided into four sections, each under a Deputy Assistant Quartermaster General, a Staff Captain and a paid attaché with an adequate clerical staff.

(*c*) The staff pay of Staff Captains was in 1899 increased from ₹150 to ₹250 per mensem.

(*d*) The formation of an Intelligence Section in the office of the Assistant Adjutant General, Hyderabad Contingent, was sanctioned in 1892.

(*e*) An Intelligence Branch for Burma was sanctioned in May 1890 and continued until April 1900, when a small Burma Section was added to the Intelligence Branch of the Quartermaster General's Department at Simla.

Local battalions for service in Burma.

In order to increase the efficiency of the Madras Army in 1892, the 30th and 31st Madras Infantry were reconstituted as the 5th and 6th Burma Battalions. In 1894 the 29th Madras Infantry was similarly converted into the 7th Burma Battalion.

These local battalions were formed from men transferred from the Burma Military Police as shown below:—

10th	Madras	Infantry	(1st	Burma	Battalion)	from the	Kubo Valley Police Battalion.
12th	„	„	(2nd	„	„)	„	Chin Levy.
33rd	„	„	(3rd	„	„)	„	Shan States Levy.
32nd	„	„	(4th	„	„)	„	Myingyan Military Police Battalion.
30th			(5th	„	„)	„	Pyinmana and Katha-Magwe Military Police Battalions.
31st			(6th	„	„)	„	Shwebo Military Police Battalion.
29th			(7th	„	„)	„	Magwe and Mandalay Military Police Battalions.

The approximate cost of this measure was ₹2,42,000.

Revision of the hutting system in the Native Army.

In 1892, with a view to provide improved accommodation for the Native Army, the system of hutting was revised. An annual grant for the reconstruction of lines in Bengal is given.

Full hutting-money is still admissible, but in lieu of half hutting-money a monthly repair allowance of ₹100 per regiment has been introduced.

In Madras a uniform system has been adopted, under which the ownership of the huts will be gradually transferred to the State, the men being granted an allowance for maintaining the huts in good condition. An annual grant of ₹70,000 is given accordingly for repairs, etc., of lines.

Similarly, the Bombay Army has been given an annual grant of ₹50,000, *i.e.*, ₹18,000 for repairs and ₹32,000 for the construction gradually of new lines. The accommodation for the Punjab Frontier Force is provided by the Military Works Department at the cost of the State, while the Gurkha battalions at permanent stations are given special grants when new lines or reconstruction become necessary, and a repair allowance every four years.

Establishment of a reserve of horses.

The establishment of a reserve of 1,000 horses to meet the demands of field service was sanctioned in 1892, but money for it was not forthcoming until 1896. The initial cost was about seven lakhs. Recurring cost on account of feed, keep, etc., R1,50,000.

1893.

Reorganisation of Hindustani regiments on the class regiment system.

In order to attract a better class of recruit and to render service in these regiments more popular, they were reorganised in 1893 as class regiments as follows :—

Group.	Class.	Centre.
1st and 3rd Bengal Infantry .	Brahmins	Allahabad.
2nd, 4th, and 16th Bengal Infantry	Rajputs	Agra.
7th, 8th, and 11th Bengal Infantry	"	Lucknow.
6th and 10th Bengal Infantry	Jats .	Delhi.
13th Bengal Infantry . .	Rajputs	"
5th and 12th Bengal Infantry .	Musalmans	Bareilly.
7th and 18th Bengal Infantry .	"	Benares.
19th Bengal Infantry to be linked with 39th Garhwal Rifles	Khas Gurkhas	Lansdowne.

Since then the 5th, 12th, 17th, and 18th Bengal infantry have been linked together with their regimental centre at Benares.

The approximate cost of this measure was R78,000 *plus* charges on account of (*i*) change in uniform, (*ii*) cost of transit of transfers, (*iii*) pensions and gratuities.

Additions to the strength of the Ordnance Department.

The personnel of the Ordnance Department was increased in 1893 by an addition of three officers to the number of Assistant Superintendents of Factories so as to provide an Assistant Superintendent for each factory. (Annual cost R20,408.) A further increase of four officers was made in 1896 in order to provide a small reserve at an annual cost of R30,128.

Inspectors of Ordnance Machinery.

Five Inspectors of Ordnance Machinery were added to the Department in 1893 in view of the necessity for specially skilled supervision for the B.-L. guns and hydro-pneumatic mountings at the coast defence stations.

Magazine rifles for British troops in India.

During 1893 the British infantry were re-armed with the Lee-Metford rifle at a cost of £327,500, and it was decided in 1897 to re-arm the seven regiments of British cavalry with Lee-Enfield carbines and the Royal Artillery with converted Martini-Enfield artillery carbines ; this re-armament was completed in 1899.

Exchange Compensation.

Exchange compensation allowance was given to all servants of Government not domiciled in India to compensate them for the depreciated value of the rupee in which currency their salaries are paid, and a privileged rate of exchange for furlough allowances calculated in Indian currency, when paid in England, was fixed.

Rules for the preparation and submission of accounts of British troops on field service.

The old system for the preparation and rendering of accounts on field service having failed in the Miranzai and Hazara Expeditions, a new system was introduced for the use of British troops in the field.

1894.

Reorganisation of the Bombay Army.

In 1894 the composition of the Bombay Army was changed, class companies being formed and a proportion of foreigners enlisted; men belonging to non-fighting classes were eliminated. The revised composition was notified in G. G. O. No. 311 of 1895.

Indian Army Reserve of Officers.

In order to provide officers on mobilisation taking place, the formation of an Indian Army reserve of officers was sanctioned in 1894, the regulations governing admission thereto being published in G. G. O. No. 308 of 1894.

Indian Articles of War.

In 1894 the Indian Articles of War (Act V of 1869) having been found defective, it was amended by a Bill (Act XII of 1894).

Reorganisation of the Military Works Services.

In May 1894 a committee was appointed under the Presidentship of the Honourable Mr. D. R. Lyall, Indian Civil Service, to report on the measures that would, in their opinion, be practicable to reduce establishment charges and percentages in the Military Works and Public Works Departments, and as to the best means of effecting economy without interfering with efficiency in the execution of military and public works. One of the recommendations of this committee was that the Military Works Department should be abolished, and that works done by that service should be transferred to the Public Works Department, which was to be manned by Royal Engineer officers only. The Government of India, however, decided that a separate agency for the execution of military works should be maintained, but that the organisation of the Military Works Department should be largely modified. It was proposed to abolish the graded system which had become unworkable, and to constitute the service on a purely military basis. Detailed proposals for carrying out this change were submitted to the Secretary of State in July 1897. Under the revised arrangements, which involved the abolition of the Military Works Department, employment upon military works duties was to be the normal duty of Royal Engineer officers in India, and this employment was to be considered regimental duty. It was proposed that the new organisation should follow the lines of the system in force in the Imperial Service at Home and in the Colonies adapted to suit the reorganisation of the Army in India in four Commands. These proposals received the sanction of the Secretary of State in March 1899, and the reorganisation was brought into effect from 1st October of that year.

1895.

Abolition of the presidential army system.

In 1895 the great reform which had been discussed for so many years was carried out, the Bengal Army was sub-divided into the Bengal and Punjab Commands and the presidential armies of Madras and Bombay were formed into two Commands, the Quetta District going to Bombay and Burma to the Madras Command. The whole army of India, consisting of the Punjab, Bengal, Madras, and Bombay Commands, each under a Lieutenant-General, was placed under the direct command of the Commander-in-Chief in India and the control of the Government of India. The staff of each Command was re-arranged and assimilated as far as possible.

Increase to the pay of the Native Army.

In June 1895 the pay of all non-commissioned ranks in the Native Artillery, Sappers and Miners, and the Native Infantry was increased by R2 per mensem. The Madras Cavalry, the Viceroy's Body-Guard, and the local corps shared in this increase. The increase in annual expenditure was about R30,00,000.

Increase of pay to the Hyderabad Contingent.

In 1895 the pay of sowars of the Hyderabad Contingent was assimilated to that of the Bengal and Bombay Cavalry, and in 1896 the increase of pay sanctioned for the Native Army was extended to the Hyderabad Contingent artillery and infantry.

Reorganisation of the Madras Army.

In 1895 it was decided to reorganise the Madras Army on the class company system, Telugus being eliminated.

Establishment of a Proof Department at Balasore.

In order to carry out the proof of projectiles manufactured at the Shell Factory, Cossipore, a proof department was established at Balasore in 1895, at an initial and an annual expenditure of ₹1,89,323 and ₹23,416, respectively.

The Secretary of State has also sanctioned the enlargement of the scope and establishment of this proof department so as to include the proof of small-arm ammunition, with effect from 1st April 1901. The cost of this will be only ₹36,000 initial and ₹17,117 annual.

Abolition of the Gunpowder Factories at Madras and Kirkee.

In consequence of the introduction of cordite, the gunpowder factory at Madras was abolished in 1895 and that at Kirkee was closed on 1st April 1900.

1896.

Amalgamation of the Bengal, Madras, and Bombay Branches of the Indian Medical Service.

In 1895-96 the Bengal, Madras, and Bombay Branches of the Indian Medical Service were amalgamated into one service under the direct administrative control of the Government of India. The Surgeon General with the Government of India was at the same time made the head of the amalgamated service, and his designation was changed to the Director General, Indian Medical Service.

Accounts.

Relief was afforded from the accumulated interest of the Patriotic Fund to the sufferers in the Chitral Relief Expedition, 1895.

Orders were issued that the rates payable to British troops serving in India on account of compensation in lieu of clothing and those recoverable from them on account of issues of clothing made on payment should be identical, and that they should be fixed at the actual cost of supplying the articles in India.

1897.

Military Works.

The high level road through the Bolan Pass which was commenced in 1882-83 was completed at a cost of ₹21,79,469.

Reorganisation of the Hyderabad Contingent.

In 1897 both cavalry and infantry regiments of the Hyderabad Contingent were organised on the class squadron and class company system and the future class composition laid down in G. G. O. No. 1165 of 1897.

Re-establishment of Cantonment Hospitals.

In consequence of the issue, in 1897, of new rules under the Cantonments Act (XIII of 1889), cantonment hospitals have been re-established at almost all the large stations garrisoned by British troops.

Sanitary Officers.

In 1897 the appointment, as an experimental measure, of three district sanitary officers for the sole duties of investigating the causes of disease and giving advice in sanitary matters was recommended to, and sanctioned by, the Secretary of State. The appointment of one sanitary officer for each Command has now been approved.

Accounts.

Measures were adopted by which it was hoped to obtain a more effectual check than formerly existed over claims to compensation for dearness of provisions and forage to Native troops and followers, together with a simplification of procedure in the submission and audit of such claims.

1898.

Raising an additional Mountain Battery.

An additional Native mountain battery was sanctioned in 1898, at an approximate cost of ₹1,60,000 initial and ₹1,40,000 annual.

Establishment of a Central Gun-Carriage Factory.

The establishment of a central gun-carriage factory at Jubbulpore in place of the three existing factories was recommended to Secretary of State in 1898 as conducive to economy as well as to efficiency in manufacture. The proposal has been approved and steps towards the establishment of the factory are now being taken. The initial cost is estimated at 26 lakhs, but there will, on the other hand, be an annual saving of nearly ₹1,20,000 on labour and establishments.

Changes in ordnance organisation.

With a view to increased efficiency and economy of manufacture, the ordnance factories were placed under the direct control of the Director General of Ordnance in 1898, a measure which resulted in a saving of ₹8,712 per annum.

As a corollary to the above change, the reorganisation of the Ordnance Department in India, by the reduction of the circles of ordnance supply from four to two, was recommended to the Secretary of State in June 1900, and received His Lordship's sanction. The reorganisation was carried into effect from 1st November 1900.

Accounts.

In consequence of the grant by the Imperial Government to British soldiers serving in England and the Colonies of a messing allowance of 3*d*. per diem, similar measures were introduced in India, and, with the approval of the Secretary of State, orders were issued sanctioning the grant in India of a messing allowance of 2¼ annas a day to European non-commissioned officers and men in addition to their usual pay and extra-duty pay; and exempting them from the payment of the stoppage of 9 pies a day hitherto made on account of the grocery ration.

Formation of a Central Office of Audit and Account for dealing with the accounts of Ordnance Factories in India.

This measure was undertaken in consequence of the transfer of the direct control of the factories of the Ordnance Department in India to the Director General of Ordnance in India.

1899.

Redistribution of commands and staff on the North-Western Frontier.

In 1899 the commands and staff on the North-Western Frontier were redistributed as follows, and notified in India Army Circular No. 45 of 1900:—

(i) A 1st class district, under the General Officer Commanding Punjab Frontier Force, was formed embracing the whole frontier from Abbottabad to Dehra Ghazi Khan.

(ii) The Brigadier-General Commanding the Peshawar District became subordinate to the General Officer Commanding Punjab Frontier Force.

(iii) A new 2nd class district, styled the Derajat District, was formed under the General Officer Commanding Punjab Frontier Force.

Military position on the North-Western Frontier.

On the conclusion of military operations on the Punjab Frontier in 1898, the whole question of the military position on the North-Western Frontier was thoroughly considered by the Government of India, and in 1899 it was decided to withdraw regular troops from the Khyber, expanding the Khyber rifles, that regular troops should be withdrawn from the Samana, Kurram, Tochi, and the Gomal and Shahur Valleys, and that thereafter these places should be garrisoned by militia or military police.

Cantonment Regulations.

Under the authority of the Cantonments Act (XIII of 1889), rules have been drawn up for the administration of cantonments. The rules were finally published and given effect to in 1899.

Provision of an adequate war reserve of Military Assistant Surgeons.

The necessity for providing a larger reserve of military assistant surgeons to meet the requirements of the field army on mobilisation was considered in 1899, and a scheme was put forward which has now been sanctioned. This involved an increase to the establishment, the cost of which is estimated at—

	R
Initial	1,55,160 spread over five years.
Annual recurring	7,250 in the sixth year and thereafter.

Horse runs for Native cavalry.

In view of the increasing difficulty experienced by Native cavalry in obtaining suitable remounts, a scheme for the establishment of horse runs by these regiments on irrigable land was sanctioned in 1899. Grants of land on favourable terms were made on the Chenab Canal and loans of money allowed to enable regiments to start operations. The experiment is now under trial.

North-Western Frontier defences.

The defences at the Malakand, including Chakdara, in the Khyber, and on the Samana were strengthened and improved so as to be proof against tribal attack.

Accounts.

The rules relating to payment of compensation for dearness of provisions were modified so as to provide for compensation being based on the local price of that quality of food-grains which would be ordinarily eaten by the class of men to which the Native soldier or follower belongs.

Pensions.

The rates of wound pensions admissible to non-commissioned officers and soldiers of the Native Army were considered inadequate and, with the sanction of the Secretary of State for India, were increased.

Organisation of transport.

The experience of the Chitral and Tirah Expeditions led to prolonged consideration by two special committees and by the Government of India of the whole subject of organising the standing transport so as to adapt it to the much larger requirements of mobilisation. In 1899 a provisional scheme for organising a large part of the existing transport into corps and cadres was approved, and this has now been merged into a more extensive scheme for the maintenance of organised transport units, which has

received the sanction of the Secretary of State. Simultaneously, in 1899, rules were formulated and approved for the organisation into units of all transport hired or purchased in time of war; and in order to facilitate the collection of such transport from private owners, the terms to be allowed for hire of animals or men were carefully detailed and widely published. A further measure with the same object is the compiling of an accurate census of transport, which is now in preparation, and the maintenance of registration officers permanently in districts. The scheme for enrolling camels from the grantees on the lands adjacent to the Chenab Canal has been most successful.

The organisation of transport has necessitated the addition of 38 officers to the Transport Branch of the Commissariat-Transport Department at a cost of R6,20,000 annually. The total extra cost is R19,40,000.

Complement of transport.

Questions connected with the maintenance of a large standing transport have been very prominent in the years under review. The complement of transport which had been developed in 1885 was increased in 1891 by 2,000 mules at a cost of eight lakhs. A further increase of 1,750 mules was sanctioned in 1896 in connection with the provision of mobilisation equipments for the divisions of the field army, and again by 2,000 mules in March 1900, when the total authorised complement of mules became 22,270.

1900.

Volunteers.

Since 1885 the strength of the volunteer force has risen from 13,363 to 31,000 approximately at the present time. During this period several new corps have been formed and the formation of reserves has been sanctioned.

In 1892 Government sanctioned an annual grant of R30,000 for volunteer buildings, and R20,000 annually for field days, and the camp of exercise grant was raised from R15,000 to R60,000. Wound and injury pensions to volunteers, and pensions to their widows, have been granted under certain conditions; the capitation for mounted and artillery volunteers has been raised by R10, and the same amount is paid to infantry volunteers trained in gun drill in addition to ordinary capitation. The volunteer officer's decoration and volunteer long-service medal have been extended to India, and volunteer officers are given an outfit allowance of R100 on first appointment.

Withdrawal of detachments of troops from isolated positions.

In pursuance of the policy of withdrawing detachments from isolated and unimportant stations as far as may be consistent with the internal safety of the Empire, a number of small stations have been given up, and troops have been generally concentrated at the more important strategic centres whence they can be more readily drawn for mobilisation, and can also be better trained.

Manufacture of cordite in India.

The experimental manufacture of a small quantity of cordite at Kirkee having, after prolonged trial, proved that this explosive could be made in India equal in quality to that produced in England, the establishment of a cordite factory in the Arvenghat Valley, Nilgiri Hills, was finally decided on, and the factory is now in course of erection. The manufacture is expected to result in a large saving as compared with the cost of cordite imported from England, and to recoup the initial cost within a very few years.

Lyddite filling factory.

It has been decided to fill lyddite shell in India, and the factory will form a branch of the Small-Arms Ammunition Factory, Kirkee.

Hut accommodation at the summer camps in the Murree Hills and at Chakrata, Ranikhet, and Dalhousie.

For the benefit of the health of the troops summer hutted camps in the hills have been established at Gharial, Kuldanna, Kalabagh, Thobba, Khyra Gully, Bara Gully,

Dalhousie, Chakrata, and Ranikhet, but want of funds has prevented the development of the policy as much as could be desired.

Supply—Grass and Dairy Farms.

In matters connected with supplies for troops the establishment of Government dairies has been prominent since 1889, when in consequence of the representations of a committee on the prevalence of enteric fever dairies were established experimentally at Allahabad, Bareilly, and Rawal Pindi. The first-named was attached to the grass farm at that station, and under the management of Lieutenant (now Captain) Meagher has attained to a state of considerable prosperity, all the troops in the garrison being supplied with excellent dairy produce. It was then determined to work dairies—wherever possible—in conjunction with grass farms, and under advice from Captain Meagher such combined farms have been started and are now working satisfactorily at Lucknow, Cawnpore, and Umballa ; dairies have also been inaugurated at Aden, Mhow, Jubbulpore; Agra, etc., in most cases under the direction of Captain Meagher. At the same time it was recognised that to ensure success, whether of grass or dairy farms, trained and continuous management was necessary. A system has therefore been adopted which places all farming operations under a Director of Farms in the Punjab and Bengal, respectively, and Assistant Directors as well as subordinates to manage local farms are trained at the Allahabad Farm by Captain Meagher, who has been appointed Director of Farms in Bengal.

In concluding this summary, I would point out that it does not, except in a few instances, embrace the various proposals which have been made and sanctioned for the years 1900-1901 and 1901-1902, as many of these have not yet been carried to completion ; and I have also alluded to these especially in my memoranda on the estimates, in March 1900, and in that which I now submit. The expenditure which has been accepted by the Government of India on these measures amounts to ₹3,48,28,140. The improvements represented by this expenditure include the re-armament of the Native Army, increase to the officers of the Army and of the Commissariat-Transport Department, the reorganisation and increase of the Artillery, establishment of mounted infantry, improvements in the volunteer force, the reorganisation of the transport, increase in horses, important proposals connected with mobilisation and equipments, increase in amount of ammunition issued, improvement in equipment of the field batteries, new mountain guns, completion of hospitals and medical equipment, provision of field railway, large development of manufacturing power, higher efficiency in coast defences, and a great many other items.

E. H. H. COLLEN, *Maj.-Genl.*

March 20, 1901.

APPENDIX III.

Memorandum by the Hon'ble Sir Arthur Trevor, K.C.S.I.

It was explained in the memorandum appended to the Financial Statement this time last year that in consequence of certain changes, of which a summary was given, in the procedure for the consideration of Railway Projects, the memorandum would then and for the future be confined mainly to the presentment of such details in connection with the Railway Programme for the ensuing and two following years as do not find a place in the Financial Statement.

For any information which may be wanted in regard to proposals not in the programme, reference is invited to the History of Railway Projects revised and brought up to date which was issued in October last.

2. In connection with the form of the present programme which is printed as Statement A to this memorandum, there are two points which call for notice.

The first is that for the grouping according to the source from which the expenditure is to be met, and the agency to be employed, which has hitherto been adopted, a new grouping has been substituted which is designed to illustrate the principle on which the resources available have been distributed.

That principle is that, in framing the railway programme, the amount required to meet the needs of open lines, so far as they can be foreseen, should be regarded as a first charge upon the money available for railway purposes, and that every effort should be made to provide in full for all demands arising out of the development of existing traffic—that next in order provision should be made for the steady prosecution and early completion of lines in progress, preference under this head being given to Companies' lines over those under construction by the agency of the State, and, lastly, for new projects which depend on the ability of the State to find money to complete them without financial embarrassment to the Government.

In the abstract at the end the totals are given according to the old as well as according to the new grouping for facility of comparison.

3. The other point is that in order to admit of the continuous application of the principle above stated, the minimum of 6½ crores, which was adopted last year as the basis of the programme for the years following that actually dealt with in the Budget, has been abandoned. The forecast for 1902-1903 and 1903-1904 has been based on the aggregate of the actual demands so far as they can be at present foreseen by the Railway administrations concerned, for open lines and lines under construction, which alone come to 10¼ crores for 1901-1902 and nearly 7 crores for 1902-1903. The obligation to find this amount if possible being accepted, it will remain to consider in connection with the preparation of the Estimates for each successive year whether the amount can be found or not; if not, in what directions reduction can be effected with the least mischief, and if, on the other hand, the financial position is as easy as may be hoped for, how far it is possible to go in undertaking new lines from among those shown in Statement B, in addition to the comparatively obligatory provision for lines open and in progress.

4. As has been explained on former occasions it must be clearly understood that except in so far as it embodies the actual Budget provisions for the year next ensuing, the whole programme is provisional only, that the order of priority given to the new projects which it is proposed to include in it, as funds permit, is always liable to reconsideration, and that the actual inception of any particular project depends on its final acceptance by the Government of India and the Secretary of State, on the financial situation when the time comes, and in some cases on the possibility that offers may be received for its construction by a Company which may admit of its being carried out independently of the programme.

5. Turning to details it will be observed that, whereas the total of the sums shown in the programme presented last March for the year now ending amounted to Rs. 7,30,84,000 only and included no provision for any new railway, the Government of India have been able during the course of the year to make supplementary grants for different lines, raising the total to Rs. 8,30,75,000, and that out of these grants it has been possible to commence work on the Gondia-Jubbulpur line, one of the three projects

mentioned in paragraph 5 of last year's memorandum as having been struck out owing to the pressure of famine demands, and also on a second line, the Midnapur-Jherriah, which was shown last year as for commencement in 1901-1902 only.

Of the other two lines struck out last year the Dhulia-Amalner line is for the present in abeyance owing to the transfer of the Great Indian Peninsula Railway to the State and the Godra-Baroda Chord still awaits the possibility of providing funds.

The commencement of the 4th line, that from Sakri to Jainagar, to which reference was made in the same paragraph, has unfortunately been delayed by the inability of the Bengal and North-Western Railway Company to raise the necessary funds on debentures the currency of which they were obliged to limit to the short unexpired term of their contract for the working of the Tirhoot State Railway, of which the Sakri-Jainagar line will form a part. This difficulty has lately been got over, it is understood, by the Secretary of State's acceptance of liability for debentures of a suitable term after the determination of the Tirhoot Contract, and it is hoped the line may now soon be put in hand.

6. For 1901-1902 the allotments amount to Rs. 10,32,44,000 against the minimum of 6½ crores shown in the programme last year. So far as can at present be foreseen the whole of this amount will be required to meet the pressing needs of open lines and for the energetic prosecution of lines under construction, including the three lines recently commenced, namely, the Khushalgarh-Kohat, Gondia-Jubbulpur and Midnapur-Jherriah, but it is hoped that later in the year it may be possible to find a place for the commencement of the section of the Godhra-Baroda Chord in British territory. For the length in Baroda territory funds will be found by the Durbar.

In 1902-1903 we may hope, if the present financial position is maintained, to commence the first ten or twelve of the lines entered in Statement B and most of the remainder in 1903-1904.

7. The usual summary of railway progress giving the lengths of the lines is entered as an Statement E to this memorandum.

8. The capital expenditure on railways falling within the categories now included in the programme for the ten years from 1892-93 to 1901-1902 is shown below :—

[Lakhs of rupees.]

	1892-93.	1893-94.	1894-95.	1895-96.	1896-97.	1897-98.	1898-99.	1899-1900.	Revised Estimate, 1900-1901.	Budget Estimate, 1901-1902.
Capital expenditure on open lines	108	120	184	167	240	179	221	335	405	460
On construction of new lines .	472	392	390	421	654	691	661	562	426	572
TOTAL .	580	512	574	588	894	870	882	897	831	1,032

9. The subjoined table shows the progress made in the development of railway communication, including lines financed by Native States or Companies outside the programme, during the 5½ years of my officiating and substantive tenure of the office of Public Works Member :—

YEAR.	AT COMMENCEMENT OF YEAR.			DURING THE YEAR.		REMARKS.
	Opened.	Commenced but not open.	Sanctioned but not commenced.	Opened.	Sanctioned.	
1895-96	18,855	2,195	22	821	2,415	
1896-97	19,677	3,741	43	713	1,054	
1897-98	20,390	4,008	129	743	917	
1898-99	21,156	3,948	349	1,339	631	
1899-1900	22,491	2,454	286	1,266	732	
1900-1901	23,763	2,597*	430	1,386	392	* Of which 1,300 miles will probably be ready for opening in 1901-1902.
TOTAL .	...	...	...	6,268	6,141	

10. The exceptionally favourable character of the earnings from Railways during the years 1899-1900 was noticed in last year's memorandum, and it was anticipated that according to the revised estimates then available the customary loss on the direct railway account, that is, " the amount by which the net earnings fall short of the interest

charges which have to be met, including strategic railways and loss arising from the special exchange provisions of the old Railway contracts," would be reduced to about 1¼ lakhs. It is satisfactory to be able to announce that this anticipation has been more than fulfilled, and that the actuals show, for the first time in the history of Railways in India, an absolute surplus, which amounts to over 11½ lakhs.

It was stated at the same time that with the cessation of the exceptional traffic due to the famine and the despatch of troops to South Africa a falling off was to be looked for, and in the estimates for the year now ending the probable deficit was put down at 73 lakhs, but according to the most recent estimates, it appears that there will once more be an actual gain, this time of about 23½ lakhs, on the direct account of the year. This result is no doubt partly due to the unfortunate continuance of famine conditions during earlier months of the year and to the movement of an unusually heavy crop of rice in Burma and of cotton in Bombay, but it is again distinctly encouraging.

The estimates for 1901-1902 allow for a deficit of about 24¾ lakhs.

11. Statement C is a list of Branch lines for the construction of which by private enterprise, outside the programme, arrangements have been made or are under consideration; and Statement D corresponds in a revised and amplified shape with Statement C, appended to last year's memorandum, which included a good many lines on which famine relief work, though sanctioned, was not actually undertaken. In connection with this Statement attention is invited to paragraph 6, page 2 of the last issue of the History of Railway Projects, where it is stated that Government will be prepared to receive proposals for the completion of some, if not all, of these lines on the understanding that the work already done will be given free of cost together with the land and the surveys already made.

A. C. TREVOR.

CALCUTTA;
March 20, 1901.

STATEMENT A IN APPENDIX III.

STATEMENT

OF

Anticipated Capital Expenditure on Railways, Open or under Construction, for which Government have accepted any direct financial responsibility for the three years *1901-1902 to 1903-1904*, including all Open Lines.

Branch lines under Rebate terms are excluded.

* Work done on 53·50 miles in the Punjab and nothing in the North-Western Provinces and Oudh.

NOTE.—Of the lines shewn in Appendix C to the memorandum, dated 21st March 1900, famine relief work, though sanctioned was not actually undertaken on the following :-

Gaekwar's Mehsana railway, Kheralu-Dhabora extension.
Nadiad-Kapadvanj.
Vekachha-Katarar-Kosamba.
Jamnagar-Sataya.
Gwalior-Sabalgarh.
Meerut-Gurhmucktesar.
Madhopur-Sikar Branch.
Jech-Bar.
Dholia-Vankaner-Rajkot.

STATEMENT E.

Memorandum on the construction of railways.

At the commencement of 1900-1901, *i.e.*, on the 1st April 1900, the total length of railways open for traffic was 23,763·78 miles, made up as follows :—

	Miles.	Miles.
Standard gauge—		
(i) State lines worked by companies	4,312·72	
(ii) State lines worked by the State	5,043·29	
(iii) Guaranteed companies	2,612·13	
(iv) Assisted companies	874·84	
(v) Lines owned by native states and worked by companies	703·55	
(vi) Lines owned by native states and worked by State railway agency	122·97	
		13,669·50
Metre gauge—		
(vii) State lines worked by companies	7,051·88	
(viii) State lines worked by the State	644·63	
(ix) Assisted companies	347·56	
(x) Lines owned by native states and worked by companies	381·58	
(xi) Lines owned and worked by native states	997·98	
(xii) Foreign lines	73·25	
		9,496·88
Special gauges—		
(xiii) State lines worked by the State	36·00	
(xiv) Assisted companies	192·40	
(xv) Lines owned by native states and worked by companies	242·31	
(xvi) Lines owned by native states and worked by State railway agency	33·62	
(xvii) Lines owned and worked by native states	93·07	
		597·40
TOTAL		23,763·78

		Miles.	Miles.
(i)	East Indian	1,836·15	
	Bengal Central (a)	125·01

(xvii)	Morvi (2′ 6″)		93·07

(a) Although for convenience classed amongst State railways, this line is the property of the Bengal Central Railway Company.
(b) Worked by the Indian Midland Railway Company.
(c) Worked by the Bombay, Baroda and Central India Railway Company.
(d) Worked by the Great Indian Peninsula Railway Company.
(e) Although forming an integral part of the East Coast State railway, this line is shown separately as it is worked by the Nizam's Guaranteed State Railways Company.
(f) Including 6·72 miles of military line not used for public traffic.
(g) Worked by the North-Western State railway.
(h) Including 2·66 miles mixed-gauge and 0·33 mile metre-gauge.
(i) Although for convenience classed amongst State railways, this line is the property of the Bengal and North-Western Railway Company.
(k) Worked by the Bengal and North-Western Railway Company.
(l) Worked by the Southern Mahratta Railway Company.
(m) Worked by the South Indian Railway Company.
(n) Excluding 3·66 miles of the Lucknow-Bareilly railway between Daliganj and Alabagh, but including the length, Bara Banki to Burhwal 26·70 miles, and the length over Cawnpore bridge 0·59 mile laid on a mixed gauge.
(o) Worked by the Eastern Bengal State railway.
(p) Worked by the Bengal and North-Western Railway Company.
(q) Worked by the Assam Railways and Trading Company.
(r) Worked by His Highness the Nizam's Guaranteed State Railway Company.

2. And the mileage under construction or sanctioned for construction on the same date was 3,018·03 miles, as follows:—

		Miles.	Miles.
Standard gauge—			
(i)	State lines worked by companies	431·35	
(ii)	State lines worked by the State	171·90	
(iii)	Guaranteed companies	109·87	
(iv)	Assisted companies	0·79	
(v)	Lines owned by native states and worked by companies	20·75	
(vi)	Lines owned by native states and worked by State railway agency	79·61	
			814·27
Metre gauge—			
(vii)	State lines worked by companies	1,009·06	
(viii)	State lines worked by the State	132·19	
(ix)	Assisted companies	151·56	
(x)	Lines owned by native states and worked by companies	382·39	
(xi)	Lines owned and worked by native states	307·85	
			1,983·05
Special gauges—

	Raipur to Dhamtari		45·25	
	Abhanpur to Rajim		10·48	55·73
(xiv)	North Western—			
	Nowshera to Dargai			41·90
(xv)	Cooch Behar—			
	Torsa bridge and approaches			0·11

3. During 1900-1901, *i.e.*, from 1st April 1900 to 31st March 1901, 392·13 miles of new railway have been authorized as follows :—

	Miles.	Miles.
Metre gauge—		
(i) State lines worked by companies	51·34	51·34
Special gauges—		
(ii) State lines worked by companies	252·67	
(iii) State lines worked by the State	88·12	
		340·79
TOTAL		392·13

And 1,386·82 miles have been or are likely to be opened to public traffic as follows :—

	Miles.	Miles.
Standard gauge—		
(iv) State lines worked by companies	39·74	
(v) State lines worked by the State	171·90	
(vi) Guaranteed companies	50·12	
(vii) Lines owned by native states and worked by State railway agency	79·61	
		341·37
Metre gauge—		
(viii) State lines worked by companies	439·13	
(ix) State lines worked by the State	23·09	
(x) Assisted companies	107·56	
(xi) Lines owned by native states and worked by companies	230·93	
(xii) Lines owned and worked by native states	147·00	
		947·71
Special gauges—		
(xiii) State lines worked by companies	55·73	
(xiv) State lines worked by the State	41·90	
(xv) Lines owned by native states and worked by State railway agency	0·11	
		97·74
TOTAL		1,386·82

4. The total length of open line at the commencement of 1901-1902, *i.e.*, on the 1st April 1901, ill, therefore, be 25,155·70 miles, comprising—

	Miles.	Miles.
Standard gauge—		
(i) State lines worked by companies	6,517·38	
(ii) State lines worked by the State	4,435·47	
(iii) Guaranteed companies	1,305·13	
(iv) Assisted companies	874·84	
(v) Lines owned by native states and worked by companies	703·55	
(vi) Lines owned by native states and worked by State railway agency	202·58	
		14,038·95
Metre gauge—		
(vii) State lines worked by companies	7,466·03	
(viii) State lines worked by the State	667·72	
(ix) Assisted companies	455·12	
(x) Lines owned by native states and worked by companies	612·51	
(xi) Lines owned and worked by native states	1,144·98	
(xii) Foreign lines	73·25	
		10,419·61
Special gauges—		
(xiii) State lines worked by companies	55·73	
(xiv) State lines worked by the State	79·90	
(xv) Assisted companies	192·40	
(xvi) Lines owned by native states and worked by companies	242·31	
(xvii) Lines owned by native states and worked by State railway agency	33·73	
(xviii) Lines owned and worked by native states	93·07	
	697·14	
TOTAL	†25,155·70

	Bársi Road to Pandharpur	(a)38·16	91·16	
	Kalka-Simla	53·00		
(xiii)	Rewah—			
	Rewah to Sutna			(a)31·81

5. And the mileage under construction or sanctioned for construction on the 31st March 1901 will be 2,019·45 miles, made up as follows :—

		Miles.	Miles.
Standard gauge—			
(i)	State lines worked by companies	391 61	
(ii)	Guaranteed companies	59·75	
(iii)	Assisted companies	0·79	
(iv)	Lines owned by native states and worked by companies	20·75	
			472·90
Metre gauge—			
(v)	State lines worked by companies	687·65	
(vi)	State lines worked by the State	38·83	
(vii)	Assisted companies	44·00	
(viii)	Lines owned by native states and worked by companies	151·46	
(ix)	Lines owned and worked by native states	160·85	
			1,082·79
Special gauges—			
(x)	State lines worked by companies	252·67	
(xi)	State lines worked by the State	88·12	
(xii)	Assisted companies	91·16	
(xiii)	Lines owned by native states and worked by companies	31·81	
			463·76
	TOTAL		2,019·45

Making a grand total of railways completed and in hand at the commencement of 1901-1902 of miles . 27,175·15*

And showing, after allowing for corrections of mileage, and advance on the previous year of miles . . 393·34

(a) Commencement of work not yet authorized.
(b) Excluding 12·23 miles of the Kaunia-Moghalhat section, 2′ 6″ gauge, to be converted to the metre gauge.
(c) Correction of mileage.

* Made up as follows :

	Miles.
Completed and in hand at the beginning of 1900-1901	26,781·81
Sanctioned during 1900-1901	392·13
	27,173·94
Add— Increase due to correction of mileage	1·21
	27,175·15

6. It is expected that the following lengths of unfinished line will be opened for public traffic in 1901-1902:

	Miles.	Miles.
Standard gauge—		
(i) State lines worked by companies	87·99	
(ii) Guaranteed companies	43·00	
(iii) Assisted companies	0·79	
(iv) Lines owned by native states and worked by companies	20·75	
		152·53
Metre gauge—		
(v) State lines worked by companies	165·00	
(vi) State lines worked by the State	38·83	
(vii) Lines owned and worked by native states	160·85	
		364·68
Special gauges—		
(viii) State lines worked by the State		88·12
TOTAL		605·33

Leaving the undermentioned lines for completion in 1902-1903 or later:

	Miles.	Miles.
Standard gauge—		
(ix) State lines worked by companies	303·62	
(x) Guaranteed companies	16·75	
		320·37
Metre gauge—		
(xi) State lines worked by companies	516·69	
(xii) Assisted companies	44·00	
(xiii) Lines owned by native states and worked by companies	151·46	
		712·15
Special gauges—		
(xiv) State lines worked by companies	252·67	
(xv) Assisted companies	91·16	
(xvi) Lines owned by native states and worked by companies	31·81	
		375·64
TOTAL		1,408·16

		Miles.	Miles.	Miles.
(i)	East Indian— Bárun to Daltonganj	78·32	85·31	87·99
	Sitarampore to Domohani	6·99		
	Bengal Central— Dum-Dum Cantonment to Pattipooker	2·68		
(ii)	Madras— Calicut to Tellicherry			43·00
(iii)	Southern Punjab (*Delhi Samdasta*)— Delhi Brewery to Delhi			0·79
(iv)	Petlad-Cambay			20·75
(v)	South Indian— Madura to Toni Torai		91·33	165·00
	Burma— Nawnghkio to Thibaw	51·00	73·67	
	Letpadan to Tharrawa	22·67

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, the 9th March, 1901.

A series of depressions has entered North-West India during the week, but the only depression of importance was a double one which advanced through the Punjab and Rajputana on Wednesday and Thursday.

On Sunday a shallow depression was shewn forming in Kathiawar, but it apparently either filled up without changing its position or it amalgamated with a second depression which appeared in Lower Sind and parts of Gujarat on Monday and advanced into the Central Provinces and Central India on Tuesday, giving showers in the Central Provinces, the east of Central India and parts of Rajputana. The largest amounts reported were ·85 inch at Saugor and ·52 inch at Jubbulpore. The depression continued advancing eastwards, but it had practically filled up by Wednesday and had given only a few light showers in the east of the Central Provinces and North-East India.

The barometer fell briskly in Baluchistan on Tuesday and briskly to rapidly in the Punjab, Sind and Rajputana on Wednesday, and a depression was lying in Wednesday morning over the greater part of the Punjab, Sind and West Rajputana. A well marked centre in which pressure was nearly a quarter of an inch in defect was shown between Montgomery and Mooltan round which winds were cyclonic and moderately strong. Light to moderately heavy showers had fallen in the North-West Punjab hills and plains, and snow in Kashmir. Peshawar had received 1·25 inches, Murree 1·10 inches, Rawalpindi ·97 inch and Cherat ·94 inch. There were traces, in the directions of the winds, of another centre in Sind, but it was not till Thursday when the depression had advanced eastwards into the East Punjab, Rajputana and the south-west of the North-Western Provinces, that the depression was clearly shown to be a double one, with one centre in the East Punjab and another in East Rajputana. Moderately heavy falls of rain and snow were reported from the Upper India hills on Thursday and light thunder-showers, in some cases accompanied with hail, were received in the Punjab and North-Western Provinces. The heaviest falls reported were :—Murree 1·30 inches, Simla 1·22 inches and Srinagar 1·00 inch. The depression in the East Punjab broke up in the Simla and Mussooree hills during the next twenty-four hours, giving showers in the Simla and Mussooree hills and submontane districts, while that in East Rajputana drifted into the Eastern States of Central India and the adjoining districts of the Central Provinces, but had nearly filled up. It had however, given light to moderate showers in the eastern districts of the North-Western and of the Central Provinces and in North and West Bengal. Benares received 1·18 inches, Darjeeling ·85 inch, Purnea ·64 inch, Jalpaiguri ·56 inch, Patna ·48 inch and Darbhanga ·45 inch. Showers were received during the day in Assam and North and East Bengal, but the depression had filled up by Saturday morning.

Rain.—Showers have been received in all divisions of Northern India, except North Bombay and West Rajputana, and in the Central Provinces, Berar, Khandesh and South India, but the amounts recorded in the majority of divisions have been small and have exceeded one inch in only the North Punjab, the Punjab Hills and the Hills division of the North-Western Provinces. The rainfall of the week has been normal or in excess in North and Central Bengal, the Bengal Hills, Orissa, Chota-Nagpur, Bihar, Oudh, the North-Western Provinces (except the west division), the Punjab (except the central and west divisions), Central India (east), Berar, the Central Provinces, Khandesh, Malabar, Coorg and South Madras.

The following gives the names of individual stations which have received more than two inches during the week:—

	Inches.
North-Western Provinces—Joshimath (Garhwal) . . .	2·16
Punjab—Pindigheb (Rawalpindi)	2·15
Haripur (Hazara)	3·60
Abbottabad	2·59

A new rainfall period commences with this week and the variations of rainfall from the normal are hence the same for the period as for the week.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING MARCH, 9TH, 1901.			RAINFALL DATA FROM MARCH, 3RD, TO MARCH, 9TH, 1901.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect in inches.	Average actual rainfall of season to date.	Average normal rainfall, March, 3rd, to March, 9th.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA;
The 14th March, 1901.

W. A. BION,
for *Meteorological Reporter to the Government of India and Director-General of Indian Observatories.*

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, the 16th March, 1901.

Madras.—The rainfall was very heavy in Travancore: fair in parts of Tinnevelly, Tanjore and Malabar and light in parts of the Circars, South Arcot, the central and the rest of the southern districts. The water-supply is insufficient in parts of Godavari, the Deccan and Central Madura and the West Coast districts. Ploughing, sowing and transplanting continue in parts. The standing crops are good generally, but are withering or damaged by insects in parts of the Godavari, Kistna, Chingleput and South Arcot districts. Paddy and Ragi have been harvested on large areas with moderate outturn. Fodder is sufficient, but pasture is scanty in parts of the Deccan, the Central and West Coast districts. The condition of cattle generally is good. Prices are almost stationary or slightly easier and continue above warning rates throughout, while those of some of the dry grains are above scarcity rates in parts of the Deccan, South Arcot, North Arcot and Salem districts. Prospects generally are fair, but not satisfactory in the Salem district. Numbers on relief:—Test workers: Cuddapah, men, 530, women 567, children 33, total 1,130. The estimated number of weavers relieved was, men 1,675 and women 1,321.

Bombay.—Very slight rain fell during the week in parts of Ahmednagar, Poona, Satara, Belgaum and Ratnagiri. Agricultural prospects are good in Sindh, fair to good in Konkan and parts of Kaira, Broach, Surat, Khandesh, Nasik, Poona and Satara, and moderate to poor elsewhere. The standing spring crops have been damaged by locusts or other insects in parts of Shikarpur, Hyderabad and Thar and Parkar, and are generally suffering from want of moisture except in irrigated lands. The reaping of spring crops is nearly over in Poona and Satara and progressing in other districts. Threshing continues in parts of Nasik and Ahmednagar. Cotton picking is in progress in parts of Broach, Surat and the Karnatak. The fodder supply is generally sufficient, but scanty in parts of the Karnatak. Agricultural stock are in good condition except in parts of Bijapur. The water-supply is getting scanty in parts of Ahmednagar and the Karnatak. Prices have fallen in six districts, risen in two districts, and are stationary elsewhere. The price of rice is slightly over normal, but easier than in 1900, while that of *bajri* is below normal in Gujarat, slightly over normal in Konkan, and considerably over normal in the Deccan and the Karnatak. Compared with 1900 it is considerably easier. The price of *jowari* is slightly below normal in Gujarat and considerably over normal in the Deccan, Konkan and Karnatak and, compared with 1900, slightly easier in the Konkan and considerably easier elsewhere. The price of wheat is considerably over normal and about the same as in 1900.

Daily average numbers on relief—British districts—on test works, 1,040; on relief works, 115,323; dependants, 22,693; total on works, 139,056. In poor houses, 3,664; on village relief, 37,208; total on gratuitous relief, 40,872. Figures for Ahmedabad and Nasik are incomplete. Native States—on relief works, 10,982; dependants, 4,016; total on works, 14,998. In poor houses, 784; on village relief, 475; total on gratuitous relief, 1,259. Grand total, 196,185.

Bengal.—There were slight local showers during the week in Mymensingh, Faridpur, Saran, Bhagalpur, Purnea, Sonthal Parganas and Angul. More rain is wanted in Mymensingh and Faridpur. It is also needed in Jessore, Bogra, Tippera, Noakhali and Chittagong. Harvesting of *rabi* and pressing of sugarcane continue. Lancing of poppy and transplantation of spring rice is in progress. Lands are being prepared for the next *bhadoi* and jute crops. Prospects are generally good. Fodder and water are sufficient except in Chittagong and

in the Chuadanga subdivision of the Nadia district. Fodder is dear in Bankura and scarcity of water is apprehended in Tippera. The price of common rice has risen in 18 districts, fallen in 7 and is stationary in the rest.

North-Western Provinces and Oudh.—The weather has been clear and seasonable during the week. Spring crops are doing well and harvesting has commenced in places. Sowing of extra crops and pressing of sugarcane and extraction of opium continue. Some injury to standing crops by hail, rain and rust is reported from six districts. Prospects continue favourable. The markets are well supplied and prices generally show a tendency to fall.

Punjab.—Slight rain has fallen in parts of Shahpur and Rawalpindi. The prices of food-grains are generally unsettled. Wheat is selling from 10 to 13½, gram 10⅝ to 13, maize 18⅛ to 22¾, and bulrush millet 16¼ to 29 seers per rupee. Sowings of sugarcane, cotton, tobacco and other extra spring crops are in progress. Ploughings for other autumn crops continue in Sialkot. Pressing of sugarcane continues in Umballa, but has been completed in Amritsar. The rapeseed crop is being harvested in Hissar and Umballa. The condition and prospects of standing crops are reported to be good to average. The standing crops have been much benefited by good sunshine in Umballa and the outturn is expected to be good in Peshawar. Rust has affected wheat in some districts. Locusts have also damaged the standing crops in parts of Mooltan and have also appeared in parts of Dera Ismail Khan and Bannu. Some damage from hail is reported from Jullundur. Pasturage fodder is sufficient in all districts except in parts of Mooltan.

Burma.—LOWER BURMA: Threshing and winnowing still continue in Henzada and Myaungmya. Reaping of dry weather paddy has commenced in Tavoy. The damage to exposed paddy by recent rain in Pegu is now returned at one-twentieth and not 20 per cent as previously reported.—UPPER BURMA: Sowing and transplanting of dry weather paddy are going on in most districts and the gathering of beans and peas is progressing in five districts. Prospects are unchanged. The price of paddy has risen slightly in Akyab, Thaton and considerably in Magwe and has fallen slightly in Thayetmyo and Kyaukse and largely in Thongwa and Myaungmya. Elsewhere there is no change.

Central Provinces.—Fine dry weather prevailed during the early part of the week with generally increasing temperature later in the week. The weather became rather unsettled in Mandla, Betul, Chhindwara, Raipur, Seoni, Nagpur, Bhandara, and Balaghat with a light fall of rain in the first four districts and rainfall measuring half, three-fourths and one inch, respectively, in the three last mentioned districts. The recent rain has checked the spread of rust in Damoh, but in Chanda it has caused damage throughout the district. Crop prospects are generally fair to good. Reaping of wheat, gram and other spring crops continues generally, and is approaching completion in Nagpur. Threshing has commenced in parts of the Chhindwara district. New grain has come into the market. The land is being prepared for the autumn sowings in Nimar, Balaghat and Sambalpur. Fodder and water are sufficient. The price of wheat and gram has cheapened in almost every district. The cheapest prices are wheat 13⅛; gram 15⅓; rice 13 and juar 22 seers per rupee. The dearest prices are wheat 6¾; gram 8¾; rice 8 and juar 14 seers per rupee. There are still seven persons on relief in the Saugor poor house. In Balaghat there are 677 persons on village relief and 41 in pauper wards.

Assam.—Slight rain fell in Lakhimpur. Rain is badly wanted in most districts. The gathering of mustard and pressing of sugarcane are nearly finished. The outturn of sugarcane is good in Lakhimpur and fair in other districts, and of mustard good in Lakhimpur, fair in Sibsagar and bad in other districts. Pruning of tea is finished in all districts except Sylhet and plucking has commenced in places, and ploughing for early and late rice and sowing of early rice are in progress. Fodder is insufficient in the Naga Hills, Khasia and

Jaintia Hills, and in parts of the Surma Valley. Water is insufficient in these places and in parts of Nowgong and Sibsagar. Prices :—common rice, Silchar 9 to 10; Sylhet, Dhubri and Dibrugarh 10, Gauhati 13, Tezpur 11 and Nowgong and Sibsagar 12 seers per rupee.

Mysore.—No rain fell in the Civil and Military Station of Bangalore. Standing crops are in good condition throughout except in parts of the Shimoga district: paddy, ragi, gram and wheat have been harvested in some and paddy is being sown in other parts. Prospects are good in Bangalore, Mysore, Kolar, Kadur and Tumkur and fair in Hassan. Prices are stationary at Mysore and Tumkur. They have slightly risen in Bangalore and Chitaldrug and parts of Kadur and Hassan and slightly fallen in Kolar and Shimoga and other parts of Kadur and Hassan. Cattle are healthy except in parts of Mysore. Water and fodder are available except in some parts of Shimoga, Mysore and Hunsur Taluks and in Kakankote of the Mysore district, where scarcity of water is being felt and in Chitaldrug where water is gradually getting scarce.

Coorg.—11 cents. of rain fell. Prices of food grains are normal. Water and fodder are sufficient.

Berar.—The weather is warm. Harvesting of winter crops is nearing completion and preparation of land for monsoon crops continues. Fodder and water supply is ample. Prices are almost stationary.

Hyderabad.—The rainfall during the week was one cent., the total from 1st January being one inch and 82 cents. Spring crop harvest is nearly over. The winter rice crop with few exceptions is doing well. Prices of grain have fallen slightly. The total number of persons on relief works, including dependants, was 1,632; gratuitously relieved 766. Prices—wheat 5, coarse rice 7½, and *juar* 14 seers per *halli* rupee.

Rajputana.—11 cents. of rain fell in Bikaner. Agricultural operations are satisfactory. Standing crops are generally good. Harvesting of gram and extraction of opium has begun in places in Kotah. Cattle are in good condition. Fodder is ample. The cheapest prices range between 12 to 31½ seers per rupee. Number on gratuitous relief in Native States 305.

Central India.—No rain fell throughout the Agency during the week. Agricultural operations are in progress everywhere. Standing crops are in fair condition and the probable outturn is expected to be good. Crops have been damaged slightly by insects in Gwalior, by rust in Baghelkhand, by drought in Malwa, and partially injured in Bhopawar and Bundelkhand. Agricultural stock are in bad condition in parts of Malwa, but good elsewhere. Prices of food grains are steady in Gwalior, Indore and Bhopal, normal in Bundelkhand, above the average in Baghelkhand, and high in Malwa. The condition of opium is good in Gwalior, Indore, Bhopal, Malwa and Bhopawar. Average prices in Gwalior 16-12 to 28, in Bundelkhand 12¾ to 16, in Malwa 18-4, in Bhopawar 16, in Indore 6 to 20. Number on gratuitous relief—Jaora 40. Number on Jobat and Alirajpur relief work 2,734.

Baroda.—Agriculture stock has failed. Prices are—bajri 32, *jowar* 32, wheat 16, rice, superior, 13, inferior 21, pounds per rupee. Numbers on relief-works—Baroda territory, 6,203; gratuitous relief, 4,127.

Kashmir.—The weather was bright and sunny. Spring crops are in fair condition. Prices continue normal. The price of rice was 24 seers per rupee. JAMMU PROVINCE.—There was no rain. Prices are generally stationary. Wheat is selling from 10½ to 17, maize from 21 to 26⅔ seers per rupee. The condition of standing crops is good. Fodder is sufficient.

Nepal.—The rainfall was 0·03. The weather is bright and clear. Standing crops are doing well. The price of rice is 8⅓ seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table :—

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the corrected District details of the rovincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons atuitously relieved in poor-houses or at their homes. Weavers relieved in their own trade are shown under "Gratuitous Relief."

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, however, actually ow the numbers on relief in each preceding week.

The following papers are published for general information.

H. S. BARNES,
the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Season and Crop Prospects for the week ending Saturday, the 30th March 1901.

Madras.—The rainfall was moderate in the southern districts and the Nilgiris and light or *nil* elsewhere. Water-supplies are insufficient in parts of Godaveri, the Deccan, the Central, Madura and the West Coast districts. Ploughing, sowing and transplanting are going on in parts. Standing crops generally are in fair condition, but are withering or have withered in parts of the Carnatic and have been damaged by rain or insects in parts of Godaveri, Tinnevelly and South Canara. Paddy and *ragi* have been harvested on large areas in the Carnatic, North Arcot and Salem districts and other dry and garden crops in the Circars and the Deccan districts with fair or moderate outturn. Pasture is scanty in parts of the Deccan, Chingleput, Central, Madura and West Coast districts, but fodder generally is available. The condition of cattle generally is good. Prices are almost stationary. They are above the warning rates throughout, while those of some of the dry grains are above the scarcity rates in the Deccan districts, except Kurnool, South Arcot, North Arcot and Salem. Prospects generally are fair, but not satisfactory in Salem. Test-workers—Cuddapah—men 400, women 433 and children 18; total 851. Weavers relieved—men 1,680, women 1,325.

Bombay.—Very slight rain fell during the week in parts of Sindh, the Panch Mahals, Kaira, Surat, Khandesh, Ahmednagar, Satara, the Karnatak, Ratnagiri and Kanara. Agricultural prospects are good in Sindh, fair to good in the Konkan and parts of Kaira, Broach, Surat, Khandesh, Nasik, Poona and Satara, and moderate to poor elsewhere. Standing spring crops have been damaged by insects or rats in parts of Hyderabad and Thar and Parkar and generally are suffering from want of moisture, except in irrigated lands. Reaping of spring crops is completed in Satara, nearly over in Poona and is progressing in other districts. Threshing continues in parts of Nasik and Ahmednagar. Cotton picking is nearly over in Dharwar and is progressing in parts of Ahmedabad, Surat, Belgaum and Baroda. Lands are being prepared for next season in parts of the Konkan, the Karnatak and the Deccan. The fodder supply generally is sufficient, but is scanty in parts of the Karnatak. Agricultural stock generally is in good condition. The water-supply is becoming deficient in parts of Poona and the Karnatak. Prices have fallen in eight districts, risen in two districts and are stationary elsewhere. The price of rice is over normal, but easier than in 1900. The price of *bajri* is below normal in Gujarat and considerably over normal in the Deccan, the Konkan and the Karnatak and, compared with 1900, is considerably easier. The price of *juar* is below normal in Gujarat and considerably over normal in the Deccan, the Konkan and the Karnatak and, compared with 1900, is considerably easier. The price of wheat is considerably over normal and, compared with 1900, about the same in the Konkan, the Karnatak and Gujarat and slightly easier in the Deccan.

Daily average numbers on relief—British districts—on test works, 418; on relief works, 118,477; dependants, 22,033; total on works, 140,928. In poor-houses, 3,720; on village relief, 39,835; total on gratuitous relief, 43,555. Figures for Ahmedabad, Nasik, Belgaum and Dharwar are incomplete. Native States—on relief works, 11,141; dependants, 3,830; total on works, 14,971. In poor-houses, 999; on village relief, 920; total on gratuitous relief, 1,928. Figures for Aundh and Phaltan are incomplete. Grand total, 201,382.

Bengal.—A few scattered light showers are reported from some of the districts of Bengal Proper and of Orissa and Chota Nagpur. Want of rain is felt in a few districts. Harvesting of spring crops and pressing of sugarcane still continue. The collection of opium is approaching completion. Sowings of *aus* and jute have been commenced. Prospects continue favourable. Fodder and water generally are sufficient The price of common rice has risen in sixteen districts, fallen in ten and is stationary in the rest.

North-Western Provinces and Oudh.—The weather was bright with slight rain in ten districts. Spring crops are being gathered generally and threshing has begun in places. The estimated outturn is reported to be, with few exceptions, good to average. Sowing of extra crops and sugarcane still continues. Opium is being collected and weighments are in progress. The yield is reported about average. Slight damage by rust to some crops is reported from Jalaun and Jhansi, while some injury by rats has been caused in Kheri. Prospects are favourable. Supplies and fodder are abundant. Prices continue to show a tendency to fall.

Punjab.—Rain has fallen in all districts, except Umballa. Sowings of extra spring crops, as well as of sugarcane and cotton crops, are in progress. Ploughings for other autumn crops continue in Sialkot. Harvesting of the rapeseed crop has commenced in Ferozepur. Spring crops are ripe in Hissar. The yield is expected to be above the average in Hissar and Jullundur and good in Peshawar. Standing crops are flourishing in Hissar and there is the prospect of a good crop everywhere. Recent rain has benefited the crops in Sialkot and Dera Ismail Khan. Locusts are said to have damaged the standing crops in parts of Mooltan. Slight damage from hail is reported from Shahpur. The condition of cattle is generally good. Pasturage fodder is said to be sufficient in all districts, except in parts of Mooltan. The price of wheat has risen in Mooltan, Lahore, Amritsar and Rawal Pindi and remained unchanged in other districts. The prices of other food-grains are unsettled. Wheat is selling from 10 to 13½, barley 20, gram 9 to 18, maize 16 to 26 and bulrush millet 14⅙ to 30 seers per rupee.

Burma.—Reports from six districts have not been received. LOWER BURMA: Agricultural operations are practically over, except in Tavoy. UPPER BURMA: Tansplanting of dry weather paddy is completed in the Ruby Mines, Upper Chindwin and Kyaukse districts and is in progress in other districts. Miscellaneous crops are being harvested, such as tobacco, onions, peas and beans. Standing crops are in good condition. Some damage has been caused in Kyaukse by the late rain. The price of paddy has fallen in Akyab and six other districts and has risen in Thongwa and Pakokku.

Central Provinces.—The weather was somewhat unsettled at the beginning of the week with high winds and light showers in some districts. It is now fine and seasonable. Hail caused some damage to the *mahua* crops in the Sakoli tahsil of the Bhandara district. Insects have attacked wheat and gram in the Behar tahsil of the Balaghat district. Harvesting of spring crops is in full swing in the north of the provinces and plateau districts. Threshing is in progress in the Nagpur country and Chhattisgarh. The estimated outturn of wheat in Mandla is 100 and gram 60. The land is being prepared for autumn sowings in most parts of the provinces. The prices of wheat and gram have eased in most districts with the commencement of the spring harvest and the quotations for rice and *juar* have fallen in sympathy. The cheapest prices are—wheat 13½, gram 16⅛, rice 14 and *juar* 22 seers per rupee. The dearest prices are—wheat 7, gram 8¾, rice 8 and *juar* 15 seers per rupee. There are still seven persons in the Saugor poor-house. In Balaghat there are 678 persons on village relief and 47 in pauper wards.

Assam.—Rain fell in all districts, except Goalpara and the Garo Hills Rain is still wanted in Goalpara, Sylhet, Kamrup, Nowgong and the Khasi and

Jaintia Hills. Gathering of mustard and pressing of sugarcane are nearly finished. The outturn of sugarcane is good in Lakhimpur and fair in other districts, and of mustard good in Lakhimpur, fair in Sibsagar and bad in other districts. Pruning of tea still continues in Sylhet. Plucking of tea continues in places. Ploughing for early and late rice and sowing of early rice is in progress. Fodder is insufficient in the Khasi and Jaintia Hills and in parts of the Surma Valley. Water is insufficient in these places and in parts of Darrang, Nowgong and Sibsagar. Prices—common rice, Silchar, Sylhet, Dhubri and Dibrugarh, 10; Gauhati, 13; Tezpur, $10\frac{10}{16}$; and Nowgong and Sibsagar, 12 seers per rupee.

Mysore.—No rain fell in the Civil and Military station. The rainfall was good in the Hassan district. Standing crops are in good condition throughout. Paddy, *ragi* and Bengal gram are being harvested in some parts, and in other parts paddy is being sown. Prospects are good in Bangalore, Mysore, Kadur, Tumkur and Chittaldrug and fair in Hassan. Prices are stationary in Tumkur, have slightly fallen in Hassan, Chittaldrug and in parts of Kadur, and have slightly risen in Bangalore, Mysore, Kolar, Shimoga and in other parts of Kadur. Cattle are healthy, except in parts of Chittaldrug. Water and fodder are sufficient, except in parts of the Mysore district and in some parts of Shimoga, Hassan and Chittaldrug, where water is getting scarce.

COORG: Prices of food-grains are normal. Water and fodder are sufficient.

Berar.—The weather was warm with occasional clouds. Harvesting of winter crops is almost completed. Breaking up of land for the ensuing crop is in progress. Fodder and water are adequate to wants. Prices show a tendency to fall.

Hyderabad.—There was no rain during the week. The total from 1st January is 1 inch 82 cents. The winter rice crop is in good condition. Harvesting of spring crops is nearly over. The water-supply is adequate to wants. Pasture and fodder are available. Grain prices are steady. Prices—wheat, 5; coarse rice, $7\frac{1}{4}$; and *juar*, 14 seers per *halli* sicca rupee. Numbers on relief will be shown in next report.

Rajputana.—The rainfall was 5 cents in Bundi and 7 cents in the Falodi tahsil of the Marwar State. Agricultural operations are satisfactory. Standing crops generally are in good condition. Harvesting operations have begun in places. Cattle are in good condition. Fodder is ample. The cheapest prices range from 12 to $32\frac{3}{8}$ seers the rupee. Number on gratuitous relief, 296.

Central India.—No rain fell throughout the Agency during the week. Agricultural operations are in progress everywhere. Standing crops are in good condition, and the probable outturn generally is estimated to be good. Crops have been damaged in places in Bundelkhand, slighly damaged by rust in Baghelkhand and by drought in Malwa, by insects and hailstorm in Gwalior and have been partially injured by frost in Bhopawar. The condition of agricultural stock is bad in parts of Malwa, but good elsewhere. Prices of food-grains are steady in Bhopal and Gwalior, normal in Bundelkhand, below average in Baghelkhand, high in Malwa and fluctuating in Indore. Average prices in Bundelkhand, 12 to 19; in Gwalior, 15·13 to 30·5; in Malwa, $18\frac{1}{4}$; in Bhopawar, $15\frac{1}{2}$ to 16; and in Indore, 6 to $15\frac{1}{4}$. The condition of opium is generally good. Numbers on gratuitous relief, Jaora 37. Number on Jobat, Alirajpur and Jhabua relief work, 3,103.

Baroda.—Agricultural stock is in fair condition. Prices—*bajri*, 34; *juar*, 35; wheat, 21; rice, superior, 13; inferior, 21 pounds per rupee. Number on relief works, 9,998; gratuitous relief, 4,055.

Kashmir.—The weather was rainy in the earlier part and bright in the concluding part of the week. Prices are normal, rice selling for 24 seers the rupee. JAMMU PROVINCE: Good rain fell. The price of wheat is stationary and that of maize is rising slightly. Wheat sells at 10½ to 17; and maize 20 to 26½ seers the rupee. The condition of standing crops is good. Fodder is sufficient.

Nepal.—*Report not received.*

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table:

Name of Province.	PRECEDING WEEK (REVISED FIGURES.)			PRESENT WEEK.			Increase or decrease.

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the corrected District details of t Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from perso gratuitously relieved in poor-houses or at their homes. Weavers relieved in their own trade are shown under "Gratuitous relief."

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, howeve actually show the numbers on relief in each preceding week.

EAST INDIA (NORTH-WEST FRONTIER).

Papers regarding British Relations with the Neighbouring Tribes on the North-West Frontier of India, and Punjab Frontier Administration.

No. 1.

(Printed on page 26 of C. 8714 of 1898.)

(Telegraphic.) From Secretary of State to Viceroy, 13th October, 1897.

My telegram of 6th October. Political settlement should, in my opinion, follow as speedily as possible upon termination of military operations in the field. You will agree with me that in present circumstances, internal and external, political and financial, no new responsibilities should be taken unless absolutely required by actual strategical necessities and the protection of British Indian border. I also think that present opportunity should be used for defining our permanent position and policy. Some modifications of existing arrangements, especially with a view to concentration of force, will no doubt be necessary, but I understand you to be in favour of strictly limiting our interference with independent tribes, and thus avoiding serious eventual responsibilities involved in extension of administrative control over tribal territory. In this I entirely concur. The question of disarmament, so far as it appears to imply protection, should be examined from this point of view. Assuming that our policy is to maintain permanently our position as it existed before these disturbances, you will no doubt consider and let me know what posts and lines of communication you regard as indispensable for this purpose, due regard being had, first, to what is possible with existing military force, second, to financial situation, and third, to great political importance of avoiding any measures likely to cause discontent among tribes and consequently recurring disturbances. Local arrangements should be based upon a clear and well-defined general plan which it should be our object to obtain.

No. 2.

(Printed on pages 172, etc., of C. 8714 of 1898.)

Despatch from the Secretary of State for India to His Excellency the Right Honourable The Governor General of India in Council, dated 28th January, 1898.

I have received from time to time the various letters from your Excellency's Government, in which you have reported to me the progress of events on the Punjab frontier, and the success of the military operations which, during the past six months, you have been compelled to undertake against the tribes in arms against the British Government over a long tract of border land, extending from the valley of the Tochi to the country on the northern borders of the Peshawar

district inhabited by the Bunerwals. Now that the active phase of these operations has almost closed, the time has arrived for briefly reviewing the narrative of events, in order to examine the causes of the late widespread outbreak and to indicate the policy which Her Majesty's Government desire to pursue in the future.

2. The first of several violent outbreaks, which have thrown the extreme North-West borderland of India into confusion and disorder, entailing a series of actions that have been fought with the greatest gallantry and attended with heavy casualties, occurred on the 10th June in the Tochi valley. It will be convenient here to give a short account of the circumstances under which Mr. Gee had proceeded from Datta Khel to Sheranna and Maizar, when his escort was treacherously attacked. In 1894 Her Majesty's Government sanctioned a policy of more effective protection and closer relations with the headmen of the Waziri tribes; and in his Despatch of the 24th of August, Mr. Fowler wrote: "Since I sanction with reluctance any assumption of fresh responsibilities, and any increase of the public expenditure, I do so in this instance on the understanding that your interference with the tribes and your outlay of money in Waziristan will be kept within the narrowest limits that are practicable." In the following year measures were taken to carry out the delimitation of the Afghan boundary as fixed by the Durand agreement of the 12th of November, 1893. On the 6th of April, 1895, the Maliks, or chiefs, of the Dawaris and of the Waziri tribes in the Tochi asked to be taken under British protection, and applied for service and allowances; and in reply to your letter, dated the 15th of May, 1895, I sanctioned your detailed proposals for giving effect to the policy laid down, in 1894, by my predecessor, on the clear understanding that your expenditure, both on Wano and Tochi, did not exceed the sum allowed for Wano alone. In my Despatch of the 9th of August, I reiterated the conditions which my predecessor had associated with his sanction of control over these tribes. In 1896 steps were taken to establish permanent military posts in the Tochi valley, and you reported for my information the outbreak of certain disturbances which occurred in February among the Madda Khel Waziris, and the murder of Honda Ram, Muharrir of the Sheranna post, which happened on the 9th of June of that year. For these outrages you sanctioned the imposition of a fine of Rs. 3,000, which was subsequently reduced to Rs. 1,200. It was with the intention of collecting this fine, and of choosing a suitable site for a military post, that Mr. Gee proceeded in June last to Sheranna and Maizar, when his party were suddenly attacked as they finished a meal prepared for them by the Madda Khels, and only succeeded in making good their retreat after the loss of all their British officers killed or wounded, and other casualties.

3. At the time of the dastardly attack made by the tribesmen the British force in the Tochi valley consisted of 1,476 rifles and 120 sabres, with four maxim and four mountain guns distributed over five posts of Miran Shah, Datta Khel, Boya, Idak, and Saidgai. The retreat of the small escort in the face of a large gathering of hostile tribesmen was conducted with great gallantry, in which the wounded British officers and the Native officers and men highly distinguished themselves. The Madda Khels upon the arrival of succour fled to the hills; and on the 21st of June Major-General Bird assumed command at Bannu of the punitive force which your Government collected for an advance to Maizar. On the 13th of July a proclamation was issued to the tribesmen announcing the terms of submission, and a few days later the British force reached Sheranna, encountering no difficulties other than those caused by the unhealthy season of the year and by the physical nature of the country traversed. It was not, however, until the receipt of your telegram dated 26th November that I learnt that Sadda Khan, his brother, and other headmen of the Madda Khels who were concerned in the attack at Maizar, had surrendered, and that the tribe had finally given in and accepted the terms of submission ultimately demanded from them.

4. On the 26th of July, within a fortnight of the issue of the proclamation to the Madda Khels, an outburst of fanaticism, as serious as it was unexpected, broke the peace of the Swat valley which had been maintained without interruption since the close of the Chitral campaign. One Saidulla, known as "the mad fakir," also called the Sartor or bareheaded fakir, suddenly gained

notoriety as a worker of miracles, and publicly announcing that he had been sent to lead a Jehad or religous war, prophesied that all British troops would be driven out of the country within eight days. His pretensions were at first disputed by the Mianguls of Swat and by other chiefs of the tribes, but the uncontrollable religious enthusiasm and superstition which his actions excited overbore all opposition on the part of the responsible tribal headmen or Maliks, and in a few hours his supporters increased from a small gathering of boys and men to an army of well-armed fanatics. The tribal levies in the locality fled, and the British positions on the Malakand and at Chakdara, held by about 4,000 men, were attacked with great fury on the night of the 26th July. Fighting continued without intermission, notwithstanding the severe losses inflicted upon the tribesmen, who were constantly replaced by fresh adherents to the cause of the mad fakir, until the 31st of July when reinforcements under Colonel Reid reached the Malakand; and on the 2nd of August a relief column detached by Major-General Sir Bindon Blood completed the relief of Chakdara. In the interval between the first attack and the final relief the mad fakir had withdrawn, but his followers were joined by tribesmen from the Utmanan Khels, the Bunerwals, the Bajauris, Ranizais, Lower and Upper Swatis, and the Adinzais and Dush Khels. As soon as the first excitement subsided, those tribes with whom agreements had been made for the maintenance of the road to Chitral, between the Malakand and Chakdara, a distance of some ten miles, began to send in jirgas and to sue for peace, protesting that their tribesman had been carried away by belief in the miraculous powers of the fakir, and by his call to a religious war. The Ranizais from Khar to the south were among the first to come in, followed by the Alladand jirgas, and by deputations from the Shamozais and other sections on the right bank of the Swat river. It is a significant fact that the disturbance did not extend northwards of the Panjkora river or affect the road or posts established on the way to Chitral, and that the Nawab of Dir resisted all pressure put upon him by the Akhundzadas, consistently refusing to break his agreement with the British Government.

5. I do not consider it necessary to follow minutely the course of the various operations which were undertaken by Sir Bindon Blood, who advanced to Saidu on the 12th of August, and rapidly succeeded in restoring tranquillity and exacting compliance with the terms imposed upon the several tribes for their unprovoked attack upon the British posts established, under tribal agreements, for the maintenance of communication with Chitral. During the operations in Upper Swat, a force was moved to Rustam to threaten Buner in the event of the Bunerwals rendering assistance to the Swatis and repeating the offence which they had committed at Malakand. The Bunerwals were in due course informed of the satisfaction which your Government demanded of them for their participation in the attack on the Malakand, and ample time was allowed to them for compliance. On the 24th of December you instructed the Government of the Punjab to announce the final terms of submission decided upon, and to give the tribe one week within which to comply with them. As they declined to avail themselves of this offer, you despatched a military expedition against them, and I have since been informed by your telegram, dated the 19th of January, that the Bunerwals have complied with your terms. Elsewhere the advance of British troops against the Swatis, Utmanan Khels and other tribes was uniformly successful, and from your Excellency's letters and telegrams I have learnt that the terms imposed by you in the matter of fines, restitution of property, and surrender of arms have been generally complied with.

6. Five days after the relief of Chakdara, and while all available resources were being hurried to the north, the Adda Mulla of Jarobi, Najam-ud-din, who has for years past been active in intrigues and hostility against the British Government, arrived with a following of 5,000 men on the frontier of the district of Peshawar, and after burning the British village of Shankargarh attacked the frontier post of Shabkadar, which was garrisoned by Border Police, and which, for fifty years, has been incorporated in British territory. It appears that this attack was not so entirely unexpected as that made upon the Malakand, and the Commissioner of Peshawar, as well as the Hindu residents of the village, had been warned to expect it. But by the time that troops arrived from

Peshawar the enemy were found in occupation of the low hills near Shabkadar, from which they were dislodged, with some loss on our part, on the 8th of August. The losses inflicted on the Adda Mulla's followers were very heavy, and these included not merely a number of Mohmands but also several Afghan subjects and levies from the country between Jalalabad and Dakka, as well as from Asmar. The Mulla withdrew to his home at Jarobi, which lies within the sphere of influence which you offered to recognise as belonging to the Amir, and when Major-General Sir Bindon Blood, advancing *viâ* Bajaur, effected a junction with a force advancing from Shabkadar, the Adda Mulla attacked the two forces and sustained a severe defeat. In September a brigade was detached to punish the Mamunds, and after the forcing of the Bedmanai Pass on the 23rd of that month, further resistance collapsed, and the terms imposed upon the various tribes and sections between the Swat valley and the Khaibar pass were in due course exacted. From your telegram of the 7th of October, I learnt that the Mohmand field force had been broken up.

7. It was inevitable that the popular disturbance caused by these events, of which the most exaggerated and erroneous accounts reached the tribes occupying the tract of country intervening between the Tochi valley and the Khaibar pass, should react upon the powerful clans of Afridis and their neighbours the Orakzais. Reports were current, sometimes of an impending Afridi rising and sometimes of a coalition between them and the Orakzais. Sir Richard Udny was, however, not disposed to credit these rumours, and on the 20th of August you informed me by telegram that the reports which you had already transmitted to me appeared to be very much exaggerated. In a later telegram of the same date you reported a gathering of the Orakzais in the hills north of Sadda, but "no disturbance in the Khaibar." Two days after this reassuring news you informed me that a large hostile gathering of the Afridis was then approaching the Khaibar, and on the 23rd August I learnt that Ali Masjid and Fort Maude were being attacked by them. Ali Masjid was captured and burnt on that day, and on the 25th of the same month Lundi Kotal was wrested from its garrison of Khaibar Rifles and the pass was completely closed for traffic. In your Excellency's telegram of the 26th August you referred to this unprovoked aggression as gravely affecting your position on the frontier, and asked my approval to an expedition against Tirah, which I sanctioned in my telegram, dated the 1st of September, on the express condition that all questions involving our future policy on the termination of the campaign must be referred for my consideration before any action should be taken. Further information respecting the treacherous attack upon Lundi Kotal only served to increase the gravity of the offence committed by the Afridis. They had entered into an agreement in 1881, undertaking to be responsible for the security of the road and the maintenance of all posts and buildings in the pass, and in particular for holding the fort of Ali Masjid. Liberal subsidies were paid to the tribesmen for these services, and the levies to which the custody of the Khaibar was entrusted were mainly recruited from them. As observed in your letter, dated the 14th October, 1897, "our relations with the Afridis founded upon "tribal subsidies and payment for tribal services, had stood the test, almost "unbroken, of sixteen years' experience. Their country has not been touched "and they have been left to govern themselves undisturbed." Under such circumstances, I can hardly doubt that the letters which were found on the 17th of November in the house of the Akha Khel Mulla, Sayad Akbar, in the Waran Valley, addressed to him by the Adda Mulla of Jarobi, and calling on the Afridis to join in a religious war, supply the real explanation of an attack which you justly describe as "fanatical in its origin."

8. Whilst these events were taking place in the Khaibar, the southern neighbours of the Afridis, the Orakzais, commenced to attack the British posts established on the Samana range for the safeguarding of British territory in the Miranzai valley of Kohat. In your telegram of the 16th of August you informed me of the preparations you were making, "owing to a report of a possible hostile combination of Orakzai and Afridi tribes." I observe that at the very outset the earliest information received by you associated the Adda Mulla with these disquieting rumours, but on the following day you reported that a Mulla, who was preaching a religious war in the Orakzai country, had returned to his

village on receipt of a further letter from the Adda Mulla. On the 18th of August you learnt that the Orakzais were about to attack the forts on the Samana at the very time that the Afridis were marching on the Khaibar, and Parachinar was simultaneously threatened by the Massuzai section of the Orakzais. On the 20th, however, you were led to believe that these reports were "exaggerated," but on that same night an attack was made upon a village near Sadda in the Kurram, and reports of further disturbances in the Orakzai country reached you simultaneously with the news of the fall of Ali Masjid. The tribes, however, still seemed somewhat half-hearted in their movements, and on the 8th of September you informed me that all was quiet in the Upper Kurram, and that confidence was fully restored. Two days later Fort Lockhart was vigorously attacked and the gallant Sikh defenders of Saragari were killed to a man on the 12th of September. No time was lost in expelling the combined forces of the Orakzais and Afridis from the Samana range into the Khanki valley, but their open hostility left you no option but to carry out your preparations for the expedition into Tirah. As you state in your letter of the 14th of October, "we had given neither tribe any cause of offence. The "Orakzais, since they were punished six years ago for raiding in the Miranzai "valley, have been left undisturbed."

9. I do not propose to dwell at any length upon the details of that campaign, which was carried out with complete success by the 18th of December last as regards the Orakzais, but which has not yet been brought to a final close against the Afridis. But there are a few satisfactory incidents to which I may here advert. Her Majesty's Government have learnt with gratification that the Kohat pass Afridis, who are under an engagement with the Government of India to keep open the road through their country, and upon whom the main weight of the fiscal policy which led to the enhancement of the Kohat salt duty must have fallen, stood true to their engagements with your Government, and resisted the pressure of the Mullas. In Tirah, owing to the inclemency of the season, and to the exceptional difficulties of the country traversed, consisting of a succession of rugged passes, intricate defiles, and swampy valleys, success could only be attained at the cost of severe hardship and numerous casualties. But the conduct of the troops employed has been excellent, and Her Majesty's Government have heard with the highest satisfaction, not only of the alacrity with which loyal offers of help were made by the Native Princes of India, but also of the conspicuous part taken by the Imperial Service troops in the Tirah and other expeditions during the last six months. I desire to record my sympathy with His Highness the Raja of Kapurthala in the unfortunate catastrophe which overtook the Kapurthala infantry in the Kharmana defile on the 7th of November when the retreat of a party was cut off by a jungle fire.

10. Passing from the narrative of the events which preceded and marked the course of the several risings of the Pathan tribes, to a consideration of their causes, I entirely agree with your Excellency in Council in regarding fanaticism as the principal motive for an outbreak which has been unprecedented alike in the suddenness with which it broke out at each point, in the large extent of country affected, and in the simultaneous action of distinct tribes or sections of tribes. In referring to the outrage which had occurred in Tochi, you informed me on the 17th of June that the Commissioner regarded it as fanatical, and in your letter of the 21st of July you accepted the view that the attack was prearranged, but fuller information has led you to alter this opinion, and to attribute it to tribal quarrels. That religious excitement was not the predominant incentive in the Madda Khel rising may be inferred from the inaction of the Waziri tribes when the news of the attacks on Malakand and Shabkadar reached them. But elsewhere fanaticism principally accounts for the proceedings of the Swatis, Utmanan Khels, Mohmands, Afridis, Orakzais, and other Pathan tribes. Indeed there appears to be a remarkable unanimity of opinion on the part of your officers along the whole of the disturbed border that the outbreaks generally were fanatical in their origin. The proceedings of the tribes, the express statements of His Highness the Amir, and the correspondence discovered in the course of the subsequent military operations, all point to the

same conclusion. Although the first attack on the Malakand was unexpected, still several indications of a religious movement had already attracted the serious notice of your Government. You were aware that Mullas were busily engaged in circulating on the country side two books which had been published in Kabul, of a tone and character that must inevitably have stimulated the fanatical spirit of wild and ignorant tribesmen. From your letter dated the 14th of July, I learnt that efforts had been persistently made by Mullas, for several months previously, to arouse and combine the tribes, not merely in the Swat country, but also in Tirah and other parts of the Afridi land. Upon ground thus carefully prepared Najam-ud-din, the Adda Mulla, found it easy to work, and the letters addressed by him to the Mianguls of Swat, and to the Afridi Mulla, Sayad Akbar, in the Waran valley, show the range of his preparations and intrigues. That he was also the moving spirit in other parts is evident from the reply made by the Khani Khel section of the Chamkannis, when they stated that they could not refuse to obey the Fakir of Swat or the Adda Mulla. His Highness the Amir, in addressing the Commissioner of Peshawar on the 18th of August last, described Mulla Najam-ud-din as the reputed prophet of the Mohmands and the people of Jelalabad and the mountain districts of Jelalabad, and he added:—"What calamities are there that his "disciples have not suffered, and what blood is there that they have not shed by "his senseless commands?" In writing to your Excellency on the following day, His Highness enclosed for your information a proclamation written by the Adda Mulla to the people of Ningrahar, exaggerating the successes of the tribesmen, and calling upon the Afghans to join in a religious war. So late as the 2nd of September last, the Mulla was endeavouring to rekindle the sparks which had died out in Swat, and was impudently promising external assistance in an early renewal of risings in that part of the country. At one time reference was made to the victories achieved by Mahomedans in Europe, and at another the active intervention of the Amir of Afghanistan was promised by this unscrupulous preacher and his fellow-workers. It is evident that in several places the tribal organisation was powerless to oppose this outbreak of fanatical fervour, and the Maliks were reluctantly forced to follow where the Mullas or the fakirs led.

11. From the information which has reached me, it is evident that the necessary task of delimiting by marks and pillars, in accordance with the terms of the Durand Convention, the spheres of British and Afghan influence, furnished the religious preachers with material for stirring up alarm and jealousy among the tribes, who were thus persuaded to connect the delimitation with ulterior designs upon their independence that were in no way contemplated by your Government. The work of marking out a frontier line through hundreds of miles of wild tribal country could not fail to arouse such suspicions, notwithstanding the scrupulous observance by you of the conditions laid down by Her Majesty's Government in 1894 with a view to avoiding interference with the tribes. I have every reason to believe that your Government has carefully kept within the scope of the operations sanctioned by my predecessor in his Despatch of 24th August, 1894, to enable "you adequately to fulfil your "obligations in regard to your own territory and the trade routes which go "through it, and to the Amir and to the well-affected amongst the tribesmen "themselves." Although it is probable that the steps taken by you to delimitate the frontier under the Kabul Agreement of 1893 gave to the Adda Mulla and others an opportunity for misrepresenting your policy by associating it with an intention of depriving the tribesmen of their existing independence, I dot not think that this necessary work could have been carried out with greater circumspection and caution.

12. Amongst other reasons set forth to give some colour of justification for tribal unrest was the recent enhancement of the duty on Kohat salt from 8 annas to Rs. 2 for each Kohati maund. In your letter of the 30th of September last, you explained to me your domestic reasons for raising the duty to a rate nearly approximating to that fixed for cis-Indus salt, so as to allow of the abolition of the preventive customs line extending from the north of the Hazara district to the junction of the Indus with the Sutlej. I approved of your action in my Despatch, dated 25th of November 1897, and I have only to add here

that, although the enhancement of the duty was skilfully used to excite disaffection, I consider that, in the interests of your own subjects, it was justified as a measure of internal policy.

13. Having followed the course of the risings and discussed their causes, I proceed now to examine the stage which has been reached in the history of our frontier relations with the Pathan tribes, in order that I may indicate the direction which, in the opinion of Her Majesty's Government, our future policy must take. Our frontier relations assume so many varying phases, and include or touch so many interests, both local and Imperial, that a comprehensive survey of the objects to be attained is a necessary preliminary to any general enunciation of policy. The duties imposed upon your Government by the advance of British influence and by consequent contact with the territory occupied by Pathan tribes may be roughly classified under three heads,—first, the police and administrative protection to be given to British districts in the immediate vicinity of the tribal country; secondly, the strict exclusion of extraneous interference from the tribal area that has been placed by a formal agreement within the British sphere of political influence; and, lastly, the fulfilment of our obligations towards Afghanistan and the safeguarding of the natural frontiers of India.

14. The events of recent years have necessarily enlarged the area of your responsibilities to British subjects, and the chances of collision with the tribes. Commerce and trade between the tribal country and British India have grown to larger dimensions, intercourse for all purposes is more frequent, and the extension of cultivation and prosperity on the immediate border land offers a greater temptation to lawless neighbours and enhances the need for protective measures. A rising which suddenly closes a main artery of commerce, like the Khaibar pass, is not a matter merely affecting your foreign relations; it at once injures the interests of Indian trade. The tribes have learnt in your military service many lessons of war, and they are able to supply themselves with arms of precision and ammunition to a degree quite unknown in former days, when blockades and small punitive expeditions sufficed to bring them to terms. Their Mullas travel in India and proceed through India to Mecca, and on their return they propagate rumours and reports as to what is occurring in Europe and India of the wildest and most inaccurate character, but always appealing to the fanaticism of their entourage. A significant instance of this was afforded by the letter, dated 25th October 1897, which was found in the house of Mulla Sayad Akbar, and which contained the information that "Aden, a seaport which was in possession of the British, has been taken from them by the Sultan. The Suez Canal through which the British forces could easily reach India in 20 days has also been taken possession of by the Sultan, and has now been granted on lease to Russia. The British forces now require six months to reach India." Moreover, the utterances of British statesmen and of members of Parliament upon questions affecting the status and prospects of Islamism and its rulers are reproduced, distorted, and exaggerated. To these and other causes may be largely attributed the recent combination, under the instigation of their Mullas, of trans-frontier tribes which have hitherto acted disunitedly. Their fighting strength and their power to combine have simultaneously increased of late years. It must also be remembered that sections of these tribes have permanently settled down in the adjacent British districts, and as they are always in close intercourse with their fellow tribesmen across the frontier, they are naturally affected more or less, by the elements of disquietude and disaffection prevailing from time to time among them. Frequency and facilities of intercommunication have thus drawn together all sections, and incitements to Jehad on the common ground of religious fervour have gained adherents, not only from distant parts of the border land, but even on both sides of the British frontier. To these influences may be attributed the participation of British subjects in the disturbances on and around the Malakand pass, and even in the Mohmand attack on Shabkadar; and they provide additional and substantial reasons why the state of the tribal country immediately outside our settled territory should have become a matter of much more serious concern than heretofore.

15. The above observations are almost equally applicable to the second branch of your responsibilities.

For the present I would direct my remarks to that section of tribal territory which is between British territory and Afghanistan, commencing with Waziristan and running up northwards to the Swat river. The character and internal government of the Baluchi tribes controlled from Quetta so differ from those of the northern Pathans that the arrangements working satisfactorily there need not now be reviewed, or criticised, as necessarily forming a foundation upon which to base our action elsewhere. The relations of the northern tribes with your Government vary greatly, graduating from those where a tribe has accepted our protection, as in the Dawari section of the Tochi valley, to the case of a tribe undertaking independent responsibility for specified duties, as in the Khaibar pass. In some cases a light assessment is paid by a tribe, and in others it receives subsidies from the Government of India in return for military or police duties. Though the characteristics of the tribes and their normal attitude towards the British Government vary considerably, yet there are certain features in our relations with these which are common to all. In the first place, the fear of encroachment or attack upon their territory from Afghanistan has been removed by the Durand Agreement. The influence of fear which formerly led a threatened tribe to seek our help, is no longer felt. Nevertheless, the arrangements and the delimitation effected by the Durand Agreement have made the protectorate an accomplished fact, and no interference from outside can be tolerated within the territory now distinctly recognized as belonging to the sphere of British influence. Mr. Fowler, in his Despatch, dated the 24th of August, 1894, adverted to this subject, and expressed his opinion that the programme advocated in the minute of dissent appended to the letter from your Government would not meet the necessities of the case, "and that, in the existing state of our relations with Afghanistan and with the tribes, it is essential "that your Government should be in a position to maintain, if necessary, an "effective control over Waziristan." The Waziri frontier was only one part of the line demarcated under the Durand Convention, and now that the sphere of British influence has been traced along almost the whole Afghan border, your responsibilities in connection with the territory thus delimited cannot be ignored or put on one side. Though the agreement made with the Amir of Afghanistan has relieved your Government from the constant friction which the undefined and debateable land lying between Afghanistan and British India produced between their respective Governments, in other respects it has not been an unmixed benefit, from the suspicious and misgivings it has aroused amongst certain of the tribes as to the ultimate intentions of your Government. To gradually allay these doubts should be one of the primary objects of our future action. As communications multiply so the tribes will mix more freely with British subjects; and this intercourse, becoming closer in the course of years, cannot fail to increase our responsibilities on the frontier by drawing the tribesmen out of their highlands into closer contact with their neighbours and with your officers. Whether the risks of collision will have been thereby augmented or diminished, remains to be seen. By care and foresight it may be possible to avoid actual conflict, and the effect of frequent intercourse may be to mitigate the lawless and predatory instincts of the hillmen, without interfering with the tribal system of self-government.

16. If your obligations inside your territories and the sphere of British influence have been increased, the case is not otherwise in respect to the Amir of Afghanistan and his country. The engagement with His Highness in July, 1880, as set forth in the communication* from the Marquis of Ripon, contained this clause:—"If any Foreign Power should attempt to interfere in Afghanistan, and if such interference should lead to unprovoked aggression on the dominions of your Highness, in that event the British Government would be prepared to aid you, to such extent and in such manner as may appear to the British Government necessary in repelling it, provided

* *See* pages 40 and 89 "Afghanistan (1881) No. 1, C. 2776," presented to Parliament by Command of Her Majesty, 1881.

that your Highness follows unreservedly the advice of the British Government "in regard to your external relations." These responsibilities were again confirmed but not extended, when Sir Mo timer Durand concluded the agreement* of the 12th of November, 1893; and as a proof of the increased good will existing between the two Governments, the subsidy of the Amir was at the same time increased by six lakhs. To the obligations thus contracted is added the ever present duty of watching over the frontier passes of the mountains into India, so as to maintain sufficient control over the main routes connecting Afghanistan with India, for the purpose of preventing the establishment of any political influence adverse to your Government in the higher plateaux which within Afghanistan dominate these passes.

*Printed in "East India (North-West Frontier), C. 8037," presented to Parliament by Command of Her Majesty, 1896.

17. Frontier questions ranging thus from the daily performance of a policeman's duties to the possible despatch of a large army present so many complications and entanglements that any set of precise instructions would prove to your Government a source of embarrassment rather than an assistance. The call for interference, or even for military help, may arise from different quarters and under conditions wholly distinct. You may be required suddenly to fulfil your duties of protecting your own subjects, as recently at Shankargah when it was attacked by the Mohmands, or perhaps to discharge your obligations to the Amir. In either of these cases the points attacked or threatened may be few or numerous. You may have to insist upon the stipulated performance of tribal service in a pass, or to punish treachery or attack upon your posts. It is conceivable that under certain circumstances you might have to fulfil all these obligations at one and the same time. It is obvious, therefore, that the steps which may have to be taken by your Government cannot be reduced to a formula, or your procedure mapped out on a pre-arranged plan. The extent of the demand made upon your resources, military and financial, cannot be foreseen until the occasion arises and has had time to develop itself. Any attempt to lay down a set of uniform rules for your guidance would be apt to defeat the main object of the general policy which Her Majesty's Government desire to pursue, namely, to show that we are as determined to respect the rights of others as we are able to enforce our own.

18. At the same time, there are certain leading principles underlying our frontier policy to which Her Majesty's Government have resolved to adhere, and to which I proceed to invite your attention. The extent and difficulty of this mountainous border render it expedient that posts and cantonments should be limited to those positions only which are indispensable to the fulfilment of the policy just indicated. In my telegram of the 13th of October I addressed your Excellency as follows:—"You will agree with me that in present circumstances, internal and external, political and financial, no new responsibility should be taken unless absolutely required by actual strategical necessities and the protection of the British-Indian border. I also think that the present opportunity should be used for defining our permanent position and policy. Some modifications of existing arrangements, especially with a view to concentration of force, will no doubt be necessary." As a practical instance of the questions to which I desire to invite your attention, I would refer your Excellency to my Despatch of the 9th of August, 1895, in which I insisted on "the very great importance of keeping your interference with the tribes and your outlay of money in Waziristan within the narrowest limit;" and to my later Despatch, dated the 8th May, 1896, in which having regard to the extension of your military posts in the Tochi valley, I asked for a statement of your conclusions on "the question whether the maintenance of the Wano cantonment is so necessary as to justify the expenditure." Your Excellency was unable to supply me with this statement before the recent outburst of fanaticism occurred, but my inquiry in respect of the posts occupied in Waziristan is one which should be extended so as to apply to the whole of the affected frontier. The two main objects to be borne in mind were indicated in my telegram of the 13th October, namely, the best possible concentration of your military force so as to enable you to fulfil the several responsibilities to which I have adverted, and the limitation of your interference with the tribes so as to avoid the extension of administrative control

over independent tribal territory. I anticipate that the question of the best location of our frontier posts, and the selection of the communications through the border land which it is most necessary to maintain, will require very careful thought, but it is an essential step towards arriving, as far as it is possible to do so, at a clear and well-defined plan upon which to base local arrangements. The experience gained in the past few months has suggested the inference that certain military posts such as Saragari were not sufficiently defensible, and it is probable that, without altering or diminishing the existing lines of communication, you may wish to modify the past arrangements for their maintenance. In any such modification of existing arrangements I wish to impress upon your Excellency the advisability of establishing regular troops nowhere except in such posts or localities and under such conditions as will enable them to promptly repel any attacks upon them, and of making the local or tribal levies assume, as far as is possible, the aspect of a police rather than a military force. It will be necessary, in framing these arrangements, that an estimate of the cost of frontier defence, including charges for tribal services, should be prepared and transmitted to me, since full regard must be had to financial considerations. It is not sufficient that the measures proposed should be desirable; it is necessary that the gain should be commensurate with the expense.

19. The second principle upon which stress must be laid is the avoidance of any interference with the tribes which can be avoided with due regard to the interests already set forth. It was for this latter reason, that, after full consideration, I was unable to give my consent to the imposition of tribute upon the Afridis and Orakzais. I recognise the force of the arguments used in favour of such a visible assertion of the responsibilities which you have incurred under the Durand Convention. It is not improbable that the regular payment of even a nominal tribute might strengthen the hands of the tribal leaders, the Maliks, against the teachings of their Mullas and against fanatical outbursts. The fear of an enhancement of the tribute might at times restrain the evil disposed amongst the tribesmen. But, on the other hand, it is desirable to avoid giving any countenance to the idea that your Government means to administer the tribal country or to inclose it within your provincial limits. Moreover, I apprehend that the imposition of even a nominal tribute might rankle in the minds of the Pathan tribes, furnish disaffected persons with material for imputing to the British Government designs which it does not contemplate, and, above all, might enable the tribes to choose their own time for refusing payment, and thus for openly defying your authority. In such a case the only means of enforcing your demand, besides punitive expeditions and blockades, might be the imposition of direct administrative control, or, in the last resort, annexation of fresh tracts of country. But the extension of your direct administration across the border involves an increase of responsibilities which it has always been our policy to avoid; and annexation would imply a still larger addition to your civil and military establishments, with a very serious and growing burden upon your financial resources. On the other hand, the fear of occupation is undoubtedly a deterrent to the commission of acts of violence, and it may prove an influence on the side of order which should not be wholly thrown aside.

20. The next point to which I adverted in my telegram of the 13th of October, in connection with the subject of protection, was that of disarmament. I approve entirely of the imposition of the terms of peace which require a tribe that has resorted to arms to surrender as large a number of arms as may reasonably be demanded. But any attempt to keep the tribal country, or even one section of it, permanently disarmed, involves serious consequences. In the lawless state of society which prevails across the British administrative frontier, a tribe could not exist without the means of defence. Unless we are prepared to wholly undertake their protection against their neighbours, some limit must necessarily be put on their deprivation of the means of self-defence. At the same time, Her Majesty's Government are alive to the importance of the fact disclosed by the recent operations—that the tribes have access to large quantities of arms of precision and ammunition. To control this traffic in arms and munitions of war is an object of the first importance, and I consider that a systematic inquiry as to the sources of supply, whether from your arsenals and factories or by means of illicit importation into India, should be

instituted. I have dealt in a separate communication with one part of this subject. I have only to add here that, whenever the trade routes to Afghanistan are re-opened and the export of arms and ammunition for His Highness the Amir is resumed, special arrangements should be made to keep an account of the class of arms exported, with a view to future identification should occasion arise, and to prevent any of them passing into the hands of the tribes *en route*.

21. The maintenance of the Khaibar pass as a safe artery of communication and of trade is an essential measure, whether viewed from the standpoint of your obligations to the Amir or from that of the protection of British subjects. It may be that, as a military route, others may be preferred to this pass, but under any circumstances the retention of an effective control over the Khaibar is essential; and accordingly, in your letter of the 4th of October, addressed to General Sir William Lockhart, you desired him to announce to the Afridis your intention to re-open the pass in such manner as you might consider most desirable. I approved of this intimation, and on the 3rd of November I authorised your consideration of any scheme for improving or re-aligning the present road, provided that any changes of importance should be reported to me. I have not yet received your report, but whilst I agree that the arrangements which have hitherto subsisted with the tribesmen have been cancelled by their own violent breach of them, I trust that it may still be possible to give the Afridis some share in your new scheme and thus to enlist their good-will and assistance in the future protection of the road. But I do not consider that your Government is bound in any way by the engagements which the Afridis so deliberately broke. Whilst Her Majesty's Government, therefore, adhere to the general policy of avoiding interference with the independent tribal organisations or with the domestic affairs of the Afridis, the safety of the pass must be the paramount consideration in any reconstruction of your arrangements with the tribe.

22. The march of events in Central Asia and Afghanistan and the recent occurrences along our borders have tended to elucidate the problem to be solved. Facts have taken the place of surmise, and successive engagements or assurances have defined the legitimate spheres and responsibilities of the Governments interested. The recent outbreak of fanaticism, in response to the propaganda of the Mullas, has revealed a source of danger deeper-rooted and wider-spread than was suspected, whilst on the other hand the leniency of the terms of submission imposed upon the recalcitrant tribes, and the manifest reluctance of your Government to interfere with their independence or customs of self-government, cannot fail to gradually allay any suspicions they might previously have entertained of the intentions of the Indian Government. The immediate difficulty to be dealt with is not so much associated with apprehension of interference from without, as with that of restlessness within the area of our influence. Your Excellency will doubtless give full weight to this change in the situation, and devote your foremost attention to that portion of the question which has thus prominently asserted itself.

23. I desire, in conclusion, to express on the part of Her Majesty's Government their high approval of the manner in which your Excellency's Government has met an arduous crisis, and of the success which has attended the various military operations conducted on the North-West frontier under conditions of extreme difficulty, upon which a separate communication will be made to you. Not only was the rising one of unprecedented extent and violence, which, moreover, occurred at the most trying season of the year, but your resources were already taxed to the utmost by the necessity for carrying on at the same time a campaign against widespread famine in India, and for dealing with the plague which had appeared in several parts of the empire. The contingency that frontier disturbances may arise at a time when attention is being devoted to other important affairs, must always have a certain weight in balancing the considerations which should dermine your policy in that quarter. It adds weight to the conclusion that no new responsibility should be undertaken, unless absolutely required by actual strategical necessities and the protection of the Indian border.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 3.

Extract from letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 23rd June, 1898.

In your Lordship's despatch, dated the 28th January, 1898, you invite our attention to leading principles underlying our frontier policy to which Her Majesty's Government have resolved to adhere. The two main objects to be borne in mind were stated to be the best possible concentration of our military forces, so as to enable us to fulfil the several responsibilities which rest upon us, and the limitation of our interference with the tribes, so as to avoid the extension of administrative control over independent tribal territory.

Your Lordship indicates that the maintenance of the Khyber Pass as a safe artery of communication and of trade is an essential measure, whether viewed from the standpoint of our obligations to the Amir or from that of the protection of British subjects; and you inform us that, whilst Her Majesty's Government adhere to the general policy of avoiding interference with the independent tribal organisations or with the domestic affairs of the Afridis, the safety of the Pass must be the paramount consideration in any reconstruction of our arrangements with the tribe.

We have from time to time reported the course of events on the North-West Frontier of India, and the two despatches, marked on the margin, bring up to the present day the account of the situation with the Afridi tribe with which, in this despatch, we propose to deal. We have been in military occupation of the Khyber Pass since the end of December, the whole Afridi tribe have submitted to us and, for some time past they have been quiet and peaceful. Even the turbulent and adventurous characters, who can seldom be relied upon in any trans-border tribe, have of late given singularly little annoyance.

Dated the 16 June, 1898; not printed.

In these circumstances, the time has come, in our opinion, to determine and make known the manner in which our relations with the Afridi tribe shall in future be carried on, and the means which shall be employed for keeping open the Khyber Pass. On this subject we have consulted His Honour the Lieutenant-Governor of the Punjab and Lieutenant-General Sir William Lockhart. We have been pressed to make an early announcement to the Afridis to the effect that the allowances which they received under the terms of our agreement with them of 1881 shall be restored to them. We do not deny that a period of suspense, between the termination of hostilities and the resumption of friendly relations, is a very trying time for those who have to deal locally with the tribesmen. The Afridis themselves are impatient. Some of them have been prevailed upon to turn to the Amir of Afghanistan in the hope of bettering their position with the British Government, and the Mullas and malcontents are too alert not to seize the opportunity for working upon their feelings. It must, however, be remembered that by their own acts the Afridis ruptured their engagements and forfeited their right to receive any allowances, that they have not made good and declare their inability to make good the loss and damage which they caused, not only to buildings in the Khyber, but by carrying off or destroying goods and chattels, and that they were told that the restoration of the latter, or the payment of their value was required of them before we could enter into any new arrangements for the future. In our opinion, therefore, a premature announcement of the restoration of their allowances would have appeared to them to be a bid for their good-will, before we had shown that their submission could be enforced. Besides this, restoration of their allowances in their entirety would anticipate our decision as to the future, while an intimation of our intention to restore them, coupled with exceptions or reservations, would have been apt to tie our own hands without satisfying the tribesmen.

Enclosures Nos. 7 and 2.

Aitchison's Treaties, Vol. IX, p. 277.

We have therefore decided to withhold for the present any indication of our intentions beyond a general expression to the effect that we would deal sympathetically with their case, and that their behaviour in the interval would not improbably influence the final decision. Of their behaviour we have little to complain. Even in turning, as some of them did, to Kabul they have strengthened rather than weakened our position; for the rebuff which their advances met at the hands of the Amir must have shown them that they have nothing to hope from not accepting our terms.

Sir William Lockhart has stated, in the memorandum embodying his views upon the best way of holding the Khyber Pass in the future, that the more important object we should have in view is to ensure a ready access into Northern Afghanistan for our army, in the event of military intervention in that country becoming necessary. The plan put forward by Sir William Lockhart for the improvement and extension of the reservoirs and water-works and for erecting a fort capable of protecting them, is one which has much to commend it, and advantage may be taken of the opportunity which is now presented for carrying out this plan.

In giving to Sir William Lockhart's scheme our support, to the above extent, we do not, however, concur in thinking that the fort at Landi Kotal should be occupied by regular troops of the Indian Army. We agree in the principle that a local tribal corps should be raised, for service in the Pass, and that it should be commanded by British officers. This distinguishes the local corps sharply from the original corps of Jezailchis dependent as it was, under the agreement of 1881, on the responsibility of the tribal council; and, further developing the "Khyber Rifles" as they came in late years to be constituted, it acknowledges the local force to be British; and the ultimate responsibility for the safety of the Pass is accepted as ours. Between a tribal levy and a local militia, there is an essential difference which is not always recognized. By a "levy" we mean a body of men who are dependent on tribal authority, and, strictly speaking, are employed, paid, and summoned for any special duty, by tribal authority. Any contribution which the British Government makes towards their support is made in order to co-operate in the assertion of the right and power of the tribe to restrain the bad characters and "young bloods" of their own and neighbouring territories. Drill and discipline are not wanted, and British officers in command or even as inspectors are out of place. When greater efficiency is desirable, the direct superintendence of British officers becomes essential, but it then equally becomes necessary to recognize the force as a British and not a tribal force. The ultimate responsibility for the actions of the force ceases to rest on the tribe. The proposal to place regular troops of the Indian army at Landi Kotal raises other questions. A battalion in such a position would be capable of no action beyond passive defence, and would constitute a standing temptation to the tribes, while, if a rising did occur, it could do nothing to make the forcing of the Khyber more easy, though it would materially add to our anxieties. Service at Landi Kotal would be unpopular, for the men would have to be practically confined to the limits of the fort, and even with the utmost precautions, there would be constant risk of men being murdered, and rifles stolen. Continual friction would thus be kept up between us and the Afridis. It is, moreover, the opinion of the Lieutenant-Governor and of the officers acquainted with the frontier, whom His Honour has consulted, that the Afridis would strongly resent the placing of troops at the further end of the Pass. We believe that we should fail to enlist the good-will of the tribe on our side, and we should certainly excite the suspicion, if not the antagonism of the Amir of Afghanistan. Everyone agrees that the good-will of the Afridi tribe is essential to the smooth working of our arrangements in the Pass, and it seems to follow that the attempt to strengthen them by stationing troops at Landi Kotal would, in fact, prove to be a source of weakness.

The alternative which we propose to adopt is to hold the position at Landi Kotal by means of the local militia to which we have already alluded,

increasing their numbers to a strength sufficient to enable the patrol and convoy work in the Pass itself, as well as the garrison duties at Landi Kotal, to be undertaken by them. The cost of building a strong fort on Suffolk Hill, at Landi Kotal, is now estimated at six and a half lakhs of rupees, and about two lakhs for water-supply; and it will take two winter seasons to complete the works. The full estimate for the works in the Pass is given in the margin.

	Rs.
1. New works at Fort Maude, Ali Masjid, etc.	4,00,000
2. New works at other places, Zintarra, etc.	2,00,000
3. Improvements to Landi Kotal Sarai .	50,000
4. Suffolk Hill Fort	6,50,000
5. Water-supply	2,00,000
TOTAL .	15,00,000

We have no reason to fear that a corps such as we contemplate would be untrustworthy in the hour of need. The history of our Empire in India appears to teach the contrary. The conduct of the Khyber Rifles themselves last year also points to the same conclusion. Had they been organised, officered and supported in the manner which we propose for the future, we have no reason to doubt that they would have remained true to us, as their fellow tribesmen in the regular regiments of the Indian army, with very few exceptions indeed, remained true. It must be borne in mind that it is an essential part of our plan that a moveable column of sufficient force shall be equipped with transport and ready to support the irregular force in the Khyber on the occurrence of any emergency calling for action of the kind. Your Lordship will be separately addressed regarding the details of our proposed military arrangements.

We think that the former management of trade affairs in the Pass has been satisfactory; and that, as far as can be, the future arrangements should reproduce them. The frequent kafilas went up and down the Khyber road in safety, and, if the volume of trade in late years contracted when we would have looked to it to expand, the reasons for that are not to be found in any deficiencies within the Pass, but in the fiscal policy which finds favour in Afghanistan. The Political Officer who directed the local arrangements has been a subordinate of the Commissioner of Peshawar. The control of political relations with the Afridis and their neighbours, as well as the control of the Khyber Rifles themselves, were in the same hands. The majority of us wish to continue this system. We think that it is essential to have one authority in the Pass, and that the only possible authority, under present conditions, is that of the Lieutenant-Governor of the Punjab. We therefore think that the control of the Political Officers and of the militia must be in the hands of the Lieutenant-Governor. The militia should be officered by British officers, and the conditions of service should be such as to ensure its efficiency for the purposes for which it is intended, but we think that the authority over it should be the same as that which directs the political relations of the Punjab Frontier.

Three other courses are suggested. The officer entrusted with political dealing in the Khyber Pass might, it is suggested, be directly under the Government of India in the Foreign Department, or he might remain under the Commissioner of Peshawar, but the Commissioner himself be directly under the Government of India, or the Military Officer, who commands the Khyber Militia might also be the Political Officer in the Pass. These plans oust the authority of the Lieutenant-Governor of the Punjab from the Khyber Pass, and introduce a special system in a narrow wedge of country bordered on each side by, and having intimate relations with, country with which the Lieutenant-Governor conducts the political relations. The first plan would not be practicable. The organization of the Government of India is not such as is adapted for dealing with local routine work of which the mass of business would consist. We could not afford to station in the Khyber an officer of the standing and experience to be trusted in cases of importance and emergency. The district is

too small for an expensive staff and too important for any other than a thoroughly reliable authority. The second plan would put the Commissioner of Peshawar in the position of serving two masters and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer. The third plan would put the whole direction of affairs, political and military, in the hands of the military authorities over whom the Punjab Government which controls the political relations with the rest of the border would have no power. Our Hon'ble Colleagues, His Excellency Sir Charles Nairne and Major-General Sir Edwin Collen, dissent from our views in desiring to maintain the authority of the Local Government over the militia and the political relations with Afridis of the Khyber. Their Minutes are enclosed.

One most important consideration in dealing with the future arrangements in the Khyber is that of our communications with Landi Kotal. A good road now exists through the Pass, but, in the event of our having to make a military advance in any of the circumstances discussed in the 6th paragraph, we are of opinion that it would be of the highest importance to have the use of a railway to Landi Kotal. A recent survey shows that a light railway on the two-foot gauge can be run from Peshawar to Landi Kotal independently of the present road, at an estimated cost of Rs. 36 lakhs. We think that we ought to secure, in the settlement which is about to be made with the Afridis, the right to construct and work a railway and to exercise exclusive jurisdiction upon it. We do not propose actually to lay the rails beyond Jamrud now, but we would make the railway bed ready for the laying of the permanent way when the time came for doing so. This, however, is a project for which we should desire to obtain an expression that the approval of Her Majesty's Government before we take any steps towards its inception.

In our new arrangement with the Afridis we must make adequate provision for the railway and for the exercise of jurisdiction upon railway lands, the trade road and within the militia posts, as well as for the constitution of the militia as a British force. We think, however, that our terms should be drawn, in some essentials, upon the same lines as the Agreement of 1881 followed, and this is the unanimous opinion of all who have been consulted; that is to say, first;—the Afridi clans who are connected with the Khyber should still be paid allowances for keeping the pass open and safe, and in commutation of their ancient rights in respect of tolls and otherwise; and second;—a local force should be raised from the Afridis themselves for service in the Pass in carrying out the objects with which we dominate it. The circumstances of the uprising against us, in contravention of the agreement under which the Afridis had for many years worked, constituted an absolute rupture of all relations, and the defeat and subjection of the tribe might, if we chose, be held to obliterate all rights. We decide in our own interests to enlist the good-will and the assistance of the Afridis, but we hold that we have a clear right to attain our ends in whatever way we please. We propose, then, to renew our former relations as much on the lines of the old agreement as is compatible with present aims, but where a departure from the old footing seems expedient, we think it should be made in a manner to leave us the utmost freedom in the future. The form itself of the new document may with advantage perhaps approach rather to that of a sanad than take again the appearance of a treaty. This is a matter for future decision, but, if it can be so arranged, we would rather make the document a statement of the terms which we grant to the Afridis with their acceptance recorded upon it. It may be necessary, as was done in our instructions to Sir William Lockhart, to leave a certain amount of discretion to the officer or officers to whom we entrust the duty of entering into communication with the tribe, and to be guided, as to the final form, by the reports we receive.

We have said that Sir William Lockhart required of the Afridis the payment of the value of public and private property looted by them in the

Khyber, and that they have not made good this demand. The property has been valued at Rs. 28,600. We fear it must be accepted that it is impossible to enforce these claims, unless we are prepared to use force to compel compliance. In addition to this, the damage done to buildings in the Khyber has been assessed at two and a half lakhs of rupees. We reserved the question of requiring the Afridis to make good the cost of this damage for consideration when renewing relations with them. It is in our opinion useless to make any demand on that head now. Notwithstanding the terms of Sir William Lockhart's proclamation, we know that the Afridis regards themselves as having complied with what was required of them. We know that they have been put to many shifts and contrivances to enable them to comply to the extent to which they have done so, and that they are unable to pay more now and do not admit their liability to pay more. Any renewed demand or even any deductions from their allowances spread over the future would, we believe, be thought by them to be an injustice, and it will detract much from the value of any settlement, if it is not cordially accepted by the tribe from the outset. We cannot readily agree, however, to wipe out this demand altogether, since it was deliberately made. We propose, therefore, to make the renewal of allowances date from the day on which the Afridis accept our new terms of settlement. The tribesmen might, and they probably will, ask for the allowances to be paid from the date on which we made peace with them. We shall make them understand that we made peace with them without exacting the full terms originally imposed, and that their allowances cannot, therefore, be restored until the date on which a new settlement is arrived at.

In one matter we shall have to forego our demand altogether. The Afridis were told that they must restore the arms taken from troops during the campaign. This they have not done, alleging that it is not the custom of their country to restore arms taken in war, that they told Sir William Lockhart so, and that he gave them no definite reply. As many of these arms have been sold out of their country, they cannot comply in full with this demand, and, after full consideration, we have, with regret, come to the conclusion that we cannot press it.

We propose to reserve for other despatches an expression of our plans for dealing, on the principles stated by Your Lordship in the despatch cited at the beginning of this letter, with other sections of the North-West Frontier, such as the Kohat-Samana-Kurram Frontier, Malakand, the Tochi Valley and Wano; there is, however, one consideration which we may mention here. We concur with Your Lordship in thinking that advanced posts in tribal country, held by regular troops, should be established under such conditions as will enable the garrisons to promptly repel any attacks made upon them. We think, however, that a well organized militia might be a most valuable addition to this system, especially in relieving the regular troops of most, if not all the duty on the lines of communication, and in small and unhealthy posts. Before the transference of the Punjab Frontier Force to the Commander-in-Chief, there was in existence a force which bore the name of militia and which performed duties somewhat of this character. In the Kurram Militia we have a revival of that system. If the proposed organization of the Afridi militia in the Khyber is accepted by Your Lordship, we would propose to place at the disposal of the Local Government an officer of experience of the frontier and with Pathans, who could not only act as Commandant of the Khyber Militia, but as an adviser in the matter of organising other corps of militia where required.

Enclosure 1 in No. 3.

Letter from General Sir W. Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department, dated Calcutta, the 3rd February, 1898.

With reference to the conference held yesterday at Government House, over which His Excellency the Viceroy presided, I have the honour to forward a memorandum drawn up by the Chief of the Staff, Tirah Expeditionary Force, submitting certain proposals for the holding of the Khyber pass.

2. These proposals, in which I concur, may perhaps be found to offer a reasonable solution of the question which was under discussion yesterday.

Memorandum by Brigadier-General W. G. Nicholson, Chief of the Staff, Tirah Expeditionary Force.

In deciding on the agency by which the Khyber is to be held, there are two points to be kept in view. First, the Khyber is used as the principal trade route between the Punjab and Northern Afghanistan; and, secondly, in the event of military operations having to be undertaken in Afghanistan, the most direct and easiest road to Kabul lies through the Khyber. To meet trade requirements it would, no doubt, suffice to hold the Khyber by tribal levies drawn mainly from the Afridi sections, whose custom it was in former days to exact tolls from caravans making use of this pass. But to meet military requirements such an arrangement seems hardly appropriate. We ought to have an advanced post capable of ready expansion into an advanced military depôt at the most commanding point in the pass, namely, at Landi Kotal; near that post an adequate supply of water is indispensable; and, in view of recent occurrences, it would appear to be neither prudent nor conducive to our prestige to expose the defensive works and water-supply which the Government of India may order to be constructed to the chance of being wrecked by a tribal outbreak. The importance of the military aspect of this question has, I believe, been fully recognised by the Government of India and Her Majesty's Government since the year 1885.

The following proposals are put forward as likely to meet the two requirements indicated above :—

1. The Khyber to be held for trade purposes by the Khyber Rifles, drawn proportionately from the tribal sections concerned, and organized somewhat in the same way as the Kurram Militia. The men to be armed, clothed, equipped and trained by Government. The head-quarters of the corps to be as heretofore at Jamrud, with a strong detachment at Landi Kotal, and the remainder distributed in suitable posts between Landi Kotal and Jamrud. The original Landi Kotal Serai to be remodelled so as to provide quarters for the detachment there, and the old posts along the line, including that at Ali Masjid, to be restored with such improvements as regards site and design as may seem necessary.

In the event of Government approving of the continuance of tribal allowances to the Afridi sections living in the Khyber, the pay and allowances of the Khyber Rifles to be taken into account as really constituting a tribal subsidy.

My own view is that Afridis much prefer to be commanded by British officers, and for this reason among others I am inclined to favour the appointment of one or more carefully selected British officers to the Khyber Rifles.

But on this point I hesitate to express a decided opinion, although I doubt whether, if a different policy be adopted, any Native officer well adapted for the command of the corps would be forthcoming. Aslam Khan has done well, but his qualifications are quite exceptional.

2. For military purposes a really strong work, armed with guns, should be constructed at Landi Kotal on a site which, if possible, would protect the water-supply. It is understood that such a site can be found near what is known as "the General's Camp." The normal garrison of this work might be fixed at one battalion of native infantry, with a detachment of gunners, and it may here be noted that Landi Kotal is a much more healthy station for troops than the Peshawar valley. The work should, however, be so designed as to be capable on an emergency of housing a larger garrison, while being thoroughly defensible when occupied by its normal garrison. There should be no difficulty about this, if suitable flanking arrangements are made. The work should provide storage for reserve ammunition and for at least one month's supply of food and water for the normal garrison. The type of work and the armament should be such as to enable the defenders to withstand a powerful tribal combination without needing immediate re-inforcement.

In conclusion, I would observe that the foregoing proposals do not, so far as I can see, involve the annexation or administration by us of the Khyber to any greater extent than has hitherto been the case. The political arrangements and the Khyber Rifles would remain as before under the control of the Political Officer in charge of the pass, and the military garrison of Landi Kotal would be under the orders of the General Officer Commanding the Peshawar District. The latter would act in concert with the former in all matters in which the presence of the troops might affect the management of the pass and of its inhabitants.

(Signed) W. G. NICHOLSON, *Brigr.-Genl.*,
Chief of the Staff, Tirah Expeditionary Force.

CALCUTTA,
Dated, the 3rd February, 1898.

Enclosure 2 in No. 3.

Letter from the Secretary to the Government of India, to General Sir William Lockhart, K.C.B., K.C.S.I., dated Fort William, the 1st March, 1898.

I AM directed to acknowledge the receipt of your letter, dated the 3rd February 1898, in which you forwarded a memorandum drawn up by the Chief of the Staff of the Tirah Expeditionary Force, making proposals for holding the Khyber Pass.

2. These proposals, which meet with your concurrence, involve the holding of a strong work at Landi Kotal, with a garrison of one battalion of Native Infantry and a detachment of gunners, while the Khyber Pass itself would be guarded for trade purposes by a militia recruited from the tribal sections concerned, and organized somewhat in the same way as the Kurram Militia.

3. The scheme, of which this short description does not purport to be even a sketch, has been examined by the Government of India in the light of what has hitherto been the policy of the British Government, and the instructions of the Secretary of State conveyed in his despatch of January 28th, paragraph 21, bearing particularly on the present subject. The Governor-General in Council is not prepared to accept the plan without further investigation of the whole question of the best way in which to secure the safety of the Khyber Pass. The Governor-General in Council, therefore, wishes you and Sir Richard Udny to put before him, in greater detail, the plan of holding the pass which commends

itself to you, and to discuss at the same time any alternative ways of doing so. It has, for instance, been suggested that a Militia, maintained on the analogy of the Kurram Militia, might guard the pass without the immediate presence and support, in time of peace, of any military force, if a body of troops is kept ready to move to the assistance of the tribal militia, should they be seriously menaced, and if a definite assurance be given to them that such assistance will be afforded.

4. Some time may yet elapse before the Government of India can arrive at a final decision in this matter. That decision must be influenced by other than purely military considerations, and you may now be in a position to advise the Government of India on the disposition and temper of the Afridis, showing how they would view a military occupation. Sir Richard Udny was understood, when you and he were personally consulted in Calcutta, to favour a system under which the whole responsibility for the administration, as well as the safety of the Khyber, would be taken entirely out of the hands of the Afridis. The Governor-General in Council would desire to know, if this is a correct description of Sir Richard Udny's views, how he would propose such an arrangement would be worked out in detail, and what extent of country on either side of the road through the pass would be included in such arrangement. Still another plan which has been mentioned is to fall back upon tribal responsibility and tribal methods entirely, relaxing even what amount of British supervision and superimposed authority there has always been in the Khyber arrangements since 1881. The Government of India will await the expression of your views before coming to any conclusion as regards these suggestions.

5. It is in the opinion of the Government of India inevitable that the present military occupation of the Khyber must, at least temporarily, continue, and that when all the clans submit, they must be told that the Khyber will continue to be occupied for the present. They will be warned at the same time, if they show any disposition to resent this military occupation and a desire to arrive at a state of relations under which they will have complete or considerable freedom from control, that their conduct in the interval between this and the settlement of the future will be taken into consideration in arriving at a decision as to the nature of the final arrangements which may be made for the safety of the pass. The sanction of the Secretary of State must be obtained before any announcement of this kind can be made.

6. I am to ask that your best consideration may be given to the several questions which have been put before you in this letter, and that your opinion may be expressed to the Government of India as early as you are able to reply. The points raised in paragraph 5 were referred to you by telegraph.

I have, etc.,

(Signed) W. J. CUNINGHAM,

Secretary to the Government of India.

Enclosure 3 in No. 3.

Letter from General Sir William Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department, dated Camp Peshawar, the 11th March 1898.

I HAVE the honour to acknowledge the receipt of your letter, No. 1098 F., dated 1st March 1898, calling for a report by Sir Richard Udny and myself on the method which appears to us to be the best for holding the Khyber Pass in future.

2. My views on the subject are embodied in the accompanying memorandum. In order to save time I submit this at once without waiting for the paper which Sir R. Udny is drawing up on the subject, and which I hope to forward on the 14th instant.

Memorandum by Gen. Sir W. Lockhart, K.C.B., K.C.S.I.

The Khyber Pass has to be kept open by us with two objects, and can be held in one of four ways. The objects are—first, to provide a direct and easy trade route between the Punjab and Northern Afghanistan; and, secondly, to ensure ready access into Northern Afghanistan for our army, in the event of military intervention in the country becoming necessary. The latter purpose is undoubtedly the more important of the two, both in connexion with the defence of Afghanistan and India against foreign aggression, and because the trade between those two countries is quite insignificant in amount and value. The temporary closing of such a trade route as the Khyber makes very little difference to the Government or people of India, but from the strategic standpoint it might be essential that the main road into Northern Afghanistan should be kept open in times of excitement and fanaticism on or beyond the frontier. The delay of a week or a fortnight in entering Afghan territory might involve momentous consequences in a political as well as a military sense. It will be seen, therefore, that the measures which would suffice for guarding a trade route might be quite inadequate for keeping open the line of military communication between the Punjab and Northern Afghanistan.

The ways in which the Khyber can be held are—first, by regular troops; secondly, by a force consisting partly of regular and partly of irregular troops; thirdly, by irregular troops alone; and fourthly, by tribesmen under tribal management and responsibility.

2. As regards the first method of holding the Khyber, it may be objected that in view of existing military requirements in the Punjab and elsewhere, the Khyber could not be held in adequate strength by troops alone without a proportionate addition to the Indian army; that permanently to lock up a considerable military force in a narrow pass is not the best way of guarding against the recurrence of a frontier rising; that for occupying the heights bordering the pass from Jamrud to Landi Kotal, local irregular troops or levies are more suitable and likely to be more efficient than regular troops; that during the summer the pass itself (except its highest point at Landi Kotal) is so hot and unhealthy that service therein would be intolerable for British soldiers and extremely distasteful to native soldiers; and, finally, that to exclude the Khyber Afridis from any share in the custody of the pass, and the emoluments attaching thereto, would certainly create ill-feeling among them and incite them to mischief.

With reference to the first objection, I would remark that some increase in the army to meet the needs of an expanding empire seems inevitable. As matters stand, a large proportion of the troops quartered in the Punjab have of late years been almost continually on outpost duty on or across the frontier, or on field service.

With reference to the second objection, it may be urged that it is by no means obligatory to lock up in the valley of the Khyber the whole of the troops that might be required to secure the pass. The Bazar valley would furnish a strong strategical position, and, if a brigade were quartered at or near China, while a smaller force occupied a fort at Landi Kotal, the pass would be as safe as it could be made by purely military means. On the other hand, it is understood that the permanent occupation of Afridi territory in the Bazar valley would be opposed to the decision of Her Majesty's Government, and I am inclined to think that such a step might embitter our relations with some at least of the Afridi sections, and thus lead to their giving trouble whenever they imagined that our troops were fully occupied elsewhere.

However this may be, the last three objections are to my mind unanswerable, and dispose of the idea of holding the Khyber by regular troops alone. Picquet and patrol duties in the pass can best be performed by a local and irregular corps, the employment of which gives the Khyber Afridis their due interest and profit in the custody of the pass, and obviates any necessity for quartering troops between Landi Kotal and Jamrud.

3. As regards the second and third methods of holding the Khyber, which can best be discussed together, it may be said that for the past eighteen years the pass has been guarded by irregular troops alone, inasmuch as the tribal levies which were raised, trained, and paid by us under an agreement with the Afridi sections concerned have by degrees been assimilated more and more closely to an irregular frontier corps. This system has saved much trouble and expense in the past, and might, if properly controlled, have continued to work well in the future, but for the unfortunate occurrences in August last. However loyal and well-disciplined irregular native troops may be, they can hardly be expected to fight against overwhelming odds of their own kinsmen, after their British Commandant has been withdrawn, and they have been warned that no support or assistance is to be looked for. Under such trying conditions, the best mercenary troops in the world might be expected to waver, and I think it highly creditable to the Khyber Rifles that, when left to their own resources they fought as well as they did.

The Kurram valley is held by the Kurram Militia under a British Commandant, and this force has done excellent service, even during the recent period of disturbance. But the local conditions in the Kurram and in the Khyber are wholly dissimilar. The Kurram Militia is mainly composed of Turis, a tribe of Shiahs which only flourishes under British protection, and is at continual enmity with the Sunni tribes surrounding it. Moreover, we have provided the necessary support or stiffening to the Militia by the regular garrison quartered in the Para Chinar Fort.

The holding of the Khyber was entrusted to a local force in some respects analogous in constitution to the Kurram Militia, but with these differences: First, the Khyber Riflemen were drawn from the Afridis sections which inhabited and bordered the pass, and consequently they had no traditional feeling of enmity against their neighbours to strengthen their loyalty towards us; and, secondly, the defensible serai at Landi Kotal had no garrison of regular troops like the fort at Para Chinar. It seems possible, however, had the Khyber Rifles been promptly reinforced by regular troops in August last, that with few exceptions, they would have stood to their engagements, that the various posts and the defensible serai and water-supply works at Landi Kotal would have been saved from destruction, and that the formidable tribal gathering would have melted away, as it did on a previous occasion, as soon as troops were moved up the pass in support.

It ought to be an axiom of frontier policy that, in using local levies or irregular corps to hold passes or outposts beyond the limits of British India, the one thing of essential importance is to inspire these levies or irregulars with the fullest confidence that, in time of emergency, they will be as fully and as promptly aided and reinforced by the army behind them as regular troops would be. Up to August last, I believe that the Khyber Rifles possessed that confidence, but for the time it has been weakened, if not destroyed, by their being left to themselves to hold the pass, and to defend the buildings and other public property which had been entrusted to their care. According to the strict letter of the law, it is doubtless the case that our agreement with the Afridis did not oblige us to assist with our troops the representatives of the sections concerned, or the Khyber Rifles, in carrying out the duty for which these sections received allowances, and for which the Khyber Rifles had been organized. But these wild mountaineers are unacquainted with the niceties of political jurisprudence, they had for many years fulfilled their part of the agreement, some of them had been employed by us as irregular troops in frontier warfare elsewhere, and they may reasonably have hoped for the assistance which, technically speaking, they had no right to demand. One of my two

main reasons for supporting the proposals put forward by the Chief of Staff, Tirah Expeditionary Force, is that their adoption will restore the confidence of the Khyber Rifles and the Afridis living in or near the Khyber Pass. These will know that, so long as a strong outpost at Landi Kotal is garrisoned by regular troops, there is no chance of our again leaving them to stem the wave of tribal fanaticism unaided. There is of course the objection that on military grounds it may be hazardous to hold an advanced post with regular troops, while the road between this post and the base remains in the hands of locally raised irregulars in whose fidelity we cannot place implicit reliance. I do not attach much weight to this objection, for Landi Kotal is at the top of the pass, and is therefore regarded by the Afridis as dominating the road between it and Jamrud. Moreover, as previously stated, the heights bordering the road are so inaccessible, and so devoid of water, that they could not be permanently held by regular troops, either British or Native, without involving a strain on our military resources quite out of proportion to any conceivable advantage to be derived from such a measure. The feasibility of covering the pass by means of a cantonment in the Bazar valley has already been discussed in paragraph 2 of this memorandum.

My other reason for supporting Brigadier-General Nicholson's proposals is that, without involving heavy outlay or alienating the sympathies of any section among the tribesmen, they are likely greatly to strengthen our hold over the Khyber, and to enable us to carry out such arrangements in the way of railway extension, water-works, and the like, as may be required to facilitate our access to Northern Afghanistan, should circumstances demand our intervention in that quarter.

4. As regards the fourth method, its practical effect would be that the Government of India would pay blackmail to the Khyber Afridis, instead of the latter imposing blackmail on the kafilas making use of the road. It would mean a reversion to the barbarous system which was condemned as intolerable at the beginning of the last Afghan war. Difficulties would be certain to arise regarding the repair of the road and the maintenance of the posts needed to protect it; the Landi Kotal water-supply would cease to exist; our prestige along the whole of the north-west frontier would suffer; in short, the fourth method of holding the Khyber has nothing to recommend it.

5. From the foregoing remarks it will be seen that I am in favour of the second method. The defile of the Khyber should in any case be guarded by irregular troops raised locally. As regards regular troops, it would no doubt strengthen our hold on the Khyber from a military point of view, if a strong force were permanently quartered in the Bazar valley at or near China, as well as a smaller force in a defensible post at Landi Kotal. From a political point of view, the permanent occupation of China might give rise to tribal ill-feeling, and thus cause us grave embarrassment; for it must be remembered that, in undertaking military operations in Afghanistan, the friendly attitude of the frontier tribes would be of much greater moment than the absolute safety of any single pass, however important. If the attitude were friendly, the pass would be secure in any case. If the pass were secure, while the attitude was unfriendly, we should be harassed in other directions. I am, therefore, inclined to recommend the scheme sketched out by Brigadier-General Nicholson as offering the best prospect of a satisfactory settlement.

I consider that the organization of the Khyber Rifles might advantageously be strengthened by attaching to the corps three British officers instead of one, namely, a Commandant, 2nd-in-command and Adjutant, possibly also a medical officer. While drawn from the same local sources as heretofore, the corps might gradually be assimilated to one of the infantry regiments of the Punjab Frontier Force in matters of equipment, pay and pension.

6. I see no necessity whatever for instituting a civil administration over the Khyber. What we ought to tell the tribesmen is that, so long as they fulfil their engagements to us, and so long as their attitude towards each other does not bring them into conflict with us or endanger the security of the road, we are perfectly content to leave them to manage their own affairs. The Political

Officer in charge of the Khyber would naturally exercise considerable influence over the tribesmen, but I doubt whether that influence would be increased by investing him with the functions of a civil administrator.

7. As soon as we are fully assured of the complete submission of every Afridi section, I should be disposed to renew the tribal allowances in the Khyber, subject to such re-adjustment as may seem equitable or politic—subject also to such conditions with respect to railway and road construction, and the acquisition of sites as we may think fit to impose. When the tribesmen see that their allowances are not to be forfeited and that the Khyber Rifles are not to be disbanded, I am of opinion that they will welcome the construction of a strong post at Landi Kotal, as furnishing a tangible proof that, if they do their part to keep the pass open, we shall not fail in ours.

8. There are two other points to which a brief reference is necessary: First, the advisability or otherwise of constructing an alternative road to Landi Kotal from Peshawar through the Mullagori country. Such a road would be nearly twice as long as the Khyber route, and its cost would be some 9 lakhs, but the alignment is an easy one. If, as laid down by the Secretary of State, the maintenance of the Khyber Pass as a safe artery of communication and trade is essential, it seems to me that it would be a waste of money to provide a second and much longer roadway which would never be used, unless the Khyber were closed—a condition of things which is not contemplated. Secondly, it may be convenient to mention that the cost of the defensive works, water-supply, &c., needed in the Khyber, if occupied in the manner suggested in Brigadier-General Nicholson's Memorandum, is roughly estimated by the Commanding Royal Engineer, Tirah Expeditionary Force, at 9½ lakhs, namely :—

	Lakhs.
Fort on Suffolk Hill	4
Water-supply	1
New post and tank at General's camp .	½
Restoring defensible serai . . .	1
Blockhouses, Upper Khyber . .	1½
,, Lower ,, . . .	1½
	9½

The cost of restoring the works which would be required if the Khyber were held by the third method., *i.e.*, without a garrison of regular troops at Landi Kotal, may be taken at about 5 lakhs.

9. In conclusion, I would refer to the supreme importance of improving the communications between our frontier outposts and the supporting stations behind them. By this means alone can the due concentration of our forces and the rapid reinforcement of any threatened point be provided for. I advocate the immediate extension of the North-Western Railway system to Kohat and Bannu on the west, and to Landi Kotal and Dargai below Malakand on the north.

(Signed) W. S. A. LOCKHART, *General,*
Commanding Tirah Expeditionary Force.

Enclosure 4 in No. 3.

Telegram from the Chief Secretary, Punjab Government, Lieutenant-Governor's Camp, to the Foreign Secretary, Calcutta, dated Banda, the 19th March, 1898.

LIEUTENANT-GOVERNOR's views in regard to re-opening of Khyber Pass have been given in paragraph 5 of Punjab Government's letter, dated 21st September, and in two demi-official letters to the Viceroy, dated 18th October

and 6th March, the material parts of which will now be put into official form and letter sent by post. To what he has already said, Lieutenant-Governor would add as follows :—*First.* It is very undesirable that we should show anxiety to restore allowances to Afridis before our objects regarding pass are defined and fully secured; such attitude would be misinterpreted and would make final settlement extremely difficult. There is no need for haste as pass is open, and military occupation must continue till sufficient guarantee for the permanency of arrangement is secured. *Secondly.* It is desirable, in view of reckless infringement of former agreement, that, as recommended in paragraph 5 of Punjab Government letter, dated 24th September, cost of constructing buildings damaged in outbreak should be deducted by instalments from the allowances, and this question should be settled before allowances are restored. *Thirdly.* In regard to re-enlistment in Khyber Rifles, Lieutenant-Governor, as already intimated, thinks this desirable, provided Government reserve complete liberty of action in regard to constitution of force and its relation to tribal control. These are questions which, in Lieutenant-Governor's opinion, require full deliberation and discussion with the tribes, and allowances should not be granted until they are settled. Even if Government has framed its policy in regard to the Khyber, the tribes are hardly in a position to enter into definite engagements, which must depend for their fulfilment on the concerted action of the several sections.

Enclosure 5 in No. 3.

Letter from General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department; dated Camp Peshawar, the 16th March, 1898.

In continuation of my letter, dated 11th March, 1898, I have the honour to forward a Memorandum [illegible] embodying Sir Richard Udny's views on the future arrangements for holding the Khyber Pass.

2. The only remarks I have to make on this Memorandum, which I am gratified to find in substantial agreement with my own, are with regard to the following points :—

Paragraph 9.—I would first observe that, although Brigadier-General Elles concurred with the Commissioner of Peshawar in thinking it inexpedient last August to send troops into the Khyber, I am not aware that he represented such a movement to be a military impossibility. But in cases of local disturbance, the responsible military adviser is not the General Officer in local command, but the Lieutenant-General of the Command concerned, and in this instance the Lieutenant-General Commanding the Forces, Punjab, strongly urged on Army Head-quarters the desirability of reinforcing the Khyber and supporting the Khyber Rifles with regular troops.

Secondly.—I am doubtful about the necessity for keeping a full equipped flying column at Peshawar in readiness to reinforce the Khyber. The correct principle to be followed in the military occupation of the frontier is to concentrate the troops needed to support the outlying garrisons in suitable and healthy positions, and to keep up the transport and equipment required to enable these troops to move at a moment's notice. Further, to perfect the means of rapid communication between the outpost and their supports by the construction of railways and the improvement of roads. To hold a long and exposed frontier with a moderate force, it is essential that the communications should be as complete as they can be made by civilized methods.

Thirdly.—I do not agree with Sir R. Udny about the Khyber Rifles being encouraged to provide their own arms. I can see no advantage in such a system, which would offer a premium on the theft of breech-loading rifles or their component parts from our troops or arsenals. I consider, too, that the Khyber Rifles should be as well armed as our Native Infantry Regiments.

*

Paragraph 10.—Admitting the existence last summer of a strong fanatical feeling along the north-west frontier, I doubt whether this feeling in the first instance took a firm hold on the majority of the Afridi tribesmen. They assemble, possibly in large numbers, to attack the Khyber posts, but their attitude was at first vacillating and half-hearted, and I cannot but think that, after having upheld their religious reputation among their neighbours by a skirmish with our troops, they would have been only too glad of an excuse to disperse to their homes. To me it is inconceivable that the Khyber Rifles would have attempted to hold out against their kinsmen, if the hostility of the latter towards the British Government had been as bitter and as fanatical as Sir R. Udny supposes. Apart from their Mullas, the Afridis have always been on friendly terms with us. In fact, as a tribe they like us, and many of us like them ; and it is well known that the Mullas have less influence over the Afridis than over any other frontier tribe.

Memorandum by Sir R. Udny, K.C.S.I.

The management of the Khyber previous to the outbreak of last August was based upon an agreement made with us in 1881 by the Afridis,* or rather, to speak quite accurately, by the Kuki Khel, Zakka Khel, Malikdin Khel, Kambar Khel, Kamrai and Sipah clans of that tribe, for the Aka Khel, and Tirah Adam Khel clans had no more to do with the Khyber than the sections of the Adam Khel Afridis, who inhabit the Kohat Pass and the wedge of independent territory adjoining the pass to the eastward. To prevent misconceptions as to the terms of this agreement, it should be read through carefully, but for present purposes it may be sufficient to say that the arrangements under it were as follows :—On Tuesdays and Fridays in every week one caravan went up through the Khyber from Jamrud to Landi Kotal, a distance of 20 miles, while another came down from Landi Kotal to Jamrud, and these caravans were accompanied by guards of the Khyber Rifles which exchanged at the half-way post of Ali Masjid, the escort which had come down with the caravan from Landi Kotal returning therewith the upward caravan from Jamrud, while the escort from Jamrud retraced its steps with the downward caravan. On these days too the heights which command the road through the defile were picquetted by Khyber Riflemen. On other days of the week the pass was closed to traffic, though special arrangements of the same kind were occasionally made on off-days for distinguished visitors, and special guards used to be provided for parties of coolies employed on the repair of the road or on such duties as the building of the fortified serai at Landi Kotal, the construction of the water-supply works near Landi Khana, etc., etc. Officials too connected with the pass like the Political Officer in charge of the Khyber and the Commandant of the Khyber Rifles, frequently travelled through it with small escorts of the latter corps on other than caravan days, though, according to the strict letter of the agreement (clause 13), they were bound to give sufficient notice of this to the tribesmen beforehand. From this it will be seen that the Khyber cannot be said to have been "held," except in a very modified sense even for purposes of trade, and that in a military sense it was not "held at all, while the system in force was absolutely different from that prevailing in the Kohat Pass (through the country of the Adam Khel Afridis), which, in return for a comparatively very small subsidy, is open every day of the year and all day long like any road in British India, for all travellers, whether European or Native, without any precautions of guards or picquets.

* And the Shinwaris of the Lwargai plateau round Landi Kotal.
R. UDNY.

2. The question that Government now have to decide is whether we should content ourselves with regaining the same measure of control over the Khyber that we possessed in the past, or whether we should seek to obtain a larger measure not only in order to secure it more effectually for military purposes as our main line of advance into Afghanistan, but also to render it impossible for the Afridis to close the road and to destroy our posts in the pass

as they did last August. I think there can be no doubt that this question must be answered in favour of the second alternative, and, as it seems to me that the objects in view under this alternative could only be completely attained by holding the pass for ourselves in a military sense and by regular troops, I said at the Conference which was held by His Excellency the Viceroy at Calcutta on the 2nd ultimo that I should like to see this done in future *if the military authorities considered it practicable*. Although too I am absolutely averse as a general rule to any occupation or quasi-annexation of territory beyond the frontiers of British India when it can possibly be avoided, and I have always been strongly of opinion that we should refrain from interference with the tribes, unless it is necessary for the security of our own subjects and border, I think that in the special case of the Khyber the objects to be attained would justify us in making an exception, and that however much the Afridis might dislike our occupation of the pass with the consequent forfeiture of their pass allowances,* the trans-border world could not fail to admit that it was a just and appropriate punishment, which they had brought upon themselves by an unprovoked outbreak and by showing us that we could place no lasting reliance on tribal agreements. But even with a military occupation of the Khyber I would have kept up the Khyber Rifles—as an auxiliary irregular corps on the model of the Kurram Milita and entirely under our own control—for two reasons—

* In this connection I may note that, *if we continued to pay them their old allowances*, the Afridis could not object to our re-occupying the Khyber with troops or regard it as any breach of the 1881 Agreement, since this was specially provided for by clause 5 of that agreement, which seems to have been made while we were still in military occupation of the Khyber.

R. UDNY.

(i) as providing an opening for the Afridis, who would still feel that they retained a considerable interest in the pass arrangements while they had a local levy to enlist in;

(ii) to escort caravans and to furnish piequets on the hills during their journey through the pass in times of peace, because such duties —particularly hill top piequets—would be harrassing for regular troops, and could be performed satisfactorily by Khyber Riflemen in ordinary times as they have been during the past.

I had no intention, however, of proposing that we should undertake any responsibility for the administration of the Khyber as well as for its safety, and I would simply uphold the existing regulation published in Government of India Notification of the 2nd July 1880 (as amended by Notification of the 15th June, 1886), which provides for the trial of criminal offences in "the Khyber Pass and the lands immediately adjoining the pass on either side of the road-way,"† without attempting to interfere with the tribesmen elsewhere. It will be observed too that this regulation in its concluding words allows a discretion to the officers empowered under it to refrain from using it unless the parties are all British subjects.

† I should prefer to read this when the new arrangements have been concluded, as "the road through the Khyber Pass and the lands immediately adjoining this road-way on either side."

R. UDNY.

3. Sir William Lockhart in his Memorandum on future Khyber arrangements is opposed to a purely military occupation of the pass by regular troops, principally on the grounds—

(*a*) that irregular troops (*i.e.*, local levies) are more suitable, and likely to be more efficient, than regulars for occupying the heights bordering the pass, which are so inaccessible and devoid of water that they could not be permanently held by regular troops, either British or Native, without an undue strain on our military resources;

(*b*) that during the summer the pass itself is so hot and unhealthy that services in it would be intolerable for British, and extremely distasteful even for native soldiers;

(*c*) that the exclusion of the Afridis from a share in the custody of the pass and the emoluments attaching thereto would create ill-feeling and incite them to predatory action;

and also more or less because—

(*d*) a military occupation would involve an increase to the Indian army; and

(*e*) to look up a considerable military force in a narrow pass is not the best way of guarding against the recurrence of a frontier rising.

4. Some of these objections to holding the Khyber entrely by regular troops are so purely military that as a civilian I feel great diffidence in making any remarks upon them at all, but in frontier questions political and military considerations are so inseparably associated that it is impossible to refer to the former without touching upon the latter. Perhaps, therefore, I may be permitted to say that I fully recognise the force of (*a*), (*b*), (*d*) and (*e*); and as regards (*a*), even if it were safe to allow local levies to hold permanent positions upon the heights which command the pass, the difficulty of water is one which it would still be probably impossible to overcome.

As for (*c*), I have already said that in my opinion the special objects to be attained by a military occupation of the Khyber would justify us in disregarding the natural dislike of the Afridis to such a measure; but their resentment might no doubt lead to "predatory action," and, if there is any question whether such action could be adequately met by military precautions, this certainly furnishes an unanswerable argument against attempting to dispense altogether with tribal arrangements. On the whole, therefore, I am quite content to accept the conclusion that, so long as we have only the pass itself to deal with, and are debarred from taking up covering positions in the country on either side of it, a purely military occupation of the Khyber is *not* practicable.

5. The alternative methods of holding the pass are stated by Sir William Lockhart in his Memorandum to be—

(i) partly by regular and partly by irregular troops (*i.e.*, local levies);
(ii) by irregular troops alone;
(iii) by tribesmen under tribal management and responsibility;

and Sir William Lockhart thinks that the first and second of these methods can best be discussed together; but I should prefer to group (ii) with (iii) as in point of fact constituting a single method, for we may take it as certain that, if we are to use only local levies, it must be in combination, as hitherto, with tribal arrangements, while on the other hand in clause (6) of the Khyber Agreement of 1881 the tribesmen themselves said that the maintenance of some kind of Jezailchi Corps was "absolutely necessary to enable them to render the road secure." This method, however, is the system which broke down in August last, and, if we reverted to it without special precautions, although the Afridis have since been taught a lesson which they are not likely to forget in a hurry, we should have no security against the recurrence of similar events in times of excitement on the border.

6. If it be said that this objection might be met by keeping up a permanent flying column at Peshawar of sufficient strength and complete with transport and commissariat, which would always be ready in case of necessity to support the Khyber Rifles, and to assist them in guarding the pass until the excitement had died away, I would reply that the primary object of a special force is always liable to be overlooked, as the events which led to its formation are gradually forgotten, and that in a time of stress elsewhere—the very time it must be remembered when excitement is most likely to spread to the Afridis—it would probably be utilised for other purposes. If, for instance, we had had a Khyber Flying Column in Peshawar when the rising occurred on the Malakand last July, no one, I think, will deny that in all probability it would have been despatched in that direction. While, however, I desire to point out the danger of relying upon a special force of this kind, I trust I may not be misunderstood as arguing against the creation of such a force. The maintenance of a flying column at Peshawar is in fact one of the precautions I would urge upon Government in any case, whether we are to revert to the old system *pur et simple*, or whether we are to strengthen it by a post of regular troops at Landi Kotal, as

suggested by Brigadier-General Nicholson, which remains the only other alternative for discussion. All I would say is that a flying column at Peshawar is not enough alone, and that it should be supplemented by the establishment of a military fort at the further end of the pass, which might at least cover the post of Khyber Rifles at Landi Kotal, and would be able to hold out till relieved even if the flying column were not immediately available.

7. I concur, therefore, with Sir William Lockhart in supporting General Nicholson's proposal that "a really strong work armed with guns should be constructed at Landi Kotal," while the Khyber Rifles should be maintained as a local levy to guard the road, and for ordinary escort and picquet duties with caravans, etc. When the question of the Khyber was discussed many years ago (? by the Defence Committee), I believe that the idea of guarding the pass by any mixed system of this kind was summarily dismissed, because it was thought that military principles forbade the location of troops in an advanced position if the line of communication with their base could only be held by levies. Prior, therefore, to the Conference at Calcutta on the 2nd ultimo I had put this alternative aside as out of the question, under the impression that it would never be accepted by the military authorities; and when I was asked my opinion about it at the Conference, I rejected it on this account as impracticable. But when General Nicholson propounded the present scheme, and I found that military opinion was not so opposed to it as I had imagined, the case assumed a different aspect, and I now entirely agree in the proposal for a fort at Landi Kotal as a considerable step towards the complete security of theKhyber, which would be obtained by a purely military occupation if that were practicable, while in some respects General Nicholson's solution of the difficulty is preferable as advoiding the danger of Afridi discontent, which would arise if we held the pass for ourselves and deprived the tribesmen of their allowances. At the same time I doubt whether the Afridis would consider a military fort at Landi Kotal to "dominate" the pass, *i.e.*, the twenty miles of road between Landi Kotal and Jamrud, which it is in contemplation to hold as before by posts of local levies, or whether, in other words, such a fort would effectually restrain them from attacking these posts and stopping the road as they did in August, unless its military garrison were large enough to send out a really strong column for operations in the pass itself; and, as I presume that Government would scarcely be prepared to keep up a *permanent* garrison of this size at Landi Kotal, I would insist upon the necessity for maintaining a flying column at Peshawar (which might be called the "Khyber Flying Column"), with every possible precaution to keep in memory the primary object for which it is intended, and to provide against it or its equipment being diverted to other purposes.

8. If the old system of guarding the road between Jamrud and Landi Kotal by a local levy is to be continued, it follows that tribal allowances for the pass must also be renewed, and I observe that Sir William Lockhart is disposed to hold the same view. The only question is whether they should be restored at the old rates, and at first I was inclined to think that, if the Afridis by their unprovoked outbreak compelled us to go to the expense of building a strong fort and maintaining a military garrison at Landi Kotal, it was only equitable that they should suffer some reduction in the amount they received, which, though to some extent a compensation for the tolls they used to realise on the Khyber road when they held it themselves, had originally been fixed on the understanding that they were responsible for guarding the pass without our assistance. On the other hand, though the site of the proposed fort would, as I understand, be in the limits of the Lwargi Shinwari, like the old Landi Kotal fortified serai, I cannot think that the Afridis would welcome its construction. It is more probable that they would regard it as a threat to their independence,* and, if at the same time we reduced their allowances this would be an additional grievance which might greatly delay their settling down to the new régime. On the whole therefore I think that, if we are to restore the allowances at all, we should do so without

*But as pointed out in my marginal note to paragraph 2 *supra*, the Afridis could not regard occupation of a fort at Landi Kotal by regular troops, as any breach of our old agreement with them so long as we paid them their old allowances under that agreement. R UDNY.

altering them; but it should be made a condition of their restoration that we reserve to ourselves the right of running a railway through the pass, and of taking up the necessary sites for this purpose, without paying anything for the ground required (unless culturable) or increasing the allowances.

9. As to the Khyber Rifles, it seems advisable for me to note that they are the present form of the Jezailchi Corps, which originally consisted for the most part of men provided by the Maliks under clause (6) of the 1881 Agreement and subject to their control, who were paid ₹7 a month if they carried matchlocks or ₹8 if they brought rifles. Gradually this corps became more and more "regularised," the men were supplied with Sniders, the property of Government, while they were withdrawn by degrees from the control of the Maliks, and a very material addition was made to the Government posts in their charge by the erection in 1888-89 of the fortified serai at Landi Kotal. From time to time the tribal Maliks still continued to assert their right of control, but these claims were steadily resisted by the Political Officer in charge of the Khyber, and before the Afridi rising occurred last summer this control had practically disappeared, so that the Khyber Rifles were very similar in organisation to a regiment of the Native army, though until Captain Barton was appointed in 1896 the important element of British officers was entirely wanting. Whether this was a wise policy is, I think, very questionable, as it certainly tended to obscure the real footing upon which the corps subsisted, and if, as Sir William Lockhart believes, but I venture to doubt, it inspired the men with confidence that we should support them by regular troops in case of attack by their own tribesmen, I can only say that it was a great mistake to introduce such a policy without simultaneous arrangements to ensure this support being given, which, as I have explained in my letter of the 3rd October 1897 to the Punjab Government, was judged by the General Officer Commanding at Peshawar on the occasion of the outbreak in August to be a military impossibility. For the future, however, I agree that the Khyber Rifles should be maintained under our own control on the same system as the Kurrum Militia, provided always that we have a properly equipped flying column in Peshawar ready to support them, and that we are holding the Landi Kotal end of the pass with regular troops in a fortified position. In order also, if possible, to reduce the number of Government rifles in their hands, I think a handsome increase of pay (say, ₹12 a month instead of ₹9) might be offered to men who brought their own Sniders. I made a similar suggestion in the Conference at Calcutta, but I observe that, in the Notes of that Conference, I am represented by mistake to have said "buy" instead of "bring."

10. There is one passage in paragraph 3 of Sir William Lockhart's memorandum about which I must say a word in conclusion, as I am glad to have this opportunity of clearing up a matter regarding which it would appear that a good deal of misconception exists. The passage I referred to is as follows: —"It seems possible, however, had the Khyber Rifles been promptly reinforced by regular troops in August last, that * * *, and that the formidable tribal gathering would have melted away, *as it did on a previous occasion, as soon as troops were moved up the pass in support.*" The italics in this passage are my own, and as the words thus italicised seem to allude to the attack made upon the Khyber by Malik Amin Khan, Kuki Khel, in July 1892, I desire to point out the important features in which that attack differed from the outbreak of last August. On the first occasion Amir Khan's "lashkar" probably numbered "four or six hundred men," and did not, I believe, include even the whole clan of the Rajgal Kuki Khels, but was only a gathering of the men of that clan who belonged to Amin Khan's own faction. The Mullas in Tirah combined to try and persuade other Afridi clans to join, but without success, and the direct motive of the attack was Amin Khan's personal resentment at having been deprived of half his "maliki" allowance for previous misconduct. On the last occasion, on the other hand, the strength of the Afridi gathering, when it came down upon the Khyber, was estimated at ten or twelve thousand men, collected from all clans except, curiously enough, the Rajgal Kuki Khels who had supplied the "lashkar" in 1892; and the motive swaying this army was the irresistible wave of fanaticism which had spread throughout the tribe. On the first occasion, again, Amin Khan's "lashkar" occupied a hill above

Shadi Bagiyar to the south of the entrance of the Khyber on the evening of the 4th July 1892, and during the ensuing night made attacks on the posts of Shadi Bagiyar, Jahangira and Fort Maude just inside the pass; but the gathering retired and dispersed early on the morning of the 5th July, because (it was thought) they had heard of the arrival at Jamrud of reinforcements from Peshawar, *viz.*, 200 men of the 14th Sikhs, who reached Jamrud on the evening of the 4th July, and 100 of the Royal Scots Fusiliers with 2 field guns, who marched into Jamrud at 2 A.M. on the 5th. Not a man, however, of these reinforcements ever advanced a yard beyond Jamrud. In August last, on the other hand, the Afridi gathering attacked and took the same three forts on the 23rd of that month in spite of a British force of 1,400 infantry and a mountain battery (besides a regiment of British Cavalry and a battery of Horse Artillery), which had been sent out to Jamrud five days previously in the hope that it might act as a demonstration to overawe the tribesmen. I will not enter into the question whether or not such a "lashkar" of the whole Afridi tribe would possibly have melted away if the troops at Jamrud (all that were considered to be available from Peshawar) had been pushed forward into the pass; but I may remark that four months later, after we had overrun Tirah and when we had no one but the Zakka Khel left to oppose us in the Khyber, one brigade at Landi Kotal was found insufficient to hold that pass and the line of communication from Jamrud, and a second brigade had to be moved up from Jamrud to Ali Masjid, as stated in paragraph 36 of Sir William Lockhart's Political despatch of the 3rd ultimo.

(Signed) R. UDNY,
Chief Political Officer,
Tirah Expeditionary Force.

PESHAWAR;
The 15th March 1898.

Enclosure 6 in No. 3.

Letter from Sir William Cuningham, K.C.S.I., Secretary to the Government of India, Foreign Department, to General Sir William Lockhart, K.C.B., K.C.S.I., dated Fort William, the 25th March 1898.

I am directed to address you with reference to the 7th paragraph of the memorandum on future arrangements for holding the Khyber Pass which you forwarded with your letter dated the 11th March 1898. For convenience of reference the paragraph in question is here quoted in full:

"As soon as we are fully assured of the complete submission of every Afridi section, I should be disposed to renew the tribal allowances in the Khyber, subject to such re-adjustment as may seem equitable or politic—subject also to such conditions with respect to railway and road construction, and the acquisition of sites, as we may think fit to impose. When the tribesmen see that their allowances are not to be forfeited and that the Khyber Rifles are not to be disbanded, I am of opinion that they will welcome the construction of a strong post at Landi Kotal, as furnishing a tangible proof that, if they do their part to keep the pass open, we shall not fail in ours."

2. The Government of India have consulted His Honour the Lieutenant-Governor of the Punjab on this point in advance of inviting His Honour's opinion upon the whole question of the management of the Khyber, as it is put before them by your letter above cited and by your further letter dated the 16th March, and I am to inform you that the Governor-General in Council is of opinion that, while the Khyber Rifles may be continued on a temporary footing, the whole question of the restoration of tribal allowances to the Afridis must be reserved at present, as it is inexpedient to renew payment of them until at any rate the permanent arrangements for the Khyber have been discussed and settled. It is necessary, in order to arrive at a decision upon this matter of the permanent arrangements, to institute enquiries which will be taken up at once.

Enclosure 7 in No. 3.

Letter from Sir William Cuningham, K.C.S.I., Secretary to the Government of India, to the Chief Secretary to the Government of the Punjab, dated Fort William, the 28th March 1898.

I am directed to forward, for the favour of the opinion of the Lieutenant-Governor, a copy of the correspondence cited in the margin, on the subject of the future arrangements for the control of the Khyber Pass.

From the General Officer Commanding Tirah Expeditionary Force, dated the 11th March 1898.
From do., dated the 16th March 1898.
To do., dated the 25th March 1898.

2. I am further to enclose a copy of a telegram, confidential, dated the 24th March 1898, from General Sir William Lockhart, suggesting certain reductions in the Tirah Expeditionary Force, in the probable event of a settlement with the Afridis being effected by the end of March. Conditional on the realization of Sir William Lockhart's anticipations, his proposals have been accepted; the force will be reduced to three brigades, and the distribution proposed is approved, subject to the General Officer Commanding explaining the necessity or advantage of retaining a brigade at Mamani. The further reduction of the force to one brigade will be made when practicable.

3. The Government of India have not yet received the official expression of His Honour's opinion, the despatch of which is referred to in your telegram dated the 19th March. If that has been sent before the receipt of these papers, it is possible that a perusal of them may suggest further expression of the Lieutenant-Governor's view.

4. His Honour will see that both Sir William Lockhart and Sir Richard Udny favour the plan of holding the actual pass by irregular troops or militia raised from the Afridi and other neighbouring tribes, while the western outlet is garrisoned by troops. Sir Mackworth Young's opinion already given on this question is in favour of holding the pass by tribal agreement and by a tribal force maintained on tribal responsibility. The primary difficulty, however, which has arisen is to find a Native officer to take the place long filled by Colonel Muhammad Aslam Khan. It is essential that a tribal levy in the proper sense of the term should not be commanded by a British officer, and the fact that Captain Barton was in command of the Khyber Rifles last year has done much to complicate the questions involved. The Governor-General in Council is of opinion that, where it is thought expedient to introduce British officers, it must be recognised that the force ceases to be a mere tribal levy and becomes an irregular force or militia. The distinction is one with which His Honour is well acquainted from the case of the Kurram Militia. Whether the Khyber Rifles will be more acceptable to the Afridis as irregular troops or militia than as a mere tribal force looking for support exclusively to their own tribal headmen is a point on which there is room for difference of opinion, and cannot be settled without careful enquiry into the feeling of the tribesmen themselves. It will be noticed that Sir W. Lockhart is of opinion (paragraph 7) that the establishment of a military post at Landi Kotal and the consciousness that this means our supporting the Khyber Rifles themselves against hostile attack will do much to obviate opposition. Sir R. Udny does not concur in this anticipation, and I am instructed to point out that the establishment of the military post at Landi Kotal in the manner proposed by Sir W. Lockhart is itself still under consideration, and the Government of India have arrived at no conclusion in regard to it. But unless the pass is to be held throughout by regular troops, the Khyber Rifles must be continued in some form, and I am to invite His Honour to consider whether the difficulties of a purely tribal organisation are not so serious that the time has come for the constitution of the force as a militia under British officers.

If the Afridi Rifles are to be maintained on the footing of irregular troops, the constitution of the corps as regards the proportion to be enlisted from the different clans may nevertheless be subject of tribal agreement.

5. My letter, dated the 25th March, to General Sir William Lockhart, communicates the decision of the Government of India to the effect that the Afridi tribal allowances cannot at present be restored. They cannot be settled until the plan of holding the Khyber is determined. On this must depend not only the amount to be paid, but the purposes for which payment is to be made. The enlistment in the meanwhile of tribesmen in the Khyber Rifles, under temporary conditions, which has been already permitted, puts a considerable sum of money into the hands of the tribe. The Government of India do not think there is any necessity to go further and to restore at the present time payment of any of the Afridi Maliki allowances. The Government of India had formed an intention not only to hold the allowances in reserve until the Afridis accept whatever conditions they are ready to grant, but to confiscate them, in whole or in part, until the cost of repairing the forts and posts in the pass has been made good. This intention has not been abandoned. Even, however, if this reason did not exist, the Government of India, as a matter of expediency, would prefer not to display undue readiness to restore the allowances.

I have, etc.,

(Signed) W. J. CUNINGHAM,
Secretary to the Government of India.

Enclosure 8 in No. 3.

Letter from the Honourable Mr. L. W. Dane, Officiating Chief Secretary to the Government of the Punjab, to the Secretary to the Government of India Foreign Department, dated Lahore, the 1st April 1898.

In continuation of my telegram dated 18th March 1898, I am directed to communicate in some detail the views of His Honour the Lieutenant-Governor so far as they are formed up to date in regard to the future policy to be adopted in the Khyber.

2. It has already been decided that, pending a complete settlement with the Afridis, the Khyber Pass will continue to be occupied by our troops, and orders have also been recently issued for the re-opening of the pass to trade; but it is understood that, as soon as we are assured of their complete submission, the Government of India are anxious to determine the details of the permanent settlement to be effected with the tribes and the manner in which the future arrangements should be carried out and our political relations with the tribes conducted.

In the first place, Sir Mackworth Young would strongly deprecate the hasty acceptance of any cut-and-dried scheme for keeping open the Khyber route, however feasible or simple the proposals might at first sight appear. The measures to be adopted must be carefully thought out and fully discussed by and with the tribes themselves, for the best guarantee for permanence in the new arrangements will be a deliberate estimate of what they are able and willing both to promise and to perform. In a matter of this kind there is the greatest danger in hurrying or patching a settlement, and His Honour thinks we should guard against doing this. Moreover, as the pass is open and it is clear that a military occupation must continue till a sufficient guarantee for the permanence of the arrangements to be made is secured, there does not appear to be any necessity for haste in the matter.

3. In view of these considerations Sir Mackworth Young cannot propound, at the present moment, any matured scheme for the future maintenance of the Khyber route, but he has always considered, as intimated in paragraph 5 of Punjab Government letter, dated 21st September 1897, that the re-opening of this route must, for the present at any rate, form one of the main objects of our future policy, and, if possible, that it should be re-opened under

arrangements for which, in the first instance, the tribes themselves should be responsible. He sees no reason for supposing that there will be another breakdown in the arrangements if properly worked out, and he is of opinion that the restoration of the old order will in one respect have a better effect than anything new, in that it will clearly illustrate the hopelessness of attempting to upset our arrangements. He is not in favour of any change in the conditions which would impose the duty of maintaining the peace of the Khyber in times of disturbance on the British Government. It is better that the tribesmen should bind themselves to keep the route open and safe, only looking to us to supply the supervising agency, without which it is impossible for them, owing to their feuds, to co-operate for the common object.

The Lieutenant-Governor thinks it will be desirable that the corps to be raised for watch and ward in the pass should be officered, as far as possible, by members of the tribes responsible for the pass, though one or more British officers will certainly be required to hold command, and to organise and supervise their discipline and distribution much in the same way as British inspecting Officers do in respect of Imperial Service Troops. At the same time the Lieutenant-Governor thinks that we should again provide (as in clause 5 of the Khyber Agreement) that we may at any time send troops into the Khyber and occupy positions there without further payment, and that, having made this provision, we should ensure that a sufficient force is always kept ready mobilised at Peshawar or Nowshera to move into the Khyber on the orders of the responsible political authorities, and that suitable positions for such a force to occupy are worked out and kept in readiness.

4. With reference to the question as to how the future settlement is to be made and who is to be primarily responsible for the conclusion of the agreement with the Afridis, the Lieutenant-Governor believes that the Government of India are in favour of retaining the political work in the Khyber for the present under the direct control of the Foreign Department, and of entrusting the reconstruction of the arrangements to the Brigadier-General in Command assisted by a civil officer of a standing that would give weight to his advice. Sir Mackworth Young feels bound to say plainly that he does not think this plan would prove a good one. If the Khyber is again to come under the political control of the Punjab Government, His Honour thinks it is very desirable that the Lieutenant-Governor of the Punjab should be in a position to regulate from the first and in detail the scheme which is laid before the Government of India for orders. To leave the Local Government out during the formation of proposals is to deprive the Government of India of the best experience available just at the time when it is most required. It is not the same thing to refer the proposals after they have been worked out to the Punjab Government for opinion. It may be too late then to give a turn to the proceedings. The same reasons apply against excluding the Commissioner, Peshawar Division, from the negotiations during the early stages. Sir Mackworth Young would therefore recommend that, as contemplated apparently in paragraph 4 of Foreign Department letter dated 15th September 1897, the reconstruction of the arrangements when the tribes have made submission be made over to the Punjab Government, and that the settlement be carried out by the Commissioner for the time being of the Peshawar Division under its direction. A civil officer would also be required in the Khyber to work out the arrangements under the orders of the Commissioner. In fact, His Honour would employ the same machinery as was employed with marked success when the Khyber Agreement of 1880 was effected, and he foresees serious difficulties if the Punjab officers are called upon to work any scheme for the maintenance of the Khyber route with which they have not been closely associated from the beginning, though he can assure the Government of India of the most loyal co-operation on the part of all officers concerned in any policy which they may decide to adopt.

5. This brings His Honour to the consideration of certain proposals which have apparently been made with the object of re-assuring the tribes and making them more willing to accept any arrangement we may hereafter adopt. Sir William Lockhart proposes in the memorandum forwarded with Foreign Department endorsement dated 3rd March 1898 that, as soon as the tribe

have assured us of their complete submission, the tribal allowances should be restored, "subject to such re-adjustment as may seem equitable or politic, and subject also to such conditions with respect to railway and road construction and the acquisition of sites as we may think fit to impose." He also favours the re-enlistment of the Khyber Rifles. As regards the latter, the Lieutenant-Governor has already intimated in my letter dated 11th September 1897 that he considers the re-enlistment of the Khyber Rifles desirable as a means of giving the men empolyment and keeping them out of mischief, provided this is expressly done subject to whatever measures are ultimately found necessary in regard to the Khyber, when, if the former constitution of the corps is to be altered, the men could be given the option of leaving or re-engaging. But as regards the renewal of the allowances, Sir Mackworth Young is of opinion that it is very undesirable that we should show anxiety to restore allowances to the Afridis of the Khyber Pass before our objects regarding the pass are defined and fully secured. Such an attitude would be misinterpreted and would make the final settlement extremely difficult. We have other means of inducing the tribe to make complete submission and to set about a future settlement in a reasonable frame of mind. Though the Lieutenant-Governor trusts no further advance of our troops will be necessary, it is still open to us to re-impose the blockade if the tribe is obstructive about the pass question, and it seems neither necessary nor desirable to hold out the prospect of an immediate regrant of their old allowances as an inducement to them to comply with our wishes in this respect. Moreover in view of the reckless infringement of their former agreement, it seems desirable that, as recommended in paragraph 5 of my letter dated 24th September 1897, and contemplated in paragraph 11 of Government of India letter dated 4th October 1897, to the address of Sir William Lockhart, the cost of reconstructing the buildings damaged in the outbreak should be deducted by instalments from the allowances, and this question should, the Lieutenant-Governor thinks, be settled before the tribal allowances are restored. The Government of India have just called upon this Government for a report as to the value of these buildings, and the Commissioner, Peshawar Division, has been asked to supply the information, but it will necessarily take some time before the information can be furnished.

6. If the views of the Lieutenant-Governor expressed in this letter meet with the approval of the Government of India, His Honour will endeavour to have a scheme for the future maintenance of the Khyber worked out under his personal direction by the Commissioner; and will submit this for their orders at as early a date as is possible under the circumstances of the case.

Enclosure 9 in No. 3.

Letter from L. W. Dane, Esq., Officiating Chief Secretary to Government, Punjab and its Dependencies, to the Secretary to the Government of India, Foreign Department, dated Lahore, the 16th April 1898.

With reference to the request contained in Foreign Department letter dated 28th ultimo, that His Honour the Lieutenant-Governor will favour the Government of India with his opinion on the subject of the future arrangements for the control of the Khybar Pass, I am desired, in continuation of my letter dated 2nd instant, to forward a copy of a letter from the Commissioner of Peshawar, dated 2nd instant, and a memorandum in which Sir Mackworth Young has recorded his views on the general question of the control of the pass, so far as he has been able to arrive at any definite conclusions on the subject.

I have, etc.,

(Signed) L. W. DANE,
Officiating Chief Secretary to Government, Punjab.

Annex I.

Letter from W. R. H. Merk, Esq., C.S., C.S.I., Commissioner and Superintendent, Peshawar Division, to the Officiating Chief Secretary to Government Punjab, dated Peshawar, the 2nd April 1898.

I have the honour to acknowledge the receipt of your endorsement dated the 18th instant, enclosing for remarks a copy of correspondence on the subject of future arrangements in the Khyber.

2. So far as I am able to judge, there appear to be three distinct systems for consideration, and no more than three, and I will deal with each in succession.

The first plan would be to ourselves accept the whole responsibility for the administration as well as for the safety of the pass, and to take it entirely out of the hands of the Afridis. This is annexation. Declared or virtual annexation will not matter; the tribes concerned will perfectly understand the drift of the measure. If we annex, whether expressly or by implication, the special consideration, *viz.*, tribal responsibility for the safety of the Khyber, in return for which we have been paying a part of the late handsome allowances to the Khyber clans (the other part represents the tolls), disappears, and with it must go the allowances, unless indeed we consented to continue to pay what will then be naked blackmail; such a course would, however, be out of the question. Under these circumstances it is only too probable that we shall be compelled to hold the road with a strong military garrison, and that sooner or later we shall come again into collision with the Afridis. They look upon the Khyber as their country, which it is, and upon the levy of tolls as their ancient and indefeasible right. It is unlikely that they will surrender either without a further determined struggle.

I have not a copy of the Secretary of State's despatch of the 28th January with me, but I think I am not mistaken in believing that anything like annexation will be directly opposed to the policy therein indicated.

3. At the other end of the scale of systems is the plan of falling back upon tribal responsibility and tribal methods entirely, and of relaxing even that amount of British supervision which there has been in the Khyber arrangements from 1881 to 1897. This plan will assuredly fail. It postulates a power of combination of self-government, and of self-restraint which is utterly wanting among the Afridis. Such a power exists among some other clans and tribes, but (and this is a most important factor in border management) no two tribes are alike in individual character, and it does not follow that because one tribe can do a thing or bear a particular treatment the same will be the case with its neighbour or with another tribe further off. For instance, during all the time that the Khyber has been shut, from the days of the Emperor Akbar down to 1878-79, the Mohmands were able to keep open the routes through their territory and to make a large income from the tolls that they imposed; but the Afridis, though anxious enough to secure the tolls, were incapable of uniting for the purpose of keeping the Khyber open and safe, and consequently it remained closed for centuries. The Afridis have not changed their character, their unreflecting cupidity and their reckless greed; the intestine feuds and jealousies among them are as virulent as ever; cohesion is entirely wanting; and if purely tribal management ever does get a start, it will break down in six months. That is a just deduction from the history of centuries.

4. Neither of the above systems being possible, it seems to me that a partnership of Government and of the Afridis, a mixture of tribal management with such a quantity of outside authority as will be sufficient, and not more than sufficient, to correct the inherent weakness of a tribal system, is the course plainly marked out to us, by the conditions of the case, as the only prudent and economical line to take. There are two phases in this partnership, which completes the list of three systems. The two phases are: one with troops permanently stationed somewhere in the Khyber, preferably at Landi Kotal,

and the other without troops quartered in the pass, but held ready in the background at Peshawar, always prepared to be slipped upon the Afridis. In one case the corrective authority, requisite for the purpose of steadying the tribal machinery, is, or is supposed to be, on the spot; in the other case it exists also, but is kept in reserve.

5. Before discussing the two classes of the system of joint management of the Khyber, I would point out that, first, a local corps to work details which cannot admittedly so well be undertaken by any one else, and, secondly, the grant of allowances, are of the essence of the partnership. Unless the tribes receive allowances they cannot well be asked to assume responsibility for the road. Both these matters, the local corps and their allowances, I will discuss below; it is enough here to say that they are, I think, indispensable adjuncts to any system of joint management.

6. Reverting now to the question of partnership, I propose to consider it on purely political and administrative grounds, leaving aside military considerations on which I am not competent to submit an opinion except in so far as they are based upon matters which are within the scope of judgment of civil officers or of any man with ordinary common sense.

The *crux* of the whole position is this: Shall troops be permanently stationed at Landi Kotal or not? If they are so stationed, then with every intention and the most honest desire to maintain the political independence of the Khyber (as distinguished from its municipal independence), it is quite certain that this political independence will shortly disappear, and subsequently also (more or less as the case may be) the municipal independence of the Khyber. I do not mean the independence of Tirah, or of the Bara Valley, but of the Khyber proper. That is the perfectly inevitable sequence of events trans-frontier, for wherever we plant power, in the shape of British bayonets, across the border among the tribes, one of two things must happen,—either we must withdraw that power or it must be supreme and must increase and widen as it remains. In connection with this most important consideration I venture to quote an extract from a note which I wrote for Sir Dennis Fitzpatrick in 1895: "It is quite impossible for ourselves or for the tribes to divest British officers of their attributes as the officers of an all-powerful State. All their acts and all their utterances have at their back this power. Unless this power is to be flaunted, what its agents wish and desire must be done; however platonic that wish or desire may be, once that it is expressed it becomes a clear or veiled command, because it emanates from the source of authority; if it is disregarded, then that authority is condemned. A British officer cannot among the tribes act as *amicus curiæ*, being in truth the *curia* himself." The presence or absence of troops at Landi Kotal will have a most profound effect upon the political situation in the Khyber hereafter, for with the best will in the world, if there are troops permanently in the country, the situation will from the first day radically differ from what it will be if there are no troops in the pass; and whatever we may say or wish the facts will be too strong for us, and we shall drift into a position which will, all but in name, be annexation with its attendant difficulties. Take a concrete case: supposing two hostile sub-sections are fighting between Ali Masjid and Landi Kotal; if there are no troops at Landi Kotal, it does not matter to us what the belligerents do; it is easy to arrange that on the days the pass is open they abstain from interference with the road and caravans on it, and for the rest they can do what they like for all we care. But if there are troops at Landi Kotal, it is intolerable that there should be fighting and the risk of interruption on our line of communications; we must forbid it. If we prohibit an appeal to arms, if we intervene as the supreme authority, it follows that the parties must, when they are not allowed to fight it out, appeal to us to settle their quarrel. We cannot refuse to interfere; if you deprive the people of one tribunal, *viz.*, that of arms, you must substitute another; and we shall find ourselves called upon to undertake the administration of justice. Between that, between administering justice and virtual annexation, the distinction is fine, it is a hair's breadth. This is the difficulty that confronts us everywhere across the border—in Chitral, in Swat, in Waziristan. If we put the magnet among the iron filings, how are we to prevent the

filings from crowding to it? We cannot possibly canton troops beyond the border without sooner or later having to assume the civil administration of the country around them. Whenever we go over the border in force, we must, I think, be prepared to assume an authoritative position; it must, by the nature of things, be authoritative; if not, it will be thrust upon us, not without the penalty which we must always pay for the neglect or disregard of natural laws.

7. Apart from military considerations, the question therefore is this: is this authoritative position necessary and expedient in the Khyber or not? I venture to consider that it is neither necessary nor expedient. It is not necessary, for the system on which the Khyber was managed for 17 years without such a position worked admirably, as has been repeatedly and publicly acknowledged in every possible quarter. It broke down, but under circumstances which would have smashed any plan except that of holding the pass with troops. The authoritative position is not expedient, because we have to adopt an arrangement which shall enlist the Afridis on our side and shall induce them to remain willingly in the partnership. That being so, anything that is likely to lead to virtual annexation is certain sooner or later to meet with the opposition of the Afridis and to terminate in a rupture of the partnership. An authoritative position in the Khyber will assuredly lead to complications, for some day or other it will be resisted and then at all costs it must be asserted. And where are its limits to be drawn? It may be argued that the presence of troops at Landi Kotal does not at all mean the assumption of this authoritative position, but I venture to repeat that it does; that we cannot go there and then decline to be bound by the conditions of the case. Events will be too strong for us.

8. If we are to enter into partnership with the Afridis at all, any basis of the partnership which must end in the eventual absorption of the weaker partner will lead to the violent disruption of the bond. There are no two ways in the matter, for the Afridis will not consent to a peaceful absorption. That is their nature, we cannot change it, and we must reckon with it in our calculations. I therefore strongly recommend the second phase of the partnership, *viz.*, management of the pass without a permanent garrison of regular troops at Landi Kotal. For 17 years a system without troops in the Khyber worked admirably as I have said. It broke down under unusual stress, but the ship has not been built that will weather every storm. For 17 years the Khyber road was as safe as any highway in India; for 17 years the Afridis were amenable to our wishes and we were at peace with them. It is not to be supposed that the tremendous punishment they have just received will be without lasting effect, or, if they are not touched in what they prize perhaps more highly than anything on earth, their independence, that they will not be content to remain good friends with us, and to co-operate with us in the task of keeping open the Khyber. They were content to do so from 1881 to 1897 without any previous punishment to speak of, without our power having been brought home to their very doors, and it is not likely that the case will be different now. If a storm were again to rage such as has recently swept along the frontier, then not even the proposed military garrison at Landi Kotal will avail, for a far stronger garrison on the Malakand did not avail, to keep the country quiet; and if so, because the presence of troops in the Khyber will assuredly lead to a virtual annexation and to consequent complications, therefore, I say, better avoid these and have no troops which will be there only for the one eventually when, troops or no troops, we shall have to fight it out.

I consider that all that is wanted for political and trade purposes can be attained by the employment of a local force, coupled with tribal allowances, and without a military garrison at Landi Kotal, provided that this local force is backed up by the presence at Peshawar of a moveable column ever fully equipped to go out at the shortest notice, and provided that the local force and that the Afridis know this.

These provisos are absolutely essential.

With these conditions maintained, it is possible to guarantee, as much as one can guarantee anything, that the Khyber will not again be disturbed to any appreciable extent.

9. Whether on grounds of Imperial policy it is necessary to have troops in the pass it is not for me to say. But I venture to urge that, if it is decided to keep troops in the Khyber, we be very careful of what we say now, or, since in the course of years the position of the major and of the minor partner in the Khyber arrangements will have, perhaps imperceptibly but none the less inevitably, altered, an agreement now made may not faithfully reflect the changed conditions of the time, and this will give a handle five or ten years hence to agitators. Nor with Afridis will it be possible to modify agreements from time to time except at the risk of misunderstandings and a rupture. A definition of the relations of the partners was made in the agreement of 1881. That agreement is abrogated by the recent hostilities, and we ought, I think, to take advantage of this fact in order to make a fresh start. The Afridis will no doubt clamour for some kind of writing, for without a tangible deed of partnership they will feel themselves insecure in the Khyber business with so powerful a partneras Government. As His Honour is aware, these men are great lawyers, and sea lawyers to boot, and whatever we record now ought, if troops remain in the pass, to be very carefully framed so as to be in accord not only with the present situation, but also with the situation as it will have developed in the future out of the beginning that is now made.

10. Assuming that troops are to be permanently stationed at Landi Kotal for military reasons (although with deference I would note that the absence of an advanced post at Landi Kotal, capable of ready expansion into an advanced military depot, did not apparently hamper our advance in November 1878), on general grounds I would strongly suggest a larger garrison than one Native regiment with a detachment of gunners. The chances of attack by Afghan troops are very remote. But where troops are permanently located a bazar and habitations invariably spring up; as the recent disturbances fade with the past and a sense of security revives, houses will be built, works undertaken, and gradually a position will be created which will become exceedingly embarrasing when danger threatens. And danger is much less likely to threaten if the visible force on the spot is strong enough to move out instantly on the offensive. Nothing encourages these clansmen more than the sight of troops cooped up in a fort and besieged. Weak outposts unable to hit out mean frontier risings. I am therefore greatly in favour, if an advanced post at Landi Kotal has to be held at all, to hold it in considerable strength. For these reasons I recommend that, if the water-supply permits, a British regiment, two Native regiments and a mountain battery be placed at Landi Kotal, if troops are to be stationed there. The climate, moreover, is healthy there, although Ali Masjid is a fever hole, and a force at Landi Kotal may enable us to reduce the garrison of Peshawar.

11. But if, as I consider, it is neither necessary nor expedient to retain a permanent military garrison at Ladi Kotal, and if it is best to rely upon a moveable column at Peshawar which will give the requisite stiffening to the Khyber management, and will not commit us eventually to a virtual annexation of the Khyber and to the risk of complications and collisions of the Afridis, in that case I recommend for consideration the suggestion to keep, all the year round, a brigade of troops and a mountain battery at Cherat. No better site can be found for climate, for opportunities to exercise the troops in hill work, and for proximity to the Khyber.

12. Whatever system we take, short of annexation or purely tribal management, a local force is required, which I venture entirely to agree should be on the lines of the Kurram Militia, raised, paid, equipped, controlled and commanded completely by Government, but with this concession that, subject to the conditions of loyalty, good discipline, sufficiency of recruits and the pleasure of Government, a fixed proportion of the force (say $\frac{3}{4}$ or $\frac{2}{3}$) shall consist of Khyber Afridis drawn from the six clans, in numbers to be determined hereafter. This is practically the system of the Kurram Militia, where we have as nearly as possible a fixed number of Turis in the corps, with their complement of Native

officers, enlisted from both factions of the Turis, the Drewandis and the Mian Murids. Owing to the existence of these factions we have not yet been able to appoint a Turi to be a Subedar-Major, but this will come in time. With Afridis most probably a good Subedar-Major could be found as Afridi society is not split into two great camps like the Turis. The Khyber Militia ought, I think, to have a British Commandant and a British Adjutant. I would not recommend the revival of the *de jure* tribal, *de facto* Government, corps which began in 1881 as Jezailchis and ended in 1897 as Khyber Rifles.

13. Coming now to the question of tribal allowances, I have, after much thought, arrived at the conclusion that on the whole it will be best to restore them *en bloc*. To begin, a considerable part of them represents the tolls of which the Afridis in 1881 surrendered the collection to us. No doubt, as an act of State and by way of punishment, we could appropriate the tolls. But compliance with the terms imposed upon the Afridis is intended to wipe out their guilt; they look upon the tolls as their private property; and the appropriation of the tolls would to them be an additional punishment for their past misconduct and be in their eyes tantamount to the annexation of the Khyber. Of course we can say: "Without us there would be no tolls at all; you Afridis would never be able to levy them,"—to which the retort would naturally be that without Afridi co-operation we should find it an uncommonly expensive business to keep the Khyber open and collect the tolls.

With respect to that portion of the allowances which represents the tribal subsidies, apart from the tolls, we shall have and shall enforce tribal responsibility, and shall get our *quid pro quo*. If any permanent reduction is made in the allowances, then it should be made ratcably all round, and favour shown, or any difference made, will probably lead to infinite trouble. But, on the whole, I think it will be best to restore things to their former footing; no particular principle is involved in reduction; we are precluded from adopting the reduction as a punishment; and a reversion to the old order of things in the matter of allowances will go far towards re-assuring the Afridis that we mean bygones to be bygones, and that we have no ulterior designs. But I recommend that one condition to the grant of the allowances be that we may, within defined limits, make and keep in repair roads or railways as we please, and that the allowances are not to be increased on account of these roads or railways.

14. To sum up my suggestions: annexation or purely tribal management seems to be out of the case; a mixed system appears to be the only feasible course; whether we have troops at Landi Kotal or not, a local force like the Kurram Militia and the grant of allowances are essential conditions.

We ought, I think, to be most careful to what agreement or agreements we commit ourselves.

Lastly, I am bound to represent that we are much less likely to be entangled in complications if there are no troops at Landi Kotal. The point, therefore, is whether the military considerations outweigh the risk of complications and the certainty, if Landi Kotal has a permanent military garrison, of the absorption of the Khyber with its attendant consequences. Since this absorption would be opposed to the policy of the Secretary of State's despatch and liable to lead to trouble, and since we get what we want, without risk, by means of a force held in reserve at Peshawar, I recommend a management of the Khyber without troops in the pass.

Annex II.

Extract from memorandum, dated 11th April, by Sir Mackworth Young on the subject of the re-opening of the Khyber.

General Sir W. Lockhart and Sir R. Udny are in favour of an advanced military post at Landi Kotal, the pass being guarded by tribal levies. Mr. Merk, who has not seen their opinions, but to whom I sent confidentially a copy

of General Nicholson's memorandum of 3rd February 1898, with which Sir W. Lockhart's recommendations are in accord, is against any military occupation of the pass, which he thinks should be held by a tribal militia backed up by the presence of a moveable column at Peshawar.

I have already on more than one occasion expressed my opinion against a military occupation of the pass, but I have now to reconsider the subject in the light of the weighty opinions which are now before me.

It seems reasonable that after having quelled the disturbances raised almost simultaneously by nearly every frontier tribe on the Peshawar and Kohat borders from the Indus to the Kurram we should strengthen our position by occupying any military vantage ground in the tribal territory overrun by our troops, which is desirable for Imperial defence, or for pacification of the tribes. But the immediate cause for occupation will soon be forgotten, and in judging of its effect we should look forward some years and endeavour to gauge the ultimate position.

Now I have no hesitation in saying that the permanent occupation of Landi Kotal by a military force will never be accepted by the Afridis with complacency. It is true, as pointed out by Sir R. Udny, that in the agreement of 1881 there was a clause [5] which ran as follows: "It lies with the discretion of Government to retain its troops within the pass or to withdraw them and re-occupy at pleasure." But this must be read with the following passage from the Foreign Department letter dated 31st August 1880: "It may be explained to the tribes that, although our troops will remain for the present at their stations in the pass, they will in all probability be soon withdrawn; and it may also be of advantage to intimate that the British Government has no desire to station troops in the Khyber so long as the pass is kept open under the independent and exclusive charge of the tribes, and so long as it is managed in accordance with the agreements that may be made with the British Government." This interpretation of the intentions of Government shows that what was reserved was the right to re-occupy the pass with troops for the purpose of restoring order and enforcing the agreement, and also no doubt for an advance to Kabul if necessary; but the tribes distinctly understood that the terms of the agreement involved no permanent military occupation, and notwithstanding that they appear to have been desirous of some assistance in formulating their scheme of watch and ward for the pass (see paragraphs 7 and 8 of Major Conolly's letter dated 23rd September 1880), there is nothing to show that they contemplated asking for a permanent garrison of British troops. On the contrary, I believe that they were then, as I feel sure they would be now, totally averse to such a garrison. It may be urged that, as Landi Kotal belongs to the Luargi Shinwaris and does not lie within Afridi territory, what reason can the Afridis have for objection to a military force being stationed at that point? To this I would reply that the occupation of Landi Kotal to a great extent dominates the pass and is a standing menace to the integrity of the Afridi territory, and that I believe that the tribe would object as strongly to a military occupation of that point as they would to the location of a force at Ali Masjid or any other similar place within their own limits. They regard the pass as their property. Occupation to them would mean annexation, and with reference to the remarks contained in paragraph 6 of Mr. Merk's letter to which I draw special attention, I doubt if it could result in anything else. It would constitute, as I said in paragraph 5 of this office letter dated 21st September 1897, a continuing disgrace which might at any future time supply the motive for hostilities. Sir W. Lockhart assumes that whereas the quartering of a strong force in the Bazar Valley would give rise to tribal ill-feeling, the occupation of Landi Kotal would not have this effect. In this I cannot agree. The tribal honour would be seriously affected and a deep-seated resentment would be engendered instead of the friendly attitude which Sir W. Lockhart considers of much greater moment than the absolute safety of the pass.

In support of this view I might appeal to numerous documents in the literature of the frontier from 1876 down to the present time. There can be no doubt whatever that the tribes have the strongest objection to any extension of British authority over their territory. The advances which we have made

during recent years, coupled with the demarcation of a sphere of influence which to the tribal mind means ultimate annexation, must be placed in the forefront of the causes which have contributed to the rising of 1897. This opinion I have arrived at after full consideration, and I may have to enlarge upon it in another connection. My immediate predecessor, Sir Dennis Fitzpatrick, alluded, in paragraph 46 of his confidential memorandum of the 26th October 1896, to the effect on the Orakzais and Afridis of our taking up a position on the Samana. It is significant that in the somewhat insolent communication made by the Afridis just before they pillaged the Khyber they referred to the occupation of Samana and the Malakand, though both outside their territory, as an offence against the amicable relation of the British Government with the tribes. In their petition to the Amir, which was reported on in this office letter dated 20th January 1898, the Afridis dropped this grievance, but this was no doubt because it pertained more to the Orakzais than to themselves. The Orakzais referred to the occupation of the Samana in their petition. If the occupation of the Samana and the Malakand was an offence to the Afridis, it will readily be believed that the occupation of Landi Kotal will be bitterly resented by them.

Similarly, I may appeal to previous communications from the Punjab Government in support of the view that an advanced post on the borders of the Amir's territory will greatly irritate and annoy His Highness. It was said in the letter of the Foreign Department, dated 14th August 1896, that the definition in 1893 by the Durand Convention of the boundary of the spheres of influence of the Government of India and the Amir had removed the danger of rousing the jealousy of the Amir of Afganistan. But I think it must be admitted that recent events have shown that the Amir's jealousy is not removed.

Thirdly, the effect of an advance in the Khyber on other tribes must not be lost sight of. The demarcation of the spheres of British and Afghan influence has without doubt led to an impression that it is our object ultimately to secure complete control of the trans-border territory up to the Durand line, and this impression will be strengthened by the occupation of Landi Kotal.

I do not say that all this should not be faced in order to secure a substantial advantage, but it is my duty to represent the political drawbacks to the present proposal. And what is of primary importance is this, that the advance, which would possibly not be met by any overt opposition at the outset, would nevertheless constitute a grievance which would be nursed till the season of opportunity. If it is important that we should have the tribes friendly when we may have to march into Kabul, then we should avoid, if possible, doing that which will inevitably set them all against us.

Of the military aspect of the question I am not competent to speak. But I would venture to make the following remarks. If Sir R. Udny is right in thinking that the idea of guarding the pass by a mixed system, partly military and partly tribal, was rejected by the Defence Committee, no doubt the causes for such rejection will be examined before the proposal is revived. I incline to Mr. Merk's view that a single regiment stationed at Landi Kotal would be a source of anxiety, not of strength, and that a larger force would have to be maintained. Landi Kotal would not, I believe, be of much use as a base of operations in case of an advance in force to Kabul; there is neither room nor water for a large force. With the tribes friendly we should have no difficulty in pushing troops through the Khyber at any time. If they are unfriendly, we should have to move up in overwhelming force, and I question if a fortified post at Landi Kotal on the line of advance will contribute much to our operations. In times of peace we should have a force locked up, 19 miles from Jamrud, in a place where service would be unpalatable to our troops. The expense which will be incurred apart from the 9½ lakhs for buildings would be very considerable, especially if a whole brigade were retained there. Whether any military advantage would be secured by occupying the post with troops appears to me very doubtful, unless a satisfactory reply can be given to the above remarks.

Further, I question whether the proposal harmonizes with the policy of the Secretary of State as enunciated in his Despatch No. 1, dated 28th January

1898. One of the leading principles given in paragraph 18 of that despatch is the following: "The extent and difficulty of this mountainous border render it expedient that posts and cantonments should be limited to those positions only which are indispensable to the policy just indicated." The paragragh goes on to deprecate any new responsibilities not absolutely required by actual strategical necessities and the protection of the British Indian border. The limitation of our interference with the tribes so as to avoid the extension of administrative control over independent tribal territory is also enjoined. The military occupation of Landi Kotal means practically the annexation of the whole of the Khyber Pass with all the administrative responsibilities attaching thereto. I need not enlarge upon this question. I feel that the proposal can hardly be brought within the four corners of the Secretary of State's despatch, paragraphs 18 and 21, unless for military reasons it is indispensable.

Whether the presence of a military force in the Khyber is necessary in order to give stability to tribal arrangements is a question which, I submit, should not be judged by the fact that when in August last it was decided not to send a force up the pass to relieve the Khyber Rifles the latter only afforded a slight resistance to the tribal *lashkar*. I do not see that anything else could be expected, especially when the European officer in command was withdrawn. I agree with Sir W. Lockhart in laying stress on the fact that the corps without its commandant made some stand, and I should conclude from this that it would be quite possible to make more of their agency in the future by affording them the necessary support. If, however, the experiment is repeated, it must be done on a definite plan, and the true character of the arrangement must not be lost sight of. Moreover, I think that it will be necessary for some little time to keep a military force in the Khyber until the tribal arrangements are fairly started.

As to what those arrangements should be, the choice lies, if it is decided to abandon the idea of a military occupation, between tribal levies constituted and maintained on the basis of the old agreement and a militia recruited from the tribes and commanded by British officers. I should prefer not to give a final opinion at this stage between these two alternatives. Under sufficient safeguards I should be willing to accept either, and should wish to know what the tribes themselves propose, how effect could be given to their wishes, and what prospect there was of such an arrangement being permanent and satisfactory, before deciding to insist on an arrangement according to our own ideas of what is best. The corps should, I think, in any case be recruited, as before, mainly from the tribes which own the pass, and the Native officers might usually be similarly selected. If the force consisted of tribal levies as distinguished from a militia, some special agreement would be required as regards the position of the British officers attached to it, for I do not think it would be possible to do without British officers for the reasons given by Mr. Merk in paragraph 3 of his letter. Upon the whole I am inclined to prefer the idea of a militia commanded by European officers, but I would direct the General Officer Commanding and Political Officer to report on this subject after discussing the question with the tribal jirgas, and would await their report before finally deciding. It is above all things desirable that we should carry the tribes with us in any arrangement that is to be made.

If a corps for safeguarding the Khyber is established on either basis as above sketched, I have no doubt that for some time at all events it will be necessary to hold troops in reserve at Peshawar or Cherat ready to support it, or even possibly to overawe it before it has acquired a status and proved satisfactory. I believe myself that the Afridis will avoid hostilities for at all events a generation, but this cannot be reckoned upon. A force should be kept ready mobilised for some time to come, and Mr. Merk's suggestion that such a force should be stationed at Cherat in preference to Peshawar deserves consideration. The elevation is 4,500 feet and the climate is good; the conditions are similar to those under which the force would operate, if called upon to do so, in the hills. It is 23 miles by cart road and 19 by bridle road from the Pabbi Railway Station, and the troops could be in the Khyber at two days' notice. There is a good and permanent water-supply at Chapri about 800 feet below the ridge, and the water could easily be pumped up into a service reservoir on the ridge.

In regard to the details of any agreement which may now be made with the tribes, the correspondence which preceded the agreement of 1881 and that agreement itself will doubtless be consulted. The position is different in this respect that we now have to deal with a tribe which has just felt the weight of our hand and submitted to our demands. With those who minimize the result of our recent operations I am unable to agree. I consider that the compliance with our demand, especially in the matter of surrendering breech-loaders, shows conclusively how hard-pressed the different sections have been. But for their internal feuds and the difficulty they have in combining for any purpose except fanatical warfare, they would have satisfied our demands at a much earlier date. The lesson they have had will, I believe, last them for some time, and if they are properly managed they will enter into fresh negotiations with the British Government and be prepared to act up to their engagements at least as readily as in 1881. I would not agree to abandon a single provision of the agreement of that year which can in any way be serviceable. I would make such further demands founded upon our recent experience as may be deemed necessary for maintaining the new arrangements, but I do not think these need include the permanent occupation of Landi Kotal with troops, and I should expect that an arrangement founded on the consent of the tribes, without such occupation, would, if duly safeguarded and carefully worked out, prove efficient and lasting. Mr. A. F. D. Cunningham, C.I.E., who has been appointed by the Government of India to advise the General Officer Commanding in his negotiations, has complete knowledge of the Khyber Afridis and was associated in the previous negotiations of 1881, and, subject to such general instructions as the Government of India may issue, is quite capable of working out the details of a satisfactory scheme.

I would suggest that when the allowances to the Khyber Afridis are regranted, a condition should be attached to their renewal, *viz.*, that in the event of the British Government making arrangements for opening any other route to Kabul they shall be subject to reconsideration. This would be in addition to the condition already agreed to by the Government of India that the allowances shall be liable to deductions on account of repairs to the forts and posts damaged in the recent outbreak. If the further condition I have now suggested is adopted, it might be well at the same time to give the Afridis the opportunity of engaging that they will improve the road or agree to the opening of a railway, should Government desire this at any time, through the Khyber. It will be to their interest to do so, if they can thereby postpone the opening of an alternative route and the consequent reduction of their allowances.

Enclosure 10 in No. 3.

Letter from Sir R. Udny, K.C.S.I., Commissioner, Peshawar Division, to the Secretary to the Government of India, Foreign Department, dated Peshawar, the 20th April 1898.

1. Sir W. Lockhart was good enough to give me a copy of his letter with which he forwarded my Khyber Memorandum to you on the 16th March. The only point on which I should like to say another word is his remark "Thirdly" with reference to my paragraph 9. The advantage of the system I suggested is, as I said, that it would tend to reduce the number of Government Sniders in possession of the Khyber Rifles, and therefore the number of breech-loaders that would be liable to fall into the hands of the Afridis in the case of another outbreak like that of August last, for, as I have explained in my memorandum, I do not believe that a fort with a military garrison at Landi Kotal could be relied upon to effectually prevent such an outbreak, unless the garrison were large enough to move out a force for the defence of the whole line of the pass, though I quite admit that, after the lesson the Afridis have now received, it would be very difficult for the Mullas to induce them to break out again.

2. My suggestion, it will be seen, does not include any proposal for *taking away* Sniders from the Afridis, and if the offer of higher pay to men who, when they enlisted in the Khyber Rifles, brought their own Sniders with them, had any practical effect as "a premium on the theft of breech-loading rifles or their component parts from our troops or arsenals," our troops and arsenals must indeed be in a parlous state! If this argument has any force at all against my proposals, surely it applies with ten-fold force to our present demands upon the Afridis and Orakzais for the *surrender* of breech-loaders, and in fact to any attempt to disarm a trans-border tribe. Moreover, it must be remembered that our troops are armed either with the Lee-Metfords or Henry-Martinis. If, therefore, my proposal had the effect supposed, the Sniders that Afridis sought to obtain for the purpose of receiving higher pay with the Khyber Rifles would have to be acquired either from the Border Military Police (who, I am glad to say, scarcely ever lose a rifle) or from private sources, Cis-Indus, which it should be easy to guard, as the ordinary Police, both Trans and Cis-Indus, have only *short* smooth-bore Sniders which would not be accepted for the Khyber Rifles. As for Sir William Lockhart's view that "the Khyber Rifles should be as well armed as our Native Infantry Regiments," which means, I presume, that they should be given Henry-Martinis, I can only say that to my mind such a policy would be simply suicidal. The Khyber Rifles have always performed their escort and picquet duties with caravans, etc., quite satisfactorily, no cause has ever been shown why they should require more perfect arms than Sniders for such duties which are their only legitimate ones, and at present I cannot conceive any possible reason why they should be given better weapons at the risk of these weapons falling on some future occasion into the hands of their fellow-tribesmen. If the Afridis have had their lesson, surely we have had ours too!

3. As regards the expression "military impossibility," to which Sir W. Lockhart takes exception in his first remark on my paragraph 9, perhaps the phrase was a little too strong; but at the same time I referred to my letter No. 3028 of the 3rd October and I used it as practically summing up in two words what I had explained in full detail in that letter.

I am at a loss to understand what grounds Sir William Lockhart (who was in Europe at the time) has for asserting (*vide* his remarks on my paragraph 10) that the attitude of the Afridis when they attacked the Khyber last August "was at first vacillating and half-hearted." As I myself was on the spot at Peshawar and in receipt of the best information available, I think I am justified in asserting most emphatically that it was neither one nor the other. Again, no one ever doubted the "*desirability* of reinforcing the Khyber and supporting the Khyber Rifles with regular troops" (*vide* Sir W. Lockhart's first remark on my paragraph 9). The point is that, in the opinion of the military authorities, a sufficient force for this purpose was not available in Peshawar.

Enclosure 11 in No. 3.

Letter from Major-General W. P. Symons, C B., Commanding the Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Camp Landi Kotal, the 29th April 1898.

I have the honour to forward to you a note by Mr. F. D. Cunningham, Chief Political Officer, Khyber Force, on the present state of our demands against the Afridis, and a suggestion for their settlement.

2. In all that Mr. Cunningham has written I thoroughly concur. He has stated the position, so far as I know it, clearly and exactly.

I also agree with his proposals for a final settlement.

3. I have made and signed one or two remarks in the margin of the note.

4. There is one other point which I think it well to mention.

On page 2 of his note Mr. Cunningham writes that "the other clans deposited 78 rifles on their (Zakka Khel) account, to be redeemed as they could get others out of that section."

All these 78 rifles are good and serviceable weapons. My latest information from Mr. D. Donald at Jamrud is that only 11 rifles out of 51 so far brought in to redeem deposited rifles have been passed by an Armourer Sergeant as serviceable arms.

The remaining 40, some of which I saw, have been returned to the tribesmen as unserviceable weapons, and therefore unacceptable.

I have given strict orders that none but really serviceable arms are to be accepted in place of those pledged.

I think that we shall get all these rifles from the Zakka Khel in time. Mr. Cunningham and I consider it undesirable to fix any near date just now as the latest for the redemption of deposited rifles, but to leave it to the tribes to get the rifles out of the Zakkas when they can.

In the meantime we have good rifles in our possession.

5. I am sending to-day a copy of Mr. Cunningham's note, and of this letter, to the Chief Secretary, Punjab Government.

NOTE ON THE PRESENT STATE OF OUR DEMANDS AGAINST THE AFRIDIS, AND SUGGESTION FOR THEIR SETTLEMENT.

The object of this note is to show—

(i) the present state of our account with the Afridis based on the demands made in the Proclamation dated 21st November 1897;

(ii) in respect of unfulfilled demands, what we are likely to realise without a renewal of war;

(iii) the present attitude of the clans;

and to suggest—

(iv) what in my opinion seem the best means of settling outstanding claims.

Up to the date of General Sir W. Lockhart's final report, No. 113 P. of 5th April 1898, the terms complied with were:—

I.—Payment of a fine of ₹47,800.

II.—Surrender of 765 rifles.

The fine in money and arms originally notified was ₹50,000 and 800 rifles, but ₹2,200 and 35 rifles set down as the share of a section of the Kuki Khel were remitted and the amount realised was as stated above.

Further, at the date mentioned, a small balance was outstanding against the Aka Khel; *viz.*, ₹1,011* and 11 rifles, of which up to 25th April they have paid in ₹550† and 5 rifles. There is some hope of the balance being given in ere long.

* The figure 900 given in General Officer Commanding's letter to Foreign Department, dated 5th April, needs correction.

A mistake was made in converting Kabuli to British rupees: this was corrected by Mr. Hastings after the date of that letter, and the sum ₹1,011 is admitted by the Aka Khel.

† Two rifles taken at this value—

	₹
Martini	350
Snider	200

2. These two terms have been practically fulfilled, but we must not assume that compliance to this extent denotes such complete submission as will ensure early or even deferred fulfilment of the remaining conditions, and it must be remembered that, since the breaking up of the Tirah Expeditionary Force, the imminent threat of renewed invasion is no longer present to induce further obedience.

Terms fulfilled.

The fine has been paid, but in such a way that only part, and probably the smaller part, has been actually collected from the clansmen at large. The Zakka Khel, the most turbulent and troublesome clan, paid nothing; their share, R9,600, had to be recovered from the sale-proceeds of confiscated property belonging to two individual Maliks in British territory.*

A large sum, generally believed to be R4,000, portion of the share of the Kambar Khel, was paid by Rahim Shah, Kaka Khel, a man unconnected with the Afridis.

Then when, in spite of the repeated threat of a second advance into Tirah, a large balance remained to be collected, at the last moment as it were, some Afridi Native officers, servants of Government, paid in what was wanted partly from their own pockets and partly by borrowing (R15,000) from a Hindu Treasurer.† Though the fine was thus completed, the matter is not yet settled, even so far as we are concerned, for to procure this payment the authorities had to give written undertakings, which bind us hereafter to arrest any Afridis whom the guarantors may point out as defaulters.

If or when the tribes learn that these individual Native officers have received the rewards for which they have been recommended, aggregating R5,000, it is not improbable the clansmen will to that extent refuse to recoup them, and we may be left to aid them in recovering what they advanced by arrest and detention of individuals, which will keep alive a certain amount of friction on the Peshawar border.

As to the rifles surrendered only half their share was got out of the Zakka Khel, the other clans deposited 78 on their account to be redeemed as they could get others out of that section.

Similarly, Maliks of the other clans deposited their own private family arms to complete the tale due from the men of their sections, to be redeemed as they collect others.

I did not know this. I will enquire and get particulars.
W. P. SYMONS, *Major-Genl.*

The process of redemption goes on slowly and keeps up a certain friction inside the clans, which impedes their working in harmony to do anything *for* us, though it would not, if occasion arose, prevent their uniting against Government.

These facts are merely stated as a warning against a hasty conclusion, that because terms II and III of the Proclamation of 21st November have been fulfilled, compliance with the others, notably No. I, may be expected to follow automatically, or in a reasonable time in accordance with arrangements made when the Tirah Expeditionary Force broke up.

If while that force remained in the field intact, and the season for a further movement had not yet passed, if while the threat of a hostile advance and the re-occupation of Tirah was imminent, such difficulties were felt that vicarious

---

* Paragraph 6 of letter P., dated 5th April 1898, from General Officer Commanding, Tirah Expeditionary Force, to Foreign Secretary.

Note.—One section of the Zakka Khel, resident in the Khyber Pass, paid in R2,000 odd to save their spring crops near Landi Kotal, but the money was refunded to them. See Chief Political Officer's telegram, dated 4th April 1898, to Political Officer, Khyber, and the Political Officer, Khyber's telegram, dated 6th April 1898, to Chief Political Officer, Tirah Expeditionary Force.

† See paragraph 12 of Colonel Warburton's report, dated 2nd April, and No. 11 of the list of proposed rewards.

payment of fines was accepted for good reasons, how much greater are difficulties likely to be now when the fear of renewed measures of coercion is removed to a distance.

Demands outstanding.

3. The demands wholly or partly unsatisfied fall under the first head of the Proclamation of 21st November 1897. For clearness' sake they may be divided in detail as below :—

I.—Restoration of arms taken from the Khyber Rifles, or taken by deserters of that corps.

II.—Restoration of rifles taken by military deserters.

III.—Restoration of rifles taken before the advance of the Tirah Expeditionary Force.

IV.—Restoration of rifles captured in fighting.

V.—Compensation for—

(*a*) Government property looted, and for—

And at Ali Masjid.
W. P. SYMONS, *Maj.-Genl.*

(*b*) private property looted at Landi Kotal.

I propose to deal with these seriatim, but, as there is a great difference between the feeling of the clans in respect of demands I, II and III, and their attitude towards the others, in considering prospects of a settlement, the first three claims should be discussed separately from the remainder.

I.—ARMS OF "KHYBER RIFLES."

Demands which the clans admit and of which they promise satisfaction.

Up to the date of Sir W. Lockhart's final report, No. 113P. of 5th April, 157 had been surrendered out of 234 outstanding. Since then 12 have come in, and the balance now (25th April) is 65.

II.—RIFLES OF MILITARY DESERTERS.

From a letter from Sir Richard Udny, Chief Political Officer, dated 2nd March 1898, to Colonel Warburton, it appears that 51* rifles were then out, 2 were brought in on 1st April. The number due on Sir William Lockhart's departure was 49. Since then 4 have come in, leaving up to date a balance of 45.

III.—RIFLES TAKEN OR STOLEN BEFORE THE ADVANCE OF THE TIRAH EXPEDITIONARY FORCE.

In the letter from the Chief Political Officer to Colonel Warburton, quoted above, No. 69, dated 2nd March, these are given as follows :—

(*a*) Taken at Saragarhi on 12th September, 21, out of which 8 were recovered from Orakzais. The balance of 13 is debited to Afridis — one has lately been recovered at Kohat, leaving due 12.

(*b*) Stolen from a Native Field Hospital, Peshawar, on 13th October from 28th Bombay Pioneers, 2.

(Airidi section not known, and this is a doubtful case.)

(*c*) Robbed from 8th Bombay Infantry at Burj Hari Singh on 26th October, 4.

(*d*) Taken from a patrol of 9th Bengal Lancers near Mamani 8 carbines—4 recovered from the Sturi Khel Orakzais, balance due, 4.

In regard to these (Head III), I note here that there has been no regular enquiry and there is no proof that case (*b*) should be charged to the Afridis.

It is said that the thieves were Mohmands.

* Exact figures are difficult to get, as it is not clear whether one or two rifles brought in at Kohat in February excluded from the 51. But this will be cleared up.

Also some deserters were Orakzais and are not included in the demand against Afridis.

And as to case (*d*) I put it under this head following Sir R. Udny's classification, but it appears to me that this case might fairly come under the head of rifles captured in war.

They were taken from a patrol of our cavalry within foreign (Orakzai) territory, and are distinctly regarded by the Afridis as taken in fighting.

Reasons why the clans admit these claims I, II and III.

4. A jirga which was interviewed by General Symons, Commanding Khyber Field Force, at Jamrud on 18th April, admitted tribal responsibility for the restoration of rifles under Heads I and II, and for the rifles taken on the Samana (Saragarhi), Head III; and there is reason to hope that these will gradually be brought in.

Again it is necessary to be on our guard lest we assume from their attitude towards these claims a willingness to fulfil the remaining demands.

There are special reasons why the tribes are content to restore these rifles. In the first place, the deserters of the "Khyber Rifles" want employment, and can only secure it by returning with their arms.

Secondly, the military deserters wish to be free of British territory, free to come and go and seek service; for, though not to be re-enlisted in the army, they may get other employment, and, finally, they have been promised that for every rifle restored a sum of R150 will be placed to their credit against other demands.*

Thirdly, in respect of these and of rifles taken at Saragarhi, the tribesmen draw a distinction between them and arms captured in the war. They admit these to be "stolen property," and allege that they feel it right they should be surrendered.

Lastly, [illegible]potent than this conscientious scruple is the desire of the clans [illegible]f the Khyb[illegible]ee the restoration of their allowances, and I have no doubt [illegible]hat they fe[illegible]es carried off by deserters must be brought in before even by [illegible]own s[illegible]dard they can ask for their confiscated subsidies.

Other demands not [illegible] by the clans.

5. I come now to the greater unsatisfied demands which lie between us and a [illegible]settlement; [illegible] are—

IV.—Restoration of Rifles Captured in the War.

V.—Compensation for (*a*) Government, (*b*) Private Property Plundered.

The captured rifles † consist of 70 Lee-Metfords and 20 Martinis. The jirga of Maliks and the so-called hostages left at Jamrud, when Colonel Warburton departed, at their interview with General Symons, Commanding, Khyber Field Force, on 18th April, distinctly said they could not restore these rifles nor pay their value.

Restoration in kind must be admitted to be impossible, because a large number have been sold;‡ and sold at a cheaper rate than the price they now command, because until the Afridis had captured also some boxes of Dum-Dum Ammunition, they did not prize the Lee-Metford as highly as they do now.

At the accepted rates the value is—	R
70 Lee-Metfords, at R360§	25,200
20 Martinis, at R350	7,000
	32,200

* Telegram from Chief of the Staff, Tirah Expeditionary Force, to Colonel Warburton, No. 6251 T. dated 31st March 1898.

† Letter from Sir R. Udny, Chief Political Officer, to Colonel Warburton, No. 69, dated 2nd March 1898 as corrected by his No. 76 P, dated 5th March 898.

‡ Note—At first in Afghanistan, later to Mohmands.

§ 450 to 500 rupees, Kabuli.

The demand for compensation under Head V comes in all to nearly R28,600; details will be found in the enclosures to a letter from Commissioner, Peshawar, to Punjab Government, dated 9th November 1897, and in paragraph 38 of Sir W. Lockhart's despatch dated 3rd February 1898.

The estimate of Government property* was R13,976. The principal item in private compensation is Captain Barton's property, R12,391; there was also a bill for losses of Khyber Rifles, put at R10,134, cut down by Sir R. Udny to R2,000, and it seems clear that only losses of British subjects among the Khyber Rifles need be considered.

Even so, however, the claim comes to R28,589, and with the value of the captured rifles, the demand under Heads IV and V amounts to R60,789.

These terms—restoration of rifles and compensation for property plundered—are in the Proclamation, and have been mentioned in jirgas held since then. But there can be no doubt that the tribe will feel or affect surprise if *present* payment in kind and cash is insisted on, and they are not likely (save under stress of further coercive measures) to attempt fulfilment, partly because they cannot pay, and partly perhaps because they assume that Government has made peace with them.

This is clear from the attitude of the jirga and so-called hostages till lately at Jamrud, and it is the unanimous opinion of the officers† best able to judge who were on the spot when I came to the Khyber.

It is well known that during the proceedings with jirgas at Jamrud from January to April stress was specially laid upon the second and third terms of the Proclamation, and efforts were exclusively directed to securing payment of fine and surrender of the rifles taken as a fine.

For the quicker realisation of these, hostages were taken and were sent to Attock and a blockade was maintained. As each section or clan complied with these two terms their hostages were released, and the blockade removed. The other principal terms, for reasons no doubt sufficient, and with which I am not concerned, fell somehow or other into the background.

The tribe say, and from *their* point of view say, with some show of reason "there is peace now between us and Government, and save for rifles of deserters etc., which we admit are not lawfully ours, we do not understand more demands.

"Government told us to pay a fine to surrender 800 rifles, and we gave hostages for compliance with those orders; we paid up, Government released our hostages from detention at Attock, made us free of British territory, and removed the blockade; we understood peace was restored."

On the other hand, no doubt we know from Sir R. Udny's telegram of 8th April, to the Foreign Secretary, that he had reminded them of their liability to make good property plundered. On this point I can say no more than this, that these two large unsatisfied conditions seem to have been less constantly, less strongly, and less insistently before the clansmen, than the question of payment of fine in money and arms. Since the 30th December, the actual daily proceedings or negotiations with jirgas were in other hands; and it will be observed that Colonel Warburton's report‡ of 2nd April is practically silent as to the large demands outstanding, R28,600 compensation, and restoration of captured rifles, the *money* value of which is R32,200.

His report covers his proceedings or negotiations; it contains no mention of these demands, it refers only to the fine, to the rifles taken as fine, and to the arms of deserters of the Khyber Corps.

* Excluding buildings.
† Mr. Hastings, Mr. Donald and Native officers.
‡ Enclosure to General Sir W. Lockhart's letter to Government of India, Foreign Department, No. 113P., dated 5th April.

He describes how these were recovered, and then, in conclusion, in paragraph 12 speaks of "the men who have assisted me to carry out *the present settlement with the Afridis* * of the Khyber Range."

* The italics are mine.

This being the official report of the officer who at Jamrud had all direct dealings in his hands, it is not altogether surprising if the Afridi assumes, or perhaps I should say, hopes that the other † demands have fallen into the background, if not into abeyance.

† Excluding, of course, rifles of deserters, etc., for which the tribe admit responsibility.

Another fact points to the same conclusion, that is, that though the term as to compensation for property looted was mentioned by Sir R. Udny when he saw a jirga, as he notes, in February, yet it seems that the amount of the claim was never stated, its details were never discussed with any deputation, and no proposals were ever made to allot or distribute it among the seven or eight clans concerned.

6. However this may be, I am convinced that the Afridi partly cannot and partly will not pay more money down in cash, and that no measure short of another armed invasion and occupation of Tirah will induce him to surrender the rifles captured, his spoils of war.

Difficulty of realising these demands.

As to his ability to pay, I observe Colonel Warburton, who should know, in paragraph 10 of his report, doubted whether the Zakka Khel "have the means of paying up their share, R9,094, for some time to come." As a matter of fact, they did not pay; the money was recovered from property of two individual Maliks.

Paragraph 6 of General Sir W. Lockhart's letter to Government of India, Foreign Dept., No. 113 P. of 5th April.

Still the point remains if they were too poor to pay their share of R50,000, while the Tirah Expeditionary Force remained at their doors and threatened to enter, shall we get their share of other demands aggregating R60,000 when there is no such threat?

It was said by some of the tribesmen at Jamrud, and I believe with truth, that a good deal, if not all, of the money realised by the sale of these rifles was expended in the purchase of other rifles to make up the number 800 demanded by Government in Term II of the Proclamation issued in Tirah on the 21st November last.

W. P. SYMONS, *Maj.-Genl.*

As to the captured rifles Some, as I have said, have been sold in Jalalabad and the Mohmand hills; the remarks above made apply to recovery of their money value, the arms having left the country.

Some remain, and I am convinced from all I have seen and heard that nothing short of a renewal of war will secure their restoration. If we went to war to enforce the surrender of the remaining portion of those 70 Lee-Metfords, even in a campaign as successful as the last, we should not be sure of not losing 70 more.

7. The conclusion I have come to is that the clansmen may gradually bring in the balance—

Present attitude of the clans.

(1) of the Sniders of the Khyber Rifle Corps,

(2) of the arms of military deserters, and

(3) the rifles taken at Saragarhi, but that we shall get no more, and that they will not pay up any part of the compensation for property looted, R28,600, nor arms captured or their value R32,200, without being coerced anew.

I might go further and say that the present attitude of the Afridi is rather one of expectation of fresh concessions or favours. It is unnecessary to dwell on this; but it must be mentioned as a right appreciation of their present feeling is necessary to enable Government to judge how much more the tribes are likely to yield under present conditions.

The view here stated was the deliberate opinion of Mr. Hastings and others on the spot, and it is corroborated by the tribesmen's petitions to General Sir W. Lockhart on his departure. They petitioned that the salt-tax be reduced, that their runaway women should be surrendred to them, that a British subject kept as a political detenu in Lahore should be released. These petitions were repeated by the jirga whom General Symons saw on 18th April, and any one accustomed to deal with the clans on this border will recognise at once that these requests go beyond what these or other clans would have put forward before the war. Whatever be the explanation, it is a fact that the Afridi is more interested in and keener to press petitions of this kind than to discuss how he is to fulfil the demands which are still unsatisfied.

As to the salt-tax, they seem to expect some concession, though of course without reason. A report recently sent to the Commissioner, Peshawar, from Kohat showed that purchases of salt had stopped, because it was everywhere declared the duty was to be lessened; there is the same expectation in the Kohat Pass and among the Adam Khels, and it can be traced back to an origin in the Khyber.

Mr. Donald writing on the 25th April says of the Aka Khel—

"Their attitude does not seem very submissive, for they actually had the impertinence to tell Sikahdar Shah that, unless they were in the future to receive a handsome subsidy, they would start hostilities again with Government."

Question of "hostages" as security.

8. Before leaving the subject of the outstanding demands, it is necessary to advert to the hostages mentioned in paragraph 7 of General Sir W. Lockhart's final report*(*a*) as being given as security "for the restoration of all other Government property."

There seems to have been some misapprehension as to the understanding upon which these men, 144, from all sections † (*b*) of the Khyber Afridis came in. They and the Afridi Maliks present at the jirga seen by General Symons, Commanding Khyber Field Force, on 18th April, positively denied that they were hostages in the ordinary sense, that they were personally liable to arrest, detention or to any form of coercion in default of compliance with the terms unfulfilled. They asserted they were a "hazir jirga," a friendly deputation present to assist to secure compliance with those conditions which the clansmen at large appear to admit, *i.e.*, restoration of rifles of deserters of the Khyber Rifle Corps, etc. They denied personal liability even for these, but were ready to help and probably will help in the matter, and they totally repudiated any responsibility for "compensation" and for surrender of rifles captured in war.

They say with some force "you had hostages in detention at Attock. You took those for the fine in money and arms; when we paid up those you set free those men who were hostages—if hostages were still needed for other demands, those men would have been detained. We are under different conditions."

It is not easy to explain here how a misapprehension, if any, arose, but I can refer to telegrams‡ between Sir R. Udny, late Chief Political Officer, Tirah Expeditionary Force, and Colonel Warburton, which corroborate my view, and show that the former had great doubts whether these men were true hostages.

Telegraphing on the 4th April, the day before the date of the final political report, the Chief Political Officer said—"You must remember that the term

* (*a*) Dated 5th April, to Government of India, Foreign Department.

† (*b*) The Shau Khel, one sub-section of the Zakka Khel, are still unrepresented.

‡ (1) Telegram from Colonel Warburton, Jamrud, to Chief Political Officer, Tirah Expeditionary Force, Peshawar, dated 4th April.

(2) Telegram, dated 4th April, from Chief Political Officer, Tirah Expeditionary Force, to Colonel Warburton at Jamrud.

(3) Telegram, dated 4th April 1898, from Colonel Warburton, Jamrud, to Chief Political Officer, Tirah Expeditionary Force, Peshawar.

hostages can only be applied to men who remain under our control if not under actual detention, and that men sent into independent territory to fetch rifles cannot be called hostages at all, while they are absent across the border.

No distinct reply was given to this.

While at Jamrud these men were free to come and go, and exchanged themselves with fellow-clansmen at their own pleasure.

The hostages who were in detention at Attock for payment of the fine in money and arms were clearly on a very different footing, but they were all released when the fine was made good, except a few, 12 men, of the Aka Khel still detained till the fine on that clan is paid up.

So far then as regards the unfulfilled terms which the clan do not admit, these men (144) are not satisfactory hostages, and their presence at Jamrud is no security.

In fact, we have no "security" save this—

(1) the hope of the Khyber Afridis to get their allowances restored,* and

(2) the desire of all Afridis to avoid another war and the re-occupation of Tirah.

This inducement is probably sufficient to bring about compliance with the demands which the tribesmen admit, that is, restoration of the balance of the Sniders of the Khyber Rifle Corps, and of rifles carried off by deserters from regiments,† but I am convinced it is not sufficient to ensure satisfaction of the other outstanding claims.

Suggestions to mean as of arriving at a settlement.

9. The great question then remains how we can secure fulfilment of the balance of our demands. I offer an opinion on this point with diffidence, but I do so now because it may be presumed that Government are anxious, if possible, to avoid a renewal of war, and the necessity of sending another expedition to Tirah, because it is desirable to reduce the large force now maintained in the Khyber and at Bara, because with the height of the hot weather rapidly coming on time is short, because the prolongation of a period of what may be called an interruption of peaceful relations is inexpedient, and while it lasts there is more chance of the tribe or some section doing some new act of folly, which may commit them and Government to more active measures, and, lastly, because it is possible now to adopt a means by which Government may settle the whole matter satisfactorily.

The ultimate object is the restoration of permanent friendly relations with the Afridis, and a settlement of the mode in which the Khyber Pass is to be held or kept open in the future. Without anticipating the decision of Government on that point, I observe that the proposals before the Government of India range from a mixed system of tribal responsibility for the police work guarded or secured by a regular military garrison at Landi Kotal on the one hand, to a system of purely tribal management on the other. In all the proposals there is the common factor of tribal responsibility, whether in presence of a military force in the pass or not. This implies and necessitates tribal allowances. The question of allowances has not yet been officially mentioned to the clans, but they certainly expect them, and are always petitioning about them; the hope of their restoration is a principal motive for the present good behaviour of the *Khyber* sections.

If it be granted, as I think it must, that in the end the allowances will have to be restored, I venture to suggest that we should now, without further delay, summon the clansmen, and tell them that the subsidies will be restored hereafter, that Government is meanwhile considering details of the question of the further management of the pass; I would say to them—

"Government has certain demands against you still unsatisfied, demands made in the Proclamation of 21st November, and never authoritatively waived.

* *Note.*—This operates only on Khyber Afridis, not on Aka Khel or others.

† And of rifles taken at Saragarhi.

W. P. SYMONS, *Maj.-Genl.*

"Government accepts your petition that you have suffered heavy loss in the war, by the destruction of your houses and property, and as an act of grace it is content to make a settlement with you without demanding payment of those claims now *in cash*.

"These claims are—

"(1) Compensation for property looted in the Khyber, R28,600.

"(2) A sum on account of Government buildings burnt or destroyed, say R21,400.

"These make up a total of R50,000.

"This Government will recover from you by deducting 10 per cent. from your tribal allowance, so that for a few years you will receive R9 instead of R10."

About five years probably.

I should advise waiving the demand for surrender of rifles captured in war. Many have been sold, and I do not believe the tribe can compel the fortunate possessors of the remainder to give up what they consider spoils of war; I doubt whether the tribe would even attempt the task; it is so difficult they might prefer the risk of another war; and on our part though we should punish them heavily in a second compaign, it seems hardly worthwhile to undertake it for this object, seeing that in pursuit of these 70 Lee-Metfords we might lose as many more.

Moreover, the clansmen feel they have in this matter the sympathy of most people, whether inside or outside British territory; and I believe this condition might be waived as an act of grace without giving rise to any suspicion of undue weakness on our part.

10. I would, as suggested above, *now* make the claim (if Government still desire it) on account of Government buildings burnt or destroyed. To put it off until a settlement shall be made, adds to the difficulties of coming to any final understanding.

The reserved claim or liability for damage to Government buildings I strongly support this.
W. P. SYMONS, *Maj.-Genl.*

The tribe as a whole probably do not thoroughly understand the exact meaning of the last clause of the Proclamation under which, after compliance by them with all other terms, Government reserved to itself discretion to enforce on them liability "to make good all damage done by them to Government buildings."

This damage, I am told, has been estimated as R3,60,000.

Under present conditions, if they understood this, they would certainly be even less amenable than they are, and would ask what was the use of their attempting to meet other claims if Government had in reserve an undefined and possibly very large demand to be brought forward hereafter.

11. In conclusion, I may sum up by saying that my suggestion for a final settlement is based on these premises, *viz.*:—

Conclusion.

(1) That it is vain to expect the Afridis will or perhaps can satisfy in cash and kind the large demands outstanding.

(2) That any scheme of "management of the pass" which is likely to be accepted by Government includes tribal responsibility, whether associated with troops or not, and that as a consequence in the end the tribal allowances will have to be restored.

If the suggestion is accepted, I think the Khyber Force could soon be reduced and a satisfactory permanent settlement arrived at within a few weeks.

Time is of value, because the longer matters remain unsettled the more chance there is of some misguided section giving trouble and committing both the clans and the Government; and, as the hot weather already begun to be felt, advances, picquet duty and what may be called the police work of the pass will be found a heavy burden upon regular troops.

F. D. CUNNINGHAM,
Chief Political Officer, Khyber Force.

The 26th April 1898.

Enclosure 12 in No. 3.

Letter from the General Officer Commanding Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Camp Landi Kotal, the 1st May 1898.

I have the honour to forward to you a copy of a portion of a telegram received by me from Mr. Cunningham, Chief Political Officer, Khyber Force.

2. I forward the telegram, but feel confident that the Government of India is fully alive to this important question in the settlement with the Afridis.

Telegram from F. D. Cunningham, Esq., Chief Political Officer, Khyber Force, to the General Officer Commanding Khyber Force, Landi Kotal, dated Peshawar, the 29th April 1898.

With reference to paragraphs 9 and 10 of my note dated 26th, I suggest your pressing on Government the desirability of an early decision on the question of tribal allowances to Khyber Afridis. If they are to be restored, as I believe is inevitable, the sooner we let clans know the better. Reasons are—first, disaffected men are encouraging them against compliance with even those demands which clans admit, by warning them they will not get their old subsidies. Second, although reports in Colonel Aslam Khan's telegrams of 25th and 26th are exaggerated and misleading, yet no doubt Amir's officials have interviewed deputations of Zakka Khel, and it would not be surprising if such officials did not discourage compliance with wishes of Government, and suggest honours and rewards from Afghan side. If clans lose hope of subsidies from us, they will look elsewhere. Third, at present hope of allowances tends to keep things quiet, but delay in announcement is creating distrust or suspicion. If clans once begin to believe they will not be restored, turbulent spirits among them would be ready to give trouble, and we could not then trust the tribal arrangement, which now holds the pass for some five miles from Gurgarra to Landi Kotal, and to that extent saves troops from burdensome picquet duty. While crops are standing uncut, we have some hold over the Zakka section, who have undertaken to guard that part, but, once crops are cut, that security will be gone. Fourth, if tribe begin to believe subsidies will not be restored, I doubt whether the Khyber Rifles, so far as they are recruited from Afridis, could be trusted. They now guard pass from Jamrud to Fort Maude, and I understand it is desired to make over a further length of road up to Ali Masjid to them. If tribe learn, or begin to believe, subsidies will not be restored, we should have to guard entire pass with troops alone. For reason given in paragraph 9 of my note, I believe in the end restoration of subsidies is inevitable, and, if Government decide on this, early announcement is most desirable. Actual payment could of course begin later when settlement is made, but delay in announcement prolongs period of uncertainty and creates risk of trouble. Sir Richard Udny has authorised me to say that he is strongly of opinion that an early announcement on the question of the subsidies is most desirable.

The remainder of the telegram refers to other and irrelevant matter.

Enclosure 13 in No. 3.

Letter from Major-General W. P. Symons, C.B., General Officer Commanding the Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Peshawar, the 7th May 1898.

I have the honour to submit, for the consideration of the Government of India, a proposal connected with the future arrangements for holding the Khyber Pass, which may be deemed worthy of acceptation.

2. I have already forwarded to His Excellency the Commander-in-Chief in India a memorandum, in which I have given my views regarding the reconstruction of the Khyber Rifles. In this memorandum I stated that I thought that it would be desirable to attach two more British officers, and four selected Native officers, to this corps.

3. My proposal now is that the Commandant of the Khyber Rifles should also be Political Officer in the Khyber.

4. This arrangement would centralise the control of the pass, and give the Commandant that influence and authority which, in my opinion, he does not at present sufficiently possess.

5. This proposal should not be entertained, unless two other British military officers are sent to do duty with the Khyber Rifles.

6. The present Commandant, Captain Barton of the Guides, might do well, but, from all that I have heard, Captain Roos-Keppel, on special duty, Kusram, would appear to be an officer peculiarly qualified for this new appointment.

7. I have spoken to Mr. Cunningham on this matter. He concurs in my proposal.

Enclosure 14 in No. 3.

Minute of dissent by His Excellency Sir Charles Nairne, K.C.B., dated the 16th June 1898.

The Secretary of State, in his despatch of 28th January 1898, laid down that the maintenance of the Khyber Pass as a safe artery of communication and trade was an essential measure, whether viewed from the standpoint of our obligations to the Amir or from that of the protection of British subjects. How such safety is to be achieved appears to me much more a military than a political question, for not only must the protection of the pass be based fundamentally on adequate military precautions, but one of the principal ends to be thereby attained, the power of fulfilling our obligations to the Amir, is essentially military.

Sir William Lockhart has proposed that a fortified post should be built at Landi Kotal, to be garrisoned by a regular regiment of Native Infantry and to be armed with guns, while the rest of the pass should be held by a local militia. While I concur in the construction of a fort, I am opposed to its occupation by regular troops, which I believe would be a source of irritation both to the Afridis and to the Amir, would not overawe the surrounding tribes, but would be a constant source of friction. The expense of maintaining troops in such a locality would be great, and the service would be unpopular with our soldiers, while, in the event of serious friction with the Afridis, their communications would be insecure.

My view is that by suitable measures we can identify the Afridis with ourselves and with our military force to a much greater extent than has yet been attained, and that by so doing we can safely utilise them to hold both

the fort at Landi Kotal and the pass itself, thus not only attaining the end aimed at by the Secretary of State, but arriving at it by the very means on which he lay stress, *viz.*, by giving the Afridis the largest possible share in the scheme, and enlisting their good-will and assistance in the future protection of the road. I lay great stress on the Khyber Rifles (whether they retain that title or are termed militia is immaterial) being kept under the military authorities and being regarded as an essentially military body, the responsibility for their military control, discipline and efficiency being vested in the General Officer Commanding the Peshawar District, for not only will their efficiency be thereby greatly increased, but such a step will be highly popular with the men themselves who will feel themselves much more bound to, and identified with, our interests, while their self-esteem and military pride will be gratified and enlisted on our side when considering themselves soldiers of the Queen, as it can never be, while their status is but that of mere civil levies or local police. Nor can we by any other means instil into their minds that full assurance of unfailing support in the event of disturbances which has been rendered necessary by the events of last August.

In the pass itself we cannot have two independent powers, one Civil and the other Military, for such a division of local authority would be fatal to our complete control. It seems to me therefore essential to the completeness of my proposal to make the Commandant of the Khyber Rifles *ex officio* the Political Officer also. In this capacity he would report to, and act under, the Commissioner of Peshawar. There are many precedents for such a course. For instance, the Commandant of the Guides had always much political work entrusted to him, and also the Commandants of nearly all the Local Corps in Rajputana and Central India.

It is because I feel that the part of this scheme which has not been adopted is essential to its efficacy, that I am reluctantly obliged to dissent from the proposals of my Honourable Colleagues.

Closely connected with the safety of the pass is the much discussed subject of the policy for many years past of the Punjab Government in its dealings with the frontier tribes. Events of the past year add another proof of the failure of that policy, and I venture to record my dissent from reverting to it.

I carry back my memory to the days of Mackeson, Edwardes, Nicholson, James, and other distinguished soldier civilians under Sir John Lawrence. Their vigorous and severe but sympathetic methods were well suited to the turbulent natures of the highland caterans with whom they had to deal, and I venture to think it is to a reversion to these methods we must look for success in our future dealings with the tribes. In conversations I have had with Afridis in the past they have always expressed the utmost contempt for the fine and blockade system of the past 20 years. If we go among them and let our rule be felt, these frontier tribesmen will soon become, as all the military nations of India have become, our faithful friends, soldiers, and allies; but with such people half-hearted and tender methods of repression lead to nothing but failure and loss of prestige. I therefore deprecate allowing the management of the Afridis and of the Khyber Pass to be assumed by an agency which has failed in the past, as under such a system it was bound to fail, and which will fail again in the future.

In agreeing to the decision that the road-bed of the railway only should be laid through the pass, the rails being laid to Jamrud only, I wish to say that I consider this only permissible if the pass and Landi Kotal Fort is held by the Khyber Rifles. Should it be decided at any time to garrison Landi Kotal by regular troops, I consider it will be essential to complete the railway to that place at the same time.

(Signed) C. E. NAIRNE.

Enclosure 15 in No. 3.

Extract from Minute by Major-General the Honourable Sir E. H. H. Collen, K.C.I.E., C.B., dated the 17th June 1898.

I am constrained to record my dissent from the proposal that the local corps of Afridis, to be entitled the Khyber Militia, should be under the control of the Commissioner of Peshawar and of the Government of the Punjab, and not under the orders of the General Officer Commanding the Peshawar District. While I concur in the proposal to investigate the question whether we cannot raise similar militia on other parts of the frontier, I consider these corps should be under the frontier military authorities. I am also opposed to the political control of the Khyber Pass remaining in the hands of the Punjab Government.

We have decided that we must provide for the possibility of an advance into Afghanistan to defend that country, and, consequently, we have approved generally of the plan described in Sir William Lockhart's memorandum of the 11th March 1898, with the modification that irregular troops shall form the garrison of Landi Kotal instead of that garrison being composed of an ordinary regiment of the native army of India. Under Sir William Lockhart's plan the Khyber defile itself would be held by the Khyber Rifles. Both Sir William Lockhart and Sir Richard Udny are in favour of the military occupation of Landi Kotal.

For many reasons I should prefer that two local battalions, instead of militia, should be enlisted from the Afridis, Shinwaris, etc., and should, though officered under the irregular system, form a part of the native army of India, and preferably of the Punjab Frontier Force. One battalion would hold Landi Kotal, and the other would garrison the Khyber itself. I believe that we should in this way utilise more fully the military strength of the Afridis; that they would prefer enlistment in these regiments to enlistment in any corps of inferior status; that we should bind the Afridis to ourselves; that their honour and loyalty would be more fully pledged; that, while making it plain that we intend to hold the Khyber against all comers, we should enlist their good-will and services for its protection; that this would be a great advance in the policy of making the tribe our friends; and that, lastly, by the employment of battalions belonging to the army we should have a guarantee that the safety of the pass would be regarded as a paramount consideration.

It is a significant fact that the Malikdin Khel, who were the first of the sections to come in, had the greatest number of pensioners. The invasion of Tirah tried the loyalty and devotion to our service of the Afridi soldiers in an extraordinary degree, but they stood the strain in a remarkable manner.

There are objections to the employment of regiments of Sikhs or Gurkhas at Landi Kotal, but by the plan I proposed we should have regular troops there, recruited from the tribe we have defeated—as has happened over and over again in the history of India—men who would become soldiers in our army, just as loyal, just as devoted, as those we have already in our ranks.

The two battalions would perform all the garrison, convoy, and picquet duties of the pass in precisely the same way as that in which the militia would carry them out; but other considerations, such as the difficulty of adding to the strength of the Native Army at the present time, the possibility of opening up questions connected with the proportion of British to Native troops, etc., would cause me to waive my views in respect to the raising of two Afridi battalions of the army and to agree that these should be irregular troops raised as militia. I would agree to this on the distinct understanding that these corps should be under the orders of the General Officer Commanding the Peshawar District.

The whole of the proposals in Sir William Lockhart's memorandum are based on the military importance of maintaining the security of the Khyber Pass and of the military occupation of Landi Kotal. The construction of a strong fort, the improvement of the water-supply, the construction of block-houses in the upper and lower Khyber, are all integral parts of that plan, and I

cannot see how we can approve generally of the proposals in his memorandum if we take away the essence of the plan—the military control of Landi Kotal and the Khyber.

In my opinion the military question is of higher importance in this case than any question of civil and political policy. There are only two great military highways to Afghanistan—the Khyber and the Bolan. All others are subsidiary and secondary. These two great routes we must have under our effective control. We have secured the Bolan by a military occupation of that route; and if we are to ensure military predominance, in the case of our being forced to advance to the strategic front Kabul-Kandahar; if we are to fulfil the guarantee we have given for the integrity of Afghanistan; if we are to be ready to help the Amir or his successor in the way which has been indicated to us by Her Majesty's Government, we must have the Khyber route under effective control, and that cannot be obtained, in my opinion, by placing that great military highway under civil management.

In 1885-86 the whole question of the defence of the north-west frontier of India was discussed by the Government of India and by Her Majesty's Government. Field Marshall Sir Donald Stewart had pointed out in 1880 that Landi Kotal perfectly commanded the western entrance of the Khyber. Lord Roberts also considered that the main defence must be at the western end, *i.e.*, at Landi Kotal, and at the conclusion of the discussion the Government of India, in their despatch to the Secretary of State, dated 4th October 1886, admitted the great importance of including the Khyber in the scheme of defence of the north-west frontier. They proposed that an enclosed "serai" should be built at Landi Kotal capable of conversion into a redoubt, and they considered that steps should be taken gradually to familiarise the neighbouring tribes with the idea of an eventual occupation of the western outlet of the Khyber, and that the earliest favourable opportunity should be taken for carrying out this defensive measure in its integrity.

The Secretary of State concurred with the Government of India that a large "serai," capable of defence, would, under the circumstances, suffice "for the present." The favourable opportunity contemplated by the Government of Lord Dufferin has now presented itself, and I am strongly of opinion that a work should be built at Landi Kotal to fulfil the double purpose of resistance against tribal attack, and capable of being heavily armed when necessary, and of forming the centre of larger entrenchments should these eventually be required.

The Khyber route must be occupied and controlled as far as the Durand line, and Landi Kotal is the strategic point which it is essential to occupy. We require it as a depôt in case of an advance into Afghanistan; we must protect the water-supply and reservoirs already constructed; the position is a part of the scheme of defence of the north-west frontier as commanding the western entrance of the Khyber; and, bad as it is, the Bori-Kandao route gives us a short line into the Bazar Valley from Landi Kotal; our hold on the Khyber would be immensely strengthened; and, lastly, the position controls the Afridis, and would demonstrate to them and to all the frontier tribes that their outbreak had led to this strengthening of our position.

It is essential, in my opinion, that the irregular troops maintained at Landi Kotal and in the Khyber should be placed under military control, and that the General Officer Commanding at Peshawar should be held absolutely responsible for the security of the pass. If battalions of militia be formed from the Khyber Rifles and officered by British officers as proposed, there is not, I submit, any practical difficulty in placing the force under the military authorities. Up to 1890 the Derajat frontier militia were under the orders of the Officers Commanding the outposts of the Punjab Frontier Force. In 1892 the militia were turned into border military police.

It is quite true that these militia, practically only horse and foot levies, and not organised in battalions, were under the frontier military officers at a time when the frontier force itself was under the Punjab Government, but there are two special points of difference between that time and the present. In the first

place we were dealing then with the old frontier of British India running along at the foot of the hills, and with the "close border" system. Secondly, the militia of those days were always police rather than a military body. At the present time we are dealing with the tribes between our old frontier and the Durand line or frontier of British influence, and we are contemplating the formation of militia so organised as to be military bodies in every essential, with the exception that it is proposed to place them under civil and not under military control, while their officers would be British officers drawn from the army, but would be in "civil employ," and, by regulation, unfit to hold military command. Undoubtedly, in the days of the frontier militia as they were before 1890, the civil officer of the frontier district had a good deal to say to the militia although they were not under his control. But in the Khyber we have no revenue to collect nor any civil district to administer, and we have been expressly told by Her Majesty's Government that interference in the domestic affairs of the Afridis is not desired. The civil power, represented by the Commissioner of Peshawar, could at all times call upon their services, and I cannot think that there are adequate civil or political reasons which would render it necessary to place this corps under civil and not under military control. In my opinion there would be no guarantee for the safety of the pass unless the proper officer, the General Officer Commanding at Peshawar, whose head-quarters are only ten miles from the mouth of the pass - Jamrud Fort being actually in his command—is placed in a position of full responsibility.

I am also compelled to differ from the majority of my colleagues in the proposal that the political relations in the Khyber should remain under the Punjab Government. I do not desire, at this moment, to raise the whole question of the management of frontier politics, although I have long held that an improvement in the agency could and should be effected, and have expressed that opinion on various occasions. I would, therefore, simply say that I consider the management of Khyber affairs should be removed from the authority of the Punjab Government, and that they should be controlled by the Commissioner of Peshawar in direct communication with the Foreign Department of the Government of India.

In paragraph 19 of the Secretary of State's despatch of the 28th January 1898, the avoidance of interference with the tribes is impressed on us, and we are told, especially as regards the Khyber, that we should avoid interference with the independent tribal organisations or the domestic affairs of the Afridis. If this policy be strictly followed, our political relations with the Afridis should be very simple. They will be in receipt of allowances which were formerly granted to them from Kabul and of those in commutation of the tolls formerly exacted by them from caravans passing through the Khyber. The trade arrangements of the Khyber can be managed as they always have been, and I do not think there is the slightest fear that were the Khyber under military instead of political or civil control the arrangements could not be carried out precisely as before. The expansion of trade with Afghanistan *viâ* the Khyber depends mainly on the fiscal policy of the Amir.

I venture to think, therefore, that when once we have come to an agreement with them, we ought to have no political dealings with the Afridis which cannot be managed by the Political Officer in the pass, unless occasional questions of importance should need a reference to the Foreign Department of the Government of India. The direct system is one which I should prefer, because I believe that any unnecessary link in the administrative chain is a source of weakness, more especially in our relations with the frontier tribes. But in order to meet any objection that the Foreign Department might be overburdened with Khyber political business, I would place the Political Officer in the Khyber under the Commissioner of Peshawar, who for these purposes would be in direct communication with the Government of India, just as he is now in respect to dealings with the Amir.

My proposal, which is also that of General Symons and Mr. Cunningham, lately Political Officer in the Khyber Pass, is that the commandant of the Khyber irregular troops or militia should be the Political Officer of the Khyber.

This arrangement would be exactly that which we adopt during a state of war, when the military and political functions are combined in the General Officer in command, but with this advantage, that the commandant of the Khyber troops would be a selected officer, selected for his knowledge of Pathans in general and of Afridis in particular, selected for his ability to manage Afridis with that firm but sympathetic treatment to which they are susceptible. The control of, and responsibility for, civil and military arrangements would be vested in one man; there would be no artificial distinctions between "military" and "political," no divided counsels and divided responsibility. I am convinced that the Afridis or any other frontier tribe would understand and prefer such a system; every one who knows the frontier knows how easily friendly relations are created and maintained with the tribes by a Commanding Officer of a regiment aided by his officers and native officers; the Afridis would look to one authority with force at his command, for they cannot recognise the nice distinction between civil and military control; they cannot serve two masters, but they can play off one against the other; but if that one authority is a man who likes them, a man of tact as well as strength, no better plan could be created either to fulfil the policy of Her Majesty's Government or to provide for the military security of the pass. I fully recognise the ability, courage, and honesty of purpose of those statesmen who have been at the head of the Punjab Government, but it cannot be denied that the policy of the Punjab Government has not been the policy of the Government of India. Those who have studied frontier politics know very well how wide the differences of opinion have been as to what was the proper line to take.

Regarding this very question of the Khyber, a writer,* supposed by popular report to be a civilian of the highest political ability, experience, and standing, formerly under the Government of India, says:—

"The Afridis and other tribes are said to have been treated by the Punjab Government with such exaggerated deference that they believed we were afraid of them and became intolerably aggressive and defiant. It is to this timidity of action that many attribute the recent risings, and certainly nothing could have been better calculated to foster the conceit of the ever-conceited Pathan than the condition in which the Kohat Pass, between two important military stations has been allowed to remain for so many years. We did not even remove the stones and boulders which covered the track, and the tribesmen openly jeered about it. The system in the Khyber could hardly fail to have the same effect. 'That immortal demon, the Khybereo,' as Alexander Burnes quaintly calls him, was paid a large yearly sum for keeping open the pass, but we had no control over the tribe, our officers being forbidden to go off the road: and the arrangements, though kept from breaking down for some years by the exertions of Colonel Warburton, loyally working on a system he knew to be wrong, ended at last in a sudden collapse under the circumstances described by Sir Lepel Griffin. In connexion with this point we would again draw attention to the agreement of 1881 with the Afridis, and to the correspondence which preceded it. It will be seen that the Afridi headmen then pressed us to exercise a larger measure of interference than we were disposed to exercise, and that the local officers were inclined to some extent to meet their wishes. The Afridis were, in fact, ripe for the application of the Sandeman system, and if it had been applied our hold on the pass would, no doubt, have been much stronger than it was. There is, therefore, some ground for thinking that the loss and expense which we have lately incurred were due rather to a want of boldness in our treatment of the tribes than to the Forward Policy."

In 1896 the Government of India desired to give a wider discretion to the Political Officer of the Khyber. This view was combated by the Lieutenant-Governor of the day, who considered that the officer had already the fullest discretion, and that it would be unwise to extend it; and the opinions held by the present Lieutenant-Governor are well known. He was in favour of holding the pass by tribal agreement, and by a tribal force maintained on tribal responsibility (Foreign Department letter, dated 28th March 1898, paragraph 4). He was not in favour of any change in the conditions, which would impose the duty of maintaining the peace of the Khyber in times of disturbance on the British Government (Punjab Government letter, dated 1st April 1898, paragraph 3).

The present and proposed system is fraught with embarrassment and delay; the officers chosen for the work are not, and would not be, the officers of the Government of India, but of the Punjab Government; the procedure is

* "Edinburgh Review," January 1898.

circumlocutory; while the fact that a moveable or flying column is to be maintained under the orders of the *military* authorities ready to advance up the Khyber, is no guarantee that the local *civil* authorities would ask for its services until too late; they would refer to the Government of the Punjab at Lahore or Simla, and the latter would refer to the Government of India in the Foreign Department at Simla or Calcutta; and that Department would refer to the Military Department; and the Military Department would refer to the Commander-in-Chief. If the military security of the pass were to be entrusted to the proper authority, the commandant of the troops, under the General Officer Commanding at Peshawar, the responsibility would be fixed and absolute. "Time is everything in military operations," and prompt action would in the future, as has been the case repeatedly in the military history of India, nip any disturbance in the bud, where "fearful commenting, the leaden servitor of dull delay" would but lead to the worst and most disastrous results, however we might subsequently exact retribution or achieve victory. What may have been quite right when Jamrud was the frontier post, when the Khyber was sealed to us, when no officer dared to advance beyond that post, is not applicable now, when the Khyber route is recognised as the great highway to Afghanistan which should at all times be kept open.

The whole object of our frontier policy is to give us peace on the border and military predominance over Russia if a conflict should unhappily occur with that power. As Sir Dennis Fitzpatrick said: "All peace and order on the frontier must rest on force;" and I submit, therefore, that Landi Kotal and the Khyber should be occupied in a military sense, that the military duties should be controlled by the commandant, that the General Officer Commanding at Peshawar should be responsible for the pass, and that the political work should be in the hands of the commandant, with such assistance as may be necessary.

No. 4.

Extract from Letter from Government of India, Military Department, to the Right Hon'ble Lord George Francis Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 23rd June 1898.

With reference to our despatch in the Foreign Department of this day's date, we desire to lay before Your Lordship our proposals for the future military arrangements necessary for keeping open the road *viâ* the Malakand to Dir and Chitral.

In Your Lordship's despatch, dated 16th August 1895, we received the approval of Her Majesty's Government to the proposals which we had put forward for placing a garrison in Chitral, and maintaining communication with it by a direct road from the Peshawar Valley. In that despatch a reference was made to our expectation of being able to keep open the road by peaceful arrangements with the Khan of Dir and the Swat Khans, so that the only garrisons necessary would be on the Malakand Pass, and at the crossing of the river at Chakdara. Except for a comparatively brief period last year when an unexpected outburst of fanaticism brought together a great gathering from all the tribes to attack our garrisons, the road has been kept open, and we have lately had the satisfaction of seeing the relief of the troops at Chitral pass off, for the third time, in perfect quiet and without a shot being fired.

We do not now desire to enter on the general question of our policy with regard to Chitral. We are of opinion that the reasons which induced us in 1895 to recommend its occupation by a force of regular troops still hold good, and that its occupation must be continued for at least some considerable time to come in the same manner as hitherto. We also consider that our arrangements for maintaining communication with the garrison have been successful, and do not

call for any change in principle. An essential point in those arrangements is the retention of garrisons on the Malakand Pass and at Chakdara. In considering, in the light of recent events, what alterations are desirable with respect to the strength of the garrisons, and in the conditions under which they are maintained, we have been guided by certain principles which we propose to apply generally to all plans of local frontier defence.

Your Lordship has recently drawn our attention to the probable necessity for modifying existing arrangements on the North-West frontier, especially with a view to the concentration of forces, and to the retention of troops only on such communications through the borderland as are most necessary to maintain. It was at the same time pointed out that, from what had occurred during the past year, some of the frontier posts did not appear to have been sufficiently defensible; that regular troops should only be placed in such posts or localities, and under such conditions, as will enable them to promptly repel any attacks made upon them; and that local and tribal levies should be made to assume the aspect of a police rather than a military force. We fully appreciate the value of these observations. We propose that in future the strength of the more advanced garrisons on the North-West frontier shall be kept as low as may be practicable, the troops being placed in strong works which cannot be captured by a tribal enemy so long as the garrisons have food, water, and ammunition; that outposts of regular troops shall be as few and strong as possible; that minor posts, and posts on the line of communications, shall generally be held by levies, when the duties to be performed are those devolving on a police force, or by regular troops, which we should prefer to see organised as a militia; and that risings among the frontier tribes shall be met by moveable columns of sufficient strength, placed where they can readily support and assist the stationary garrisons. Further that, in event of serious attacks on the frontier being made or threatened, as in the case of the attacks by the Orakzais and Afridis on the Samana and other posts in August and September last, the garrisons of the weaker posts shall either be reinforced or withdrawn, according to a pre-arranged plan.

[Enclosures not printed.]

No. 5.

Extract from Letter from Government of India, Military Department, to the Right Hon'ble Lord George Francis Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 4th August 1898.

In continuation of our despatches in the Military Department, dated the 23rd June 1898, and dated the 7th July 1898, with which we submitted our proposals for the maintenance of the road *viâ* the Malakand to Dir and Chitral, and for the future holding of the Khyber, we now desire to lay before Your Lordship our views as to the military position to be maintained on the Miranzai border, in the Tochi Valley, and at Wana and the adjacent portion of the frontier.

The general principles which we propose should govern our arrangements for the future defence of the Punjab frontier are stated in paragraph 4 of our military despatch, dated the 23rd June 1898, and these principles have been adhered to in the proposals now submitted.

The most difficult portion of the frontier to deal with, after the Khyber, is the Miranzai border extending from Kohat to the Kurram, and comprising the Samana range, the posts on which were attacked in great strength by the Orakzai and Afridi tribes in September last. The position of the Samana has a local military importance in that it protects the Miranzai Valley through which the road runs connecting Thal and the cantonment of Parachinar in the Kurram Valley, with Kohat, *viâ* Hangu. The security of this road and of the inhabitants of the Miranzai Valley must be assured, and we are therefore of opinion that the retention of some force of regular troops on the Samana is at present essential

for the protection of this portion of the frontier, and although there is considerable force in the opinion of the Lieutenant-Governor of the Punjab expressed in the letter which forms one of the enclosures of this despatch, that it would be desirable to withdraw the troops from the Samana if this could be effected without loss of prestige, and without danger to our subjects in Miranzai, there is a general agreement that the time has not yet arrived when this course can be contemplated.

We decided that the question of the defence of the Samana should be considered on the spot by a Committee of experienced officers, including a political officer. A Committee was accordingly assembled in April last under the presidency of Brigadier-General E. R. Elles, C.B., to report generally on this question. In our instructions to the Committee, we stated that the object with which the Samana is to be held is to protect Miranzai against tribal incursions, to afford support to the police posts in resisting such incursions, and to dominate the road from Shinawari to Karappa; and the Committee were desired to consider whether the force of regular troops should be located on the Samana itself, or whether it was desirable that the posts on the crest should be limited to the smallest possible number, and the main defence entrusted to a force posted in rear of the range the greater portion of which would be equipped as a moveable column.

The report of the Committee, which we enclose, shows that they framed two alternative schemes—

A. To hold the Samana range in such strength as would admit of a small moveable column being immediately available to support the police posts; the force being depended on Kohat for its main support.

B. To hold the Samana range with purely defensive posts, supported by a moveable column located near at hand in Miranzai.

After carefully considering the views of the Committee, and of the Commander-in-Chief, we have decided to accept scheme A, which avoids the formation of a new cantonment on the frontier, a measure to which there are undoubtedly strong objections, and which would probably prove expensive. This scheme also affords a readier means of resisting an incursion by the Ublan Pass, and of securing communication with Peshawar by the Kohat Pass. We have consulted the Lieutenant-Governor of the Punjab, who without being very strongly in favour of the scheme, considers it amply provides for the protection of the frontier, and preferable to scheme B. We recommend the proposals generally for Your Lordship's approval and would add that we do not propose to make any material change in existing arrangements in the Kurram Valley. The fort at Parachinar will require improvement, and a project for a new post at Sadda is being prepared by the Punjab Government, but no definite proposals are as yet before us.

Turning to the Tochi Valley, we have considered whether, and to what extent, the withdrawal of the troops now in the Tochi can be effected. In view of the fact that the inhabitants of Daur have been assured of our protection, we are of opinion that the entire withdrawal of troops from the valley would be impracticable under the circumstances now existing. We believe, however, that it may be possible before long to diminish the former garrisons,* and to concentrate the regular troops, placing the principal garrison in a strong post at Miranshah. The question of holding the minor posts by levies, or by militia, should any be organised hereafter, is engaging our attention, and if Your Lordship accepts the general principle on the subject, stated in our despatch regarding the Khyber arrangements (Foreign Department, dated the 23rd June 1898), definite proposals will be submitted. As we cannot now abandon the occupation of the Tochi Valley, it appears to us necessary that the construction of the main post should be proceeded with, and if Your Lordship approves our proposal that it should be located at Miranshah, we should be glad to be favoured with a reply on this point by telegram. The garrison has not yet been

* Two battalions of native infantry.
One squadron of native cavalry.
Four guns, native mountain battery.
Four maxims.

finally decided, but it is probable that one, or one and a half battalions of native infantry, with a squadron, and two mountain guns would suffice. Any troops which can be set free from the Tochi would be stationed at Edwardesabad, where a moveable column would be maintained.

With regard to Wana, Your Lordship asked in your despatch, dated 8th May 1896 for a statement of our conclusions on the question whether the maintenance of the Wana cantonment was so necessary as to justify the expenditure incurred on it. In our despatch in the Foreign Department, dated the 1st September 1897, we informed Your Lordship that owing to the existing position of affairs in Waziristan, it was desirable to postpone our recommendations on the subject. We are of opinion that the presence of troops at Wana, together with that of the force in the Tochi Valley, materially contributed to prevent a rising on the part of the Waziris during the recent disturbances on the frontier.

Wana has also considerable local importance as it protects the trade route by which caravans reach the Gumal, and since the cantonment was established Waziri raids into Zhob have been greatly checked. Having regard therefore to the general peace of the country, we think that the withdrawal of the troops from Wana should not at present be undertaken. But here again we would desire to follow out the principle above mentioned, *viz.*, the concentration of regular troops, if, and when, we are able to provide an efficient substitute for holding the subsidiary posts.

We would add that the construction and improvement of roads on the North-West Frontier, also the possible construction of frontier railways, are being considered by us with reference to our requirements as a whole, and we shall, if necessary, address Your Lordship hereafter on these subjects.

[Enclosures no printed.]

No. 6.

Despatch from the Secretary of State for India, to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 5th August 1898.

I have given my most attentive consideration to the various proposals for restoring and maintaining British control over the Khaibar Pass which are contained in Your Excellency's letter (Foreign), dated the 23rd of June 1898.

2. The scheme which you recommend for the future management of affairs in this important artery of communication and commerce between Peshawar and Afghanistan consists of three main proposals. At Landi Kotal, the further end of the Pass, you contemplate the construction of a fort to be built with emplacements for guns, but not armed with guns, to be supplied with reservoirs and water channels, and to be occupied by a local militia recruited from the Afridi tribes and placed under British officers. The militia will have charge of the Pass as well as of the Fort. The second proposal is the organisation, at the British end of the Pass or in its neighbourhood, of a moveable column of sufficient force, and equipped with transport for the express purpose of supporting the militia. Various posts at Ali Masjid, Fort Maude and elsewhere are to be strengthened, and preparations are to be made for extending to Landi Kotal, when necessary, a line of rail, which will be laid as far as Jamrud. Thirdly, you desire to leave with the Government of the Punjab its control over the Pass and the new militia. Besides these three proposals, there are other matters treated of in your letter, namely, the conclusion of a new agreement with the tribes, and the settlement of outstanding claims against them, to which I shall revert presently.

3. As to the first proposal of Your Excellency's Government, namely, the construction of a strong defensible post at Landi Kotal, with an adequate water-

supply, I observe that military opinions generally concur in its necessity. It must be remembered that the Afridis, in the course of the late disturbances, wrought much havoc in the forts and posts entrusted to their charge, and the reconstruction of these works has been forced upon you. The work, in short, is one of restoration rather than one of fresh construction or advance. There is, however, a difference of opinion as to whether the fort when built should be occupied by regular troops, or left to the care of the Afridi militia supported by a moveable column at Peshawar and officered by British officers. That question is not exclusively a military one, it involves also important political issues.

4. It is convenient here to refer to two considerations which must be borne in mind in dealing with this and all other questions connected with the Khaibar Pass. The Afridis have, as you observe, "by their own acts ruptured their engagements," and in the proclamation addressed to them, and on subsequent occasions, they have been given to understand that the Pass will be re-opened under such terms as the British Government may consider necessary. No considerations of past agreements or of tribal rights stand in the way of the adoption by Your Excellency's Government of any military measures necessary for ensuring the permanent safety of the Pass, and for preventing a repetition of the late disturbances. At the same time, while your hands are perfectly free, and should be kept so in any negotiations or communications that you may have to conduct with the Afridis, it has always been an axiom that the good will of the tribesmen affords the best guarantee for the success of a frontier policy. In his memorandum, dated 11th March 1898, General Sir William Lockhart remarked with equal force and truth: "from a political point of view, the permanent occupation of China might give rise to tribal ill-feeling and thus cause us grave embarrassment; for it must be remembered that in undertaking military operations in Afghanistan, the friendly attitude of the frontier tribes would be of much greater moment than the absolute safety of any single pass, however important. If the attitude were friendly, the Pass would be secure in any case. If the Pass were secure, while the attitude was unfriendly, we should be harassed in other directions."

5. These observations apply equally to the immediate question of the occupation of the fort at Landi Kotal by regular troops. In the opinion of Your Excellency's Government, such a measure will necessarily strain the good will of the Afridis. Her Majesty's Government is, therefore, prepared to accept your view subject to such further consideration as may be needed after fuller experience. At the same time there is no necessity, in communicating to the tribes your intentions, to bind your Government as to its action hereafter. The reconstruction of the works destroyed by the Afridis in breach of their agreements will take some months, and the arguments both for, and against, the occupation of the fort by regular troops will receive additional weight according to the behaviour of the Afridis during the course of the next year. It is sufficient for me at present to convey to Your Excellency my general sanction to any expenditure that may be found necessary for the proper accommodation and defence of the garrison which you may eventually determine to place in the Khaibar Pass.

6. I accept also your proposals for establishing a moveable column, and I shall await the detailed report referred to at the end of paragraph 9 of Your Excellency's letter. I approve, further, of your measures set forth in paragraph 12 for extending railway communication, but I do not think that it is necessary for you to secure the right of working it and of exercising jurisdiction by means of any agreement with the several sections of the Afridi tribes. The Pass is now in the occupation of your Government, and it will be sufficient to intimate to the tribes your intentions for the future, and to retain the power now actually in your hands of carrying out your intentions.

7. Your third proposal, under which the Government of the Punjab is to retain its control over the Afridi militia and over the Khaibar Pass, raises an important and more difficult question. Under the altered circumstances which have arisen, it is not desirable merely to restore the arrangements which were in force before the recent outbreak. On the other hand, you are evidently impressed with the difficulty of withdrawing entirely the existing jurisdiction

of the Punjab Government on the British side of the frontier. Schemes have at various times been put forward for creating a Frontier Commissionership to hold separate charge of the Trans-Indus districts as well as of our relations with the tribes beyond. They are open to the objection that they would have the effect of breaking up the established administrative units of British India, disturbing the revenue system already introduced, and entailing a succession of territorial rectifications and compensations. There is no part of India where the need of a strong administration, equipped with all the resources of Government and capable of resisting aggressions, is more likely to be felt than on the North-Western Frontier. It may also be inexpedient to deprive the Government of the Punjab, and thus also of the Government of India, of a valuable opportunity of training officers for frontier service, and of gaining a knowledge of the feelings and habits of tribes which are constantly sending settlers into British districts. It is open to question whether it is altogether advisable to place in the hands of a single Commissioner the whole executive power on both sides of this most important section of the Empire's external frontier, without the restraint which a trained experience of financial and administrative responsibilities on a large scale imposes upon an authority charged with the government of a first-class province.

8. It is not, however, clear to me that the objections which you raise to the alternative courses indicated in paragraph 11 of your despatch are entirely unsurmountable. I desire in particular to invite your further consideration to the second of these alternatives :— that, namely, in which it is assumed that the officer entrusted with political matters in the Khaibar Pass might remain under the Commissioner of Peshawar, the Commissioner himself being placed under the Government of India. This plan, you observe, "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer." I confess that these objections appear to me to be rather formal than substantial. Your Excellency's Government already exercises direct control over the conduct of relations with Afghanistan, and in the management of the independent tribes upon the Punjab frontier there has always been a certain distribution of powers between the Local and Imperial Governments, with a more immediate supervision than is exercised over the internal administration of the Province. The Commissioner of Peshawar is, in fact, accustomed to this difference and its consequences, and in a large measure he even now serves two masters in times of peace, while on various occasions of frontier disturbances he has corresponded direct with the Government of India. The policy, therefore, of directing the affairs of the Khaibar Pass from the headquarters of the Government of India, through the Commissioner of Peshawar, is not altogether an untried policy ; and it must be borne in mind that the objects which You set forth in paragraph 6 of your letter are, all of them, matters for which your Excellency's Government is primarily responsible, subject to a reference to Her Majesty's Government. In view, then, of these several considerations, I am inclined to hold that it would be better that the Commissioner of Peshawar, and, through him, his several subordinates, who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, in respect of such matters, act directly under the Government of India. In such a case it would, in my opinion, be necessary that the Commissioner should be appointed by the Government of India, with special reference to the responsibility in respect of affairs on the frontier which will be placed upon him under the scheme now proposed. In respect of affairs beyond the frontier, it would suffice that he should send copies of his reports for the information of the Lieutenant-Governor of the Punjab.

9. I am aware that any such alteration of system may require additional expenditure and some relaxation of the ordinary service regulations, and also that it will involve a change in the status of the office of Commissioner. There is one point, however, which I commend to your particular attention. It seems to me to be of the first importance that the officers who are entrusted with the

delicate and difficult duties of maintaining friendly relations with, and control over, the trans-frontier tribes, should have large liberty of action and leisure for personal intercourse with them, and should be able to devote much time and patience to these special objects. They can hardly combine such duties with the regular work of district officials ; nor will it, I think, be found convenient that they should be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion. I shall not object to the exercise by your Government of a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to these considerations, which appear to me to be very material to the success of any system introduced for the removal of the disadvantages indicated above.

10. Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India. I have indicated, in the two foregoing paragraphs, some of the considerations which should be borne in mind in dealing with this question. But the matter is too important for me to arrive at any final decision in respect to them without giving to them the fullest possible consideration. I shall receive with interest any further observations which Your Excellency may desire to make on the suggestions of this despatch.

11. The remaining portions of Your Excellency's letter deal with two subjects which are closely connected with each other, namely, the exaction of the terms of submission already announced to the Afridis, and the grant to them of a sanad declaring their future relations. I accept the conclusion stated in the 15th paragraph of Your Excellency's letter, that no future steps should be taken to enforce the restitution of arms captured by the tribes during the campaign. In regard, however, to the abandonment of the demand for payment by the tribe of the value of property looted by them in the Khaibar, I consider that it would be well to make some further attempt to bring home to the Afridis their responsibility for the consequences of their flagrant breach of engagement in this respect. I desire to be informed whether a portion of the liability could not be realized from the property of Maliks Wali Mahomed and Khwas Khan in British India, and how far it might be possible by other means, such as the threat of a blockade, to enforce the pecuniary satisfaction which was formally demanded by Your Excellency's Government from the tribe.

12. I presume that the allowances payable to the clans will not be renewed until you have settled the terms upon which your future relations will be conducted with them. The acceptance of these allowances might suffice as a formal adhesion on their part to the terms which may be arranged. I do not consider that it is necessary to stipulate for their "acceptance recorded upon" a sanad, or to base your reservation of the right to construct and work a railway upon their consent. The conduct of the Afridis has, as you observe, "constituted an absolute rupture of all relations." You have obtained actual and undisputed possession of the Pass, and it is sufficient to announce in clear terms to the tribes the rights which you reserve, and the relations which for the future you intend to maintain. Whether you should include in the announcement a formal declaration of your intention to make a railway and to assume jurisdiction within its limits, appears to me doubtful ; at least until your survey is complete and you are prepared to begin the work. At any rate, I presume that great care will be taken to avoid the use of any language which may limit your powers or give rise to misunderstanding in the future ; and I request that Your Excellency will be so good as to send me a summary of the new settlement before you communicate it to the tribes for their guidance.

I have, etc.,

(Sd.) GEORGE HAMILTON.

No. 7.

Extract from Military Despatch from the Secretary of State for India in Council, to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 25th August 1898.

I have considered in Council Your Excellency's despatch M 6636 of 23rd June 1898, submitting your proposals for the military arrangements necessary for keeping open the road *viâ* the Malakand to Dir and Chitral.

Dealing first with the principles to be adopted generally for defences on the North-West Frontier, you propose that in future the strength of the more advanced garrisons shall be kept as low as may be practicable, being placed in strong works which cannot be captured by a tribal enemy so long as the garrisons have food, water, and ammunition; that outposts of regular troops shall be as few and strong as possible; that minor posts, and posts on the line of communications, shall generally be held by levies, when the duties to be performed are those devolving on a police force, or by irregular troops, which you would prefer to see organised as a militia; and that risings among the frontier tribes shall be met by moveable columns of sufficient strength, placed where they can readily support and assist the stationary garrisons. You consider that in event of serious attacks on the frontier being made or threatened, as in the case of the attacks by the Orakzais and Afridis on the Samana and other posts in August and September 1897, the garrisons of the weaker posts shall either be reinforced or withdrawn according to a pre-arranged plan.

I approve of these general principles, which are in accordance with the views expressed in my despatch of the 28th January 1898. I will merely add that in all cases the garrisons should be amply sufficient not only with regard to the perimeter of the works to be defended, but also to provide some relief for the troops in the contingency of continuous attacks for several nights running, such as occurred during the outbreak of last year.

No. 8.

Letter from Government of India, Foreign Department, to the Right Hon'ble Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 10th November 1898.

Dated the 5th August 1898.

As soon as we received Your Lordship's despatch as marked in the margin, we referred to the Local Government the question of the conduct of external relations with the tribes on the Peshawar border. We have now received the reply of the Lieutenant-Governor, but, for reasons stated by His Excellency the Viceroy in a Minute which we enclose, we have been unable to give to the Lieutenant-Governor's memorandum sufficient consideration to enable us to state our views on the question at issue.

2. In the meantime we have the honour to forward, for information, the correspondence alluded to and the Minute by His Excellency the Viceroy.

We have, etc.,

Enclosure 1 in No. 8.

Letter from Sir William Cuningham, K.C.S.I, Secretary to the Government of India, Foreign Department, to the Chief Secretary to the Government of the Punjab, dated Simla, the 19th September 1898.

In my letter dated the 12th September, you were informed that a further communication would be made to you upon the question of the future position of the Commissioner of the Peshawar Division and other matters dealt with in the despatch which that letter forwarded.

2. In the 7th and 8th paragraphs Lord George Hamilton discusses alternative ways in which it has been proposed to carry on relations with the tribes on the Punjab border, and His Lordship states the decision at which Her Majesty's Government have arrived in these words :—" Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India."

3. Of the two plans, one is the creation of a Frontier Commissionership. Any discussion of this scheme could only be undertaken after careful consideration by the Government of India of the various objections indicated by the Secretary of State himself. The Governor-General in Council accordingly in this letter would primarily invite His Honour's attention to the alternative of making the Commissioner of Peshawar and, through him, his several subordinates who are employed in conducting external relations with the tribes, directly subordinate, in respect of such matters, to the Government of India. The practicability of an arrangement of this nature must largely depend on local circumstances and conditions; and it cannot usefully be discussed without information which the Local Government alone can supply. The Governor-General in Council, therefore, desires to be favoured with the opinion of his Honour the Lieutenant-Governor as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, and as to the changes in system which would be entailed by giving effect to the scheme above indicated.

4. The conclusion to which Her Majesty's Government have come may contemplate the extension of this system of controlling tribal relations to the whole Punjab frontier, but as all the remainder of the paragraph from which the passage above is quoted deals exclusively with the Commissioner of Peshawar and his subordinates, it would, in the opinion of the Government of India, be convenient to consider this matter first from the point of view of the Peshawar Commissionership only, and not to provide for re-arrangement of the duties and position of the frontier officers of the Punjab Commission on other parts of the border, further than alterations proposed in the Peshawar Commissionership rendered a reference to others necessary.

I have, etc.,

(Sd.) W. J. CUNINGHAM,
Secretary to the Government of India.

Enclosure 2 in No. 8.

Letter from the Hon'ble Mr. L. W. Dane, Officiating Chief Secretary to the Government of the Punjab, to the Secretary to the Government of India, Foreign Department, dated Camp, the 25rd October 1898.

I am desired to acknowledge the receipt of your letter, dated 19th ultimo, in which it is intimated that the Governor-General in Council desires to be favoured with the opinion of His Honour the Lieutenant-Governor as to the

way in which the external relations with the tribes on the Peshawar border can be regulated under the conditions desired by Her Majesty's Government as set forth in the despatch from the Secretary of State, No. 18, dated 5th August 1898.

Punjab Government endorsements, dated the 29th September 1898, forwarding the papers to the Commissioners of the Peshawar and Derajat Divisions and to Mr. H. A. Anderson.
Letter from the Commissioner, Derajat, dated the 7th October 1898
Letter from Mr. H. A. Anderson, dated the 17th October 1898.
Note by his Honour the Lieutenant-Governor, dated the 19th October 1898.

2. In compliance with these orders, I am now to submit copies of the documents noted on the margin, and to intimate that the opinions of Sir Richard Udny and Mr. F. D. Cunningham, who was consulted unofficially, will be forwarded on receipt.

Annex. I.

Government of India letter, dated the 19th September 1898. Endorsed by Punjab Government.

Copy forwarded to the Commissioner and Superintendent, Peshawar Division, for favour of his very early opinion on the measures discussed in paragraphs 7 and 8 of the Secretary of State's despatch, Secret, dated 5th August 1898, with special reference to the arrangement mentioned by the Government of India in this letter of making the Commissioner of the Peshawar Division directly subordinate to Government of India in regard to his political dealings with the trans-border tribes.

Copy, with copy of Secretary of State's despatch, dated 5th August 1898, forwarded to the Commissioner and Superintendent, Derajat Division, H. A. Anderson, Esq., for favour of his opinion on the suggestions for the future management of the Punjab frontier contained in paragraphs 7 and 8 of the despatch from Secretary of State, Secret, dated 5th August 1898.

Annex. II.

Letter from W. R. H. Merk, Esq., C.S.,C.S.I., Commissioner and Superintendent, Derajat Division, to the Officiating Chief Secretary to Government, Punjab, dated Dera Ismail Khan, 7th October 1898.

I have the honour to acknowledge the receipt of your endorsement dated the 29th ultimo, forwarding for opinion a copy of the Government of India, Foreign Department, letter noted in the margin, with its enclosure, on the subject of the future management of the Punjab frontier.

Dated 19th ultimo.

2. The matters discussed in paragraphs 7 and 8 of the Secretary of State's despatch, dated the 5th August 1898, relate primarily to the frontier management of the Peshawar Division and not to that of the Derajat Division. My excuse for submitting an opinion regarding another Division than the one in which I am just at present holding office is, that my connection with the Peshawar Division commenced 21 years ago, that in the course of that connection I have served in every district of the Division, in the Khaibar and in Kurram, and have occupied every post, from that of Junior Assistant Commissioner in the Division to that of Commissioner.

3. It may serve to explain the position as it at present stands, and help towards appreciating the probable effect of a change in the existing arrangements, if, even at the risk of unduly lengthening this letter, I proceed to give as brief an account as possible of the state of affairs that, with slight and unimportant local

modifications which do not affect the question, obtains along the whole line of the Punjab frontier, from Hazara to the Quetta Agency. It is realized that the populations on either side of the boundary line are as closely interwoven and intermingled, socially, commercially and in all the matters of everyday life, as are the inhabitants of Nancy and Metz or for the matter of that the people of Berwickshire and Northumberland. Thousands of our subjects are constantly visiting independent territory, many thousands of the hillmen regularly migrate to our districts, whole clans live for half the year on this and for the other half of the year on that side of the border; where the residents within and without the frontier are not men of the same clan or of the same tribe, they are connected by the intimate ties of common race, of marriage, neighbourhood and of an association, territorial and social, which has endured for many generations. In short, there is no impassable gap or gulf, difficult to cross, between British and independent territory; the frontier is in reality only an arbitrary line drawn through the limits of a more or less homogeneous population. That being so, it will be readily understood what an infinity of questions, of disputes and disagreements, of business, arises from the daily intercourse of these people. This business must be settled promptly and with justice, or the peace of the border is endangered; it is business which is quite distinct from the Imperial questions in which British and independent interests, as such, are arrayed against each other. And upon the successful administration of the daily business of the frontier it chiefly depends whether, under ordinary circumstances, the border is heard of or not.

But the discharge of local or Imperial business on the border is not the sole duty that falls upon frontier officers by whom I mean Deputy Commissioners and Commissioners. The internal government of the frontier districts is a matter of great moment, and in some districts of exceptional difficulty. I say it is a matter of moment, because I believe that the prosperity and satisfaction of our trans-Indus subjects reacts strongly upon the men beyond the border, and that discontent within the frontier enhances the dislike of the clans to come under our control and influence and gives a handle to those who preach fanaticism and inculcate hostility. Of the six frontier districts in the Punjab—Hazara, Peshawar, Kohat, Bannu, Dera Ismail Khan, Dera Ghazi Khan—the district of Peshawar is in some respects pre-eminently the most difficult to manage of all in the Province; the revenue and irrigation systems are exceedingly complex and intricate; crime is of the gravest nature; and the population is exceptionally headstrong, fanatical, excitable and intractable. Next in degree with similar general features, comes Bannu. And, excluding Kohat, I think that the five frontier districts, leaving border matters for the moment out of consideration, call for administrative qualifications and capacity above the average which is requisite for Cis-Indus districts. This is undoubtedly so in the cases of Peshawar, Bannu, Hazara; and I think of Dera Ismail Khan and Dera Ghazi Khan also.

4. Turning now to the machinery which works the external and internal business of the frontier divisions and districts, it will be seen that the whole of the Punjab border tribes are already in the immediate and direct charge of officers who have large liberty of action and perfect leisure for personal intercourse with them, who can devote all their time and energy to the specific end of tribal management. To look after one-half of the border clans, special officers exist, appointed *ad hoc*. The tribes of Swat and the Utmanr Khel are in charge of the Political Agent, Dir and Swat; the Political Officer in the Khaibar attends to nearly the whole of the Afridi tribe, to the Mullagoris and some Mohmands; the Officer on Special Duty in Kurram deals with the Zaimusht tribe, with several clans of the Orakzais and with the Chamkannis; the Political Officers of Northern and Southern Waziristan between them administer the whole trans-frontier population from the Kohat to the Dera Ghazi Khan District. The fact is if we exclude the Biluch tribes of the Dera Ghazi Khan frontier who are, as regards border management, in another category altogether from the Pathan tribes, two-thirds to three-fourths of the frontier is already in the hands of special officers who have no other functions, except perhaps the Officer on Special Duty in Kurram, than those of tribal management. These officers, excluding the Political Agent on the Malakand who reports direct to the Government of India, are directly subordinate to the Commissioners of their respective Divisions. In matters affecting districts they

correspond with the Deputy Commissioners or with the Commandants of Border Military Police, as may be most convenient in each case. Where we have not crossed the boundary of British India, and consequently have not been obliged to create political charges that are independent of Deputy Commissioners, the maintenance of friendly relations with the border tribes, the exercise of such control over them is feasible and expedient, and the settlement of the business, which I have sketched above, arising out of the daily intercourse and transactions of the people within and without the frontier line, is entrusted to the Commandants of Border Military Police, under the general control and supervision of Deputy Commissioners. These Commandants, one of whom is appointed to each one of the six frontier districts, who are European or Native officers, as the case may be (generally European in the more important districts), have the fullest leisure and opportunity for cultivating relations with the clans and for managing the hill men. That is their *métier*. In the discharge of their duties they are served by, and make every use of, the large establishments of Border Military Police in each district whose work consists quite as much of intercourse with the tribes as of watch and ward on the border.

Important matters and questions which the Commandants cannot dispose of are referred to the Deputy Commissioners, under whose general orders, supervision and control are also the Border Military Police establishments; and similarly, whenever necessary by Deputy Commissioners and by the special Political Officers whom I have mentioned above, to Commissioners. And this is as it should be. I have explained how and why in the districts external cannot be dissociated from internal management, the people are much too closely connected for that; there must be one administrative head for both branches of management; in places where we have crossed the boundary and have undertaken the political or other administration of large trans-frontier tracts the circumstances are entirely different, and there we have officers co-ordinate with and not subordinate to Deputy Commissioners, but within a district there can only be one king in Brenford, *viz.*, the Deputy Commissioner. In other ways also this system is right; it is essential that the officers who are in direct and immediate charge and control of tribes should enjoy the fullest and most unrestrained intercourse with them; but for senior officers it is in my opinion a mistake to see too much of the tribesmen. By the time an officer has reached the rank of Commissioner he is well known to, and has a thorough personal knowledge and acquaintance with, the jirgas and clansmen, acquired during the period when as Assistant Commissioner, or Political Officer, or in charge of the Border Military Police, and as Deputy Commissioner, he has had constant and daily dealings with them. To my mind, the present system ensures the requisite amount of touch between the senior officers and the clans, without sacrificing any of the respect and awe which the hillmen should entertain for relatively high office. On the other hand, the officers actually in charge of them have nothing else to do than to deal with them. I cannot help thinking that the feeling that officers are not now in touch with the clans as they were formerly is based on a misconception. The officers in charge of the tribesmen are very much more in touch with them than they were before or after the Mutiny. It will be remembered that in the early days of the Punjab there were neither special Political Officers nor Commandants of Border Military Police; the Deputy Commissioners had to do everything themselves, and I find as early as 1850 Reynell Taylor, in a note regarding the Derajat frontier which he wrote for the benefit of his successor, Nicholson, lamenting the loss of opportunities for mixing with the tribesmen, owing to increased work. Great as was the task accomplished by those men, they tolerated and perforce had to tolerate a condition of things, insecurity within the border and trouble upon it, at which we, of the present day, would be horrified. This defect in the earlier administration has been recognised and remedied by the appointment of special tribal officers in every district of the two frontier divisions and at five trans-frontier localities (Malakand, Khaibar, Kurram, Tochi, and Wana); that is to say of eleven officers whose sole duty is frontier management.

5. Before considering the effect of the changes contemplated in the system of frontier management, I would venture to point out, first, that all and every matter, I think I am correct in saying, of Imperial interest on the border, however

small it may be, is instantly referred by the Punjab Government for the information and orders of the Government of India; and that no measure or step whatever which is of general bearing or of any importance in border policy, no organic change of any kind, is undertaken by the Local Government without the previous sanction and concurrence of the Supreme Government. This has been so since 1882, if not from an earlier time. To all intents and purposes, therefore, the Punjab frontier is as already as much under the Government of India as if Commissioners reported on frontier matters direct to that Government. The elimination of the Punjab Government will, however, have a profound effect in other ways, which I will submit further on.

The other point to which I would invite attention is that, save in matters of the purest routine, the Commissioner of Peshawar can hardly be said to correspond direct with the Government of India. So far as I know the affairs of the Khaibar Pass have never been directed by the Government of India through the Commissioner omitting the Punjab Government. Since 1881, and I think practically for the past 20 years, the duties of the Commissioner in connection with the Government of India have consisted of reporting to that Government (generally by the same telegram in which the Commissioner reports to the Punjab Government) the occurrence of any serious border event; and of transmitting to Kabul urgent communications intended for the Amir and telegraphed to Peshawar, and similarly of telegraphing to the Government of India the contents of urgent letters from the Amir. He also occasionally arranges for the transit of employés or goods belonging to the Amir. In fact, so purely ministerial is this branch of his duties that during his absence from Peshawar the Duputy Commissioner performs them. His present position therefore in respect of serving two masters, if it can be so described, is utterly different from that which is contemplated for the future. I do not think he can be said ever to have been under two masters. In the early days of the Punjab, the medium for the execution of the Imperial policy in regard to Afghanistan was the Lieutenant-Governor of the Punjab, who naturally employed the Commissioner of Peshawar, *e.g.*, in the negotiations and correspondence which preceded the Afghan treaty of 1856, concluded by Sir J. Lawrence. Subsequently, the work of the Commissioner in connection with the Government of India was confined to translating and transmitting the Kabul correspondence and supplying news; I remember just before the Afghan war that this work devolved upon Sir L. Cavagnari, then Deputy Commissioner of Peshawar; and since then the Commissioner's duty direct under the Supreme Government has been always purely ministerial it appears, and in no way administrative.

6. At first sight the proposed alterations in the system of frontier management seem to effect no appreciable change in the present arrangements; there are the special tribal officers already at hand: the frontier is already practically under the Government of India, the elimination of the Punjab Government will accelerate the transit of orders and the receipt of reports, and the whole difference in the conduct of affairs apparently will be almost nominal. But if we go into the matter, it seems to me that there are very great difficulties in the way; in practice if not in theory. These I will now submit:

7. It is not a question on which I can venture to offer an opinion, whether the Government of India ought or ought not to deprive itself of the weight, the experience, the knowledge, the long training, of the Punjab Government in matters concerning the border tribes. It is suggested that the Commissioner of Peshawar will send copies of his reports to the Local Government, and no doubt copies of letters from the Government of India to the Commissioner would similarly be communicated to the Local Government. But this is a very different thing from what obtains now; from the beginning the Lieutenant-Governor has personal knowledge of a case, if it is of any importance he has probably discussed it with the local officers, he has gathered information on all points which are obscure or have been neglected, in short he is in a position to form a full and carefully-weighed judgment. Precluded from personal discussion with officers on the spot and from eliciting information and confined to an opinion upon papers drawn up without the Lieutenant-Governor's intervention, it is inevitable that the views of the Local Government will not possibly

have the great intrinsic value that they now possess, and that the Lieutenant-Governor will drift farther and farther from touch with the border. Yet, seeing that local officers cannot avoid as a rule dealing with matters solely from a local point of view, that they are in the heat and dust of the battle so to speak, the opinion and judgment of a high officer of State who approaches the consideration of a question with a dispassionate mind and yet with local knowledge, who looks at it from a broad standpoint that embraces the whole frontier and yet is not wholly centred in the frontier, and who moreover has full leisure and opportunity for going into these matters, on the spot, must be of inestimable value to the Supreme Government. Moreover, it is unavoidable that the local officers will be deprived of the benefit of personal communications with their Government. To this benefit I think due weight is not always given, it is a factor of great importance in administration. It is of course practicable for a Commissioner to visit Simla or Calcutta, but of necessity the occasions for doing so must be far more rare, and the meetings will be of a different character from those that take place when the Lieutenant-Governor marches along the frontier or officers go to Lahore. The element of personal supervision on the spot and of personal influence on part of the governing authority must disappear, unless the Commissioner is raised to, or almost to, the position of the Lieutenant-Governor. But even then the Commissioner's views will necessarily be narrower and more circumscribed than those of the Local Government, possibly also less prudent and circumspect.

8. If the Commissioner of Peshawar is appointed by the Government of India, it is almost impossible that there should not be difficulty arising from the then divergent interests of the Supreme and of the Local Government. The Government of India will then want the best frontier officer it can get; on the other hand the Lieutenant-Governor must think of the internal administration of the frontier divisions of revenue, police, crime, etc., etc.; it does not follow that a good Political Officer has good administrative abilities, or *vice versâ*; and it will not be easy for both Governments to unite upon the same choice. Moreover, the Commissioner is only one man, he cannot work without his subordinate staff in each district, and the dual control will and must run through the whole administrative establishment. The Commissioner will emphatically serve two masters (which he does not do now) and where the head of the administration is under dual control, the body must necessarily follow. I do not see how under those circumstances, men being what they are, a break down can be escaped.

9. I have explained that there is a mass of daily business transacted in connection with the border management of districts, with the political charges and their administrations, with the border establishments, etc., this is all disposed of by the local officers under the orders of the Local Government. What that amounts to, a glance at the printed and manuscript Foreign Proceedings of the Punjab Government will show. The whole, or very nearly the whole of this, never reaches the Government of India. If the Punjab Government is dissociated from frontier management, it is plain that the Commissioner must be raised to the position and powers of a Local Government, on the analogy of the Agent Governor-General at Quetta, otherwise this burden of detail will devolve upon the Supreme Government, which would obviously be undesirable.

10. This brings me to the last difficulty. It is suggested that the tribal officers should not be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion, it is evidently anticipated that the rank and pay of the Commissioner may have to be raised (and if my conclusions in the preceding paragraph are correct, they will have to be raised very considerably), and concessions made to his subordinates. As a frontier officer myself, I should welcome anything that adds to the inducements and attractions of service on the frontier. Compared with what I remember 20 years ago, there is a reluctance to cross the Indus among the junior officers. The reasons are not far to seek. In former days rapid promotion compensated for the responsibilities, hardships, discomfort, unhealthiness, solitude and actual danger of frontier service, which conditions still remain; but Mackeson, Ross, Edwardes, Reynell Taylor James, Becher, Pollock, Macnab, Monro were all substantive

Commissioners within 20 years of entering the Punjab Commission and often in advance of their contemporaries Cis-Indus. Of later years, however, promotion has gone in due course, and men weighing their future, naturally, prefer to remain where life is easier and where their chances of a Commissionership are equal, and some of them may moreover rise to the higher appointments from which frontier officers are in practice debarred ; at any rate to which only two officers from the frontier have obtained in 50 years. But I am afraid nothing will reconcile officers to spending their whole service at Wana, in the Tochi, in several of the worst districts trans-Indus, or even in Kurram and on the Malakand, if that is what is meant by men not being subjected to removal. They are willing enough to spend some years under arduous and trying conditions, but I do not think any prospects we could hold out would tempt the stamp of man we want, to serve permanently in some of these frontier charges . In the interests of Government, it is not advisable to keep men too long in any particular post. The majority of the frontier stations are far too unhealthy for prolonged residence, save in cases of exceptional physique or adaptability to the climate. A change from time to time is healthy to all concerned.

With a minute service, such as the proposed class of officers will be, it is difficult to understand how it will be feasible to arrange for proper promotion. If the Commissioner of Peshawar in future has higher pay and rank than other Commissioners, say than the Financial Commissioner also, where is he to go to ? Unless the Government of India are prepared to open high political appointments for him, he must remain where he is till he retires, since there is no further place for him in the Punjab and a transfer to another Division will operate as a penalty. It may so happen that an officer obtains the post at a comparatively early stage in his career ; if so, his juniors will be hopelessly blocked. Or the man next to him may be a relatively young officer, in that case all below him must stagnate. Each in regulating promotion varies in proportion to the size of a service, and with the dozen or at the most two dozen officers who will compose this special frontier service, it is certain that very soon insuperable difficulties of promotion will arise. Additions to pay will not suffice, for men want variety of work after a time. Nor will it be possible to utilize them elsewhere, since after a man has spent 10 to 15 of the best years of his life on special work, he becomes an expert in that particular line, and experts are rarely fit for other duty than in their own sphere. Altogether, however desirable it is to attract and to retain the best type of officer for the difficult task of tribal management, on the principle that the best system of administration that can be devised is made or marred by its *personnel*, I fear the specialization of the frontier service will result in grave difficulties, unless indeed all frontier officers are included in the political service, but this is apparently not intended and would be going far beyond the scope of the present scheme which is to place officers of the Punjab Commission jointly under the Supreme and Punjab Government.

11. On the whole, I venture to conclude that the scheme discussed in the Secretary of State's despatch virtually is already in existence, but without those obstacles to the successful working of the frontier administration which I apprehend from the modifications suggested. The frontier tribes are already under the Government of India and eleven special tribal officers are already at work everywhere. The recent frontier troubles were not, I submit, the consequence of the present arrangements. One might otherwise argue with equal justice that because they started in the Tochi and culminated on the Malakand and in the Khaibar, all of which are distinct political units under special officers, therefore it is a mistake to place officers in exclusive political charge of trans-frontier tribes, whereas the contrary is the case.

Annex. III.

Letter from H. A. Anderson, Esq., Officiating Commissioner, Derajat Division, to the Chief Secretary to the Government of the Punjab, dated the 17th October 1898.

I have the honour to submit the opinion on the suggestions for the future management of the Punjab frontier contained in paragraphs 7 and 8

of the despatch of the Secretary of State, Secret, dated August 5th, 1898, called for in your endorsement, dated September 29th, 1898. The proposal contained in paragraph 8 of the Secretary of State's despatch is that the Commissioner, Peshawar, and through him his several subordinates who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, in respect of such matters, act directly under the Government of India. The Government of India in forwarding the despatch ask for information as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, and as to the changes in system which would be entailed by giving effect to the scheme proposed by the Secretary of State.

2. I apprehend that practical suggestions for carrying the Secretary of State's proposal into effect are what is asked for in this reference. At the same time as the question is admittedly one of considerable practical difficulty, and as it is not easy to make suggestions for carrying the new scheme into effect without pointing out and considering the difficulties which are involved in the change in system, I consider myself justified in briefly indicating some of these difficulties. As a Punjab frontier officer who has spent his service under the old system, it is difficult to approach the question without prejudice, but I shall attempt to examine the question with impartiality.

3. The first point calling for remark in the Secretary of State's statement of the scheme contained in paragraph 8 of his despatch is the assumption that something similar to what is now proposed is already in existence, namely, that the Commissioner of Peshawar in a large measure serves two masters in times of peace. That the Commissioner of Peshawar discharges any administrative functions under the orders of the Government of India direct, is, I believe, not the fact. He is the servant exclusively of the Punjab Government, through whom he receives the orders of the Government of India. He is the medium no doubt through whom a certain amount of urgent communications between the Government of India and the Amir of Kabul passes, but in this connection he is a translator and conveyor of letters only. The system which it is now proposed to introduce is an entirely new one. It has not been tried before, and it is not correct to claim for it the prestige of a tried and proved success.

4. The Lieutenant-Governor of the Punjab, as things now are, frequently visits and tours along the frontier. He is in close contact with frontier affairs and frontier officers. He is able to acquaint himself personally on the spot with what is passing on the frontier. At the same time he is by his experience, training and position as the head of the Punjab administration, able to form dispassionate judgments on difficult questions, and give invaluable advice on all questions of policy. There can be no doubt, I think, that one effect of the proposed change of system will be that the matured judgment and advice of the Lieutenant-Governor will not be so available on trans-frontier questions as it now is. This, I should think, will be a loss to the Government of India: it will certainly be a severe loss to the Commissioner of Peshawar.

5. A strong objection has been taken to the scheme under discussion on the ground that the Commissioner of Peshawar would be in the position of serving two masters, and the control of affairs on the British side of the border would be divorced from the control of affairs on the further side. No doubt it is difficult for one man to serve two masters of equal status and authority, and the difficulty would be enormously enhanced if these two masters followed opposite or divergent policies. In the present case, however, the two masters stand in the relation of supreme and subordinate, and the policy of the latter must subordinate itself to the policy of the former. The proposed arrangement would no doubt give rise to difficulties, but it does not appear to me to be impracticable. As regards the divorce of control mentioned above, it is no doubt true that the population in parts of the border is homogeneous within and without, relations between cis-border and trans-border tribes are intimate and the spheres of control must cross at points. It is practicable, however, in most matters to draw a fixed line between trans-border and cis-

border affairs and cases, and as one officer will have direct control of both, it is my opinion, though I state it with all deference, that the Commissioner of Peshawar being an officer of the Punjab Commission could, without serious difficulty, exercise his control over trans-border tribes under the direct orders of the Government of India, while at the same time administering cis-border tribes and districts under the direct orders of the Punjab Government.

6. It is suggested in connection with the new scheme that arrangements should be made, whereby officers who are entrusted with the duties of maintaining friendly relations with, and control over, the trans-frontier tribes should have ample leisure for personal intercourse with them. This is no doubt most desirable, but there are now special Political Officers along the whole frontier who have the desired leisure for full and free intercourse with the tribes, and who are little encumbered with the regular work of district officials. So far as my experience goes, there is little left to be done now in this direction.

7. It is also suggested that the political staff which has to deal with trans-border tribes should not be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution. It has been the practice of the Punjab Government of recent years to keep its frontier staff on or across the frontier, to restrict the frontier Commissionerships to frontier officers, and to discourage transfers to non-frontier districts. Service, however, on and across the frontier is not generally popular for various reasons. It is difficult now to induce officers to serve for any length of time across the border. They will be still less willing to so serve if they experience stagnation in promotion which will surely follow the introduction of the proposal now suggested. I do not think that the Government could go much further in this direction than the Punjab Government have gone in the past.

8. I pass now to the consideration of the advantages of the new scheme. The Commissioner of Peshawar in the first place as the only intermediate authority between the tribesmen and the Supreme Government will under the scheme gain a greatly enhanced status in the eyes of the former, and this will increase his power and influence with them and will render them more amenable to his control. The Pathans have an intimate acquaintance with our administrative grades, and will fully understand the difference between an officer who is in direct communication with and who acts directly under the orders of the Government of India, and an officer of the Provincial Government. They will have more respect for the former in virtue of his superior authority and more independent position. This seems to me a very important consideration when weighing the merits and demerits of the new scheme.

9. There can be no doubt, I think, that the new system will save much correspondence as the Commissioner of Peshawar will correspond direct with the Government of India. It will also reduce discussion in the disposal of questions which are not of first rate importance and accelerate the introduction of any changes which the Government of India may consider it desirable to introduce in prosecution of its present policy of extending our influence over the trans-border tribes. Moreover, it is obvious that under the proposed arrangement the Government of India will exercise a more direct control over the external relations of the trans-frontier tribes than it has hitherto exercised. On the Peshawar border these relations are intimately involved with our relations with the Amir of Kabul and other Chiefs; it is an argument in favour of the new scheme that it will bring all these relations more directly under one Imperial control.

10. It will also be an advantage, I think, for the Commissioner to be directly under the Supreme Government in connection with other departments such, for example, as the Military Department. It will strengthen his hands in dealing with matters, such as the employment of the military forces in support of the Political Officers in checking raids and promoting peace and order. At present all such matters have to follow a very circuitous channel before anything is done, and it is desirable to shorten this channel.

11. It will be seen from the views expressed above that while the new scheme seems to me open to serious objections, it at the same time has certain

advantages. The Secretary of State points out that, in giving practical effect to the scheme, it will be necessary to make a change in the status of the Commissioner of Peshawar. It will be necessary, I consider, to considerably enhance the status of the Commissioner as regards trans-frontier affairs. He must be empowered to dispose of many matters which he has now to refer for orders to the Punjab Government. To enable him to have as wide a view as possible of what is passing across the frontier of the division, it will be advisable to place under his control the Chitral and Dir Agency and the relations with the tribes under that Agency. His status would be advantageously raised to something like that of the Governor-General's Agent for Baluchistan as regards trans-frontier affairs. This arrangement need not, I think, interfere with his status as Commissioner under the Punjab Government as regards the districts and tribes of the Peshawar Division which may remain as it is. The position of the Commissioner of Peshawar will thus become one of great responsibility, and much additional work will be thrown on his shoulders. A considerable increase in his salary must accompany the enhancement of his status, and no doubt he will require the assistance of a Personal Assistant to assist him in the disposal of much of his routine work.

Annex IV.

Note by Sir Mackworth Young, K.C.S.I., Lieutenant-Governor of the Punjab.

I am asked for my opinion as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government in the despatch from the Secretary of State, dated 5th August, 1898, and as to the changes in system which would be entailed by giving effect to the scheme therein indicated. The scheme is thus described in the despatch: "Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India." And in directing my attention to this scheme, the Government of India further define it to consist in "making the Commissioner of Peshawar and, through him, his several subordinates who are employed in conducting external relations with the tribes directly subordinate, in respect of such matters, to the Government of India."

2. The objection to such an arrangement put forward by the Government of India, *viz.*, that it "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer," is held to be formal rather than substantial, and it is argued that the Commissioner of Peshawar even now serves two masters in times of peace, while on various occasions of frontier disturbances he has corresponded direct with the Government of India.

3. The main ground of dissatisfaction with the present system appears from the passages above quoted to be that the Punjab Government is interposed between the authority of the Government of India and that of the Political Officers on the Punjab frontier. Further grounds for this dissatisfaction appear to be based upon the opinion that the officers entrusted with the delicate and difficult duties of maintaining friendly relations with, and control over, the trans-frontier tribes have not sufficient liberty of action and leisure for personal intercourse with them, and cannot devote much time and patience to these special objects; and that they can hardly combine such duties with the regular work of district officials, and that it is inconvenient that they should be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion.

4. It is above all things necessary in a question involving such important issues that the facts should be correctly understood, and before going any

further I find it necessary to state, with the utmost deference, that the passages above quoted seem to me to indicate several misconceptions as to the facts. I may draw attention, with reference to this subject, to the opinions stated in an article of "The Times" of 23rd August last, for which high authority was claimed, but which have been shown to be based upon similar misconceptions. The most important of these opinions were traversed in an excellent letter signed "Expertus" which appeared in a later issue about 13th September. I regret that, owing to the necessity for replying at an early date to the reference from the Government of India, it has been impossible for me to obtain in time the opinions of several officers of extended frontier experience, but I have received an able letter from Mr. Merk, C.S.I., well known to the Government of India as a distinguished frontier officer who, though at present officiating as Commissioner of the Derajat Division, has been for 21 years almost continuously employed in the Peshawar Division, and who is intimately acquainted with the administration of that frontier and with the races, customs, languages and locations of its various inhabitants. I invite a careful perusal of his excellent paper, which also brings out several of the misconceptions to which I have alluded.

5. I shall now, in order to be as brief as possible, make definite statements relating to the matters on which, as it seems to me, misconception exists —

First.—*The position which the Commissioner of Peshawar occupies or has from time to time occupied bears no resemblance to that which he would occupy under the present proposal.* It is true that the Government of India communicate direct with the Commissioner of Peshawar in regard to matters relating to the Amir. I draw attention, however, to Mr. Merk's remark that "so purely ministerial is this branch of his duties that during his absence from Peshawar the Deputy Commissioner performs them." To this I may add that, except in regard to the collection and formulating of information regarding the affairs of Afghanistan—in fact, compiling his weekly diary—the duty performed by the Commissioner in this respect consists mainly of translating and forwarding letters between the Government of India and the Amir. But the most noteworthy fact in connection with this subject is that these duties have very little connection with the administration of the border, and do not involve the employment of the services of any other officer under the orders of the Punjab Government. The orders communicated direct to the Commissioner of Peshawar with reference to the Amir do not, as a matter of fact, relate to any questions with which the Punjab Government and the officers serving under it are directly concerned, and no possibility of conflict can arise so long as the Commissioner corresponds with the Government of India direct only on such matters. I shall show later on how different would be the effect of placing the Commissioner of Peshawar and his subordinates in direct relation with the Government of India in respect of border management. For the present it is sufficient to state that there is no analogy between the two cases, and that the employment of the Commissioner of Peshawar in the manner above described affords no precedent for the success of the proposal to control the trans-frontier tribes through officers under the orders of the Punjab Government without the intervention of that Government, unless it can be shown that the management of the trans-frontier tribes has no connection with the management of the British border. I deal with this question further on— (paragraphs 10-11).

6. Second.—*It is not the fact that on various occasions of frontier disturbances the Commissioner of Peshawar has corresponded direct with the Government of India.* I cannot find any instance of this. The Commissioner of Peshawar, as will be explained hereafter (paragraph 14), has to submit certain information on urgent matters direct to the Government of India; but I cannot discover that he has ever corresponded direct with the Government of India, otherwise than as provided in the orders on that subject.

7. Third.—*Speaking generally, it is a fact that the frontier officers who are entrusted with the duty of maintaining friendly relations with, and control over, the trans-frontier tribes, have large liberty of action and leisure for personal intercourse with them, and are able to devote much time and patience to these*

special objects. It is notorious that the two frontier Commissionerships of Peshawar and the Derajat are far the lightest worked in the province. In the reorganisation scheme of 1884, when the number of cis-Indus Commissionerships was reduced, and the number of districts included in them increased, the Peshawar Commissionership, notwithstanding that the Commissioner was relieved of sessions work, was not enlarged and only one district was added to th Derajat charge. The number of districts in each Commissionership is now a follows:—

Delhi .	7 districts.
Jullundur	5 ,,
Lahore .	6 ,,
Rawalpindi	6 ,,
Peshawar	3 ,,
Derajat	4 ,,

Since 1884 the following outlying political charges have been added; Kurram in 1892 to Peshawar, and Tochi and Wano in 1895 to the Derajat, but this does not seriously affect the propositions that the two frontier Commissioners have ample leisure for political work. Their communications on the questions which arise in connection with border politics have always been full and well considered. From long experience of the subject, I maintain that no branch of work entrusted to Commissioners is more efficiently performed. Whenever their personal presence or supervision has been required for interviewing jirgas on special occasions or for watching the development of trans-frontier events, their services have been freely available. There is absolutely no ground for the idea that they have insufficient leisure for patient dealing with trans-frontier tribes, though it is by no means always desirable that an officer of the standing of a Commissioner should personally interview the jirgas. I am not sure that I understand the desire of the Secretary of State that Political Officers on the frontier should have large liberty of action, but I apprehend that what is meant is that they should not be hampered by other duties, not that their power of independent action should be increased. The latter would be quite inconsistent with the centralisation of authority implied in the present proposals. In the earlier days of Punjab Administration, Frontier Commissioners undoubtedly enjoyed large liberty of action, but trans-border politics having become matters of Imperial concern, this liberty has of necessity been curtailed.

8. Passing from Commissioners to Deputy Commissioners and Political Officers, there is perhaps something, though still very little, to be said for the position that local Political Officers have not always sufficient leisure for tribal management. As pointed out by Mr. Merk, two-thirds to three-fourths of the Punjab frontier is in the hands of officers who have nothing else to do. The Political Agent, Dir and Swat, already under the direct orders of the Government of India, is of course an instance of the system desired by the Secretary of State, and the remarks regarding want of leisure, etc., do not apply to him. But apart from him the Political Officer in the Khyber, and the Political Officers in the Tochi and at Wano are solely engaged in tribal management, while the administrative duties of the Officer on Special Duty in Kurram are not so onerous as to hamper him in his discharge of the same duty. The creation of these appointments, all within the last 18 years and most of them within the last eight years, has had the effect of reducing the responsibilities for tribal management attaching to the Deputy Commissioners of Peshawar, Kohat, Bannu, and Dera Ismail Khan. The power to appoint an additional District Magistrate for districts to which the Frontier Crimes Regulation, 1887, applies, conferred upon the Local Government by section 5 of that Regulation, was designed to lighten the work of the Deputy Commissioner and set him more free for political duties. With the same object the strength of the staff in frontier districts has from time to time been carefully revised by the Local Government, and special officers have been appointed to the command of the Border Military Police in several frontier districts. The Deputy Commissioners of Hazara and Kohat have ample leisure for their political duties. The Deputy Commissioner of Peshawar has an onerous charge, but he has few political duties left. Buner, the Khudu Khel and

Gaduns are managed by the Assistant Commissioner in charge of the sub-division of Yusafzai; Swat and the Utman Khel, except the Laman Utman Khel, a small section, are in the hands of the Political Agent for Dir and Swat; the Political Officer in charge of the Khyber corresponds direct with the Commissioner, and the Deputy Commissioner is not concerned with its political management; and the tribes of the Kohat Pass are managed by the Deputy Commissioner of Kohat. The only tribes which remain under the control of the Deputy Commissioner of Peshawar are the Mohmands on the north-west, and on the south-west the Aka Khel Afridis and the Hassan Khel section and two other small sub-sections of the Adam Khel. As regards the Mohmands, proposals have been made for transferring them to the Political Officer in charge of the Khyber, and probably this should be done when the Khyber settlement is completed. During recent years, while the settlement with the Mohmands was in progress, the work was largely done by the Commissioner in person. The charge of the Peshawar district is undoubtedly quite enough for one officer, and the attention of the Punjab Government has long been directed to the necessity for relieving him of political work or of strengthening his hands in the district administration, so as to permit of his giving more time to such work. The measures taken have been to a great extent effectual. What remains to be done is only a matter of time and thought. It is possible that, if the political management of the Mohmands had last year been in the hands of an officer with more leisure than the Deputy Commissioner of Peshawar, he might have succeeded in persuading the Commissioner of Peshawar that a raid on Shabkadar was imminent, though I am not inclined to attribute our unpreparedness to his being overworked. Be this as it may, I am prepared to admit that the political management of the Mohmands is a matter which requires further consideration in connection with the settlement of the Khyber Pass, and any redistribution of political functions which may result from the present correspondence. And if the Secretary of State or the Government of India consider that the Deputy Commissioner of Peshawar or any other frontier Deputy Commissioner requires further relief to enable him to bestow more time upon the management of the tribes on his border, I shall be quite prepared to make proposals with this object, but such proposals would necessarily involve considerable extra expense, which the Provincial Government would not be in a position to meet without assistance.

9. I do not enter into details regarding the districts of the Derajat, as this is not desired by the Government of India, but in regard to the Peshawar Commissionership I am decidedly of opinion that, with the exception perhaps of the Deputy Commissioner of Peshawar whose onerous duties have long engaged and will continue to engage the attention of the Punjab Government, there is no foundation for the conclusion that the local Political Officers have not ample leisure for tribal management.

10. The fourth statement that I make is this—

The duty of maintaining friendly relations with, and control over, the trans-frontier tribes is inseparable from that of managing the tracts within the British border. The grounds for this statement are so well put by Mr. Merk that I reproduce his words:—

"Thousands of our subjects are constantly visiting independent territory, many thousands of the hillmen regularly migrate to our districts, whole clans live for half the year on this and for the other half of the year on that side of the border; where the residents within and without the frontier are not men of the same clan or of the same tribe, they are connected by the intimate ties of common race, of marriage, neighbourhood and of an association, territorial and social, which has endured for many generations. In short, there is no impassable gap or gulf, difficult to cross, between British and independent territory; the frontier is in reality only an arbitrary line drawn through the limits of a more or less homogeneous population. That being so, it will be readily understood what an infinity of questions, of disputes and disagreements of business arises from the daily intercourse of these people. This business must be settled promptly and with justice, or the peace of the border is endangered; it is business which is quite distinct from the Imperial questions in which British and independent interests, as such, are arrayed against each other. And upon the successful administration of the daily business of the frontier it chiefly depends whether, under ordinary circumstances, the border is heard of or not."

11. There are tracts in regard to which separate political charges have been framed to which the above remarks apply only to a minor degree. But

they apply with special force to the whole of the Peshawar and Kohat border from the Malakand to the Kurram, including the Khyber Pass and the Afridi and Orakzai tribes. The political management of the last-named tribes is closely bound up with the management of the British border. And although there are tracts in regard to which the position is less clear, this is more or less true all along the border. And Mr. Merk touches the point when he says that the business which arises in consequence of the close connection between the people on either side of the border is quite distinct from the Imperial questions in which British and independent interests are arrayed against each other. There are numerous references in regard to such matters in which a decision of the Local Government may be called for, but a pronouncement of the Foreign Department of the Government of India would be unnecessary and out of place. In short, a great deal of our management of the trans-border tribes is carried on in the daily course of border administration, and it is not expedient that it should be magnified into a Foreign Office question. On the other hand, the separation of the trans-frontier from the cis-frontier aspect of many questions now disposed of by our frontier officers is impossible. This was fully realised by Lord Lytton when proposing the creation of a Frontier Chief Commissionership, in the words:* "Mixed up as are the tribes within and beyond our borders, he (the Chief Commissioner) must evidently have charge of the immediate frontier districts as well as of all our trans-frontier relations. I confidently affirm the inseparable connection of portions of British territory with trans-frontier tracts and the necessity of entrusting the control of both to the same local officer."

* Minute of 22nd April 1877.

12. My fifth statement is—

That frontier officers in the Punjab have been much less liable to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion than other officers of the Punjab Commission; and that a special service constituted with the object of furnishing officers solely for controlling the trans-frontier tribes would be a failure. I do not suppose that the above proposition will be seriously challenged. The writer of the article in "The times" of 23rd August, in support of his assertions that frontier officers are now frequently changed, that they are no longer specially selected for frontier work, and that the ablest of them look upon such work as a stepping-stone to pleasanter posts, alluded to the fact that between 1st April 1894 and August 1898 there had been 13 changes in the office of Commissioner of Peshawar. But as he was obliged to record, though there were 13 changes, there were only four officers, and the changes were in no single case brought about by the removal of any of those to pleasanter posts, while each of the four officers was a thoroughly experienced frontier officer. It is sufficient to mention their names, and record their total service and the length of their frontier service:—

	Years.	
	Total Service.	Service on Frontier.
Sir R. Udny, K.C.S.I. . . .	29	21½
Mr. Cunningham, C.I.E. . . .	26	15½
Mr. Merk, C.S.I.	23	15¾
Mr. King, C.S.I.	20	9½

These officers, all of them bearing the marks of approved service in the decorations they have earned, are undoubtedly the best men that the Punjab had to give for the office of Commissioner of Peshawar. That their names should have been cited by "The Times'" writer in support of his extraordinary

assertions seems to me singularly unfortunate for his argument. I should not have gone out of my way to deal with this instance, but that I am at a loss to find any ground for what is implied in the suggestion contained in the Secretary of State's despatch that it will not be found convenient that the officers entrusted with the duties of maintaining friendly relations with, and control over, the trans-frontier tribes, should be "subject to the removal or transfer to other appointments under the ordinary exigencies of provincial re distribution or promotion." The officers employed on the Punjab frontier are very rarely moved to charges in the interior of the province when they have once established their reputation as frontier officers. I think I may say that the only circumstances under which such transfers have been made are those which relate to the health of the officer or some other disqualification for frontier service. On the other hand, it will, I think, be readily admitted that a small service is difficult to man properly; that the pick of a large Commission is likely to be far superior to the best outturn of a limited number of specialists, and that a small corps of Punjab frontier politicals would not be in any respect a success. I am not arguing here against a Frontier Commission large enough to deal with a considerable tract of British territory added to the control of trans-frontier tribes, nor against a Department of the Foreign Office with a political contingent forming part of the political service; but a limited service of a dozen or even two dozen politicals recruited *ad hoc* to be retained *ad hoc*, and to be precluded from transfer otherwise than on promotion to higher spheres under the orders of the Government of India, would be a thorn in the side of the latter, and is doomed to failure. And it may, I think, be confidently asserted that the best field for selecting Punjab frontier officers is the Punjab Commission, and that, while as hitherto it is desirable that transfers from the interior of the province to the frontier and *vice versâ* in the higher grades of the Commission should be sparingly made, it would be undesirable to separate the two services in such a manner as to preclude transfers, where they are manifestly for the advantage of the public service.

13. I have thus endeavoured to clear away what I cannot but regard as misconceptions in respect of the existing state of affairs, and I now crave permission to say a few words regarding the Secretary of State's proposals. The first and most prominent feature of those proposals is the elimination of the Punjab Government in the chain of correspondence in regard to trans-frontier management between the Punjab local frontier officers and the Government of India. It is proposed to put the subordinates of the Local Government into direct communication with the Supreme Government on this subject. The advantage of this change is not stated, but I think I may assume that the main object is to get rid of what is rightly or wrongly held to be the Punjab view in regard to our trans-frontier management. What that view is has been well described by "Expertus" in the letter above quoted, and I cannot do better than give an extract from his remarks:—

> "I think I may claim for the Lieutenant-Governor and his officers that they have always been most loyal to the Government of India and have done their utmost to carry out the policy of that Government as if it was their own. What has from time to time occurred has been simply this—that when the Government of India has directed some forward move, the Lieutenant Governor and his officers being in immediate contact with the tribes have felt more impressed than the Government of India seemed to be with the difficulties and risks with the amount of force required at starting and to be permanently locked up, and so forth, and have represented this to the Government of India."

I need not say much on the value of the opinion of an officer in the position of the Lieutenant-Governor of the Punjab on questions relating to the control of the trans-frontier tribes. It is for the Government of India to estimate the value of such an opinion. As remarked by "Expertus," "the exclusion of the Punjab Government from all share in the frontier administration would undoubtedly simplify matters in two ways, *viz.*, by abridging discussion and removing opposition to forward movements, and by doing away with the supervision and control which the Lieutenant-Governor, who spends a good deal of time on the frontier and is in close contact with frontier affairs, now exercises. Whether the results of this simplification would be good or bad, I leave others to say." Although these remarks were directed to the

proposal to separate the frontier entirely from the Punjab Government, they deserve, I submit, respectful consideration with reference to the proposal to control the trans-frontier tribes without the advice of the Lieutenant-Governor of the Punjab.

14. The second objection to the proposal is that as above stated the management of trans-frontier tribes is so much mixed up with that of the adjoining British frontier, that their complete separation is impossible. Thus many matters will be reported direct to the Government of India which affect the responsibility of the Local Government, but in regard to which the Local Government will have no voice. This is to my mind absolutely fatal to the scheme. I do not think the inconvenience and impossibility of the arrangement would be fully apparent for some time, as the frontier officers of experience would retain for some time their old ideas of subordination to the Local Government, but a few years would, I feel sure, be sufficient to reveal its impossibility. The Lieutenant-Governor will find his authority over the frontier districts impaired and will be of little assistance to the Government of India in the task which will have devolved upon it. In support of this view I appeal to opinions held on previous occasions with reference to the same subject. The orders* of the Government of India directing the submission by all officers in the Punjab exercising political functions of information of a certain class to the Government of India direct were regarded by the late Sir Henry Durand as involving a radical change in the position and powers of the Local Government. He represented† that:

* Foreign Department, dated 20th July 1870.

† Punjab Government, dated the 22nd August 1870, paragraph 6.

"a very little consideration of practical working must convince any one acquainted with the system of the administration hitherto in force that subordinate officers, when they shall cease to be confined to direct communication with the Local Government, and shall acquire the practice of direct correspondence, both written and telegraphic, with the Government of India, will *ipso facto* be invested with a power of initiating through the superior Government their own views. These may or may not be consonant with those of the Local Government, and when opposed to them there will be no corrective. The superior Government, acting on first impressions, may find itself committed to the issue of instructions from which it may be difficult to recede, however little in harmony with the deliberate views of the Local Government which can only reach subsequently. The latter would thus be fettered by the action of its nominal subordinates and be placed in a very false position.

"Besides the above element of weakness, there is the fact which obtrudes itself upon general observation, and is already the subject of comment, namely, that there is no announcement that similar orders have been promulgated to the Bombay Government with regard to its officers on the Sind or Rajputana frontiers; nor to the Bengal Government with regard to its Assam and Arracan frontiers; nor to the Chief Commissioner of British Burma with regard to the Burmese, Karan, Shan, and Siamese frontiers. The contrast is held to indicate a change of policy reflecting distrust of, and want of confidence in, the Punjab Government and its officers."

It will be observed that Sir Henry Durand's apprehensions were based merely upon the direct transmission of information. A division of responsibility in the actual management of frontier affairs was not contemplated by him as a possibility. An instance of the effect of the orders regarding direct reports to the Government of India will be found in the correspondence marginally noted. Sir Robert Egerton represented that direct communications not of the urgent character mentioned in the correspondence of 1870 between the Commissioner of Peshawar and the Government of India had resulted in different orders being communicated to the former by the latter, and by the Punjab Government. He represented that such procedure was anomalous and might lead to confusion; that he knew "of no reason why the Commissioner of Peshawar should hold a position in regard to the Government of India independent of the Punjab Government." The Government of India entirely shared Sir R. Egerton's views "that the correspondence in question should be strictly limited to matters regarding which it is important that the Government of India should receive the earliest information," though it held the position of the Commissioner of Peshawar to be exceptional, as he was the sole agent of the

Punjab Government, dated the 9th November 1880.
Government of India, dated the 3rd February 1881.

Government of India for very important and usually urgent correspondence across the frontier, and that as regarded that correspondence it was unavoidable that he should continue to communicate direct with the Foreign Office. The correspondence for which the Commissioner of Peshawar was sole agent to the Government of India was, of course, correspondence with Kabul. It may, I think, be concluded that the Government of India on this occasion realised the justice of Sir Robert Egerton's contention that divided responsibility in the control of the Commissioner of Peshawar would result in confusion.

In 1892 there was some talk of separating off the political work of the Punjab Frontier Districts and placing it in the hands of officers who would be directly under the Government of India. Sir Dennis Fitzpatrick denounced the proposal in very strong terms, and pronounced it simply out of the question. I appeal to universal experience in support of the view that the authority of the Punjab Government would be dangerously weakened by such a measure. Punjab frontier officers have larger opportunities of attracting the notice of the Government of India under existing conditions than other officers—these opportunities would be greatly increased by a definite portion of their work being specially controlled by the Government of India to the exclusion of the Local Government, and, human nature being what it is, the tendency to play to the superior gallery would be irresistible.

15. The third objection to the proposal is that it will throw upon the Foreign Secretary to the Government of India a mass of work with which the Local Government is competent to deal, and the submission of which to the Government of India is quite unnecessary. How would the distribution of work be made in practice? I imagine by some such order as this, "All matters affecting our relations with trans-frontier tribes which Commissioners are unable to dispose of will be referred by them to the Government of India direct and not to the Local Government." I cannot suggest any other distribution. It would not do to say that all matters of importance should be so referred. The Local Government might pass an order in the initial stage which would hamper the Government of India later on. Nor would it do to say that all matters affecting the peace of the border should be so referred. Many matters occur in frontier administration which are unimportant at first, but assume importance as they develop. There are numberless possibilities of the peace of the border being affected by matters which are apparently totally unconnected with trans-border tribes, and which at first sight ought not to produce such an effect. Half the causes of trans-frontier unrest might be embodied in correspondence with the Local Government, and that part of the correspondence which was sent direct to the Government of India might be quite incomplete without it. I am really quite unable to make any suggestion for defining what matters should be referred to the Government of India which would not be open to one of two serious objections, *viz.*, that it would either swamp the Foreign Office or afford insufficient material for forming an opinion. The only possible method is that the reporting officer should be responsible for communicating intelligence of importance in sufficient detail to enable the Government of India to form an opinion. This is what the Local Government now does, and I do not understand what advantage is gained by placing the responsibility on a subordinate of the Local Government.

16. I have not been able to do what I was asked to do, *viz.*, to give an opinion as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, or to discuss the changes of system which would be entailed by giving effect to the scheme above indicated. I do not think those relations can be regulated in the precise manner indicated, without introducing chaos into the frontier administration. If what is desired is to eliminate the Punjab Government from trans-frontier control, this can only be done by removing the frontier districts, or such portions of them as are closely connected with trans-frontier tribes, from the control of the Punjab Government, and forming this tract into a separate administration under the direct orders of the Government of India. I am not called upon to say anything on this subject, as it has been

negatived after the fullest consideration both by the Government of India and Her Majesty's Government, and I entirely concur in the reasons which have led to this conclusion. At the same time, it would, in my opinion, be far better to encounter all the objections urged to that scheme than to disintegrate the existing administration and introduce confusion where there is, at all events, order and discipline.

17. As I am concluding these remarks, I have received a telegram from Sir R. Udny and a letter from Mr. Anderson, both of which give a partial assent to the Secretary of State's scheme. Sir R. Udny approves of the elimination of the intermediate responsibility of the Local Government, but adds that there are minor points which have required a good deal of consideration. His opinion will be forwarded when received. Mr. Anderson, while expressing his opinion that the new scheme is open to serious objections, thinks that it has certain advantages. I need not notice his objections, as they have been fully stated in this note. The advantages he considers to be—

(1) That the status of the Commissioner will be enhanced in the eyes of the tribesmen, and they will thus be more amenable to his control.

(2) That correspondence will be saved and discussion reduced.

(3) That the relations of the trans-frontier tribes with the Amir of Kabul will thereby be brought under more direct control of the Government of India.

(4) It will be an advantage for Commissioners to be more directly under the Supreme Government in connection with other Departments, such, for example, as the Military Department.

I do not think the tribes will know the difference between a Commissioner who gets his orders direct from the Government of India or intermediately from the Local Government. But no doubt the status of the Commissioner would have to be raised if he were entrusted with more authority than at present. The question is whether the Government of India is prepared largely to raise his status and make him practically a Chief Commissioner. If so, I am afraid he will be difficult to control in regard to his other duties. The Financial Commissioner who is his superior officer in revenue matters holds a position only a little higher than that of Commissioner as it is. I have dealt with (2) above. I think (3) is already fully provided for. Every item of news regarding Kabul is already sent to the Government of India, and the Local Government never attempts to decide questions affecting the Amir. No. 4 shows, I think, what complications are likely to arise. It is not contemplated, I presume, to allow Commissioners to correspond with the Military Department of the Government of India direct in regard to "the employment of the military forces in support of the Political Officers in checking raids and promoting peace and order."

18. In conclusion, I can only state my conviction that, unless and until Her Majesty's Government decide to separate the frontier and place it under a Chief Commissioner or other officer in direct subordination to the Government of India, the existing machinery cannot with any advantage be altered. The Local Government at present works in loyal subordination to the Government of India, and while, on the one hand, submitting for its orders, together with the opinion of the Lieutenant-Governor, all matters of importance with regard to trans-frontier matters as well as matters arising in other Departments, stems the tide of correspondence by assuming responsibility in regard to matters within its competence. Though the views of the Local Government have not always been in accord with those of the Government of India, I confidently assert that it has never failed in loyal co-operation with the declared policy of the latter. I am not aware that the Government of India has made any complaint in regard to this matter, and I appeal to the present correspondence to show that, as regards the former management of trade affairs in the pass, the Government of India considered the Punjab management satisfactory and desired that it should be reproduced. If the Punjab Government has in the past practically acted as

a drag on the suggestions or proposals of the forward school of frontier politicians, the most strenuous advocates of which will be found in military ranks, I venture to suggest that the elimination of its counsels will not strengthen the position of the Government of India with whom rests the responsibility of deciding between conflicting views according to the best interests of the Empire, and to whom the views of the head of the local administration can hardly be a matter of indifference. But the view which under a strong sense of duty I feel bound to urge in connection with the present case, is that to place the Commissioner of Peshawar and District Officers in the Peshawar Division in respect of trans-frontier matters under the direct control of the Government of India would indicate a want of confidence in the Government of the Punjab and would introduce confusion into its administration.

(Sd.) W. M. YOUNG.

19th October 1898.

Enclosure 3 in No. 8.

Letter from L. W. Dane, Esquire, Officiating Chief Secretary to Government, Punjab and its Dependencies, to the Secretary to the Government of India, Foreign Department, dated Lahore, 7th November 1898.

Sir,

IN continuation of my letter dated 23rd October (Confidential), I am desired to submit the letters noted on the margin, which contain the opinions of Sir R. Udny, K.C.S.I., and Mr. F. D. Cunningham, C.I.E., on the question of the future administration of the Punjab Frontier and to convey the following remarks.

Letter dated 20th October 1898, from the Commissioner and Superintendent, Peshawar Division.
Letter dated 21st October 1898, from Mr. F. D. Cunningham, C.I.E., on Special Duty.

2. As regards the first four paragraphs of Sir R. Udny's letter, the Lieutenant-Governor has nothing to add. He proposes a distribution of the work, but does not deal with any of the objections to a dual system of frontier management which Sir Mackworth Young has endeavoured to explain in his memorandum dated 19th October 1898.

The remainder of his letter is a plea for —

(*a*) A specially selected body of Civil Officers for service in districts on the Afghan border.

(*b*) A largely increased staff of European assistants in the same districts.

3. Sir R. Udny's scheme for (*a*) is practically what has for some years been accepted by the Punjab Government, with the exception (1) that the inducements for frontier service in the shape of extra emoluments consists in the extra allowances for political charges, for the outposts of Mardan, Thal, Tank, Rajanpur, Mianwali, and Bhakkar, and the Pashtu and Biluchi allowances, and it has not been found necessary to ask for salaries graduated with reference to contemporaries cis-Indus; (2) that the demarcation between service trans-Indus and cis-Indus has not been quite so final or distinct as Sir R. Udny wishes, for the reason that officers sometimes develop special aptitude or the reverse for frontier service after a longer period than three years, and, as in the case of the judicial and executive separation, it is better for the service that there should not be such finality at an early stage of an officer's career. Sir R. Udny's list of officers serving on the frontier does not include the names of several officers who have served on the frontier, and who might serve there again. Their removal has been due to various causes. Sometimes to health, sometimes to

the desirability of giving the officer a training in the more regulated procedure of a cis-Indus districts sometimes to the fact that an officer has been proved not sufficiently equipped for special work on the frontier, sometimes to the requirements of the Government of India, as in the case of Major Deane, C.S.I., and Major MacMahon, C.I.E., C.S.I., but rarely or never has the transfer been made in the interest of the cis-Indus as contrasted with the trans-Indus administration. Speaking generally, however, His Honour entirely concurs in the principles which Sir. R. Udny advocates for regulating service on the frontier.

4. But the great difficulty with which we have had to contend of late, a difficulty which lies beneath all Sir R. Udny's strictures and the removal of which must be a work of time, is the paucity of officers of a certain standing in the Commission. The circumstances which led to this depletion have frequently been brought to the notice of the Government of India, and I am now to enclose for facility of reference a copy of paragraphs 13 to 15 of Mr. Tupper's letter dated 1st July 1889, to the Secretary to the Government of India, Home Department, which will explain the state of affairs then existing. Up to 1878 the recruitment was fairly regular, but thereafter it fell off seriously. No less than seven junior civilians, who had been recruited under the new system by which candidates of the ages of 17 to 19 were admitted to the open competition, died also shortly after their arrival in the country, and some of the Statutory civilians did not prove a success and left the service. The result is that between 1880 and 1884, a period of five years, there are now only nine officers in the Commission instead of about thirty-one, which, under the normal scheme of recruitment, we should have obtained. A proposal to mend matters by drafting in competent men from other branches of the Government service was not accepted by the Government of India, and in consequence for the past ten years the greatest difficulty has been experienced in manning the posts in the Province. The frontier has suffered least as it has always been recognised to be a matter of vital necessity to keep competent officers there, but elsewhere all sorts of expedients have been resorted to and the districts have been filled temporarily by Provincial Service men and officers of two and three years' service. Since 1893, however, the number of recruits has risen to eleven and thirteen a year, and many of these are officers of great promise, so that in the near future it will be a simpler matter to adequately fill all the posts in the Province.

5. I am to point out that Sir R. Udny's second proposition in favour of a largely increased European staff on the frontier is nothing new. The question engrossed the attention of the Government of India and this Government in 1891, and the measures then taken are detailed in the despatch dated 23rd June 1891, from the Government of India, Department of Finance and Commerce, to the Secretary of State. The following extract, paragraph 3, of Mr. Fanshawe's letter dated 17th November 1891, to the Frontier Commissioners, clearly explains the aims which the Punjab Government then held in view. These are almost identical with those of Sir R. Udny, and Sir Mackworth Young considers that they still embody all that is really necessary, and that when they are attained a fully efficient frontier staff will always be available :—

3 The strength of the staff of the districts of your division will be in future as shown in the accompanying statements, in which also the *personnel* of the staff for the present cold weather is entered. For the reasons given in the notes annexed to my letter No. 129 of 20th March last, Sir James Lyall considers that this staff will be found sufficient in all cases, and will enable Deputy Commissioners to devote a proper share of their time to political and frontier work without detriment to their control and share of the general work of district administration. Deputy Commissioners will doubtless bear in mind that it is a necessary part of the revised scheme of frontier administration that they should trust all their subordinates specially appointed for this work with a good deal of responsibility and power Unless this is done the relief which it is desired to give to District Officers themselves will be less than it should be In particular, the officers in charge of the Border Military Police should, if proper use is made of their services, be able to relieve the Deputy Commissioners of much unimportant work connected with border offences and tribal administration, and proposals should be submitted for investing them with the necessary magisterial powers for this work. A European assistant will be attached to the headquarters of all frontier districts whose staff does not include one at present so soon as the recruitment of the Commission will permit of this, and it is to be hoped that this will be arranged for by the commencement of next hot weather at latest. Similarly, all outposts will, as far as possible, be held by a European officer in future.

6. That th se results have not been fully realised up to the present, is entirely due to the general depletion of the Commission explained above. When the Commission is properly manned, it will be a comparatively easy thing to provide suitable officers for frontier service and to increase the staff of European Assistants in Frontier districts. Meanwhile, the Punjab Government has done its best to provide substitutes from other Branches of the service, and the names of Messrs. Hastings, Donald, Waterfield, are not unknown t) the Government of India as efficient Frontier officers. A scheme for securing the full training of Frontier Political Officers in the management of the Border t ibes by placing junior officers of the Commission in command of the Border Military Police in Frontier districts is under consideration, and its submission t) the Government of India is only delayed pending the development of the scheme for a Frontier Militia, which has been referred to the Punjab Government for consideration. If so desired, a proposal to throw open the command of the Border Military Police to Assistant Commissioners as well as to the Assistant District Superintendents of Police and Tahsildars, noted in the Government of India despatch above quoted, can be submitted for sanction at once.

7. In conclusion, I am to intimate that the Lieutenant-Governor has no re narks to offer on Mr. Cunningham's l tter, as all the subjects therein discuss d have been already dealt with in this letter or in Sir Mackworth Young's note dated 19th Oct ber 1898.

I have, etc.,

(Signed L. W. DANE,

Officiating Chief Secretary to Government, Punjab.

Annex A.

Letter from S r Richard Udny, K.C.S.I., Commissioner and Superintendent, Peshawar Division, to the Chief Secretary to Government, Punjab, dated Nathia-ali, 20th October 1898.

IN reply to your endorsement of the 29th ultimo, I have the honour t) say that I am strongly in favour of the proposal "to make the Commissioner of Peshawar, and through him several subordinates who are employed in conducting external relations with the tribes, directly subordinnate in such matters to the Government of India"; and after much consideration I am unable to see why the carrying out of this proposal should entail any change in the existing system.

2. As far as *purely external* relations with the trans-frontier t ibes are concerned, I think it would be a distinct advantage for the Commissioner t) be in direct communication with the Government of India, and it seems to me that, on the border of the Peshawar Division at any rate, the elimination of the intermediate responsibility of the Local Government would give rise to no practical inconvenience, provided that copies of the correspondence were furnished simultaneously to the Lieutenant-Governor in the few cases which might appear to affect the interests of our cis-border subjects, *e.g.*, where residents of British India had been maltreated in independent territory. The sending of such copies might safely be left to the discretion of the Commissioner, and the Government of India would doubtless note the omission to send them in any case in which they considered it necessary that His Honour should have an opportunity of offering his opinion.

3. Our other relations with the t ibes nen, which are not purely external, are generally in respect of one or other of the following matters :—

(i) Raids or other offences committed in British territory either by trans-border tribesmen themselves or by British outlaws residing with them ;

(ii) Difficulties which occasionally arise in consequence of men who have homes on both sides of the border mixing themselves up with trans-frontier affairs or going across the border to commit offences there while residing in British territory, *e.g.*, in the case of the Mohmands on the Shabkadar frontier and Wazirs in the Bannu District.

(iii) Offences committed upon trans-border men in independent territory by purely British subjects who return to our side of the border afterwards;

(iv) Disputes between cis and trans-border men about the boundary of British India; and

(v) Disputes arising out of civil transactions between men of independent territory which are not taken into the ordinary Civil Courts, but decided by jirga under Section 10 of the Frontier Crimes Regulation.

4. In serious offences of class (i), which under existing orders are already reported both to the Local and Supreme Governments, all correspondence should go in duplicate to both Governments, though the cases would be settled under the direction of the Government of India alone. Minor offences of this class are ordinarily disposed of by the local officers without any report to Government at all, but any periodical statements of such cases which at present go to the Punjab Government would, I presume, in future be submitted to the Government of India.

In cases under class (ii) it would generally be unnecessary to send the Punjab Government copies of the correspondence, as the men concerned, though sometimes resident in British territory, are in respect of such matters practically trans-border tribesmen.

Cases of classes (iii) and (iv) are very rare, but it would probably be advisable that any correspondence about them should be in duplicate, the final decision under class (iii) being left to the Local Government, and under class (iv) to the Government of India in communication with the Local Government, as would be done in disputes of the same kind between a Native State under the Foreign Department and the conterminous Local Administration in British India.

Statements of cases under class (v) might, if desired, go to the Government of India, though there seems no reason why they should not be submitted, as they have been hitherto, to the Local Government along with the other quarterly statements under the Frontier Crimes Regulation.

I have not referred to cases of male or female refugees from independent territory, because the only notice we take of them is to require such refugees under Section 35 of the Frontier Crimes Regulation to reside at a distance from the border if any attempt upon their lives is apprehended from across the frontier, and this is a matter of internal administration.

5. As the whole question of frontier management is now under discussion, there are two other points upon which I should like to take this opportunity of saying a word, *viz.*—

(*a*) The necessity of a specially selected body of Civil Officers for service in districts on the Afghan border; and

(*b*) the necessity of largely increasing the staff of European Assistants in the same districts.

6. As regards (*a*), I have always held the strongest opinion, and my views are still the same as I expressed demi-officially in 1891 or 1892, *viz.*, that no officer should be sent to the frontier till he has received his full ordinary training—*i.e.*, until he has passed all his Departmental Examinations and gone through the usual course of Settlement instructions—that all officers thus qualified should be allowed to volunteer for the frontier provided that they must do so while still under three years' service, and that only those volunteers

should be accepted who appear likely, from their physique, strength of character, and power of associating with natives, to prove adapted for the work before them. Such volunteers should be enrolled on a special register, and warned that they are electing for *permanent* service on the frontier, where promotion must necessarily be slow because the body of officers will always be comparatively small, and because they will not be considered eligible for transfer to promotion cis-Indus; but I would make up for this to some extent by allowing Assistant Commissioners in border districts to draw higher pay when officers of their own standing in the Commission or junior to them were officiating as Deputy Commissioners in the Punjab, and this, with the knowledge that they belonged to a "*corps d'élite*" with more interesting and responsible work and with greater possibilities of advancement and distinction than ordinarily fall to the lot of the cis-Indus official, should be sufficient to keep men who have voluntarily chosen this line of service fairly contented. Hitherto I believe junior officers have not unfrequently been sent trans-Indus, and again withdrawn to the Punjab, without regard to their own inclinations. The result has been in some cases that they have managed to return cis-Indus on the first opportunity, while in other cases men who would gladly have remained on the frontier have been recalled either for the Secretariat or because their turn had come for promotion to charge of districts elsewhere; but according to my idea no officer once selected for the frontier should ever be withdrawn except for proved unfitness or for neglect to pass the Pashtu Examination within a reasonable time.

7. In this connection I append a statement* of all Civil Officers who are either serving on the Afghan frontier at present or who may be reckoned upon as available for work on this border though absent on furlough or (as in the case of Colonel Leigh) posted temporarily to a cis-Indus district; and by Afghan frontier I mean the five districts of Hazara, Peshawar, Kohat, Bannu and Dera Ismail Khan, where the trans-border tribesmen are of Afghan race, as distinguished from Dera Ghazi Khan, where the people are Biluch and the conditions are very different. From this statement it will be seen at once how irregularly the supply of frontier officers has been maintained, and that, if the six men of longest border experience (not counting myself as I am retiring immediately) were removed, we should have no one left of much more than six years' frontier training, while the great majority are very junior. In the period of thirteen years from February 1878 to February 1891 only five men were sent to the frontier who still remain there. From 1891 to 1895 we have one officer per year, and eight in 1896—1898, but under the existing system most of the latter would probably be recalled cis-Indus before long.

8. As regards the second point (*b*), it must be understood, as in the preceding paragraph, that I am speaking only of what (to use the old expression) may be called Covenanted Officers, *i.e.*, Covenanted Civilians or Military Officers in Civil employ, for Uncovenanted Officers can never, save under very exceptional circumstances, be promoted to the charge of districts or divisions, and, however able they may be, their frontier experience can rarely be utilised in these higher posts. Except, therefore, for purely judicial work or the charge of treasuries, Uncovenanted Officers on the frontier fill positions which might otherwise be more usefully occupied by Covenanted men in training for higher service, and no Uncovenanted Officer (European or Native) should ever be placed in charge of a frontier sub-division, or in posts like those of the Political Officers in the Khyber, Kurram, Tochi or Wana, which also afford excellent training for the political duties of a Deputy Commissioner. Yet, at the present moment we find a European Extra Judicial Assistant (Mr. Homan) officiating as Deputy Commissioner of Dera Ismail Khan, while a Native Extra Assistant Commissioner (Sardar Mahsud) is at Tank, the frontier sub-division of the same district, and a European Police Officer, Mr. Donald (though this is probably only a temporary arrangement), is in the Khyber. Not long ago, too, we had Mr. Hastings (another Police Officer) in the Kurram, and at the time of the outbreak last year the Political Officer of the Khyber was a Native. Lastly, there have been occasions within my recollection when the important sub-divisions of Mardan

* Not printed.

and Thal were held either by a European or Native Extra Assistant Commissioner, and all these instances have been due to the impossibility of providing officers of sufficient standing and experience from the Covenanted line. Even the posts of the Commandants of Border Police, who usually act as Political Assistant to their Deputy Commissioners, are valuable for frontier training, and I think that, in future, these two might be held with advantage by regular officers of the Commission; but such officers ought never to be left long enough in them to forget, or acquire a distaste for, the ordinary work of interior district administration, and this, I may add, is a remark which applies equally to the Political charges in the Khyber, Kurram, Tochi and Wana.

2. If these views are accepted, it is evident that the number of Covenanted Assistants in the Afghan border districts must be largely increased. Even as it is the number is too small to allow of a fair proportion being always absent on furlough or leave. The result is that at the present moment three of the five districts are temporarily in charge of officers of less than two years' frontier standing (Messrs. Mant, Down and Grant), while in another—Dera Ismail Khan—the Deputy Commissioner, as I have said already, is not a Covenanted officer at all. As regards Assistant Commissioners, the case is still worse, for in four of the five districts there is no such officer at head-quarters, and in Peshawar, so notorious for its crime and lawlessness, there is but one (Mr. Gracey) who came up from cis-Indus two or three weeks ago. To remedy this state of things, and to secure a properly graduated service of trained men, there ought to be at least two Covenanted Assistants (or three, if one is to be Commandant of Border Police) at the head-quarters of every district, and four in Peshawar, a corresponding diminution of course being made in the number of European and Native Extra Assistant Commissioners. The permanent Convenanted staff on the Afghan frontier would then be constituted as follows:—

Commissioners	2
Deputy Commissioners	5
Political Officers in Khyber, Kurram, Tochi and Wana	4
Assistant Commissioners in charge of the Mardan, Thal and Tank Sub-Divisions	3
Commandants of Border Police in Peshawar, Kohat, Bannu and Dera Ismail Khan	4
Assistant Commissioners at head-quarters	12
TOTAL	30

and this would allow of a reasonable number of officers being absent on furlough or leave without necessitating the constant bringing up of new and untrained men from cis-Indus, which is at present unavoidable.

It may be urged that, if the number of subordinate officers is so much increased, and they are debarred from advancement cis-Indus, promotion to Officiating Deputy Commissionerships will be so slow that we shall have no men offering themselves for the frontier. This would no doubt be true if no steps were taken to remedy such a grievance, and it is therefore essential, as I have already pointed out, that a sliding scale of pay should be introduced giving an Assistant Commissioner the pay of a Deputy Commissioner whenever an officer junior to him is officiating in charge of a district cis-Indus.

It may also be said that, to keep men out of the charge of districts and in subordinate positions for seven or eight years would tend to disgust them and to dwarf their power of accepting responsibility; but, though they would take some time to rise to Deputy Commissionerships, they would not be all this time mere assistants; and it is a point of great importance to have men of a certain standing for Political charges like Kurram, etc., which on this account it has often been very difficult to fill from the Covenanted line. In the ordinary course an officer on first coming to the frontier should have two years of the usual work in Cutchery, which is the best of all schools for learning the language, and after that he might be put for a year in command of the Border Police. Then would

come a term of two or three years in charge of a sub-division, followed by, perhaps, a year or two in an independent charge like the Khyber or Kurram, by which time, if not before, a permanent district vacancy would probably be available. All this would give such ample variety of experience and responsibility, that I think no man with a liking for border service would find it compare unfavourably with a life even of a Deputy Commissioner cis-Indus, and still less so with the duties of an Assistant Commissioner, who is often little better than a Cutchery drudge.

Extract, paragraphs 13 to 15, of a letter dated Simla, 1st July 1889, from C. L. Tupper, Esq., Secretary to Government, Punjab, to the Secretary to the Government of India, Home Department.

13. Enclosed will be found a statement (Enclosure III*) from which it will be perceived that, whereas according to the prescribed figure of recruitment, *viz.*, 6·21 per annum, the Commission should have received 68·31 recruits in these years, the actual number of recruits was 52 only, and of these, owing to resignations, transfers to other Provinces and employments, and to deaths, only 32 remain. In the years 1885—1888, as will be perceived from the same statement, the recruitment has been sufficient or fairly so.

14. The Lieutenant-Governor would take this opportunity to beg that the services of the following officers now employed away from the Punjab may be restored to this Province when practicable, *viz.* —

(1) Mr. R. G. Thomson, Officiating Postmaster-General, Punjab.
(2) and (3) Messrs. Drew and Cappel, transferred to Bombay in 1882.
(4) Mr. L. W. King, now serving under the Government of India in the Political Department and just at present on furlough.

The Lieutenant-Governor would like to add to this list the names of Mr. Hurry and Lieutenant Martindale, now serving in Burma, but he does not wish to be pressing upon this point, as he believes that it would be very difficult for the Chief Commissioner of Burma to spare their services. I am to add as additional reasons for this request that the European strength of the Punjab Commission is at a dangerously low ebb, and that undoubtedly one of the reasons for the defects in the criminal administration which are under discussion is the want of a sufficient number of European Magistrates.

15. It remains to consider the measures which should be adopted to keep the future strength of the Punjab Commission up to the mark. This matter has been very fully discussed in personal consultation with yourself, and the result is that it is now proposed to raise the number of charges to which recruitment should be adjusted from 104 to 119. The reasons for this change are very fully explained in the annexed memorandum (Enclosure IV*) by the Secretary to this Government, showing in detail the results of the recent conference with yourself. In accordance with those proposals the figure of recruitment should be raised from 6·21 to 7·105. The Lieutenant-Governor hopes that this proposal will be sanctioned. He has also requested that the next supply of Covenanted Civilians may be five instead of four, the number previously intimated to you; and he thinks it would be an excellent thing if two Military recruits could be given to the Punjab as soon as possible.

Annex B.

Letter from F. D. Cunningham, Esq., C.I.E., Commissoner (on Special Duty) to the Officiating Chief Secretary to the Government of the Punjab, dated Peshawar, the 21st October 1898.

I have the honour to acknowledge receipt of a copy of a letter from the Government of India, Foreign Department, dated 19th September, about alterations proposed in the present system of managing relations with tribes beyond the Peshawar border, so as to bring the conduct of these affairs more directly under the control of the Government of India.

---

* Not printed.

2. The despatch of the Secretary of State announces that generally "Her Majesty's Government are of opinion that the present arrangements are not satisfactory," and that, with special reference to the Khyber, it is "not desirable merely to restore arrangements which were in force before the outbreak." Some change is, therefore, called for. There can be no question that of late, and especially in the year 1897, the fruits of the present system have not been all that could be wished; how far this is due to defects in the administrative system and how far to difficulties inherent in recent frontier policy and to deep-rooted antagonism between feeling beyond the border and the aims of government, is a question well worthy of consideration, though its discussion here would be out of place.

The decision of Her Majesty's Government calls for a change in the administrative machine, and the immediate question is whether, as regards the Peshawar border, that direct control which is desired can be secured by removing the Commissioner and the officers below him from subordination to the Punjab Government in respect of political matters, and by placing them to that extent under the direct orders of the Government of India.

The proposal has the obvious objection of weakening the control of the Local Government over its principal Revenue Officers and Magistrates in the Division. I should be sorry to say it would be unworkable; Indian officials are accustomed to serve many masters; the Deputy Commissioner in the Punjab is controlled in some Departments by the Commissioner, in other by the Sessions Judge and Chief Court, and he is answerable to a variety of other authorities. It is said that this dependence on many masters is practicable because all are under one head, the Local Government; so that the Deputy Commissioner cannot excuse deficiencies on one side by pleading press of work on another. To this it may be replied that, whatever other changes are introduced, assuming that the Deputy Commissioner is left in charge of the clans of his own border, as I hope to show he must and ought to be, he would still, for both internal and external work, be under the Commissioner; and though the Commissioner would serve two masters, yet ultimately all are under one supreme authority, the Government of India.

At the same time, though I think the proposal is not wholly unworkable, it has in it many tendencies to produce friction, and from the point of view of the Local Government may well be thought impracticable.

The Lieutenant-Governor would no longer look on officials in Peshawar as his servants, and it might happen that a transfer desired by him in the interest of the Revenue or Judicial administration would be vetoed by the Government of India. This again does not seem to me an insuperable objection, for analogous cases arise under the Provincial Government where Revenue and Judicial authorities take different views of the efficiency of the individual.

Nevertheless, it is impossible to deny that the proposal has in it certain seeds of friction and will put the Local Government in a very difficult position. Moreover, it will not be easy in practice to define the two spheres. To distinguish on paper relations with border clans from district work is easy, but many questions affecting directly the ryots within our border may indirectly concern their trans-frontier cousins.

To go no further back than the last year, the Kohat salt duty, the Agror Border Regulation, and matters connected with the Border Police, are cases in point.

3. But from the concluding part of paragraph 8 of the Secretary of State's despatch, I gather that, coupled with this change in the position of the Commissioner, it is suggested that the District Officer should be divorced from the management of political business on his own border.

I do not know whether this is an essential part of the proposal under discussion; if it be, I venture to think the scheme needs careful reconsideration. Speaking with a long experience—nearly a quarter of a century—of frontier work, I make bold to say that, whatever changes may be introduced above, the fundamental principle of Border administration should be to retain in one hand

executive control within, and the management of relations with clans on the fringe of hills beyond, the frontier. Any other system must involve immense loss of influence and waste of power.

The geographical line which marks the boundary is no barrier; in many parts the men beyond are of the same clan and race as our subjects within the border; in some they live on both sides, migrating with the seasons; in all parts foreigner and subject, whose villages and grazing-grounds adjoin, are closely connected by ties of interest, business, tenancy or marriage. Many trans-border clans have "jagirs" in our districts; all down the frontier the great families have assignments or pensions representing allowances granted by former Rulers—Mogal, Durrani or Sikh—to secure their loyalty and assistance. Though the heads of these families are no longer regularly employed as middlemen, yet they still have influence, and take care to maintain it; in every frontier trouble they are called in to assist, and often do most valuable work.

All these and many similar conditions give to the officer who is Magistrate and Collector, who is locally supreme in matters connected with Police, Criminal Justice and the administration of the Land Revenue system, a power to get work out of Chiefs and Khans within our border, to check intrigues starting in our territory, and to influence clansmen on the immediate "hinterland" of his district, such as no other official can exert.

Leisure to sit all day and every day with jirgas and men from across the border will not make up for want of power to decide their petitions about assessment of wells, suspension of revenue demands on lands owned by them in Peshawar, or to take action under the Frontier Crimes Regulation on their claims about debts due or broken engagements of betrothal and marriage.

These remarks refer to the clans who march with British territory; the further you go from our border the less does this argument apply. The fact that there are Political Agents in charge of Wano, Tochi, Dir and Swat, etc., and that they can manage those tracts successfully without having jurisdiction within our districts, does not prove the contrary, as their charges include clans far removed from the border line, and in any case the Khans of Dera Ismail Khan or Bannu understand that they may some day see the officer who is now Political Agent in Wano or Tochi come back to be Deputy Commssioner in the adjoining district.

4. It seems, however, to be anticipated that, with the creation of a set of Political Agents separate from the District Officers, there will be less change of *personnel* due to "removal or transfer to other appointments under the exigencies of provincial redistribution or promotion." This is possible; but at the same time it is probable that there is no part of any Indian province in which men have been kept longer within narrow limits than on the Punjab frontier. It is notorious that once on the frontier, always there. I have known men who did not wish to stay purposely neglect to learn Pashtu, on the ground that, if they once passed the examination, they would be kept for life in a part of the province from which they wished to escape. Take the Peshawar Division as an instance: the three officers* who have last held charge have been practically all their service on or beyond the frontier, and have at least as much knowledge as the experience of a quarter of a century can give.

* { Sir R. Udny. / Myself. / Mr. W. Merk.

Of the changes of tenure of this office since 1891, when Sir R. Udny became Commissioner, not one has been due to "exigencies of provincial redistribution or promotion;" they have been caused solely by the removal of an officer to special political work outside, to furloughs, ill-health, or privilege leave. And under no system can changes for these causes be avoided.

5. It seems to me, however, very doubtful whether the control of the Government of India will be increased to the extent expected merely by eliminating the Punjab Government and by drawing the Commissioner, Peshawar, into direct relations. If the Punjab Government had any frontier

policy of its own, or, having one, if it had authority to pursue it, if it had power to give orders in any but the most trivial matter, I could understand that, by removing it from the chain, the control of the Government of India would be increased in reality as well as in name. But I venture to think that, whatever their position in constitutional theory may be, the Lahore Government have not for many years past given orders in any but the most petty matter, affecting trans-border clans or politics.

With the exception of a few years in the Secretariat, the whole of my service of twenty-six years has been passed on or beyond the North-West Frontier, and for the past thirteen years in the Peshawar Division. Speaking of that part of the border, I cannot remember any question sufficiently important to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta. Under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India. The Deputy Commissioner as the local Political Officer disposes of many claims against trans-border men by reprisals or arrests in British territory, or by his influence with clans outside, and he settles these cases without report to the great advantage of Government. But when he thinks action on his part will not summarily dispose of a case, he may report it for orders, and in cases of this description I think that, in practice, the Commissioner and the Local Government give advice and not decisions; the final order even now comes from Calcutta.

The charge proposed will certainly eliminate one office, the function of which in these matters has become advisory rather than administrative, will so far tend to quicken despatch of business and the issue of orders, and will bring the Government of India nearer to the work to be done.

It is, however, clear that between the local officer on the spot and the Supreme Government there must be some authority interposed high enough to pass orders in small matters disposed of on general principles or in accordance with the declared policy of Government, and of experience and knowledge sufficient to give weight to his advice and conclusions.

If between the Deputy Commissioner and Government there is to be only the Commissioner, clearly his responsibility will be largely enhanced, and if the change is to work to advantage, his position must be raised, and he must be invested with powers beyond what he now ventures to assume.

6. To sum up, I am of opinion that the proposal to remove the Commissioner and his subordinates in political matters from the control of the Punjab Government and to place them directly under the Government of India is practicable and not unworkable, but that it has the grave disadvantages of risk of friction, and of impairing that control which is a condition of discipline and efficiency.

But I have no hesitation in saying that it would be a grievous mistake to divorce the Deputy Commissioner from the management of the border clans who march with his district.

Assuming that the reasons given in pragraph 3 are accepted, and that authority within and without the border is kept in one hand, it remains to be considered how the local Political Officer himself is to be directed and controlled. That between him and the Supreme Government some authority must be interposed is evident, otherwise the Foreign Department of the Government of India, which should deal with large questions and with cases likely to cause complications, will be inundated with trivial business.

I venture to think that there are two solutions, and that either of them would in effect be better than that of making the Commissioner of Peshawar an official Janus with one face to Calcutta and one towards Lahore.

These are either —

(i) to give the Punjab Government real authority and power to issue final orders in respect to affairs with clans on the immediate border fringe, and in all but matters likely to lead to serious results or to hostilities on a large scale; or

(ii) to remove the frontier districts* from the Punjab Government, and to place in charge of them an officer with the powers of Chief Commissioner for the interior, and the position of Agent to the Governor-General for the clans and countries beyond.

* Excluding of course the cis-Indus parts of Dera Ismail Khan and Bannu, and the whole of Dera Ghazi Khan.

The first of these two plans would work, but at this date it seems useless to suggest what would at once be ruled out of court as "retrograde," and, moreover, it does not fulfil the condition laid down by the Secretary of State, and is therefore out of the question.

The second would bring the management of the border under the Government of India in the most direct manner practicable. The population, revenue, trade and wealth of the province have so increased since the question of a separate Frontier Commissionership was mooted some twenty years ago under the Government of Lord Lytton, that what would be left to the Punjab after removing Hazara, Peshawar, Kohat, and a strip of the Derajat, is still sufficient to constitute an administrative area of the first class.

Towns have grown, Municipalities have been created under new and complex laws, the whole machinery of Local Self-Government has been started, hundreds of miles of railway and canals have been opened, the cultivated, and, what is more important, the irrigated area has been enlarged by scores of thousands of acres,—in a word development in all directions has been so great, that it is questionable whether there is not enough cis-Indus to occupy the full energies of a great administration.

I am writing without access to an office, and therefore do not attempt to give figures, but a comparison of the chief statistics of the province for 1878 with those of to-day would, I think, show that no "territorial rectifications or compensations" would be required, and that this supposed objection to the radical and effectual remedy does not in reality exist.

If, then, a strong administration directly under the Government of India is desired, in which frontier questions can be fully taken up on one consistent line without detriment to the needs and requirements of the greater part of a large province, this can best be secured by placing the frontier districts under a separate Chief Commissioner and Agent to the Governor-General. The Punjab Government would benefit by being relieved of an incubus, by the gain of time and power to devote to the administration of a rapidly growing province, and it would be rescued from what to many has appeared the invidious position into which it has been relegated by the course of events in the past ten or twenty years in regard to affairs on the North-West Frontier.

7. While I believe that this would be the better alternative, I am not prepared to say that the other proposal put forward, to split the Commissioner of Peshawar into two persons, responsible to the Local Government in things internal, and to the Government of India in external matters, is unworkable. But there can be no doubt that it would make the position of the Punjab Government very difficult, and probably within a short time they would be constrained to ask the Government of India to take over the entire responsibility for the frontier districts, and for officials over whom the Lieutenant-Governor would no longer have that full control which alone can secure discipline and efficiency.

Even if the other alternative be ultimately accepted and the border districts be separated from the Punjab, there remains the question whether the unsatisfactory position of to-day on the North-West Frontier is wholly the result of the administrative system, and how far it may be caused in part at least by the natural opposition of tribesmen of independent territory to the policy of these later years. It is the duty of servants of Government to carry out the policy of Government whatever it be, not to criticise unless their views are asked, and I have no intention of suggesting criticisms, for Government best

knows its business and its ultimate aim. After all, if difficulties exist, they must be overcome; it is constant advance in spite of opposition which has created an Empire:

"Et dubitamus adhuc virtutem extendere factis"
"Aut metus Ausoniâ prohibet consistere terrâ"?

But when it is a question of condemning and altering an existing administrative system, it will surely not be out of place to note with proper deference that, in the policy which has led to the occupation and, as the tribesmen view it, to the practical annexation of Wano, Tochi and Malakand, there are elements so contrary to the feelings, traditions, and aspirations of the clans thus conciliated, so likely to arouse their fear of loss of independence, that this alone would account for some at least of the difficulties experienced in carrying out the aims of Government on the North-West Frontier, besides any that may have been created by the machinery of administration, which no doubt is capable of reform and improvement.

As the discussion has arisen out of a despatch upon the management of the Khyber, it is specially appropriate to remember that the arrangements started under the Punjab Government, when I had the honour to be the first Political Officer in charge of the pass, worked with success for nearly twenty years.

They broke down in the end, but under stress of a storm whose origin was unconnected with the Punjab or its Government. But twenty years is a long time in the history of any political system; the map of Europe rarely outlasts it unchanged; and the system to be reformed has at least this to its credit, that during that time the Khyber Pass was kept as safe as any part of the Grand Trunk Road from Peshawar to Calcutta.

Enclosure 4 in No. 8.

Minute by the Viceroy on the management of the Punjab Frontier, dated 6th November 1898.

1. At the end of August we received from the Secretary of State his reply to the despatch in which we communicated our proposals for the final settlement of outstanding questions with the Afridis, and for the future management of the Khyber Pass. The nature of the decision arrived at by Her Majesty's Government made it necessary for us to differentiate even more than before in our treatment of these two branches of the subject. So far as concerned the communication of the terms on which peaceful relations with the tribes might be re-established, we were authorised to act so soon as our definition of the terms had been approved by the Secretary of State. On the other hand, so far as future management was concerned, Her Majesty's Government came to no determination, but forwarded to us certain suggestions on which they invited our opinion.

2. Naturally the first branch of the subject, as the more pressing, first engaged our attention; but I am not dealing with it in this Minute, and it will suffice to record that on September 12th we were able to inform the Punjab Government of the nature of the terms, and of the manner in which we proposed to communicate them to the tribes. It was impossible to refer to future arrangements until this letter had gone; but a week later, *i.e.*, on September 19th, it was followed by another in which we requested the Local Government to supply us with the information necessary to determine how far the suggested alterations in existing arrangements were practicable. I mention these dates to show that there was no delay on our part in taking action along both the lines indicated in the despatch from the Secretary of State. Nor, in my opinion, has there been any undue delay on the part of the Local Government. It was essential that the Lieutenant-Governor should consult his officers who were actually in charge, or were well acquainted with the

circumstances, of the frontier districts. He warned me at once that this must take time, and I am indebted to him for pressing his enquiries so energetically as to be able to submit his report within little more than a month. The propositions which he had to consider were calculated to affect the province for which he is responsible in many ways, and it would have been unreasonable to except an opinion upon them without full time for consultation and deliberation. It is not, therefore, on account of any delay, which could have been avoided, that a difficulty has arisen in our determining before we leave Simla the conclusions on which the further observations desired by the Secretary of State might be founded. It was only on one supposition that the short time at our disposal might have sufficed. If the Lieutenant-Governor had seen his way to make proposals by which the objects aimed at in paragraph 8 of the Secretary of State's despatch might be attained, it would perhaps have been just possible for the Government of India to consider those proposals and forward them with observations to the Secretary of State. But the reply of the Lieutenant-Governor is that he cannot suggest any alterations in the directions indicated; on the contrary, that, in his opinion, they would introduce chaos into the frontier administration.

Under these circumstances we have nothing to work upon. The Government of India will now have to decide on one of two courses: either to endorse the verdict of the Lieutenant-Governor, or to formulate proposals of its own. It can do neither hastily, and any attempt to arrive at a premature pronouncement without careful sifting of the information already available, or which may be collected, would be unfair to hon. members, and could not be expected to yield results of any value.

4. This, however, leaves me in a position which differs in one essential respect from that of my colleagues. When the case comes before them hereafter, as it bound to come, I shall not be in a position to offer any opinion. It appears to me that, while it is my duty to abstain from inviting any formal or final discussion at this moment, it is equally my duty not to shirk my responsibility, but to submit to the Government of India and the Secretary of State, in a form which can be used officially, a statement of the reasons which in my judgment justify the policy which I have advised, and which on my present information I should still recommend. But I desire to speak for myself alone. and to make it clearly understood that the transmission of this minute and of the documents necessary to explain its argument to the Secretary of State, implies no approval by the Government of India of either it or them, but expressly reserves the whole case until it can be maturely and deliberately considered and determined.

5. Her Majesty's Government have affirmed that in their opinion "the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India." Unfortunately very little is said of the grounds on which this opinion is based. When, after defining the duties of frontier officers in terms to which no exception can be taken, the Despatch proceeds to say, "They can hardly combine such duties with the regular work of district officials," the assumption of course is that under present arrangements this combination is the rule. The Lieutenant-Governor challenges this assertion, and shows (1) that on a large portion of the frontier the combination does not exist at all, there being political officers for the political work, separate and distinct from, indeed not even subordinate to, the district official, *i.e.*, the Deputy Commissioner; (2) that where the combination does exist it is in parts of the country where the interests of the residents on the two sides of the border are so closely interwined that it is impossible to deal with them separately; and (3) that where under the circumstances aforesaid the work becomes too heavy for the district official, assistance has been given, and can be given, and at any rate the political work is not allowed to suffer. In connection with this subject the Lieutenant-Governor has examined in detail the statements found in an article in *The Times* newspaper, an avowed and, so far as I know, the only formulated indictment of the present system

which has yet appeared. I do not propose to follow him, and will content myself with saying that, so far as my own experience goes, it corroborates his presentation of the facts of the case, and that I feel bound to perfer the authority of the responsible head of the Province writing officially, to that of any anonymous correspondent.

6. A similar argument might be used with regard to the sentence in the despatch following next to that already quoted. The Lieutenant-Governor denies, and gives chapter and verse to show that it is not true, that frontier officials are transferred to other appointments in a manner that interferes with efficiency. There is nothing on the other side but assertion, and assertion by itself is not proof. Until, therefore, evidence to the contrary is adduced, it is but reasonable to believe that of the Lieutenant-Governor. But one is tempted to go a step further. Is it not possible to rate too highly the absence of removal or transfer? On the contrary, is there any worse evil in a service than stagnation? Mr. Anderson's remarks on this subject deserve consideration. Even Sir R. Udny, who avows himself a strong supporter of a special service for the frontier, clearly recognises that there would be difficulties, and proposes to meet them by arrangements, of which one thing is quite certain, *i.e.*, that they will be very costly. This paper has come in late, and there has been no time to examine it in detail; but it must be remembered that a similar state of affairs to that brought out by the statement annexed is by no means unknown elsewhere in India, and that one of the causes which contributes to it is a block in promotion, or in other words, one of the phases of the stagnation to which I take objection; and one which would be still more likely to arise in a small special service. What is wanted on the frontier is personal influence, but not necessarily the influence of the individual. No doubt instances could easily be quoted where a strong and sympathetic individuality has dominated the ruder natures with which it has been brought in contact. But we cannot predicate characteristics like these for all frontier officers, and it is only too probable that an officer, set down in a remote district for the best years of his life, will imbibe prejudices from his surroundings, or perhaps tend to fossilize, at any rate lose the versatility of resource and promptitude of action on which success in dealing with Native races so much depends. We escape from much of this difficulty if we look to the service rather than the individual officer, and aim at a service so organised as to receive a constant supply of officers well equipped for the duties they have to perform, rather than the mere selection of special officers for special posts. People sometimes talk as if all we had to do was to find the man to fill the post It is by no means to under-rate the initial difficulty to point out that it is often the smallest of the series; for once the post is established on certain lines, specially if the first incumbent is a man with special characteristics, the field of selection is still further limited in the case of his Deputy or successor. Apart altogether from casualties or resignations, temporary vacancies must be comparatively numerous in an arduous service like that on the frontier, for it is impossible to deny men so placed opportunities of rest and relaxation. The difficulty, therefore, of replacing specially selected officers is no remote one, but may occur immediately, and recur constantly.

7. Leaving out of sight for the moment all questions of the official who is to control the whole system, two classes of officers are required for frontier work. For the actual dealings with the tribes young men are wanted whose activity of mind and body predisposes them to a life which, if isolated and monotonous, has a spice of adventure and of danger, and who are free from the ties which, *e.g.*, for a married man, render residence in the wilds irksome and expensive. But as it is impossible to combine these qualities with a mature experience, it is necessary also to provide local supervision, or in other words, the presence at local centres of officers of sufficient standing and knowledge to be able to direct the junior officers on the spot in cases of difficulty, especially in those which must be disposed of promptly, and where reference to a distant authority is impracticable. In the long narrow strip of tribal country stretching along the Punjab frontier from the Gomal northwards, it would not be easy to find an agency so effective for

this kind of local supervision as the men who attain to Commissionerships under the Punjab Government. The younger men might be recruited from the Staff Corps or elsewhere, though when that is advocated it is fair to remember that the Punjab Commission is already largely recruited from Staff Corps officers, the rule being that one Staff Corps officer is appointed to the Commission to every three of the Indian Civil Service. Two things seem perfectly evident—(1) that if a new Staff, separate and distinct from the Punjab Commission, is to be established, it must at the outset consist principally, if not entirely, of officers drawn from that Commission, because in no other way can the local experience be obtained; and (2) that, even if hereafter it is sought to cut adrift from Punjab influences, the ultimate source of supply must be practically the same for the new service as for the old.

8. The geographical configuration of the tribal country to which reference has been made above has no doubt contributed to the formation of an administration such as that just described, and makes it difficult to suggest any workable alternative. In a compact tract of comparatively open country like Baluchistan, inhabited by a number of tribes which, though differing from each other in some respects, are neither fanatical nor strong, it is possible to prescribe a general policy for the country as a whole. But that is not so with the tribes along the Punjab frontier, and the fact was very clearly brought out in the correspondence between the Government of India and the Local Government in 1896. The attitude of Sir Dennis Fitzpatrick was that there ought to be no attempt to generalise where there is no room for generalisation, but that the circumstances of each bit of the frontier must be separately considered with reference to its peculiar circumstances. The Government of India fully accepted the proposition that different parts of the frontier were in different states of development,—*vide* paragraph 6 of Mr. Barnes' letter of August 14th, 1896,—but Sir D. Fitzpatrick thought it so important that he dealt with the whole subject in great elaboration and detail in his reply dated October 26th, 1896.

9. If it be argued that, admitting the necessity of different treatment in different tracts, some of the sub-division of the executive staff might be avoided by making each tract self-contained, the answer is to be found in paragraph 11 of the Khyber despatch of June 23rd. Of each one of the districts into which the tribal country would divide itself could it be said, as of the Khyber, that "we could not afford to station there an officer of the standing and experience to be trusted in cases of importance and emergency. The district is too small for an expensive staff, and too important for any other than a thoroughly reliable authority." We cannot dispense with any of our outposts, Wano, Tochi, Kurram, Kohat, Khyber, and so on; each must be in charge of a British officer; doubling up is impracticable and without it the cost of senior officers is prohibitive. It may be said that the conclusions of Her Majesty's Government do not necessarily involve the displacement of the subordinate machinery, but only the transfer of the control to the Government of India. That may or may not be so; much depends on the working out of details. But it seemed necessary to examine present arrangements from the foundations, and to show that the guiding principles are intelligible and practical; for, as pointed out, the language of the Despatch is vague and general, and it is impossible from it to say for certain how far their retention in whole or in part in a new system is contemplated, and the area of controversy thereby restricted.

10. Proceeding now to the question of the transfer of control, it cannot be said that the reasons which have influenced Her Majesty's Government here are much more distinctly defined than their reasons for condemning the present system. The objections stated in our despatch to placing the Commissioner of Peshawar under the Government of India are quoted,* and the comment is that these objections appear more formal than real. But from what follows it is evident that there is some misapprehension as to the true position of the Commissioner of Peshawar. The Secretary of State maintains that the policy he suggests is not an untried one, because the Commissioner of Peshawar even now serves two

* This plan "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side, of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer."

masters in time of peace and corresponds direct with the Government of India on the occurrence of disturbances. The Lieutenant-Governor does not admit the correctness of this allegation, and he is strongly supported by Mr. Merk. The events of the last five years have again and again drawn my attention to the position of the Commissioner of Peshawar, and it is right that I should record my personal opinion that it is a mistake to suppose that the Government of India has exercised over him any control which could differentiate him from other officers under the Punjab Government. By arrangement they have made use of him for certain purposes, *e.g.*, in their correspondence with the Amir, but it would be most misleading to represent him as in consequence in charge directly or indirectly of any part of our relations with Afghanistan. It is true that at present the Commissioner of Peshawar is the channel through whom certain communications go to the Amir. He corresponds on local matters on his own responsibility, and he forwards by messenger certain communications which we send to him by telegraph. But in the latter case he is not consulted, unless we see fit to do so, on the nature of the message; and we only use him at all to secure secrecy and despatch. It cannot be intended to give this officer, however much his importance may be increased, a right of corresponding independently with the Amir. We have never allowed the Agent to the Governor-General in Baluchistan to do so, and it would be most dangerous not to keep this correspondence entirely in the hands of the Foreign Department.

11. So, again, in regard to direct correspondence on the outbreak of disturbance. The object then is that stated in the letter from the Government of India of February 3rd, 1881, quoted by the Lieutenant-Governor, *i.e.*, that the Government of India should receive the earliest information. It has always been recognised that so soon as military operations are undertaken or are even in prospect, it is necessary that the Government of India should obtain all important information direct, and the dual relation is then by no means confined to the Commissioner of Peshawar. It has been customary of late in the larger expeditions to entrust the chief political control to the General Officer Commanding, who thereupon corresponds with the Foreign Department as well as with his own military superiors, and the Chief Political Officer attached to the expedition acts under the orders of the General, though with a right reserved to him of submitting a statement of his individual opinion to the Government of India, should he think fit to do so on any special point. But the case of Mr. Bruce, who was Political Officer in Waziristan in 1894-95, is perhaps the best illustration. As an officer of the Punjab Government he began by sending information through the Local Government in the ordinary manner. The acute stage was reached while the Viceroy and Commander-in-Chief were on tour, and Mr. Bruce was then instructed to correspond direct with the Foreign Department. Here, as in the case of the Commissioner of Peshawar, the object was that in urgent matters information should reach the Government of India by the speediest channel, and early information is so essential that the Government of India must reserve to itself the power of employing any officers of Government to supply it. But it is a wholly different matter to assume control of an official under a Local Government in his administrative action—or to consult him without reference to the Local Government on questions of policy. That has not been the practice with the Commissioner of Peshawar, and I can best show how strongly it was impressed on my mind by mentioning an incident which occurred last year. I deemed it expedient on a certain question of policy to make a communication to the officers on the frontier on whom we chiefly relied for political information. I had no difficulty in acting on my own initiative except in the case of the Commissioner of Peshawar, but in his case I thought it right to confer first with the Lieutenant-Governor, and explain what it was that I proposed to say. It need scarcely be added that the Lieutenant-Governor took no objection, and I addressed Sir R. Udny accordingly; but in my judgment to obtain the previous concurrence of the Lieutenant-Governor was both technically correct and in itself advantageous.

12. It does not of course necessarily follow that because the Commissioner of Peshawar has not hitherto been under the control of two masters he might not be so placed for the future. It would be more of an experiment

than the Secretary of State seems to imagine, but the experiment might be worth trying. Before, however, it is tried we must examine carefully its chances of success. And I confess it is a plan which has had attractions for me. In 1896, when we had the management of the frontier under consideration, I myself put forward the proposal for the extension of the jurisdiction of the Commissioner of Peshawar, which has suggested to the Lieutenant-Governor in paragraph 7 of Mr. Barnes' letter of August 14th, with the addition, which was not adopted, that "this Commissioner might perhaps correspond direct with the Government of India on tribal affairs within his jurisdiction;" but I did so because I thought that thus "we should have secured most of the advantages of a separate province while avoiding the difficulties inseparable from dividing the tribes from the settled district that adjoin them." In the course of the discussion various arguments were adduced against the division between the different functions of the Commissioner of Peshawar. It was pointed out with great force that the idea of separating the ordinary civil administration of a district from the political charge would inevitably lead to friction amongst the officers themselves, as they would have to treat the people from different standpoints. It would also cause a want of finality in settlements of cases. Suitors would go backwards and forwards from the civil authority to the political authority, hoping that a later interview or petition might bring about a ruling more acceptable to them. The theory is that the political officer would be the medium of influence, and that, divorced from more routine civil duties, he would have leisure to push that influence. But influence over border men is not an abstract political entity; it is closely concreted with the incidents and conditions of their daily life, such as the settlement of their quarrels, the management of their land, disputed rights to water, grazing claims, love intrigues, and the numerous domestic incidents that make up life on the frontier, and which when settled under normal conditions, lead to violence and blood feuds; and it is in the settlement of disputes that would result in bloodshed if left to tribal custom that our frontier officers, if of the right sort, get openings for spreading their influence. If a frontier man wants to describe his model of a frontier officer, he says of him—"*He knows all our affairs.*" Such influence and such knowledge will not bear breaking up into different elements of paternal Government—one political and the other civil. Arguments such as these seemed fatal to the idea of placing the Commissioner in direct correspondence with the Government of India on tribal affairs only.

13. Now, again, the method which is suggested for bringing about a change, is that the Commissioner of Peshawar, and through him his several subordinates who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, *in respect of such matters*, act directly under the Government of India.

14. The Lieutenant-Governor in his Note shows, I think, so clearly that it would be vain to go over the ground again, that the Commissioner and the Government of India cannot deal thoroughly and conclusively with external relations with the tribes without including some administrative work within our border. What the extent of that must necessarily be has not been defined, because the Lieutenant-Governor pronounces against the practicability of the system proposed; but whatever its extent, administrative work dealt with directly between the Government of India and a Commissioner of Division would be something different from what is done in any part of India. In all India there is between the Government of India and the administration of the country a Governor, Lieutenant-Governor, or Chief Commissioner, and if this is necessary elsewhere, no reason has been advanced for thinking that it will not be necessary on the frontier.

15. It is difficult to give instances of the sort of work which is referred to the Local Government in frontier matters, but which with a Local Government need not come to the Government of India; but, in order to give it as

far as may be in detail,* an examination has been made of the Proceedings of the Punjab Government in the Foreign branch or section for the year 1896, that year being selected as an ordinary one, undisturbed by any special frontier rising.

16. It is more than doubtful whether the Secretary of State, in entrusting to the Government of India "a wide discretion in framing the arrangements,

* On the very first page of the B papers (Frontier) for January 1896, will be found five cases, dealt with by the Punjab Government, which, if frontier management were removed from the Lieutenant-Governor's control, would presumably have come to the Government of India. The subjects of these cases were—

Complaints to Colonel Warburton against the Sartip of Dhakka.

Portion of land acquired for military purposes at Para Chinar allotted for building sites and other purposes.

Proposal to call one of the gates of the "City" of Para Chinar the Fitzpatrick Gate.

Petition to the Lieutenant-Governor from prisoners in the Kohat Jail.

Sanction granted to a Kurram Militia Drill Instructor to return to his regiment.

A further examination of the Frontier Proceedings shows numerous references disposed of by the Punjab Government. To cite a few of the different subjects of such references :—

Details connected with Khyber tolls.

Border Military Police establishment. Questions of their equipment, pay, allowances, etc.

Same class of questions as regards Kurram Militia and Khyber Rifles.

Reports on British military officers with such corps.

Correspondence between the Amir and Commissioner, Peshawar, on *unimportant* local matters. (There are occasionally such cases which the Punjab Government dispose of.)

Permits for rifles imported by British officers on the frontier.

Numerous petitions from tribesmen and Frontier Chiefs; also miscellaneous petitions relating to the frontier tracts, not one in twenty of which now comes before the Foreign Department

Statements of cases decided under the Frontier Tribes Regulations.

Peshawar, Kohat, Hazara, Khyber, and Kurram monthly political contingent bills.

Expenditure from District Funds.

Reports of death of leading men in the frontier districts.

All questions of the grant of pensions to families of deserving jagirdars and such like. (At present the Foreign Department only gets these when the Local Government supports them. Under the proposed arrangement the Foreign Department would have to get all applications which the Commissioner supported.)

Questions relating to expenditure by frontier officers of an unusual nature. (Many such are within the competence of the Local Government to dispose of.)

Permission to Afghan refugees to visit Peshawar.

Payments of compensation to persons (other than Government servants) who suffer loss from petty tribal offences in cases where fine money is levied from offenders. At present Punjab Government has discretion.

Disputes between British and Afghan subjects at Peshawar.

Appeals from prisoners under sentence of death. The disposal of these has just been transferred to the Home Department. Would not these have to come back to the Foreign Department as Local Government under the new arrangement?

Questions relating to leave, promotion, etc., of local native officers, such as Tahsildars, etc.

The Commissioner's budget for frontier expenditure would have to be taken up in this Department, and all questions connected with it. (This would mean a lot of trouble.)

All matters connected with the Mohmands, the Back Mountain, Buner, the Nawab of Amb, Kohat Pass Afridis, Orakzais, Afridis, Kurram.

Grant of *khilats*.

The above headings have been taken from the Punjab Foreign Proceedings volumes for three months. The Home, Financial, and Revenue Proceedings have not been examined; but it is clear that all questions now referred to the Lieutenant-Governor under those heads would also have to come up to the Foreign Department, unless the Commissioner's status were altered.

financial and executive, which may be found necessary," contemplated the separation from the Punjab Government of so much administrative work, or that the Commissioner should have the financial powers of a Local Government. Granted that this is necessary, the question must sooner or later resolve itself into one whether it is better to have as an intermediate Local Government the Lieutenant-Governor of the Punjab, or a Commissioner who will be a Chief Commissioner on the frontier.

17. Mr. Anderson thinks it possible for the Commissioner to be a Chief Commissioner as far as his duty lies directly under the Government of India and to remain a Commissioner of Division in his relations with the Punjab. To my mind his position has only to be so stated in order to show the impossibility of it. Sir R. Udny seems to contemplate an elaborate system of duplicate reports which would certainly end in confusion.

18. The Lieutenant-Governor, as the responsible head of the Province declares that the changes suggested would introduce chaos into the administration. Having been for five years in charge of the Foreign Department of the Government of India, I think I am entitled to speak for it, and I do not hesitate to say that the consequences there would be equally serious. The Foreign Department, as things stand, has no reason to fear attack; it will bear comparison with any similar department in the ability and diligence of the officers by whom it is manned, the accuracy of its information, or the promptitude and prudence with which the varied and complicated mass of business is despatched; but the staff, from the Viceroy and Foreign Secretary downwards, are not chosen for knowledge of administrative details, and to employ them to deal with business of the kind described above would be a useless waste of their time. This is no theoretical opinion, for we have gained a considerable experience in Baluchistan. Matters are now on a more sound and regular footing in that Agency, and since the revenues have been in a manner provincialised, the detailed work has decreased. But the Foreign Department used to be greatly occupied with details of revenue, police, and levy establishments, and I assert emphatically that the result was not satisfactory. If the Lieutenant-Governor is unable to suggest how the necessary changes can be effected on the frontier, I am equally unable to make any proposals for so reinforcing the Foreign Department as to enable it to cope with this addition to its labours. It is not merely a question of amount of work, for that might be overcome, but it is a class of work for which the organisation is absolutely unfitted. Recognising, as I do, the supreme importance of an efficient Foreign Department, I feel bound to deprecate any step that would overweight it, as I am sure the allotting of administrative work to it would do.

19. Sir Mackworth Young, in paragraph 16 of his note, states that, while he entirely concurs in the reasons for rejecting the proposal to form a separate administration for the frontier districts, he would prefer even that scheme with all its disadvantages to the disintegration of the Punjab administration. Any support, therefore, which he gives to the idea of a separate administration is given from a consideration of provincial interests, and is given only if these interests cannot be preserved otherwise. But for the purposes of this Minute it is necessary to examine the question from the point of view of Imperial interests. No one of course can deny that occasions have arisen, and may arise again, when the formation of a new charge, or agency, or province, either becomes a necessity or has overwhelming advantages. It may be necessitated by the increasing development or opening up of the country, which has made the burden too heavy for the shoulders on which it has hitherto rested, or by the adoption of a new and energetic policy which it is desired to push by the undivided attention of a special officer. It may be justified by the fact that the tract in question marks itself for separation by the physical features of the country, or by characteristics of its inhabitants which distinguish them from their neighbours and facilitate their collective treatment. It may come about by one of those accidents which bring us face to face with the hour and the man. Reasons like these could be found for placing Assam under a Chief Commissioner or Baluchistan under an

Agent to the Governor-General; I can find none in the circumstances of the tribal country on the Punjab frontier. The Punjab Government is a busy Government, as all Governments are in India, but it is not true that it is overburdened, and, if necessary, it could be strengthened by methods adopted elsewhere. There is no question of opening up the country, or inaugurating an active policy therein; such things are excluded by the despatch of January 28th. As already pointed out, geographical conditions and the tribal characteristics and animosities unite to make combination impossible. I hesitate to say much of individuals, but with a full sense of responsibility I affirm that, having watched closely the events on the frontier during the last five years and the actors in them, I can select no one who in my judgment has by his experience, natural ability, standing, or performance approved himself beyond dispute the right man in the right place if this difficult task has to be undertaken.

20. But it will be said that there is here a special reason in the traditional policy of the Punjab, the "close border" system of which so much has been written. It is not necessary to stir the embers of an ancient controversy, and to debate whether the cautious policy of former Lieutenant-Governors was right or wrong in the circumstances as they then existed. It should not be forgotten that those circumstances were not the circumstances of to-day, that our knowledge of the tribes, and their knowledge of us, was very different, and, above all, that the sphere of the Amir's interference was undefined and his attitude aggressive. It is perhaps not surprising to find that those who chafed at what they deemed a timid and ineffectual policy should have rooted in their minds the belief that officers under the Punjab Government must pursue the course and maintain the attitude which that policy imposed upon them, but it is none the less a mistaken belief. The officers serving under the Punjab Government are drawn from the same classes as other officers in India, and those from amongst them who rise to positions of authority, and the men who fill the post of Lieutenant-Governor, do so by the same process of selection which is in force throughout India, and which has made the British rule in India what it is. There is in reality one difference only between the training of a Punjab officer and that of his brethren elsewhere, and that is that he can, if he will, acquire a knowledge of the tribes living on the borders of his province. I could give numerous instances from my own experience of Punjab officers who had no inclination to hang back, and I am prepared to endorse most emphatically the claim that the Local Government has loyally co-operated in the declared policy of the Government of India. The late Lieutenant-Governor of the Punjab once said to me, when discussing this subject, "You have only to lift your finger and the break will be taken off in any place you think this desirable." That remark is more than an expression of personal loyalty; it contains in a few words a correct exposition of the only principle on which we can rest our arrangements, *i.e.*, that it is the business of the Government of India, and the Government of India alone, to formulate and prescribe a policy outside the borders of British India. People sometimes talk as if it was for the Lieutenant-Governor, the Agent to the Governor-General, the Commissioner, the Political Agent, to manage the district assigned to him, and that he must be "given a free hand." Statements of this kind cannot be accepted without qualification. It is possible to limit too strictly the intercourse of political officers with the tribes, and our letter of 1896 was designed to show how more intimate relations were perfectly consistent with management by the Punjab Government. It is also very desirable to give each political officer full opportunities of expounding his views, which are the result of his local knowledge, and to follow his advice so far as that can be safely done. But it is essential that over all there should be the general control and the general policy of the Government of India, to which all officers alike must conform, whether they agree with it or not.

21. This seems so self-evident a proposition that when Her Majesty's Government declare "that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India," it is reasonable to suppose that there is no suggestion that the control is not now supervised by

the Government of India, though it is exercised indirectly and through the Lieutenant-Governor of the Punjab. I pass therefore to the consideration of the comparison between a control exercised indirectly through the Lieutenant-Governor and a similar control exercised through an Agent to the Governor-General. It may be admitted that in both cases the Foreign Department is relieved from a mass of administrative detail; but, as already stated, the relief is by no means as complete in the case of the Agent to the Governor-General as in that of the Lieutenant-Governor, for the simple reason that the full machinery of a Local Government is not available. The Baluchistan agency was fairly on its legs before I knew it, and is still more firmly established now, and yet it affords overwhelming proof of this proposition. If so, one can only conjecture what would be the result of a new agency on the Punjab frontier. But besides this there are two other matters on which it is my duty to speak frankly; and if it be thought that I magnify my office I can only say that I describe circumstances as I myself have found them. The closer supervision and control desired by Her Majesty's Government must be largely exercised by the Viceroy himself, both in his capacity as head of the Government and as having charge of the Foreign Department. It is of the highest importance that the relations between the Viceroy and the officer who, under his supervision, directs the control of their external relations should be close and personal. The Agent to the Governor-General, from the mere fact of his appointment, is expected to reside in his district; he may be called to Simla or Calcutta, or the Viceroy may, during his five years, meet him once, perhaps twice, on tour, and that is all. The Lieutenant-Governor resides several months every year at Simla, and is in constant communication with the Viceroy. The Agent to the Governor-General of a district, such as that now under contemplation, would of course be a selected officer, deserving the fullest confidence, but the Lieutenant-Governor is an officer in the very highest grade, both by seniority and position. Now it is at the point where Imperial interests must override local considerations that the Viceroy's hand must be felt upon the reins. A certain course of action may be proposed which, looking to local circumstances, is beyond doubt the best; and yet Imperial policy may require that it should be abandoned. If at that moment the officer who must be overruled is one with whom there are opportunities of personal conference and consultation, the chances of friction and misunderstanding are infinitely less than if he is one with whom there can only be communication from a distance by letter, and who must on that account, and perhaps by reason of his standing, be addressed rather as a subordinate than as a colleague and friend.

22. It is probably only practical experience that can enable any one to realise the full advantage that can be secured, or the loss of influence that may result, from differences such as this in the arrangements whereby control is exercised. But there is one more difference between the Agent to the Governor-General and the Lieutenant-Governor which is fundamental, and which vitally affects the question, which of them is to be preferred for the present purpose? It has been objected that the Lieutenant-Governor has too many interests inside his province, and that it cannot be expected that he will be able to devote sufficient attention to affairs on and across the border. But is there not another side to that question? If we create this new post, choosing for it, as we are bound to do, a man of energy and ambition, what outlet is he to find for his activity? The career of a Sandeman, the creation of a new Baluchistan, is debarred to him; for the policy which he must carry out is essentially one of *quieta non movere*. It was a policy of non-annexation, of non-interference, which was declared by Her Majesty's Government in the despatch of January 28th, and was expounded on their behalf by the Prime Minister, the Secretary of State, and the future Viceroy. It is a policy of which I heartily approve, and which I claim has been pursued during my administration. Expeditions have been undertaken, and our advanced posts have been still further advanced, the former having been sent, and the latter established, in consequence of obligations which, so far as I am concerned, were inherited. We have assumed the protection of the Dauris in the Tochi valley against their turbulent neighbours, at their own request long and urgently preferred, but no tribe or section of a tribe

has been compelled against their will to surrender the local self-government which they formerly possessed, and which it is their desire to retain. It is because I wish to see this policy acted upon in the future, and because I regard it as the best hope of a peaceful and permanent settlement, that I deprecate the establishment on the frontier of an authority which from the nature of things must, in my judgment, endanger its continuance, and that I still prefer to rely on such an adaptation of the machinery we already possess as we proposed in our despatch, believing that, by so doing, we can with less risk and greater efficiency secure the objects which Her Majesty's Government have in view.

(Signed) ELGIN.

November 6th, 1898.

No. 9.

Despatch from the Secretary of State for India to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 24th November 1898.

I have received and considered your Excellency's military despatch* of the 4th August last, in which you submit your views as to the military position to be maintained on the Miranzai border, in the Tochi valley, and at Wana, and the adjacent portion of the frontier.

2. I may assume generally that the proposals contained in this letter are concerned, not immediately with ulterior strategical necessities, but with the protection and pacification of the Punjab frontier; and from this standpoint I proceed to pass some observations upon them. In regard to the Miranzai border, you are of opinion that the retention of some regular troops is at present essential for the protection of this part of the border, and that though their eventual withhdrawal may be on some grounds desirable, it cannot now be considered. You therefore appointed a Committee to report upon the question of the defence of th Samana range, with the objects of protecting the Miranzai valley against tribal incursions, and of supporting the police posts in that region. Of the two schemes submitted by the Committee, your Government adopted one (A), which contemplates holding the range in such strength (concentrated at Fort Lockhart) as would admit of a small moveable column being at once available to support the police posts, the force being dependent on Kohat for its main support. You recommend this scheme generally for my approval, leaving the details to be further examined, and reserving for submission hereafter any point that may need my sanction, with exact estimates of the cost.

3. In the Tochi valley you are of opinion that the entire withdrawal of troops would be impracticable in the existing circumstances; but you believe that it may be possible before long to diminish the garrisons, and to concentrate the regular troops, placing the main garrison at Miranshah. In my telegram of the 14th September I informed your Excellency that I approved the selection of Miranshah for that purpose.

4. Having regard to the general peace of the country in the vicinity of Wana, you think that the withdrawal of the troops from that post should not at present be undertaken; although you desire to follow out the principle of the concentration of regular troops, if and when you are able to provide an efficient substitute in the subsidiary post.

5. I have, therefore now before me, in outline and in anticipation of details and estimates, a sketch of the military position wich your Government are prepared to establish for the protection of a very large area of tribal territory. The general purport of your letter is to recommend the retention for the present

* See above, page 66.

of strong garrisons in fortified posts on the Samana range, in the Tochi valley, and at Wana. The important question of holding the minor posts by levies, or by militia, is engaging your attention, with the object of organising them, if necessary, in the future.

6. In regard to the general principles which should govern these military arrangements for frontier defence, Your Excellency refers to a statement made in paragraph 4 of your Military letter of 23rd June 1898, which affirms and accepts the leading principles laid down in my despatch of the 28th January 1898, as underlying the frontier policy to which Her Majesty's Government are determined to adhere. The first of these principles, as given in paragraph 18 of the despatch, was that no new responsibility should be undertaken unless absolutely required by actual strategical necessities and the protection of the British Indian border. And the two main objects to be borne in mind were indicated to be the best possible concentration of your military force that would enable you to fulfil your responsibilities and the limitation of your interference with the tribes, so as to avoid the extension of administrative control over independent tribal territory. With the question of concentrating your troops Your Excellency's letter now under reply has dealt carefully and comprehensively; but the second of the two objects which I have just mentioned is not of such a nature as to bring it adequately within the scope of a scheme for military defence. The measures which you submit for my approval must be regarded as a part of the arrangements necessary for the control and protection of the frontier, while these again must depend mainly upon the general policy of your Government towards the tribes, which, as you are aware, is now under consideration; and I wish to be assured that this side of the whole question has been thoroughly examined. Accordingly, before deciding finally upon proposals which, if approved, might bring a large extent of trans-frontier country under the permanent protection of the British Government—a step which can hardly be taken without some material increase of our responsibilities—I think it best to remit the case again to Your Excellency for full consideration, upon the political and military principles laid down in my despatch of the 28th January last.

I have, etc.,

(Signed.) GEORGE HAMILTON.

No. 10.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 10th August 1899.

In our Military despatch of the 4th May 1899,* we informed Your Lordship that we had finally decided that the force holding Landi Kotal and controlling the Khyber should be, as heretofore, a local force, and that it should have a strength of 1,200 men in two battalions under a single Commandant and Adjutant, with two other British officers to each battalion. It was added that Your Lordship would be separately addressed as to the organisation of this force, and as to the political arrangements for keeping open the Khyber route. Subsequently, in our telegram of the 14th July, we asked Your Lordship's sanction to proceed at once to raise the Khyber Rifles to the strength proposed, and this was accorded in your telegram of the 2nd August.

2. We now have the honour to enclose copies of the correspondence cited in the accompanying list, showing in detail the arrangements sanctioned for the reorganisation of the corps, and the cost entailed.

* Not printed.

3. We have decided to maintain the existing arrangements for the kafila traffic, *viz.*, that there shall be two kafilas a week each way in the cold weather, and one a week each way in the hot weather. While, however, in practice the Pass will be open for kafilas only on stated days, we retain the right to use it on any or every day of the week for any other purpose for which it may be required.

4. We invite Your Lordship's attention to our Foreign Secretary's letter dated the 22nd June 1899, to the Officer Commanding the Khyber Force and Mr. F. D. Cunningham. We have in this letter laid down the principle that, in the Khyber and elsewhere along the frontier, the various corps of tribal militia or rifles, or military police, though semi-military in organisation, are more than semi-political in functions and object, and, as such, must necessarily (except in time of active warfare) be under civil authority and control. While, therefore, we have reserved full discretion to invest the Commandant of the Khyber Rifles, or any other officer displaying special aptitude for the work, with political authority in the Khyber Pass, we have decided that ordinarily there will be a separate Political Officer in the Pass, to whom in all political matters the Commandant of the Khyber Rifles will be subordinate.

Enclosure in No. 6. Other enclosures not printed.

5. Measures will be taken at once to raise the corps to sanctioned strength, and we anticipate that it may be possible to withdraw the military garrison from Landi Kotal before the end of the year.

We have, etc.,

(Signed) CURZON OF KEDLESTON.

„ E. H. H. COLLEN.
„ C. M. RIVAZ.
„ C. E. DAWKINS.
„ T. RALEIGH.
„ R. GARDINER.

Enclosure in No. 10.

Letter from H. S. Barnes, Esq., C.S I., Officiating Secretary to the Government of India in the Foreign Department, to Colonel N. F. FitzG. Chamberlain, Colonel on the Staff Commanding Khyber Force, and F. D. Cunningham, Esq., C.I.E., dated Simla, the 22nd June 1899.

In the third paragraph of my letter dated 1st June, you were informed that the question of the political control of the Khyber Pass was still under consideration, and that orders on this point and also on the question of the relations between the Political Officer and the Commandant of the Khyber Rifles would be communicated hereafter.

2. In the fourth paragraph of the same letter, it is stated that the *raison d'être* of the Khyber Rifles is political rather than military, and that it was considered important not to deprive them of their tribal character. This view is admitted throughout the correspondence, and the only point, on which there appears to have been some difference of opinion between General Egerton and Mr Cunningham, was the question whether the Commandant of the Khyber Rifles under the new organisation should be *ex-officio* the political authority in the Pass, or whether there should be a separate Political Officer to whom the Commandant would be subordinate.

3. The Government of India, after full consideration, desire to take this opportunity to lay down the principle that, in the Khyber and elsewhere along the frontier, the Corps of tribal militia, or rifles, or military police, by whatsoever name they may be called, though semi-military in organisation, are more than semi-political in functions and object, and that as such they must necessarily (except in time of active warfare) be under civil authority and control. Sometimes this authority is exercised by a military officer in civil employ (who may also on occasion be in command of the Militia or Rifle Corps as well). Sometimes it is exercised through an officer of the Civil Service. In either case, the principle is the same. In the opinion of the Governor-General in Council, there can be no doubt that the principle is a correct one, and it should be adopted and acted upon along the entire length of the North-West border.

4. In these circumstances, the principle being admitted, the selection of the officer by whom the civil control is to be exercised is a matter of personal fitness. I am therefore to say that, while retaining full discretion to invest the Commandant of the Khyber Rifles, or any other officer displaying special aptitude for the work, with political authority in the Khyber Pass, the Government of India have decided that ordinarily there will be a separate Political Officer in the Pass, to whom the Commandant will be subordinate. As regards the relations between the Commandant and the Political Officer, I am to add that the Government of India are of opinion that the rules suggested in paragraph 5 of General Egerton and Mr. Cunningham's letter of the 14th March are suitable and may be adopted.

5. I am to remind you that no time should be lost in submitting the proposition statement called for in paragraph 6 of my letter of 1st June. As soon as the additional defence works which are to be constructed at Landi Kotal and in the Pass are completed, the regular troops now in the Pass will be withdrawn. It is therefore important that there should be as little delay as possible in passing the final orders to raise the Khyber Rifles to the strength now desired.

I have, etc.,

(Signed) H. S. BARNES,

Officiating Secretary to the Government of India.

No. 11.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 26th October 1899.

Your Lordship's despatch dated 25th November 1898 acknowledged the receipt of the letter from Lord Elgin's Government of the 4th August 1898, containing proposals in regard to the military position on the Miranzai border, in the Tochi valley, at Wana, and in the adjacent parts of the frontier. In commenting on the plans submitted, Your Lordship referred to the leading principles of policy laid down in your despatch dated 28th January 1898, and pointed out that, while the proposals made dealt carefully and comprehensively with one of the main objects which Your Lordship desired us to bear in mind, *viz.*, the best possible concentration of our military force that would enable us to fulfil our responsibilities, the measures to be undertaken must also be devised with due attention to the principle that our administrative control over tribal territory was not to be extended, and must harmonise with the general policy that it is decided to pursue towards the frontier tribes. Your Lordship therefore remitted the case to us for full consideration in connection with this general question.

2. We have lately, as desired by Your Lordship, discussed the position on this part of the frontier in connection with, and as part of, the definite policy which we have already initiated in the Chitral Valley and in the Khyber Pass, and which has received Your Lordship's sanction. In the course of this discussion, we have arrived at certain conclusions which have been briefly communicated to Your Lordship in the Viceroy's telegram of the 2nd July, and which have met with Your Lordship's general approval. We now propose to set forth in greater detail the scheme which we recommend, and to explain the principles by which we have been guided.

3. The first principle laid down by Her Majesty's Government in Your Lordship's despatch of the 28th January 1898, was that no new responsibility should be undertaken on the frontier unless absolutely required by actual strategical necessities and the protection of the British Indian border. At the same time, as already stated, our attention was more specially directed by Your Lordship to the concentration of our military forces, and to the avoidance of unnecessary interference with the tribes. On the other hand, by their previous recommendations, the Government of India at the end of last year were more or less committed to a policy which involved the construction of fortifications and the retention of the existing garrison in Chitral, the expenditure of several lakhs of rupees on a new fort at Landi Kotal, and on other fortified works in the Khyber, the construction of the bed for a light railway from Jamrud to Landi Kotal, the maintenance of a military garrison on the Samana range and in the Kuram valley, and an expenditure on forts and posts in these two places which under the scheme A recommended in the despatch of 4th August 1898, and including the additional lines required at Kohat, amounted to Rs. 6,89,958. Certain additions to this scheme since recommended by the present Commander-in-Chief would have raised this expenditure to over eleven lakhs of rupees. In the Tochi valley it was considered necessary to maintain a considerable, though diminished, garrison, and it was proposed to establish a central cantonment at Miran Shah which could only have been constructed at a heavy cost. Similarly, it was proposed to maintain a military garrison at Wana in Southern Waziristan for the protection of the Gomal route from Afghanistan. It is true that it was proposed in time to withdraw the regular troops from Landi Kotal in the Khyber, but with this exception there was to be little reduction in the number of troops cantoned beyond our administrative border. The principle of the concentration of our regular forces would, in these circumstances, have been imperfectly applied, and there was the further risk that the maintenance of regular garrisons in tribal territory would inevitably tend to increase, rather than to diminish, the extent of our interference.

4. Upon the reconsideration of the whole position to which we were invited by Your Lordship, we came to the conclusion that the recommendations previously submitted were susceptible of some modification in order to bring them into greater harmony with the principles that had been laid down. Accordingly, early in the present year, we prepared and forwarded revised proposals in regard to Chitral and the Khyber Pass, which, with Your Lordship's approval, are now in process of being carried out. These proposals were not made without due regard to our position and our impending arrangements elsewhere on the frontier. We endeavoured in framing them to make them conform to a definite and preconceived plan of general application, and they may be regarded as initiating a positive course of policy and action on the North-West Frontier, which, we hope, will be continuous and which rests on principles applicable in our opinion along the entire border. These principles are in accordance with the general axioms laid down in Your Lordship's despatch of 28th January, and they may be specifically defined as follows:—

(i) We desire to avoid locking up regular garrisons in costly fortified positions, at a distance from our base, where the troops themselves are practically lost to the offensive strength of India, and, in time of emergency, would probably require additional forces to be detached from the Indian army to their assistance. It is for this reason that we proposed to withdraw or reduce our

existing garrisons in Chitral and Landi Kotal, and have decided not to proceed with the fortifications at those places on the large scale at first proposed.

(ii) Inas much as after withdrawing or reducing our garrisons we cannot leave these positions or districts—all of which have been taken in a greater or less degree under our control—without military protection, we propose in each of them, as far as possible, to interest the inhabitants of the locality in their own defence, at the same time that we establish a lien upon their loyalty, by enrolling them as a tribal force to supply the local garrisons. In different parts of the frontier, according to the state of development of our relations with the tribes, or to the character of defence required, different methods will be adopted. Thus for instance in Chitral, we have decided to utilise native levies, already existing under a system of feudal service, and to pay them a salary for holding small posts, in our interests, on the road between the Lowarai Pass and Chitral. Their organisation and equipment are entirely native. This is the most primitive and rudimentary system, and is only supplementary to a military occupation in which it has been resolved on wider grounds to persist. In the Khyber Pass we have reached a more advanced stage. Here the Khyber Rifles will replace the troops, and, as recently reorganised, they will consist of a body of men, recruited in certain proportions from the tribes, disciplined and equipped on more military lines, and commanded by British military officers. Nevertheless they are not a purely military body, and they are under the control of the civil power.

In all these cases the principle is the same, and is, we think, one of general application along the frontier, as well as of practical wisdom. By relieving the Indian army from the task of garrisoning and defending these outlying positions, it will be possible, when war breaks out on or beyond the frontier, to concentrate the majority of our troops upon the principal lines of advance. By enrolling the local garrisons as levies, or militia, or police, we reduce the publicity and exaggeration inseparable from proceedings of the regular army upon the frontier, while in the event of any contretemps, we escape the commotion and reproach that are apt to be excited by military disaster. Finally, we take into our pay, and thereby acquire a hold upon the allegiance of the tribesmen who, while their local patriotism is conciliated by employment as the guardians of their native hills, develop at the same time under the influence of a quasi-military discipline an ever increasing loyalty to the British Government.

(iii) Having withdrawn our regular garrisons from these advanced posts and having substituted for them tribal forces, we cannot allow the latter to be imperilled or destroyed by local risings or by external attack. Accordingly at bases within or contiguous to the administrative frontier of India, we propose to maintain moveable columns ready to march to the relief or defence of the advanced positions, and, where possible, to connect the frontier cantonments with the military resources of India by light railways pushed forward from already existing railway systems. Thus, for the support of the Chitral position, we keep a garrison at the Malakand, and for the present, a moveable column at Khar. It has also been decided to construct a light railway from Nowshera to Dargai. In support of the Khyber there is a moveable column at Peshawar, and we have decided, with Your Lordship's sanction, to extend the railway on the standard gauge as far as Jamrud.

We have stated these principles at some length, because, if they are approved, their record may be of use for future guidance. It is also desirable that Your

Lordship should clearly apprehend the objects at which we desire to aim, and the unity of plan which underlies both our past and present recommendations.

5. We now propose to apply these considerations to that part of the frontier which is dealt with in Your Lordship's despatch of the 25th November 1898. We have carefully re-examined the proposals made by Lord Elgin's Government, and we see no reason why this part of the border should be dealt with on different principles from those which we have adopted in the sections of the frontier which have already come under our notice. There are also indications in the despatch of 4th August 1898 that a policy of progressive withdrawal and the substitution of tribal militia for regular troops had already been in the background of the intentions of our predecessors. We have therefore, after full discussion, come to the following conclusions :—

(i) That it is possible and will be safe at an early period to withdraw the military garrisons from the forts on the Samana range.

(ii) That the troops shall be replaced by a battalion of military police about 460 strong, to be called the Samana Rifles, and to be commanded by police officers. This form of tribal militia or military police will be intermediary between the native levies of Chitral and the more military organisation of the Khyber Rifles. In our view precise uniformity of system is not essential on a frontier, so long and with such varying conditions both of local population and the degree of British control as the North-West border, and we think it far from undesirable that different experiments should be made in different parts. This police battalion will be largely recruited from the Orakzai tribesmen, who will thus be enlisted on our side in guarding their own border.

(iii) That similarly there will be no serious difficulty or risk in withdrawing the regular troops from the Kurram valley, where we have a loyal population to deal with ; their place being taken by an increase to the existing Kurram Militia. It is proposed that this increase should take the form of a second battalion, 400 strong, under police officers, the existing battalion being given a more military organisation, and being provided with additional officers.

(iv) That for the support both of the Samana position and the Kurram valley a new cantonment be established in Miranzai, the position which has been recommended as most suitable being the open plain at an elevation of over 3,000 feet, which lies between Doaba and Torawari. The establishment of this cantonment is, we consider, a necessary condition of the withdrawal of the regular troops from these two advanced positions. Indeed, His Excellency the Commander-in-Chief considers that such a cantonment would have been necessary even if we had decided to adhere to the scheme A which was recommended in our despatch of the 4th August last. Its construction will have the further advantage of obviating the demand for the additional Native Infantry lines which it would otherwise have been necessary to build at Kohat.

(v) That while the obligations into which we have entered render it impracticable to consider the question of a total withdrawal from either the Tochi valley in Northern Waziristan, or from Wana or the other obligatory positions in the Gomal and Shahur valley in Southern Waziristan, a prolonged or permanent military occupation of these places by the troops of the Indian army is not necessitated by political or strategical considerations.

(vi) That, in pursuance of the policy initiated elsewhere on the frontier, the troops may be gradually withdrawn from all these places at as early a date as is consistent with safety and expediency.

(vii) That to replace the troops, two new Militia Corps, similar to the Khyber Rifles and the Kurram Militia, shall be raised under British officers and largely recruited from the local tribes. One of these corps will hold the Tochi valley, the other will have its head-quarters at Wana, and will hold the necessary posts on the Gomal and Shahur routes. It is proposed not to maintain the present system of Sillahdari levies, but to absorb into the militia most of the men who are now engaged, employing a small portion of the new corps for civil and political duties, and continuing only such allowances to the local Maliks as the Local Government may think necessary, in order to enable us to count on their support and good-will in maintaining the peace of the country.

(viii) That in consequence of these arrangements, it will not be necessary to proceed with the proposed fortified cantonment at Miran Shah, but for the support of the Tochi position a moveable column will be maintained at Bannu.

6. We have been in communication with the Government of the Punjab in connection with these proposals, and they have on the whole met with the concurrence of His Honour the Lieutenant-Governor. We enclose, for Your Lordship's information, copies of the correspondence as detailed in the accompanying list. In the case of the militia for the Samana and the Kurram, we have not yet received the final conclusions of the Local Government, in the form of the necessary proposition statements, though the arrangements are in an advanced state of preparation. Our Foreign Secretary's letters to the Punjab Government of the 14th and 18th July explain the points on which we still await information. The estimated net cost of the Samana Battalion is Rs. 78,507, and of the additions to the Kurram Militia Rs. 1,29,126 a year. These totals may be slightly increased in the final proposals which we shall receive, but the net cost of the two schemes will not, we think, exceed Rs. 2,20,000 a year. In accordance with the general sanction given in Your Lordship's telegram of 25th July, and as soon as we receive the replies of the Punjab Government, we propose to sanction these two schemes, and to proceed without delay with the enlistment of the Samana Rifles and of the additional militia for the Kurram valley. We anticipate that it may be possible to withdraw the troops from the Samana range and the Kurram in about nine months from the date of sanction to these two schemes. As regards the new cantonment which it is proposed to place at Torawari, we think it desirable to test the suitability of the site before incurring a large expenditure on buildings and other works. We have decided, therefore, to place there in camp a moderate force consisting of not less than one regiment of Native Cavalry, one Native Infantry regiment, and a Mountain battery. These troops will be provided later on with adequate shelter during the hot weather, and, if the site proves to be satisfactory, we will proceed gradually to construct permanent barracks and other buildings.

7. Our proposals in regard to Waziristan are in a less advanced state, and will take a longer time to complete. Our Foreign Secretary's letter to the Government of the Punjab of 7th August explains our views in detail, and before we can furnish Your Lordship with more precise and detailed proposals, it will be necessary to await the report of the Committee which we have directed the local Government to convene. But the information given in the papers which we forward will, we think, be sufficient to enable Your Lordship to form an approximate estimate of the cost of the scheme when completed. Assuming the absorption in the new corps of the greater number of the existing Sillahdari levies, the nett cost of a militia corps in the Tochi of a strength of 700 rifles and 50 cavalry is estimated at Rs. 87,452 a year. The nett cost of the larger scheme of 1,000 rifles and 60 cavalry suggested by the Commissioner of the Derajat would be about Rs. 1,35,000. We must await the proposals of the Committee and the Local Government as to the exact strength which may be required, but assuming the strength of each of the two corps in Waziristan to be not less than 800 or more than 1,000 rifles, the nett cost for both will be from 2 to 2¾ lakhs

per annum. We would ask Your Lordship's permission to sanction such a strength for each corps, as in communication with the Local Government we may find to be necessary, within a limit of 3 lakhs a year nett increase of expenditure. The initial expenditure in connection with these corps cannot be large, as it is assumed they will take over the buildings now occupied by the troops.

8. It will be convenient at this stage to furnish Your Lordship with some estimate of the difference in cost of the arrangements now proposed, and of those which were in existence or were contemplated in January of this year. Such an estimate can, from the nature of the case, be only approximate, but the figures which we have been able to collect, and which are given in the three statements* herewith enclosed, are sufficient to demonstrate that the policy now contemplated must result at once in a very considerable, and in the long run in a permanent, relief to the Indian exchequer. Excluding the cost of the new cantonment in Miranzai, which will be dealt with hereafter when we are satisfied as to the most suitable site, and also the cost of the temporary camp, which it is impossible at present to estimate, but which should not be large, the difference in the initial expenditure on posts and fortifications, which we now propose, and that of the larger programme of military works contemplated last year, is no less than 26½ lakhs of rupees.

* Enclosures not printed.

The saving in the recurring expenditure will also be substantial. If we find it possible to carry out to the full all our present proposals, the withdrawal of troops from the advanced positions which they now hold, and the substitution of militia corps and levies will result in the end in an annual saving of 2¾ lakhs. A large portion of this saving will accrue at once, or within a very short interval, inasmuch as one regiment is now being withdrawn from Chitral, the troops at Landi Kotal will, we anticipate, return to India before the end of the year, and as already stated the withdrawal of the Kurram and Samana garrisons will, we hope, be possible within about nine months from the present time. We have already referred to the other obvious advantages of the present proposals, *viz.*, the addition to our defensive strength on the border by the enlistment of the tribesmen in local corps for the police of their own hills, and the increase to our offensive power by the recall and concentration of the troops of the regular army. The extent of the relief which will be thus afforded may be measured by the fact that, without counting the two battalions which would in any case have been withdrawn from Landi Kotal, they will set free for service elsewhere about five battalions of native infantry.

We have, etc.,

[Enclosure not printed.]

No. 12.

Despatch from the Secretary of State for India to His Excellency the Right Hon'ble the Governor-General of India in Council, dated India Office, London, the 4th January 1900.

North-Western Frontier. Military arrangements for Samana, Kurram, and Waziristan.

I have considered in Council Your Excellency's letter No. 208 of the 26th October last, in which you explain the principles by which you have been guided in formulating your recommendations for the concentration of your military forces on the North-Western Frontier, and set forth in detail the measures which you propose to adopt.

2. In my telegram of the 13th October 1897, I expressed the view that "the present opportunity should be used for defining our permanent position and policy"; and in the 18th paragraph of my Despatch of the 28th January 1898, I pointed out that one of the main objects to be kept in view should be the "limitation of your interference with the tribes so as to "avoid the extension of administrative control over independent tribal territory."

3. Subsequently, in reply to your predecessor's Military Letter of the 4th August 1898, I again referred to the question of the limitation of interference with the tribes as having an important bearing on your military proposals, and remitted the recommendations of the Government of India for further consideration upon the political as well as the military principles laid down in my Despatch of January 1898.

4. In your letter now under reply you report the military arrangements made upon an important section of the North-Western Frontier, and you explain that they have been framed upon a definite plan intended for general application, which you desire to carry out as representing the continuous policy to be followed in dealing with questions of the protection of our own territory and the police of the border. The main object of these arrangements is the withdrawal of garrisons of regular troops from fortified positions beyond the frontier, or their reduction as circumstances may allow; and the substitution of milita recruited from the tribes of the country, disciplined and equipped to a certain extent upon military models, and usually commanded by British officers. In some cases untrained native levies are to be employed in maintaining posts of communication.

5. These measures, and the policy upon which they are based, appear to me to be in accordance with the principles laid down in my Despatches to you on the subject, particularly in the 18th and 19th paragraphs of my Despatch, dated 28th January 1898, in regard to the discharge of the duties and responsibilities devolving upon the British Government in its relations with the frontier tribes.

6. I sanction the proposals submitted to me, and the expenditure which is estimated to be necessary, and I have pleasure in conveying to you, on the part of Her Majesty's Government, their recognition of the judgment, ability, and promptitude with which your Government has taken up and dealt with these important questions.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 13.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 13th September, 1900.

In your despatch of August 5th, 1898, in which you discussed the future administration of the North-West Frontier of India, as affected by the war of the preceding year, Your Lordship used these words: "Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab Frontier should be more directly than heretofore under the control and supervision of the Government of India." Your Lordship, in inviting the attention of Lord Elgin's administration to certain suggestions for the attainment of this object, went on to remark: "The matter is too important for me to arrive at any final decision without giving to it the fullest consideration. I shall receive with interest any further observations which Your Excellency may desire to make on the suggestions of this despatch."

2. The proposals alluded to, relating to a change in the political control of the tribes on the Peshawar Border, by an alteration in the position of the Commissioner of Peshawar, were referred to the Punjab Government in the autumn of 1898. The replies of the Lieutenant-Governor and of the principal Frontier officers of the Local Administration, together with a Minute by the Viceroy, Lord Elgin, were forwarded to Your Lordship in a despatch dated the 10th November 1898. Lord Elgin explained in his Minute that, while anxious before leaving India to submit his own opinions in an official form, he desired to speak for himself alone, and not in any way to pledge the Government of India, for whose mature and deliberate consideration the whole case must be expressly reserved.

3. This consideration we have now, in the light of further experience, and of a most careful examination of all the factors of the problem, given to it; and we submit to Your Lordship the conclusions at which we have arrived.

4. We are even more profoundly convinced than was Your Lordship of the unsatisfactory nature of the present position. It is as unsatisfactory from the point of view of the Punjab Government as it can be from that of the Government of India. The former is called upon to carry out a Frontier policy for which it is not in the last resort responsible, and with which it is not specially qualified to deal. The latter is responsible for a Frontier policy which is not carried out by its own agents, and is to a large extent removed from its direct supervision. Labour without responsibility is the experience of the Local Government; responsibility without control is that of the Government of India. This situation, which is equally invidious for both parties, has been aggravated in recent years by the circumstances that have brought a larger number of the Frontier tribes under the influence of the Government of India, and have compelled the institution of political relations with them, not always or easily to be adjusted to the scope and capabilities of a Provincial Administration. Some radical change in the existing system of Frontier management appears to us to be required, if there is to be either firmness, promptitude, or continuity of Frontier policy in the future.

5. The entire question has for some time engaged the close attention of His Excellency the Viceroy, who has personally visited the Frontier in order to examine the situation upon the spot. He has now submitted his views and proposals in an exhaustive Minute, which has been considered by us, and which we forward to Your Lordship with an expression of our unanimous and hearty agreement with its main propositions.

6. The problem is one which is capable of being dealt with in one of three fashions. It might be possible to reduce the difficulties and dangers of the present situation by conferring a considerably larger measure of independent authority and control over the Frontier administration upon the Punjab Government. We could not ourselves recommend such a proposal, for the reason that any addition to the powers of the Local Government must involve a corresponding subtraction from those of the Government of India; and that to increase the responsibility of the former at the expense of the latter would defeat the entire object that we have in view. But in any case we are precluded from even considering this alternative by the express injunction of Your Lordship, already quoted, which postulates a closer and not a more perfunctory control by the Government of India in the future.

7. Of the various compromises that are capable of being suggested between such a scheme and that of the creation of a new administration, we will only observe that we are in complete agreement with the Lieutenant-Governor and the officers of the Punjab Government in their rejection of the particular proposal that was indicated in Your Lordship's despatch of August 5th, 1898, and with His Excellency the Viceroy in the criticism that he has passed upon other and cognate suggestions in his Minute.

8. There remains only the third alternative; that of the construction of a new Agency or province, to be under the immediate control of the Government of India, and to be created out of those Trans-Indus districts of the Punjab in which British officers are brought into direct contact with, and become

responsible for, the management of the Frontier tribes. We are convinced that our duties, whether towards them, or to our own subjects on this side of the border, are more likely to be discharged with the resolution, despatch, and freedom of personal discretion that are essential to success in dealing with such questions, by an Agent to the Governor-General, acting in direct touch with the local officials on the one hand and the Government of India on the other, than will be possible so long as the more complex mechanism and the stereotyped procedure of a first class Provincial Government continue to be interposed between the Frontier and ourselves.

9. His Excellency the Viceroy has worked out with much care the suggested scope and character of the new administration. We concur with him in thinking that the main desideratum to be borne in mind, consistently with the root principle of our policy, is the least possible disturbance of existing arrangements. His scheme appears to us to have been devised with this object, and to be capable of execution not only without detriment, but even with advantage, to the interests of the existing province and its officers.

10. Should the project, in its general outlines, meet with the approval of Your Lordship and of Her Majesty's Government, we would not propose to carry it into effect without the fullest consultation with the Punjab Government. It might be susceptible of modification and improvement at their hands. It should not be regarded, even from our own point of view, as fixed or finite, until it has been subjected to the scrutiny of those who, from their local knowledge, will be better able than ourselves to advise upon details, both administrative and geographical. The exact boundaries and sub-division of the detached districts, the constitution of the political, civil, and judicial service of the new Agency, and the effect produced upon the Punjab Commission, are all matters upon which we should desire to enter into friendly discussion with the Lieutenant-Governor. Should we receive your Lordship's permission to do so, we entertain little doubt of being able to submit to you, with no great delay, the full and final details of the projected reform.

11. As regards its financial cost, we call to mind that your Lordship, in your despatch of August 5th, 1898, conceded to the Government of India "a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to the considerations" to which you had invited our attention. It is too early at the present stage to pronounce with any definiteness as to the outlay that is likely to be entailed by still inchoate proposals. We are not without hopes, however, that, even when they are fully developed, we shall not be called upon to profit by the latitude which has been so generously allowed to us, but shall be able to commend our scheme as consistent with the interests of economical as well as efficient administration.

12. Finally, in submitting these proposals, we desire to impress upon Her Majesty's Government that we regard them as essential to the prosecution of the larger scheme of Frontier policy upon which, with their approval, we have lately embarked: that they are put forward, not in any experimental interests, but with the firm conviction that they will be conducive to a consistent and peaceable continuance of our present and harmonious relations with the majority of the border tribes: and that, while, if accepted, they will emphasise the due responsibility of the Government of India for Frontier policy and concerns, they will also be the means of investing the officers who conduct those affairs on the spot with that wider liberty of action and leisure for personal intercourse with the Pathan peoples which have long been recognised as an indispensable condition of Frontier success.

We have, etc.,

Enclosure in No. 13.

Minute by the Viceroy on Frontier Administration.

During the year and-a-half that have elapsed since January 1899, the Government of India have matured and are now carrying into execution a new policy for the military charge and control of the North-West Frontier. We have reduced the regular garrison in Chitral, have concentrated our troops at Drosh, in close proximity to the British end of the Dir-Chitral line of communication, and have supplemented our military strength in the country by native levies, raised from the Mehtar's subjects. We have at the same time strengthened the Malakand position by the construction of a rail-road from Nowshera to Dargai.

2. In the Khyber we have successfully withdrawn the whole of the regular troops, both British and Native, from all positions in the Pass; and have replaced them by two battalions (1,250 in all) of the reorganised and enlarged Khyber Rifles, with an increased number of British officers, and an improved scale of pay. We have abandoned the costly and extensive fortifications which it was at one time proposed to build in the Pass and at its further extremity; and have, at a greatly reduced outlay, constructed the additional or improved defences that are required for the Afridi garrison. We have desisted from the plan of laying either the bed of a railway or a railway itself up the Khyber Pass, and have contented ourselves with a modest extension of the existing North-West Railway for the distance of 10 miles that separates Peshawar from Jamrud. Flying columns, maintained beyond the Malakand and at Peshawar, provide for the rapid reinforcement of these two sections of the frontier.

3. Between Peshawar and Kohat we have arranged peaceably for the construction of the long desired cart-road through the Kohat Pass, a work which is about to be undertaken with the consent and co-operation of the Pass tribes. We further contemplate, at as early a date as our resources will bear the outlay, the linking of Kohat by railway with Kushalgarh upon the Indus, at which point connection by rail already exists with the military base of Rawalpindi.

4. South of Kohat a force of tribal militia, 450 strong, largely recruited from the Orakzai tribesmen and entitled the Samana Rifles, has been raised under British officers as an extra battalion of the Border Military Police, and is intended, as soon as the conditions permit, to replace our regular garrisons now maintained on the Samana Range.

5. In the Kurram valley, the Kurram Militia have been augmented in numbers and reorganised in two battalions (1,250 strong) under British officers. It is believed that the high state of efficiency which they have already attained will very shortly admit of the withdrawal of the regular garrison which has been maintained in the Kurram valley since it was taken over in 1892. Both the Samana and the Kurram positions will be supported by the light railway which it is in contemplation to build from Kohat to Thal.

6. Further to the south measures are now being taken for the realisation of a similar policy. Two battalions of Waziristan Militia of 800 each are in course of being raised, the one for the Tochi valley or Northern Waziristan, the other for the Gomal valley or Southern Waziristan. They are intended, as soon as the requisite degree of discipline and efficiency has been attained, to replace the large garrisons of regular troops which have been kept in those valleys since 1895.

7. The principle that underlies all these dispositions is the same. While entailing no abdication of the responsibilities, military or political, which have been assumed by the Government of India at an earlier date, and which could not, either with safety or in honour, be now repudiated, they are intended to extricate from advanced positions the large numbers of regular troops who have for some years been stationed there; to consolidate instead of diffusing our military strength upon the border; and to promote a spirit of local harmony and co-operation by the enlistment, in the service of the British Government, but in the defence of their own country, of the wild but not intractable inhabitants

of these regions. It is hoped, if the scheme be given a fair start, that its possible risks may be more than compensated by its unquestioned advantages of reduced outlay, of increased tactical mobility, and of tribal contentment. Above all, the scheme which I have sketched, which has been inspired, not by a Local Government, but by the Supreme Government, and which is under the control not of the military authorities, but of the Foreign Department, *i.e.*, of the Viceroy, is intended to emphasise the responsibility, which the Government of India has assumed and of which it cannot ever safely divest itself, for the pacification and control of regions which lie upon the borders of the Empire, and which, if any part of the Indian frontier be at any time exposed to attack, will in all probability be the immediate focus of military and political danger.

8. I now desire to supplement these plans, which have so far been attended by consequences as favourable as could possibly have been hoped for (though I shrink from any dogmatism as to the future) by submitting the proposal, which is their natural complement and climax, and upon which they are in my judgment dependent for the prospect of continuing success—*viz.*, the constitution of a form of administration in the tracts in question which shall bring to bear upon them the authority and influence of the Government of India in a manner more prompt, more imperative, and more direct, than will ever be found possible, so long as the elaborate organisation of a Local Government of the first class intervenes between it and them. I have not brought forward this scheme until I have satisfied myself, by more than a year and-a-half of patient enquiry and observation in this country and in the Departments of Government, of the complexities, the anomalies, and, as they appear to me, the ineradicable flaws, of the existing system; nor have I ventured to indicate what in my opinion should be the keystone of the frontier arch, until I have endeavoured securely to lay the foundations upon which its piers must rest.

9. This is by no means the first time that the proposal has been made to create a new and separate administration for the North-West Frontier. On the contrary, schemes of varying character and magnitude have been submitted to and debated by the Government of India throughout the last quarter of a century; and it may safely be said that there is no Frontier authority of any eminence during that period who has not discussed, while there are but few who have not approved the principle of such a change. This remarkable unanimity * testifies to the depth and range of the conviction upon which the desire for reform has been based and effectively relieves any fresh disputant from the charge either of rashness or of innovation. On the other hand, the fact that all previous endeavours have proved abortive, and that the existing system, though so widely and authoritatively condemned, has continued to survive, suggests that the problem itself is far from easy of solution, and that, before it be again approached, a brief survey of earlier efforts and, if possible, an analysis of the causes of their failure, may be helpful to the present argument.

* Among those who have at different times held these views, I may mention Sir Bartle Frere, Sir Henry Durand, Lord Roberts, Sir James Browne, Sir Robert Warburton, Sir Robert Sandeman, Sir William Lockhart. I exclude those whose views have been formed independently of Frontier experience, such as Lord Lytton, Sir Charles Aitchison, Sir George Chesney, Lord Lansdowne.

History of past attempts.

10. From the date of the Mutiny until 1889, the discussion of a separate Frontier province and administration was invariably mixed up with, and arose in the first place out of, the proposal to incorporate Sind with the Punjab. Sind had been conquered in 1843, when—the Punjab not having as yet been annexed, and Bengal, which embraced administratively the whole of the north of India, being too remote—it was added, in spite of the distance and the intervening sea, to the Government of Bombay. Even when the Punjab was annexed in 1849, and when, after the Mutiny, it was constituted a Lieutenant-Governorship, it was decided by the Secretary of State not to attach Sind to it, owing to the excellent administration which the latter province was at the time receiving from its Commissioner, Mr. Bartle Frere, under the Government of Bombay. In later years, in 1863 and in 1876, Sir Bartle Frere himself became one of the

strongest advocates of the fusion which his own abilities had successfully availed to postpone. During the Viceroyalty of Lord Northbrook, the incorporation of Sind with the Punjab was, in April 1876, formally recommended to the Secretary of State, and was accepted in principle by him, though a final expression of opinion was deferred until the newly-appointed Viceroy, Lord Lytton, had visited the frontier.

11. The result of this visit was the appearance of Lord Lytton's wellknown Minute of April 22nd, 1877, which at once raised the question on to a different level by suggesting the creation of a separate Trans-Indus District, under a representative of the Viceroy, as the sole exponent of Imperial policy in India. The anomalies and drawbacks of the existing situation were vigorously delineated; and the outlines of the new administration were clearly sketched. The province was to consist of the six Frontier Districts of the Punjab, *viz.*, Hazara, Peshawar, Kohat, Bannu (except the Cis-Indus tracts), Dera Ismail Khan (with the same exception) and Dera Ghazi Khan, and also Trans-Indus Sind (with the exception of Karachi). At the head was to be a Chief Commissioner of the North-West Frontier and Agent to the Governor-General, to reside at Peshawar, with the powers of a Local Government, and with a Judicial Commissioner possessing the powers of a Chief Court. Under him were to be two Commissioners, one for the Punjab Frontier Districts except Dera Ghazi Khan (*i.e.*, for the Pathan population of the border); the other for Baluchistan, Dera Ghazi Khan, and Trans-Indus Sind (*i.e.*, for the Baluch population). Into the constitution of the lower grades of the administrative hierarchy, which was to be furnished, with an increased scale of pay, from the Punjab Commission, I need not enter. The covering despatch which was sent with this Minute to the Secretary of State, dated May 17th, 1877, recommended the adoption of its proposals, and the compensation of Bombay for the loss of Sind by the administrative absorption of the whole or part of the Central Provinces—thereby introducing an element of discord which effectually ruined this and all similar proposals for many years to come.

12. The Secretary of State in replying, on November 29th, 1877, accepted the main proposals of Lord Lytton's Government, remarking that the conditions under which the Frontier had been given to the Punjab were obsolete, and that the proposals themselves were "measures of defence and security, not of aggression." Nevertheless, looking to the heavy financial cost of Lord Lytton's complete scheme and to the desirability of not embarking upon too large a change, he recommended, as a smaller and less ambitious proposal, the elimination of the Chief Commissioner or single supreme authority, and the creation of two Commissionerships for the Trans-Indus Districts of the Punjab and Sind (the one for the Pathan, the other for the Baluch tribes). The incumbents of both posts were to be appointed by the Viceroy, but in respect of all internal affairs were to take their orders from the Punjab Government. The Northern or Pathan Districts Commissioner was to be the superior in status, with the rank of Agent to the Governor-General and Frontier Commissioner, and with the right to correspond directly with the Viceroy. The Southern Commissioner was to be subordinate to, and to correspond with, his Northern colleague.

13. I call special attention to this proposal, as to which it was admitted that it involved "a duplicate responsibility which is in theory objectionable and may be attended with occasional inconvenience," because it was the first suggestion of a form of compromise which has re-appeared at intervals since, which possesses undoubted superficial attractions, but which has invariably been condemned by those enjoying the closest practical acquaintance with the frontier. Sir C. Aitchison, who was at that time Foreign Secretary and who subsequently became Lieutenant-Governor of the Punjab, noted that "it would probably be difficult to devise a scheme more full of the seeds of future misunderstanding, confusion, and divided responsibility." Sir R. Egerton, the Lieutenant-Governor of the Punjab, remarked—"It is almost impossible to exaggerate the inconvenience which might arise from this division of authority. It would have the worse effect upon the internal administration of the Frontier districts." Other members of the Government described it as quite unworkable and as radically bad.

14. Lord Lytton, however, thinking that half a loaf was better than no bread, was prepared, with certain re-adjustments, to accept the modified scheme. A correspondence ensued with the Punjab Government as to the best methods of carrying it out. The arrangements were nearly completed, and Sir F. (now Lord) Roberts had even been designated as the first Northern or Chief Commissioner of the frontier, when, in the winter of 1878, war broke out with Afghanistan.

15. In the ensuing year, when the war was apparently ended, the project was revived. Then came the Cavagnari massacre and the second Afghan expedition. When peace had been re-established, and the future administrative dispositions required to be made, Lord Lytton had left India. His successor, Lord Ripon, recommended to Her Majesty's Government the abandonment of the entire scheme, both for the separation of the Trans-Indus Districts from the Punjab Government and for the transfer of Sind; and both projects accordingly disappeared from view.

16. Some years elapsed before, in the concluding year of Lord Dufferin's and in the opening year of Lord Lansdowne's administration, either project was revived. The transference of Sind to the Punjab was then again proposed. Matters had, however, changed in the interim. With the creation of the Baluchistan Agency under Sir Robert Sandeman, Sind had ceased to be a frontier, and had become an internal province. Willing as Bombay might be to consider the exchange of Sind for the Central Provinces, the Chief Commissioner of the latter submitted an argument which, in the altered condition of circumstances, was fatal to any such proposal. Early in 1889, accordingly, this scheme, which for over 30 years had at fitful intervals re-appeared upon the scene, finally vanished from view. I do not propose, and I cannot imagine that any of my successors will ever propose, to revive it. The interests of Sind, now that it is no longer a Frontier Province, if they have no special connection other than a historical one, which is not to be despised, with Bombay, have, on the other hand, no connection with the Punjab other than that of geographical contiguity with the outskirts of that province. Sind is, I believe, content with its present, and rather peculiar, administration, the foundations of which were laid by Sir Bartle Frere, and I see no reason for disturbing it. Still less ground would there be either for partitioning or for handing over to another Government the Central Provinces. That Administration has, since its constitution, greatly increased in size, in numbers of population, and in importance. It has no natural connection with Bombay. It requires the undivided services of a single Governor. A series of capable administrators have established its indisputable right to an independent existence.

17. The discussion, which had been resumed in the Viceroyalty of Lord Lansdowne, as to the desirability of creating a new Frontier Province, terminated in a decision not at present to proceed further with any such scheme, but to leave to the Punjab Government the responsibility of carrying out, in the middle or Pathan section of the Frontier, a more active policy than had hitherto been in vogue, with the view of establishing friendly relations with the tribes upon this part of the border, similar to those which were alleged already to exist in Dardistan and Baluchistan. Twelve years earlier Lord Lytton had written in his Minute:—

"I believe that our North-West Frontier presents at this moment a spectacle unique in the world; at least I know of no other spot where, after 25 years of peaceful occupation, a great civilised power has obtained so little influence over its semi-savage neighbours, and acquired so little knowledge of them, that the country within a day's ride of its most important garrison is an absolute *terra incognita*, and that there is absolutely no security for British life a mile or two beyond our border."

18. How little change had been effected in the interim may be illustrated by the almost exact reproduction of the same complaint in the same language in the letter, dated 17th October 1889, in which Lord Lansdowne's Government laid down its new injunctions for the guidance of the Local Government:—

"The Government of India cannot consider its present relations with the trans-frontier tribes on the Punjab border as either suitable or satisfactory, and the absence of any friendly understanding between them and the neighbouring British officers may at any time prove a source of serious danger and anxiety. The country within a day's ride of one of our most

important garrisons is indeed almost a *terra incognita*, and there is no security for British life a few miles beyond the border. Punitive expeditions have been frequent, but have been attended with very few permanent results, and there is probably no other spot in the world where, after 35 years of peaceful occupation, a great civilised power has obtained so little influence over its semi-savage neighbours or has acquired so little knowledge of them."

19. This correspondence was not attended by any appreciable results. It was an attempt to recommend to the Punjab Government methods other than those to which it had been accustomed, and did not accordingly meet with an effusive welcome at its hands. From a perusal of many such discussions of which this is only one, I derive the impression that any attempt, in the case either of the Punjab or Baluchistan Administrations, to indicate to the one a preference for the system followed by the other foredooms the discussion to practical sterility. It is so easy to demonstrate a difference of conditions that any argument as to similarity of treatment is capable of being hotly contested, and is certain to be fruitless. Much of the failure to devise any better method in the past has been due to the unconscious affront to local susceptibilities, caused by the suggestion of an analogy, which is thought to be, and perhaps sometimes is, misleading.

20. In the concluding months of Lord Lansdowne's administration, a great change was introduced in the entire circumstances of the Frontier, and notably in the question which I am here discussing, by the conclusion of the Durand Agreement at Kabul in November 1893, whereby a line of division, subsequently demarcated through the greater part of its extent, was drawn between the British and Afghan possessions, from Chitral to the borders of Seistan. On the British side of the line was left, notably in Waziristan, a great block of tribal territory, with which the Amir henceforward had no right of interference, and which, without being thereby either absorbed or annexed by the Government of India, passed into its indisputable sphere of influence. The establishment of control over its people or even of friendly relations with them may be rapid or slow, complete, imperfect or illusory. But the territory so demarcated has ceased to belong to any other political system and has fallen within the Protectorate of a Power which, while it may not be anxious to assume, cannot in the last resort repudiate, its paramount responsibility. So clearly was the entire change in the conditions produced by this Agreement seen by Lord Lansdowne that, on leaving India, he left the following opinion on record :—

"I hold that, irrespective of the objections to a system of dual control (*i.e.*, by the two Local Governments of the Punjab and Baluchistan), it is not desirable that the great Frontier region for which we have become responsible to the north of the Gomal should be administered by an already overworked Local Government, only a few of whose officers are really familiar with Frontier affairs, while all of them are overladen with routine work. All the circumstances seem to me to point to the creation of a single Frontier charge entrusted to the management of a single officer under the immediate direction of the Government of India."

21. In the early years of Lord Elgin's administration, an attempt was once more made to escape from the necessities of a radical change by again suggesting to the Punjab Government the initiation of a policy of friendly intercourse with the tribes for whom we had thus assumed political responsibility and for the strengthening of the political service on the border. Into the discussion that followed with the Punjab Government I need not enter. Suffice it to say that it was not followed, so far as I can ascertain, by any practical changes, either in the principles or in the form of administration. Then ensued the Frontier risings of 1897, and the Frontier war culminating in the Tirah Campaign.

22. At the conclusion of the war, the Secretary of State, in his despatch of August 5th, 1898, summing up the situation as it then stood, used these remarkable words :—

"Her Majesty's Government are of opinion that the present arrangements are not satisfactory; and that it is desirable that the conduct of external relations with the tribes on the Punjab Frontier should be more directly than heretofore under the control and supervision of the Government of India."

23. In order to secure this end, the Secretary of State then invited the attention of the Government of India to the suggestion that the Commissioner of Peshawar, and the officers employed in conducting external relations with the tribes under him, should act directly under the Government of India. The Commissioner should be appointed by the Viceroy with special reference to these responsibilities, and should send copies of his reports to the Lieutenant-Governor of the Punjab. In all other respects, *i.e.*, in all matters of civil administration, he and his officers would continue as now to be under the Local Government.

24. It will be observed that this proposal was an almost exact reproduction of the scheme that had been put forward by another Secretary of State 21 years before, and that had perished at the outbreak of the Afghan war.

25. The 1877 scheme contemplated the appointment of two Commissioners, the one for Baluchistan, the other at Peshawar. Both were to be appointed by the Viceroy, but in respect of all internal affairs were to take orders from the Punjab Government. The Northern Commissioner was to correspond directly with the Government of India. I have already quoted the severe criticisms which were passed in India upon the earlier scheme, even though it was accepted, *faute de mieux*, by Lord Lytton. The only material difference in the 1898 scheme was that the Southern Commissioner having already been created in the interim in the person of the Agent to the Governor General and Chief Commissioner for Baluchistan, the proposal was restricted to the Northern or Pathan section of the border. The reception which was accorded to it may be judged from the correspondence that was sent home to the Secretary of State by Lord Elgin's Government in November 1898, shortly before I came out to India, and that contained the opinions of the Viceroy, the Lieutenant-Governor of the Punjab, and the leading Frontier officers of that Government. The whole of these authorities, with one exception, were opposed to the scheme on grounds which may be inferred from the previous discussion. It was held (1) that by such a system friction would be developed between the Supreme and the Local Governments, since the former would desire, as Commissioner of Peshawar, a man skilled in Frontier politics, while the latter might prefer an administrator trained to deal with revenue, police, and crime; (2) that it would be found impossible in practice to sever the political or trans-frontier duties of such an officer from his administrative or cis-frontier work, and that in fact his influence with the tribes in their political aspect was inseparable from his administrative control over them, or their friends and neighbours, on the British side of the border; (3) that great difficulties would be encountered (in respect of recruitment, promotion and replacement) in so small a political service as would require to be constituted in order to carry out the plan; (4) that the authority of the Punjab Government would be impaired by the inevitable tendency of those of its officers who served two masters, to play to the superior gallery; (5) that the Foreign Department of the Government of India would be swamped with work; (6) that it would be difficult to find a man for the place. With all of these arguments I do not agree, or at least not to the same extent; but I regard their cumulative effect as overwhelming; whilst after visiting the Frontier, and making special enquiries about the matter on the spot, I entertain little doubt that the first objection, *viz.*, the impossibility of severing the external relations of the tribes from their internal administration, and of placing the former under one Government, while the latter remains under another—or, as I have heard it put, of separating hill politics from plain politics—is alone sufficient to condemn the proposal.

26. Since these replies were sent home to the Secretary of State, nothing further has transpired, and we are now at liberty to make to him any proposals that we please for the removal of blemishes or the reform of abuses in the present system, and for the carrying out of his instructions to bring more directly under our own control and supervision the conduct of external relations with the border tribes.

27. The historical recapitulation in which I have indulged will, I think, have established the following propositions, as a starting point from which we may safely proceed :—

(1) Throughout the past quarter of a century, there has been a steadily growing feeling that the affairs of the Frontier, which are in a peculiar degree the province of the Government of India, are not best managed by a Local Government, neither specially recruited, nor exceptionally qualified, for the purpose.

(2) These general considerations have been greatly enhanced in urgency and value by the political changes which have resulted in recent years in the addition of great territorial and tribal responsibilities to the Punjab Government, and in the concentration of the main external anxieties of the Viceroy in particular, and of the Government of India in general, upon that section of the Indian Frontier which is administered by the Punjab Government.

(3) The desired changes are not capable of being brought about by the issue of instructions to the Punjab Government to carry out the policy of the Government of India on its behalf. In no country in the world is administrative loyalty more sincere or more profound than in India: but it is from the nature of things impossible for a Local Government to carry out a foreign policy which it neither originates in the first place, nor is responsible for in the last, with the same influence, zeal, or despatch as would the authors of the policy itself. The comparative futility of the admonitions which have at various times been addressed to the Punjab Government in this context, confirms the necessity of a wider and more organic change.

(4) Such a change, if brought about, should, in view of previous experience, aim at the minimum rather than the maximum disturbance of the *status quo*.

(5) It should not be handicapped at the outset by questions of territorial or political compensation to injured parties. For this purpose such injury must itself, as far as possible, be avoided or minimised. In other words, Sind, Baluchistan, Kashmir—all of which it has at different times been proposed to throw into the crucible from which the new province was to emerge—should be treated as possessing fixed destinies, and as lying outside the present discussion.

With this prelude I will now proceed to discuss, firstly, the reasons which lead me, individually, to think that the time has now arrived when the constitution of a new Frontier administration can no longer wisely be delayed; secondly, the form which that administration should take; and, thirdly, the merits or demerits of the proposal.

Reasons for creation of a new Frontier Province.

28. The first objection that I take to the present system is one which in theory must be obvious, but the full force of which in practice no one can adequately realise who has not had direct experience of it. Under the methods of Indian Government, the conduct of foreign affairs in India is vested in the Viceroy. He is the head of the Foreign Department; or, if the Indian analogy be pursued, the Member of Council for that Department; if the home analogy be followed, the Secretary of State for Foreign Affairs. Now in India foreign affairs—while they embrace many intricate and important questions concerning Native States, and while, in the sphere of external policy, they include our relations with China in Yunnan, with Tibet, with Afghanistan, with Maskat, with the Arab tribes in the Aden Protectorate, and with the Persian Gulf—in the main arise out of, or are connected with, the Frontier tribes and problems; whilst, if we take the whole of the land frontiers of India from the Shan States on the extreme east to the borders of Persian Baluchistan on the extreme west, the most critical, most anxious, and most explosive section of the entire Frontier

is that between the Swat river and the Gomal valley, or precisely the section which is handed over to the Punjab Government. Upon this stretch of boundary, inhabited by the most numerous, fanatical, and turbulent of the Pathan tribes, the Foreign Minister of India, who is also the Viceroy, cannot issue an order, or make an appointment except through the medium of the Punjab Government, nay he cannot—with certain exceptions, hereafter to be noted—make an appointment at all. The Commissioners and Deputy Commissioners, the Political Officers, and Commandants of Border Police, in whose hands rests the entire local responsibility upon the Frontier, are nominated not by him, but by the Lieutenant-Governor. The Chief Secretary to the Punjab Government, who is the principal adviser of the Lieutenant-Governor, is selected, without reference to the Viceroy, by the latter. The Viceroy cannot even remove an indifferent or unsuitable official since promotion in the Punjab is regulated by the conditions of a service of which not he, but the Lieutenant-Governor, is the efficient head. If a debate arises in Parliament as to a Frontier outbreak or a tribal expedition, it will be the Viceroy, and the Viceroy alone, who will be held accountable. Public opinion censures him for failure, or congratulates him upon success. To a certain extent public opinion is right; since, owing to circumstances to which I shall presently allude, the Local Government ventures upon few steps of any importance without reference to the higher authority. But among those who hold up the head of the Government of India to praise or to blame, how many are there who know that he has been working throughout not through his own agents, but through those of another Government, that at each stage he has required to carry the assent of a subordinate, but withal most influential authority, and that in all probability in the early stages (for most Frontier disturbances spring from small beginnings) he has had neither responsibility, knowledge, nor information? I venture to affirm that there is not another country or Government in the world which adopts a system so irrational in theory, so bizarre in practice, as to interpose between its Foreign Minister and his most important sphere of activity, the barrier, not of a subordinate official, but of a subordinate Government, on the mere geographical plea that the latter resides in closer proximity to the scene of action—a plea which itself breaks down when it is remembered that for five months in the year the Supreme and the Local Governments are both located at the same spot, Simla.

29. Now there might be some excuse, perhaps even some solid ground, for such an arrangement, if the Local Government and its officials, who are the intermediaries through whom the Government of India are compelled to act, were themselves deeply versed in Frontier knowledge and experience. It might not unreasonably be argued that a Viceroy and Council, recruited partly from England, partly from the different provinces of India, must know less of the Frontier than a Lieutenant-Governor and Chief Secretary who have probably been brought up in the Punjab, and have been familiar with the tribes from early manhood. But is this the case? Quite the reverse. In practice it is found that as a rule neither the Lieutenant-Governor nor his Chief Secretary knows anything of the Frontier at all; and that they are selected for their high offices, the former by the Viceroy, the latter by the Lieutenant-Governor himself, on account of their general administrative capacity, and ability to do justice to the many aspects of a singularly complex civil administration. Thus, if I take the list of the Lieutenant-Governors and Chief Secretaries of the Punjab, who have held those offices during the past 23 years since Lord Lytton first mooted his scheme of a Trans-Indus province, I find that their Frontier record has been as follows:—

Lieutenant-Governors.

Sir Robert Egerton (1877—1882) had never been in a Frontier District throughout his service, except as Additional Commissioner of Peshawar from November 1863 to March 1864.

Sir Charles Aitchison (1882—1887) had never been in a Frontier District throughout his service.

Sir James Lyall (1887—1892) had never served upon the Frontier.

Sir Dennis Fitzpatrick (1892—1897) had never served upon the Frontier.

Sir Mackworth Young (1897—1900) had never served upon the Frontier, except for 16 months as a 3rd grade Assistant Commissioner of one year's service in 1865-66.

30. Thus the entire cumulative period of Frontier service which can be claimed by a succession of five Lieutenant-Governors has been 20 months, out of a total cumulative service enjoyed by these officers, at the period of their appointments to the rule of the Province, of 151 years.*

* This total is made up as follows: Length of service (upon appointment as Lieutenant-Governor) of Sir R. Egerton, 21 years; Sir C. Aitchison, 26 years; Sir J. Lyall, 29 years; Sir D. Fitzpatrick, 34 years; Sir M. Young, 35 years; or a total of 15 years.

31. If I take the Chief Secretaries during the same period, I find the following:—

Sir Lepel Griffin (1878-1880) had never served upon the Frontier.

Sir Mackworth Young (1880-1886) as above stated.

Mr. C. L. Tupper (1890-1895), previously officiating, had spent 16 months as 3rd grade Assistant Commissioner, engaged in settlement work, at Dera Ghazi Khan.

Mr. H. C. Fanshawe (1895-96) had spent 7 months, as Settlement Officer, at Dera Ismail Khan.

Mr. L. Dane (1896—1899) had been for 1 month 3rd grade Assistant Commissioner at Dera Ghazi Khan and Settlement Collector of Peshawar (1893-1896).

32. It will thus be seen that not one of the Chief Secretaries of the Punjab Government during the same period had, at the time of his appointment, enjoyed any political service upon the Frontier whatsoever. All without exception have been selected for their administrative or other abilities. It is manifest, therefore, that the plea that, in committing the charge of the Frontier to the Punjab Government, the Government of India is making up for any ignorance on its own part by special aptitudes or knowledge in respect of Frontier affairs on the part of the principal agents whom it employs is one that cannot be sustained. There are probably at any one moment in the Foreign Department of the Government of India men with a wider knowledge of the Frontier and its tribes than are to be found in the Punjab Secretariat in an entire decade. Moreover, even were such local knowledge forthcoming at Lahore, it would surely be open to argument that a Lieutenant-Governor or a Chief Secretary or a combination of the two, so endowed, would not necessarily be qualified to deal with the larger problems of foreign policy upon which all tribal issues in the last resort depend, and which must inevitably be more accurately gauged by the Government of India and its head, than they can be by the officers of a provincial administration. Some of the officers of the Punjab Government, in commenting upon the Secretary of State's suggested compromise, have enlarged upon the advantage to them of consulting the personal knowledge and authority of the Lieutenant-Governor when he is on tour upon the Frontier. I do not desire for one moment to disparage the results or benefits of such consultations. But from what I have said, I should imagine the advantage to be quite as often communicated to the Lieutenant-Governor as derived from him; whilst, assessing it at the maximum, how much more valuable, I feel inclined to say, would it be, were it the result of the presence of an Agent to the Governor General, not paying an occasional visit to the Frontier, but permanently resident upon it, not ignorant of the tribes, before he attained his high office, but possessing a long and intimate acquaintance with them. If, however, it be said that any lack of knowledge on the part of the superiors is compensated by the intelligent abilities of their subordinates on the Frontier itself, it may be pointed out that the services of the latter would equally be at the disposal of the Government of India, under a reformed system, without the intervening stratum of experienced but not expert authority; whilst it is unfortunately the case that, owing to the wider scope of promotion that is open to members of the Punjab Commission, who are engaged in revenue and financial work, there is an inclination among ambitious men to devote themselves to these fields of service rather than to the more irksome and less remunerative conditions of Trans-Indus existence. It was further shown by Sir R. Udny (Commissioner of Peshawar) in his letter

of 20th October 1898 that while, under the Punjab system, the theory is that the Frontier is administered, in the lower grades, by officers of Frontier experience, in practice this is very far from being the case. Between 1878 and 1891, only five men were sent to the Frontier who still remained upon it (not having been reverted) in 1898. It was a constant occurrence that no Covenanted Officers were forthcoming for the Frontier; and that Uncovenanted Officers and even natives had to be sent in their place. The charge, therefore, of insufficient experience, which has been shown to apply in the highest quarters, is not without substance in the lower grades also.

33. I have not paused to discuss the cynical suggestion that may occur to some students of British administration, that there may be some deliberation in the policy, that constitutes as the Viceroy's chief adviser in Frontier policy, an officer who in the majority of cases has had no practical experience of the Frontier himself. If there is a case in which the conclusions of the uninformed are perilous, it is that of tribal policy. It is impossible to imagine a field of political action in which the capable outsider, relying upon general *savoir faire*, or experience of men, is likely to come to more disastrous grief. A collateral illustration of this truth may be found in the fact that all the men who have attained the greatest celebrity by their successful handling of the tribes have been men who have not come fresh to the task, but have devoted years of their life to the study and assimilation of tribal ideas and ways. I may instance Sir John Lawrence, General John Jacob, John Nicholson, Sir Herbert Edwardes, Colonel Mackeson, Sir R. Warburton, Reynell Taylor, Sir R. Sandeman.

34. Such being the character of the agency through which the Government of India is at present required to carry out its Frontier policy, I next ask what are the main features and results of the system as a working scheme. I do not hesitate to say that they are departmental irresolution, the dissipation instead of the concentration of responsibility, and long and injurious delays. Some of these consequences are inseparable from the system. Others have grown up as accretions upon it.

35. It will be admitted that in any administration the longer the official chain—and the more numerous the obligatory links of reference—the less likelihood is there of prompt and efficacious action. It will also be conceded that, if there is a field of policy in which rapidity of decision and swiftness of execution are essential, it is that of the Frontier. And yet in practice, before the pettiest affair, arising, *e.g.*, out of a border raid, can be settled, the following are the stages, and their probable duration, through which the matter must pass. The local Political Officer, or the Deputy Commissioner, where the latter is the local Political Officer, reports the case in the first place to the Commissioner, who is probably at some distance, and who, if it be summer time, may be away in the hills. In former days the Political Officer was obliged to report to the Deputy Commissioner and the latter to the Commissioner. But this intervening link has, except in certain cases, been abolished. The Commissioner, upon receipt of the report, has to consider the case, to look up the recent history of the tribe, or to investigate precedents. He then sends up the original report, with his own report upon it (as a rule proposing something rather different from his subordinate), to the Punjab Government. Before it reaches the latter, in all likelihood a fortnight will have elapsed. The case then passes through the Punjab Secretariat. Precedents and policies are again examined; in a department which, as I have shown, is not as a rule rich in Frontier experience there is an inevitable tendency to become the slaves of formulæ and of precedents; finally, after the probable lapse of another fortnight, the case with some fresh or alternative suggestion, may reach the Government of India. If a reference has been required in the interim, as is frequently the case, to the military authorities, another three or four weeks may have been spent in a reduplication of the same chain. An enquiry will have been addressed in the first place to the Lieutenant-General Commanding the Forces in the Punjab. He must refer the case to the General Officer Commanding the Punjab Frontier Force, and the latter to the Officer Commanding in the locality concerned. The answers must be returned through the same compulsory stages. The case having reached the Government of India, all the various papers and proposals, which have by now attained somewhat bulky

dimensions, must pass through the Foreign Department in the normal course for analysis, illustration, and annotation. Finally, orders are issued upon it by the Viceroy to the Local Government, these having to be transmitted back through the familiar chain; until many weeks, and too often many months, after the commission of the original offence, a decision arrives upon a matter which ought in all probability to have been composed on the spot in a few days. If it be said that such a history must be the exception and not the rule, I reply by admitting the charge; since in the majority of cases the delay entailed will undoubtedly be not less, but much greater, than that which I have depicted. I have dealt above with simple cases only. In the event of a complicated case, such as an increase of establishment, the raising of a new body of levies, or the shifting of a military post, what with the numerous references and cross-references, and the inseparable departmental delays, it will be surprising if the matter can be carried through in less than a year. I may instance my own scheme for a Tribal Militia in Waziristan. The original orders of the Government of India were issued to the Punjab Government on August 7th, 1899. A Committee was to be constituted to draw out the details of the scheme. Its report left matters in a state of considerably greater confusion. A mass of undigested papers, proposing something entirely different from what the Government of India had laid down, reached us in March 1900. I had to proceed myself to the Frontier in April, in order to extricate the case, by personal conference with the officials concerned, from the tangle in which it had become involved; and only now, one year after inception, is the scheme of the Government of India beginning to take rudimentary shape.

36. That the description which I have given is applicable not to rare or isolated instances, but to the vast majority of Frontier cases, may be demonstrated by a passage from the letter, dated October 21st, 1898, in which Mr. F. D. Cunningham, the Commissioner of Peshawar, and himself one of the senior Punjab officials, expressed his opinions upon the suggestion made by the present Secretary of State for altering the status of that office. He said:—

"If the Punjab Government had any Frontier policy of its own, or having one, if he had authority to pursue it, if it had power to give orders in any but the most trivial matter, I could understand that by removing it from the chain the control of the Government of India would be increased in reality as well as in name. But I venture to think that, whatever their position in constitutional theory may be, the Lahore Government have not for many years past given orders in any but the most petty matter, affecting trans-border clans or politics.

"With the exception of a few years in the Secretariat, the whole of my service of 26 years has been passed on or beyond the North-West Frontier, and for the past 13 years in the Peshawar Division. Speaking of that part of the border, I cannot remember any question sufficiently important to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta. Under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India. The Deputy Commissioner as the local Political Officer disposes of many claims against trans-border men by reprisals or arrests in British territory, or by his influence with clans outside, and he settles these cases without report to the great advantage of Government. But when he thinks action on his part will not summarily dispose of a case, he may report it for orders, and in cases of this description I think that in practice the Commissioner and the Local Government give advice and not decisions: the final order even now comes from Calcutta."

37. This extract brings me to a secondary feature of the existing system. It might have been supposed, and it has frequently been argued, that the intervention of a Local Government between the Government of India and the Frontier, involves a wise and necessary decentralisation. I have shown, on the contrary, that it results in excessive centralisation. The Local Government is apprehensive as to the issues of a policy for which, while the initial responsibility may perhaps be placed upon its own shoulders, it is not unnaturally anxious to shift the ulterior responsibility to those of the Government of India. And this apprehension is reflected in its attitude towards its own officers, to whose independence of action but slender scope is apt to be given, and who, particularly if they happen to be new to the Frontier, having perhaps been transferred thither from the charge of an inland district, are loth to assume an initiative which is certain to be discountenanced by the superior, and may bring them into trouble with the supreme, authority. Thus the first merit of a

well-ordered decentralisation, namely the graduated diffusion as opposed to the rigid concentration of responsibility, is sacrificed.

38. There is another consideration which in practice has a disturbing and in the long run a sinister influence upon the promptitude and continuity of Frontier policy. Minute and incessant as are the references from the Punjab to the Supreme Government, averse though the former be from independent initiative or responsibility, there must yet in the nature of things be a great number of cases in which the Government of India are reluctant, at any rate in the earlier stages, to intervene, partly because they have little practical alternative but to accept the advice of the Local Government, through whose officers—and through them alone—their information is derived; still more from an indisposition to be constantly overruling or dictating to so powerful and highly-placed a subordinate. If the Local Government be interfered with at each stage, it is open to it to turn round later on, and to complain that it has never been given a free hand; that it has not been trusted; and that any failure or misfortune that may have ensued has been due not to any fault on its own part, but to the fact that it has been overridden. My predecessor, in his Minute of November 6th, 1898, laid stress upon the arguments, in defence of the existing system, that it is a great advantage that the Lieutenant-Governor of the Punjab should be resident for several months in every year at Simla, where the Viceroy can enjoy opportunities of private conference with him; and that it is less easy to overrule a subordinate than a colleague and a friend. Without dissenting from the great advantages of such consultation, I yet venture to disagree *in toto* with both propositions. It seems to me an indefensible duplication of labour and delay, that for several months in every year, the Government of India, which is the real arbiter of Frontier policy, should be compelled to issue its orders respecting the Frontier not to the officials on the spot, but to another Government, whose officers are separated by only three miles from its own; while I cannot conceive it to be open to question that, if the advice of the inferior authority be not taken, such a course of action is at once more easily adopted, and more ungrudgingly obeyed, if that authority be in direct subordination to the Government of India and to the Viceroy, than if he be a Lieutenant-Governor, and the head of a quasi-independent administration. I do not see how any Governor-General could deny that, if he desires a policy to be pursued or a step to be taken in Baluchistan, which is under the administration of an Agent to the Governor-General, directly subordinate to himself, however unpalatable such a policy or step might be to the Agent to the Governor General, it will be carried out with incomparably less friction and delay than in a similar case in the Punjab, where the dignity and susceptibilities of a Local Government and of its head demand the most scrupulous and respectful consideration.

39. For the reasons, therefore, which have been given, I hold the existing system by which the Frontier is managed through the medium of the Punjab Government to stand condemned. It has been reprobated by all the greatest Frontier authorities for the last quarter of a century. It attenuates without diminishing the ultimate responsibility of the Government of India. It protracts without strengthening their action. It interposes between the Foreign Minister of India and his subordinate agents, not an Ambassador, or a Minister, or a Consul, but the elaborate mechanism of a Local Government, and the necessarily exalted personality of a Lieutenant-Governor. If this is an influential, I have yet shown it in practice to be not an expert medium. Worked as the system has been with unfailing loyalty and with profound devoti n to duty, it has yet been the source of friction, of divided counsels, of vacillation, of exaggerated centralisation, of interminable delay. Whether it has presented to the Government of India a cautious and continuous Frontier policy, whether it has saved India from Frontier expeditions and wars, whether, however imperfect as an administrative machine, it has produced meritorious political results, are questions which an appeal to history will easily settle, and which will be touched upon before the close of this memorandum.

Possible forms of new Administration.

40. Having thus argued the inefficacy of the present system, I proceed to consider how best it may be replaced, always bearing in mind my earlier

dictum as to the desirability of producing the minimum dislocation in long established methods and traditions. It has sometimes been suggested that the existing organisation of the Punjab Government might still be retained for Frontier purposes with certain improvements or alterations. The Lieutenant-Governor might, it has been urged, be specially chosen for Frontier knowledge. The answer is simple. Even if a single such officer were forthcoming in the Punjab Commission, a succession could not possibly be found. Such a system would moreover be most unfair upon the remainder of the service, and upon the interests of the province as a whole, of which the Frontier constitutes a relatively small part. The same arguments apply to the choice of a Chief Secretary endowed with the knowledge in which his chief might be lacking. If he were, useful for the Frontier, he would be less useful for the remainder, *i.e.*, for the bulk of the war. Again, if a Special Secretary or Commissioner were appointed for Frontier business, he would not diminish by a single link the existing chain. Neither would the suggestion, which has also been made, of granting much greater financial latitude and a larger staff to the Punjab Government meet the case. It might enable the Local Government to cope more rapidly and successfully with Frontier work. But it would not make it any the more faithful an exponent of the policy of the Government of India. I regard all these proposals as illusory and deceptive. They are open to the common objection that the more they give to the Punjab Government, the more they take away from the Government of India, and that they conflict with the initial proposition laid down by the Secretary of State and already quoted, namely, "that it is desirable that the conduct of external relations with the tribes on the Frontier shall in the future be more directly than heretofore under the control and supervision of the Government of India."

41. I next pass to a number of possible compromises, which have at various times been suggested or which admit of being discussed, between the present system and that of a new and independent administration. One of these proposals, *viz.*, that which was suggested by the present Secretary of State in his despatch of August 5th, 1898, I have already examined in my review of the earlier history of the Frontier problem. It was the suggestion that the Commissioner of Peshawar and his several subordinates who are employed in conducting external relations with the Frontier tribes, should, in respect of such matters, act under the Government of India, and that the Commissioner should be appointed by the latter, remaining, in other respects, as hitherto, under the Punjab Government. I have shown that this scheme was condemned by the almost unanimous opinion of the Frontier officers who were invited to report upon it, in the main on account of the impracticability of separating trans-frontier from cis-frontier work, amid communities who may be described as living perpetually astride of the border. I concur in these views, and I may add that the scheme possessed the further drawbacks, in my judgment (1) that it would introduce two different systems, with two different sets of officers, upon the Pathan Frontier; since it was only proposed that the Commissioner of Peshawar should be appointed by and should act under the Government of India; the Commissioner of the Derajat, under whose charge are the whole of the Waziri tribes, by far the most restless denizens of the border, being apparently left as now a servant of the Punjab Government, appointed by and reporting only to it; (2) that with the single exception of the Commissioner of Peshawar the Frontier policy of the Government of India would still be conducted by agents not its own; (3) that unless the status of the Commissioner were raised, and he were given some of the powers of a local administration, an insupportable amount of detail would (in the difficulty of deciding between the external and the internal relations of the tribes) be thrown upon the Government of India. It may be noted that any such scheme had been condemned by the Government of India as long ago as May 17th, 1877, the despatch of which date, covering Lord Lytton's Minute, contained the following emphatic declaration:—

"We are of opinion that the separation of political from administrative duties is practically impossible when these two classes of duties are interwoven as closely as they now are in the government of the Frontier. To place the Frontier officers under the local Government *quoad* their administrative duties, and under the Government of India *quoad* their political duties, is a system fraught with inconvenience and one which has already proved the source of serious embarrassment to this Government."

The allusion in the last sentence was, I apprehend, to the system that prevailed in the third quarter of the century in Sind, the Commissioner of which received his administrative orders from the Bombay Government and his orders as to foreign policy from the Government of India. The system having hopelessly broken down, the Commissioner of Sind (Sir W. Merewether) was in 1876 relieved of all responsibility for Kalat, *i.e.*, Frontier affairs, which were handed over to Colonel Munro, the Commissioner of the Derajat.

42. A second compromise which has been suggested is that the Frontier, or the Trans-Indus portions of the Punjab, should be treated somewhat as Sind now is, being placed under a single Commissioner who might even be appointed by the Government of India, and who should remain under the Punjab Government, as the Commissioner of Sind is under the Bombay Government, but should enjoy some of the administrative and financial powers of a Local Government, being assisted by a Judicial Commissioner. He would refer to the Government of India for Frontier matters, and to the Local Government for internal and district affairs. The objections to such a scheme are the familiar and, as I think, insuperable difficulties of serving two masters, and of discriminating between external and internal affairs. There would be the further drawback that a Commissioner selected by the Government of India for his political abilities might not satisfy the standards of the Local Government in respect of capacity for local administration, revenue, and finance. Above all it must be patent that such a compromise would satisfy neither party, that it could possess no permanent vitality, and that it would only be a stepping-stone to some larger change.

43. There is a third compromise, which, in the course of my study of the present question since I have been in India, at one time possessed attractions for myself. It was to take all the trans-frontier charges, from Chitral to the Gomal, now under the control either of the Government of India or of the Punjab Government, *viz.*, (1) Dir, Swat and Chitral, (2) the Khyber, (3) Samana, (4) the Kurram, (5) the Tochi, (6) Wana; and to place the Political Officers for all these districts under a single high officer, who equally with them should be appointed by the Government of India, and should report exclusively to the latter upon all political and external affairs, the civil and administrative organisation of the Punjab Government remaining untouched, and the conduct of cis-border affairs continuing to be vested in the hands of its Commissioners and Deputy Commissioners. In my conversations, however, with Frontier officials, both last year and this, I could not discover a single supporter of this scheme. It was pointed out to me in the unanswerable words of Sir Alfred Lyall, written nearly 20 years ago, that "it is an established principle from Peshawar to Karachi that the Frontier can only be managed properly if both sides of it are in the hands of the same British authority"; it was said that the tribes themselves would not understand the system of two co-ordinate groups of officials, the one dealing with their external, the other with their internal relations, and that they would be disposed to play off the one against the other; and it was asserted that the result could not fail to be friction, and perhaps even worse, between the officers who served the Supreme, and those who served the Local Government.

44. I have also heard it suggested that the six Frontier charges, which I have mentioned above, might be placed under Political Officers nominated by, and reporting to the Government of India, but subordinate to no local official of superior rank. I could not recommend such a scheme. In addition to the drawbacks of possible disagreement with the Punjab officials, which were regarded as fatal to the compromise last examined, it would, by breaking up the Frontier into separate districts, under no single or common head, introduce discord, instead of homogeneousness or unity, into our Frontier policy, and would enormously increase the work that devolves upon the Government of India. It is, I think, a *sine qua non* of any new system, that it should interpose between the Supreme Government and its local agents, some authority possessed of high status and influence.

45. The examination to which I have subjected the various possible forms of compromise will, I think, have shown that the remedy is not to be found in

any such direction. It is of no use to attempt a patchwork reorganisation; or to dovetail into each other the features and methods of two administrations, with such essentially different characteristics and objects. No natural respect for the susceptibilities of the Local Government, nor even the desire, which I have myself avowed, to pursue the line of least resistance in making the contemplated change, should deter us from looking facts in the face, or from recognising that it can only be by an organic change, that evils, which are themselves not accidental but organic, can be cured. I hope, therefore, to have established the presumption that the reform which we have in view can only be effected by the creation of some new administrative unit, independent of and separated from the Punjab Government. It remains to be discussed what shape such a new administration should take.

Form of administration recommended.

46. Lord Lytton's scheme in 1877 contemplated an immense new Trans-Indus province, stretching from Hazara to the Indian Ocean, and including the Trans-Indus portions of the Punjab, Baluchistan, and Sind. The Resident in Kashmir, though under the Government of India, was also to correspond with the Chief Commissioner upon Frontier matters relating to Chitral, Badakhshan (*sic*), etc. Such a charge would, had it then been created, before long have proved too much for the shoulders of any single man. The idea has since been rendered obsolete by the remarkable change in the conditions of the problem. No one now proposes the severance of Sind from Bombay. Baluchistan has its own administration, which is important and self-sufficient. Moreover, its developments and aspirations lie rather on the western border, and in the direction of Afghanistan and Seistan, than on the Punjab side. The incorporation of Baluchistan with a Trans-Indus charge would be of no advantage to the former province, and would associate the latter with a partner, whose earlier start in the world would overshadow and stunt the growth of the more youthful administration. Kashmir is separately provided for; and its own Frontier problems, which extend from Ladakh in the north-east to the Shandur Pass on the north-west, are sufficient to engross the attention of the British Resident at Srinagar. It is, therefore, unnecessary to contemplate, even for a moment, any revival of the idea of a great Frontier administration, which should gather up into a single skin the many and complex threads of the whole of the North-West and West Frontier of the Indian Empire. Such an idea might still appeal to the imagination of the enthusiast; but it is not practicable in fact.

47. Even eliminating Baluchistan and Sind, I have heard recommended the creation of a great Frontier Province which should include the whole of the Trans-Indus Districts as far south as Dera Ghazi Khan, and, crossing to the left bank of the Indus, should further embrace the districts of Rawalpindi (as the military base of Peshawar and Kohat) and Jhelum. I could not endorse any such proposal. It would involve a needless dismemberment of the Punjab, would create a new province by which the older one would be completely overshadowed, and would involve the organisation of a new and extensive Commission.

48. The province which I would propose to constitute would consist, with a slight exception, of the whole of the Trans-Indus Districts of the Punjab as far south as and including Dera Ismail Khan. The exception (subject to the approval of the Punjab Government) would be the Mianwali Sub-division of the Bannu District which is astride the Indus, the trans-riverain *tahsil* of Isa Khel being inhabited by non-Pushtu-speaking Pathans and having little or no connection with the Frontier. The Cis-Indus portions of Dera Ismail Khan, which exceed in size, and are approximately equal in population to, the Trans-Indus Districts, would be left to the Punjab Government. It might also be a matter of discussion with that Government, whether any, and if so what, portions of the Trans-Indus *tahsils* of Dera Ismail Khan should similarly be excluded from my scheme. There are three such *tahsils*, those of Tank, Kulachi, and Dera Ismail Khan. The first of these is a purely Frontier district, and

must in any case be detached. The two others contain a mixed population; and it is possible that some division of them between the old and the new administrations may be found desirable or necessary, although a sentimental value may attach to the inclusion of the capital city, Dera Ismail Khan, in the new Agency. I would also leave Dera Ghazi Khan to the Punjab—it could be grouped in a single charge with Multan—in the main because its Frontier relations arise out of contract not with Pathans but with Baluchis, and because I should prefer that the new administration should as far as possible be concerned with the former. It has sometimes been argued that Dera Ghazi Khan should preferably, by reason of its Baluchi connections, be handed over to Baluchistan. This may perhaps be its ultimate destination. But for the present, and as long as there is no Trans-Indus railway communication in this part, I think that Quetta and the Agent to the Governor-General for Baluchistan are too far away, and that it would be better not to sever the old established connection with the Punjab.

49. Passing to the Northern confines of the proposed province, I would make it strictly Trans-Indus, *i.e.*, I would not take away from the Punjab the Hazara District, with its administrative centre of Abbottabad, even though this be a Frontier District. Its interests are very different from those of the north-west border, as commonly understood; its inhabitants are of different origin; and the Kaghan Valley, which is its main northern prolongation, is now thoroughly pacified.

50. It would be a matter for consideration whether the Black Mountain tribes which are Cis-Indus should continue as now to be managed by the Deputy Commissioner of Hazara, under the Punjab Government, or should pass with their Trans-Indus neighbours, the Bunerwals and the tribes of the Mahabun, to the charge of the Political Officer at the Malakand. Expediency should be the test of this decision.

51. The Mohmands and any other tribes who are now under the Deputy Commissioner of Peshawar should probably, with the exception of those who may be handed over to the Political Officer at the Malakand, be added to the charge of the Political Officer in the Khyber.

52. The new frontier Province would then consist of the following Trans-Indus Districts of the Punjab: (1) Peshawar, (2) Kohat, (3) Bannu, (4) Dera Ismail Khan; and of the following Political Agencies, at present either directly under the Government of India, or under the Punjab Government, (1) Dir, Swat and Chitral, with head-quarters at the Malakand, (2) Khyber, (3) Kurram, (4) Tochi, (5) Wana.

53. The Chief of this administration would be a Chief Commissioner and Agent to the Governor General, who should be appointed by, and should be directly subordinate to, the Government of India. His position would be closely analogous to that of the Chief Commissioner and Agent to the Governor-General in Baluchistan, *i.e.*, he would possess some of the powers of a local administration, and his pay should probably be on the same scale, *i.e.*, Rs. 4,000 a month. He would reside at Peshawar, where he would take over the office of the present Commissioner. He would probably require the services of two Assistants. The judicial and revenue work of so populous, and in some respects highly organised, a province would doubtless render it impossible to combine the supreme charge of both functions, as in Baluchistan, in the hands of a single Revenue and Judicial Commissioner. A Judicial Commissioner, and a Revenue Commissioner, would both be required. If the former is to take the place of the Chief Court, as the supreme appellate tribunal for the new province, he should clearly be a man of high legal attainments and independent position. There are some who may deprecate the substitution of a more simple system for the complex paraphernalia of the Chief Court, and the amenities of facile litigation. I am not in agreement with them. I know of no vice which is more fatal in a Frontier district than litigiousness; and I should prefer summarily to arrest, rather than to foster, its growth. The new staff at Peshawar, if thus

organised, would, therefore, exceed in numbers and probable cost the present higher ranks of the Punjab Commission who are there employed, by the following totals :—

Present Administration.			*Proposed Administration.*		
	R			R	
Commissioner of Peshawar	2,750	*per mensem.*	Chief Commissioner and Agent to the Governor General	4,000	*per mensem.*
Commissioner of the Derajat	2,750	,,	Two Assistants	1,600	,,
Divisional Judge	2,250	,,	Judicial Commissioner	3,000	,,
			Revenue Commissioner	2,750	,,
Total	7,750		Total	11,350	

54. On the other hand, while there would be some such increase in the head-quarters establishment, I entertain every hope that, in other branches of the administration, a material reduction would be capable of being effected. I will indicate three directions in which this might be possible: (1 Inasmuch as the new arrangement contemplates the substitution of a Judicial Commissioner, as the supreme tribunal, for the Chief Court at Lahore, some simplification of judicial procedure ought, in my opinion, to follow upon the general reduction in the judicial scale; and if this be achieved, then there should follow upon it a corresponding reduction of the judicial staff. (2) In a Frontier Agency where successful administration will depend chiefly upon the character and influence of the British officers employed, and where a wider discretion will, I hope, be given to them in the future than has hitherto been permitted, it should be possible to abolish the mischievous practice of dealing with the tribes through native officials, and to effect some reduction in the number of native subordinates, which has a tendency to grow under the ordinary provincial system. (3) From the figures which will presently be given, it will be seen that the portions of the Bannu and Dera Ismail Khan Districts, which I propose to withdraw from the Punjab, are considerably less both in size and population than the single District of Dera Ismail Khan (as administered by the Punjab) is at present. It is conceivable, therefore, that some re-arrangement may be feasible by which the number of districts taken over might be reduced from four to three. I do not say that Bannu, without the Mianwali Sub-division, and Dera Ismail Khan, without its Cis-Indus tracts, can be grouped together in a single district. It would be premature to make any such suggestion at present. If, however, any portion of the Trans-Indus tahsils of Dera Ismail Khan were left to the Punjab, such a concentration would be more easy. In any case, a reduction of the number of administrative units will be worthy of serious consideration; and, if feasible, would certainly carry with it a marked reduction both in establishment and in cost.

55. I had contemplated drawing up a Proposition Statement to accompany this Minute, showing the existing strength and salaries of the superior ranks of the Punjab administration at present engaged in those portions of the province which it is proposed to subtract, and comparing with them the probable corresponding totals for the new Agency. I feel, however, after several attempts in this direction, that such statement would, at the present stage, only be a misleading guide. My reasons are these. It is as yet unsettled what are the precise districts or tracts, if the principle of my proposals be accepted, that will be detached from the Punjab. It is unsettled how, when detached, they will be grouped. It is also uncertain in what manner the Punjab Government would re-group the Cis-Indus tracts left to it, or what change or increase of establishment such re-adjustment might require. Further, it is too early, for the reasons already given, to give figures as to the possible reductions in the new province. Lastly, a statement of the existing position would be a not altogether reliable test, from the facts that the pay and allowances of the actual incumbents of posts upon the Frontier are liable to continual variation with changes of *personnel*; and that the list of officers so employed is apt to contain some, who may, as in the case of Settlement Officers, only be engaged upon temporary work.

56. From a careful comparison, however, of the probable requirements of the new Agency with the existing establishment maintained by the Punjab, I feel in a position to say that the total cost of civil administration at the start is not likely to be greater than under present conditions, while, if my anticipations (in paragraph 54) are realised, there is even reason to hope that a saving may be effected.

57. I now proceed to state how I would propose to officer the new province. Lord Lytton, in his scheme of 1877, contemplated a list, separate from that of the Punjab, but with facilities for interchange between the two; *i.e.*, he advocated the creation of a fresh or branch Commission. Such a scheme might be practicable and even necessary, if a very extensive province were being called into being. But a small Commission, such as a relatively small province might require, would be attended by patent drawbacks, the recognition of which has in practice helped to kill the various proposals for a new Frontier administration that have previously been made. These drawbacks would arise in connection with recruitment, replacement, and promotion. With a small civil list, an occasional failure is very serious, and is not easily redressed by transfer or removal. Further, as Sir M. Young has observed—"The pick of a large Commission is likely to be far superior to the best outturn of a limited number of specialists."

58. I propose to escape all these difficulties, and at the same time to ensure for the administration of the new province the best ability that the Civil Service can produce, by relieving the Punjab Commission of the duty of providing its establishment and by bringing the latter upon the graded list of the Political Department of the Government of India. This would involve a reduction of the present numbers of the Punjab Commission and a proportionate increase to the Political list. My proposals would of course apply only to the higher or *cadre* posts, and not necessarily to all of these. It would perhaps be found wise in the first instance to borrow the Divisional and District Judges for the new Agency from the Punjab, and afterwards from the Punjab or from other provinces, since we could offer no prospects to such officers in the Political Department. Indeed if a Judicial Commissioner be appointed, it is not certain that any Divisional Judges would be necessary. Similarly we might borrow officers from the same source, when required, for settlement work. Finally, as regards miscellaneous departments, such as Police, Jails, Medical, Educational, Irrigation, and Public Works, and the subordinate establishments of all Departments, the best plan would probably be to take over temporarily the whole or the greater part of the existing staff of the Punjab Government now employed in the area of the new province, and gradually to work out such changes as experience might dictate. *Per contra* if in this way we were to provide appointments for members of the Punjab Commission, the Local Government might be willing in return to continue to find places for educated Pathans of good family, a certain number of whom, under the existing system, rise to high positions in the Civil Service of the Punjab.

59. The effect of these changes upon the Punjab Commission and upon the Political Department, respectively, would be somewhat as follows. At the present time there are in the area covered by the new Agency 16 superior posts (including District and Divisional Judges), *i.e.*, posts carrying a substantive pay of more than ₹1,000 a month. To fill these posts (allowing for the percentage of incumbents who would ordinarily be absent on leave and for those in training) there are required 31 officers. The monthly cost of these officers under the Punjab system has been worked out at ₹46,300. If this area be brought directly under the Government of India, and if the necessary appointments, graded as nearly as possible on the corresponding scale, be added to the Political Department, the same number (31) of officers will be required, and the monthly cost will amount to ₹46,600, or a difference of only ₹300. These calculations are of course, in the present stage, only approximate. Both tables would be affected if the judicial appointments were to remain upon the Punjab list. Enough has been said, however, to show that, in so far as officers are concerned, the change of system could be made without involving any injury. The pay and prospects of the officers in the Punjab Commission would, it can be

shown, be left approximately as they are. On the other hand, the prospects of the officers of the new administration, and of the Political Department generally, would be vastly improved; since there would be open to the former a far wider field of employment and promotion under the Foreign Department of the Government of India than is at present possible within the confines of a single province and a restricted Commission; while service on the Frontier, which is now, with a few exceptions, closed to the officers on the Political list, should become an object of ambition for the most promising young men whom the Political Department can attract to its ranks.

Merits or Demerits of the Proposal.

60. Having thus not merely sketched the outlines but filled in the principal administrative details of the new province, I now pass to my last subject of enquiry, namely, the objections that may be taken to its creation, and the compensating advantages.

61. The Secretary of State, in his despatch of August 5th, 1898, indicated four possible objections to the project of a separate Trans-Indus charge. The first of these was that by breaking up the established administrative units of British India, the revenue system already introduced would be disturbed. This is not an objection to be despised. The Peshawar District, for instance, contains some of the richest and most highly assessed land in the Punjab, covered in parts by a network of canals, the working of which is no simple matter. The whole District has been surveyed on a scale of 24" to the mile, and the maps are accompanied by elaborate land records which must be kept up to date. Neglect of these would produce insecurity of tenures and rights, and might soon result in chaos. Specially trained officers would be required for this work, such as are not ordinarily found in the Political Department. I concede this difficulty, which will also apply, though in a less degree, to the Districts of Kohat, Bannu, and Dera Ismail Khan. But I hope to have provided against it. I do not propose the handing over of technical work to unskilled hands. In these respects we must still look to the parent province. The revenue system of the new Agency would not merely be that of the larger administration of which it at present forms a part, but it would be administered, at any rate to begin with, and possibly continuously, by the same men. No one would propose to inaugurate a new province by disorganising or revolutionising the old revenue system. Continuity in this respect is prudent, and has been provided for.

62. The second objection mentioned by the Secretary of State to a Frontier province was that it would entail a succession of territorial rectifications and compensations. This objection also I have shown not to apply. No other province beyond the Punjab is touched by my scheme; and it remains only to be considered whether the Punjab itself will be mutilated or dismembered by it to a serious or unreasonable degree.

63. The following table will show the approximate extent of the area and population, as calculated from the Census returns of 1891, and of the land revenue, of the districts which it is proposed to withdraw :—

	Area, square miles.	Population.	Revenue.
			R
Peshawar District	2,444	703,768	11,02,626
Kohat	2,711	203,175	1,90,849
Bannu (excluding Mianwali Sub-Division)	1,664	204,469	2,58,000
Dera Ismail Khan (excluding Cis-Indus Tahsils).	3,812	254,163	3,24,372
Total .	10,691	1,365,575	18,75,847

In connection with the above figures, I may mention that the Cis-Indus *tahsils* of the abovenamed districts and the Trans-Indus tracts, which I do not propose to subtract from the Punjab, are of the following dimensions :—

	Area, square miles.	Population.	Revenue.
			R
Mianwali Sub-division of Bannu .	2,183	167,807	1,93,000
Cis Indus Tahsils of Dera Ismail Khan	5,628	232,038	3,24,372
Dera Ghazi Khan District . .	5,606	404,031	5,15,697
Total	13,417	803,876	10,33,069

Out of the total area, either Trans-Indus, or connected administratively with the Trans-Indus Districts, which is at present administered by the Punjab Government, I therefore leave to the latter more than one-half, with rather more than a third of the revenue, and one-third of the total population. Comparing the subtracted area with the figures for the entire province, which were in 1891 :

Area, square miles.	Population.	Revenue.
		R
148,966	25,130,127	2,75,32,972

it will be seen that I propose to take away from the Punjab Government, if the maximum of my proposals is accepted, and if no restitution, partial or otherwise, is made to the Punjab of the Trans-Indus *tahsils* of Dera Ismail Khan, only $\frac{1}{11}$th of its total area, $\frac{1}{15}$th of its total revenue, and a little less than $\frac{1}{8}$th of its entire population.

64. Now of these districts it should be remembered that they do not belong either geographically, ethnologically, or historically to the Punjab. They are inhabited by entirely different peoples. They exhibit a different mode and standards of life. They were only conquered and annexed to the Punjab by Ranjit Singh. So detached are they in reality from the remainder of the Province that in 1857 during the Mutiny, when our general position in that part of India was in some doubt, Sir John Lawrence was prepared to surrender Peshawar to the Afghans; while in the following year, he proposed the rendition of Kohat also, on the grounds of economy and of the unhealthy climate. In other words, the first and most famous Lieutenant-Governor of the Punjab himself proposed, though in different circumstances, a portion of that dismemberment of his province which I now advocate.

65. Still more do these considerations apply in the case of those parts of the present Punjab administration lying outside the administrative border of British India, which have in recent years, and notably since the Durand Agreement of 1893, been added to the jurisdiction of that Government. It should be remembered that the conditions under which the Punjab Government was placed in charge of the Frontier at all were widely different from those which now obtain. They were clearly explained by Lord Salisbury, when Secretary of State for India, in his despatch to Lord Lytton's Government of November 29th, 1877.

"The Punjab Government was interposed between the Governor-General and the Frontier officers at a time when communication between Calcutta and the Punjab was tedious and difficult, when the state of affairs beyond our territory caused little solicitude, and when the duties imposed upon the Government of Lahore were not such as to prevent the Frontier from receiving a large share of its attention."

66. When this Despatch was penned, great changes had already taken place. The telegraph and the railway had brought the Frontier into close and

rapid connection with the head-quarters of the Supreme Government. The Punjab had itself, since its original constitution, as a Chief Commissionership, received the notable addition of the Delhi District from the North Western Provinces. Frontier questions had gained greatly in number and importance; and the advance of Russia across the regions that previously separated her from the Afghan border had been continuous and alarming. If this was the metamorphosis of conditions that could be recorded in 1877, how unmeasurably greater is it now. It may truly be said that every subsequent change in the frontiers of India has been a change dictated, not by considerations arising out of or directly affecting the interests of the Punjab Government, but by imperial considerations, and by them alone. The consolidation of Baluchistan into a separate administration, the inclusion of Chitral and Dir within the British sphere, the signature of the Durand Agreement and the consequent political protectorate over Waziristan, have revolutionised the position on the Frontier. Moreover, while they are the results of a policy, with which the Local Government has only incidentally been concerned, they have themselves created a further group of problems with which a Local Government is ill qualified to deal. To such an extent is this the case that a considerable part of these territorial acquisitions has already been withdrawn from, or has not been incorporated with, the Punjab Government. The Agency for Dir, Swat and Chitral is directly under the Government of India. So is the Khyber. In the tribal territory further to the south, so strongly has the necessity of severing tribal management from administrative pre-occupations and of putting the political work into the hands of Political Officers, specially appointed for the purpose, forced itself even upon the Punjab Government that already, as pointed out by Sir M. Young in his note of 19th October 1898, "two-thirds to three fourths of the Punjab Frontier is in the hands of officers who have nothing else to do." There could not be a clearer admission of the extent to which the Frontier work has ceased to be administrative, *i.e.*, to fall within the necessary sphere of a Local Government, and has become political, *i.e.*, has entered the legitimate sphere of the Supreme Government. It is indeed only the logical expansion of the present system (in itself illogical) by which the Frontier work is in part now performed by Political Officers under the Punjab Government, and the logical completion of the system by which the remainder of the Frontier is already under the direct charge of the Government of India, that the whole of it should be transferred to the latter, *i. e*, to the real controller of its destinies.

67. There is another respect in which the situation has greatly changed since 1877, and which renders the question of any compensation to the Punjab Government for the proposed losses superfluous. Not merely have the administrative problems demanding the attention of the Local Government grown in number and complexity—to such an extent that complaints have frequently to be made of the degree to which the Punjab Secretariat is overworked, and that the work of the Lieutenant-Governor is probably nearly double what it was 25 years ago —but the population of the province is rapidly increasing, and must continue to increase, not alone by the normal increment arising from natural causes, but by the reclamation of immense new tracts of habitable country. It is estimated that the great scheme of canalisation, connected with the Chenab River, has, during the last few years, brought under cultivation for the first time an area of over 1,000,000 acres, with a population of 700,000 persons,—figures which are expected to rise, within a few years, to 1,500,000 acres, and 1,500,000 persons. The Jhelum scheme, now in course of execution, will similarly augment the area of cultivation by over 500,000 acres and should accommodate an increased population of about 400,000 persons. These two increments alone will far more than balance the loss of population which my scheme entails upon the Punjab. The Lower Bari Doab scheme, which is next on the list, and the surveys for which are about to be commenced, will add another 500,000 acres, and the same number of population.

68. Finally, it is hoped that before very long the immense Sind Sagar scheme may be undertaken, which is intended to irrigate the staring blank space on the map on the left bank of the Indus between Kalabagh and Multan, and which is expected to reclaim an area of 1,750,000 acres. The realisation of this project, as of its predecessors, will add enormously not merely to the population of the

province, but to the revenue and settlement work devolving upon the local officers, and to the responsibilities of the Punjab Secretariat. They will more than compensate for what it is now proposed to take away. They will probably, before any great length of time has elapsed, demand the replenishment of the Punjab Commission by as many officers as it is now under suggestion to withdraw.

69. So well known are these considerations in the Punjab itself that the necessity for territorial rectifications or compensations would probably no longer be urged by its own officers. One of the foremost of these, Mr. F. D. Cunningham, the Commissioner of Peshawar, has indeed, in his letter of 21st October 1898, already quoted, gone so far as to argue in the opposite sense. Coming as they do from the senior Frontier officer of the Punjab Commission, these views are worthy of quotation here—

"The population, revenue, trade and wealth of the province have so increased since the question of a separate Frontier Commissionership was mooted some 20 years ago under the Government of Lord Lytton, that what would be left to the Punjab after removing Hazara, Peshawar, Kohat and a strip of the Derajat is still sufficient to constitute an adminstrative area of the first class.

"Towns have grown, Municipalities have been created under new and complex laws, the whole machinery of Local Self-Government has been started, hundreds of miles of railway and canals have been opened, the cultivated, and, what is more important, the irrigated area has been enlarged by scores of thousands of acres,—in a word, development in all directions has been so great that it is questionable whether there is not enough cis-Indus to occupy the full energies of a great administration.

"I am writing without access to an office, and therefore do not attempt to give figures, but a comparison of the chief statistics of the province for 1878 with those of to-day would, I think, show that no 'territorial rectifications or compensations' would be required, and that this supposed objection to the radical and effectual remedy does not in reality exist."

70. I hope, therefore, to have shown conclusively that the time-honoured objection to a new Frontier province which I have been discussing, is one that has become obsolete in the lapse of time, and that need deter us for a moment from the acceptance of the proposed change.

71. Should it be said, however, that, though not detrimental to the prestige or interests of the Punjab, such a change cannot but be condemned by the officers of the administration which it is proposed to supersede, it is easy to show from their recorded opinions that, so far from this being the case, the erection of a new Frontier province is a solution which, if there is to be any alteration in the *status quo*, is not only contemplated, but is even heartily approved by all. Mr. Merk, Commissioner of the Derajat, said in his letter of 7th October 1898 (paragraph 9)—

"If the Punjab Government is dissociated from Frontier management, it is plain that the Commissioner must be raised to the position and powers of a Local Government on the analogy of the Agent to the Governor-General at Quetta."

72. Mr. Anderson, Officiating Commissioner of the Derajat, said in his letter of 17th October 1898 —

"It will be necessary, I consider, to considerably enhance the status of the Commissioner of Peshawar as regards trans-frontier affairs. He must be empowered to dispose of many matters which he has now to refer for orders to the Punjab Government To enable him to have as wide a view as possible of what is passing across the frontier of the division, it will be advisable to place under his control the Chitral and Dir Agency and the relations with the tribes under that Agency His status would advantageously be raised to something like that of the Agent to the Governor-General for Baluchistan as regards trans-frontier affairs."

73. Sir R. Undy's (Commissioner of Peshawar) letter of 20th October 1898, paragraphs 5—9, which criticised the Punjab system, was also in reality an argument for the creation of a separate Frontier Commission.

74. Mr. Cunningham (Commissioner of Peshawar) went further and laid down clearly that there could be only two solutions to the problem; either to give

the Punjab real and final authority in respect of Frontier matters (reducing *pro tanto* the power of the Government of India), a solution which he admitted to be "out of the question"; or

"To remove the Frontier districts (excluding the Cis-Indus parts of Dera Ismail Khan and Bannu, and the whole of Dera Ghazi Khan) from the Punjab Government, and to place in charge of them an officer with the power of Chief Commissioner for the interior and the position of Agent to the Governor-General for the clans and countries beyond..... If a strong administration directly under the Government of India is desired, in which Frontier questions can be fully taken up on one consistent line without detriment to the needs and requirements of the greater part of a large province, this can best be secured by such a plan. The Punjab Government would benefit by being relieved of an incubus, by the gain of time and power to devote to the administration of a rapidly growing province; and it would be rescued from what to many has appeared the invidious position into which it has been relegated by the course of events in the past 10 or 20 years on the North-West frontier."

75 Sir M. Young himself also saw clearly that the object desired by the Secretary of State could not be gained by any compromise, but was only feasible in one way. In his note of 19th October 1898 he wrote (paragraph 16) :—

"If what is desired is to eliminate the Punjab Government from trans-frontier control, this can only be done by removing the Frontier districts or such portions of them as are closely connected with trans-frontier tribes from the control of the Punjab Government, and forming this tract into a separate administration under the direct orders of the Government of India."

And again (paragraph 18)—

"I can only state my conviction that, unless and until Her Majesty's Government decide to separate the Frontier and place it under a Chief Commissioner or other officer in direct subordination to the Government of India, the existing machinery cannot with any advantage be altered."

76. Similarly Lord Elgin, though, like the Lieutenant-Governor, he was opposed to such a solution, admitted in his Minute of 6th November 1898 that, granted the necessity for a considerable devolution of powers, "the question must sooner or later resolve itself into one whether it is better to have as an intermediate Local Government, the Lieutenant-Governor of the Punjab, or a Commissioner who will be a Chief Commissioner on the Frontier."

77. These various quotations indicate that, in the opinion of the majority of the Punjab Frontier officers of the highest standing and even of those authorities who are opposed to the principle of the suggested change, there is but one mind as to the fact, that if the Local Government is to be deprived, for whatever reasons, of the principal functions which it now discharges with reference to the Frontier, there is only one method by which such a change can be satisfactorily carried out, *viz.*, by the institution of the new administration which it is the object of this Minute to advocate.

78. I now pass to the third objection that was indicated by the Secretary of State in the following words :—

"It may also be inexpedient to deprive the Government of the Punjab, and thus also the Government of India, of a valuable opportunity of training officers for Frontier service, and of gaining a knowledge of the feelings and habits of tribes which are constantly sending settlers into British districts."

It will, I think, be obvious from the scheme that I have submitted that the opportunity which the Secretary of State desires, so far from being diminished, will be immensely enhanced by placing the officers of the new province upon the Political list of the Government of India. There will henceforward be no risk either of an officer being sent to the Frontier who has hitherto been engrossed in civil work, or of an officer being withdrawn from it, because the exigencies either of the public service or of grade promotion demand his return to the interior parts of the province. On the contrary, an officer who displays exceptional aptitudes for tribal politics and management will be under no risk of being withdrawn, unless it be to some more responsible post, of a similar character, either in Baluchistan, or under the Foreign Department in other parts of India. On the other hand, if an individual be found deficient in the special talents that are required for the Frontier, it will be much easier to find work for him elsewhere than it is at present. To the officers of the entire Department will be

given a fresh goal of ambition. To those who attain it will be given a wider field of reward. I anticipate that in a few years' time the new Frontier province will draw towards itself the very best ability that the civil and military services in India can produce, and that it will be the nursery of a new school of Political Officers, who will revive both the memories and the credit of an earlier time.

79. With regard to the fourth objection cited by the Secretary of State in the following terms :—

"It is open to question whether it is altogether advisable to place in the hands of a single Commissioner the whole executive power on both sides of this most important section of the Empire's external frontier, without the restraint, which a trained experience of financial and administrative responsibilities on a large scale imposes upon an authority charged with the Government of a first class province."

I may say that exactly the same objection was raised when Baluchistan was converted into a separate administration, and that it proved to be entirely groundless ; and that I would not myself propose for one moment to appoint as head of the new province any officer who was destitute of financial and administrative experience. This is a commodity that is unfortunately procurable without recourse to the Government of a first class province. It is as frequently forthcoming in our second class as in our first class administrations. Moreover, as I have shown in the case of the Punjab, its present advantages are apt to be somewhat dearly purchased at the cost of inexperience in other and not less vital concerns.

80. There remains the fifth objection of the Secretary of State, touched upon rather than emphasised in the following paragraph :—

"There is no part of India where the need of a strong administration, equipped with all the resources of Government and capable of resisting aggression is more likely to be felt than on the North-West Frontier."

81. There can be no doubt that the phrase of the Secretary of State indicates an objection to the scheme of a new Frontier province, which has been widely entertained in the past, and, more than any other argument, has hithe to availed to defeat its adoption. I refer to the belief that such a scheme would, in some way or other, favour a forward and aggressive policy, and that the Government of India would exercise less control over the activity of its Frontier officers, than under a system which interposes the buffer of a Local Government between itself and them. I can only say that I regard such a belief as an entire illusion ; and that if I held it, I should not now be composing this Minute. Twenty-three years ago Lord Salisbury, as Secretary of State, foresaw the same objection to Lord Lytton's scheme (which was, I think, by reason of its magnitude, far more exposed to such a charge than is mine) and emphatically repudiated it. The proposed formation of a new Frontier charge was, he said, "a measure of defence and security, not of aggression." I cannot better explain or defend the proposals which I now submit.

82. If the intervention of the Punjab Government acts as a barrier against aggressive schemes, I would ask how it has come about that in the 50 years that have elapsed between the annexation of the Punjab and the present day, during the whole of which time the Frontier has been under the control of the Punjab Government, there have been no fewer than 40 military expeditions against the tribes of that frontier, or one expedition for every 15 months of the entire period ; how, notwithstanding the pacific dispositions of the Punjab Government, there has nevertheless taken place, under its patronage and eye, the series of military advances upon the border which have carried us forward on to the Samana, into the Kurram, and far into Northern and Southern Waziristan ; and how above all it came about that the Government of India were involved, only three years ago, in the greatest Frontier conflagration that has ever been known. I am not saying for one moment that the Punjab Govern nent ought to be held solely, or even mainly, responsible for all these events. The Government of India cannot evade or disown its share. All that I do say is that the plea that we are saved by the intervention of the Local Government from a forward policy, from punitive expeditions, or from Frontier war, is one that will not stand the test of a moment's examination.

83. I will even go further and say that whereas an Agent to the Governor-General for the Frontier could without difficulty be controlled, by reason of his subordinate position, by the Government of India, and whereas a forward or aggressive policy, if initiated under his rule, would rightly be laid not at his door but at that of the Government of India, I can conceive that an ambitious Lieutenant Governor, if such a phenomenon were to occur, might be very difficult to control. The Punjab has fortunately hitherto been free from any such source of danger. But the fact that a succession of cautious and prudent Lieutenant-Governors have been quite powerless to save the Frontier from the disturbances which I have mentioned, is a proof that there must be something unsound, not in the men, but in the system.

84. To me it seems absurd to argue that, if a local administration be brought more strictly under the influence of the supreme authority, it will therefore become more mischievous and unruly. I should infer that precisely the opposite will be the case. If an avoidable war now breaks out upon the Frontier, the Government of India cannot censure or recall the Lieutenant-Governor of the Punjab. It divides the responsibility with him, though very likely innocent of any complicity in its earlier stages. If, however, an Agent to the Governor-General were to compromise the Supreme Government by any rash or bellicose action, I cannot conceive that there would be any hesitation in bringing him smartly to account.

85. I am not aware that since the Dir-Swat-Chitral Agency has been under the direct control of the Government of India, there has been any development of aggressive tendencies in that quarter. On the contrary, we have enjoyed peace, on what is by far the most critical section of the Frontier, for three years. Similarly, it is under the control of the Government of India that we have re-pacified the Khyber, which the earlier system had not saved from the fatal convulsion of 1897. Neither does the creation of Baluchistan into an independent administration appear to me to have been attended by the martial expansion which might, according to the plea that I am examining, have followed upon so hazardous a step.

86. I will not further pursue this argument than to say that it is in the most confident belief that the future Frontier administration of the Government of India will, under the change that I advocate, be more, and not less under control; that disputes, culminating in wars, with the tribes will be less, and not more frequent; and that India will thereby escape the perils of a policy of bisected responsibility, of vacillation, of drift, and of delay, that I urge the separation from the Punjab Government of the Frontier districts and peoples.

87. There remain three further arguments which have sometimes been employed against the proposed reform. The first is that the more direct control of the Government of India signifies greater centralisation. I have shown in an earlier part of this Minute that the very reverse will be the case. I regard the present administration of the Frontier by the Local Government, with its suppression of local responsibility, and its perpetual reference to the Punjab Secretariat, as centralisation in a most aggravated and pernicious form. What more mischievous evidence of centralisation could be afforded than the ladder of compulsory and dilatory reference, which I have before described, whose foot is across the Frontier, but whose head is at Simla or Lahore? Under a separate administration, I believe that one-half of the references which now pass up and down this ladder of delay will be settled promptly upon the spot by a superior officer of sufficient authority to decide, and sufficient local knowledge to do so without risk; while in the case of such matters as still require reference to the Government of India, the process will be by so much accelerated as the number of intervening rungs will have been reduced.

88. The second argument is the allegation that with a new province under the Government of India, the Foreign Department of the latter will be swamped with a mass of work which it will be incapable of digesting, and which will cripple its capacity in other quarters. Sir M. Young laid stress in his Note upon the number of references which we are spared by the intervention of the

Local Government. Perhaps the best test that I can apply is the number of receipts and issues that pass through the Foreign Department from the Punjab Government—I take those which relate to the Frontier alone—as compared with the whole number relating to internal administration as well as to Frontier affairs, with which we deal from the entire province of Baluchistan. In the year 1899 they were as follows:—

	Receipts.	Issues.
Punjab Frontier—		
Political .	720	316
Administrative	115	119
TOTAL	835	435

	Receipts.	Issues.
Baluchistan—		
Political .	301	186
Administrative	326	357
TOTAL	627	543

89. It, therefore, appears that the entire business, internal and external, devolving upon the Foreign Department for the province of Baluchistan is less than the external business alone, which comes up to it from the Punjab Government. It is of course true that Baluchistan is a by far less populous and less advanced province than the Trans-Indus portions of the Punjab would be; and that no strict analogy can be drawn between the political or administrative business of the two Governments. I quote the figures, however, to show to what moderate and reasonable dimensions the work that is entailed upon the Foreign Department by the Baluchistan Agency has shrunk, in the face of the argument that was so freely employed at the time of its constitution,—*viz.*, that the Foreign Department would not be equal to the additional strain. The figures also show how slender in practice the devolution upon the Punjab Government has become. I do not of course argue that the Frontier business of the Foreign Department will not, if a new administration be created, be increased. Such will, at any rate for a time at the beginning, in all probability be the case. We may require for a short period the assistance of an extra hand in the Foreign Office. But this transitional epoch will not be of long duration. As the Local Government becomes consolidated, so will the references on administrative and internal affairs rapidly diminish, as they have done in Baluchistan. The Frontier and political references may also be expected to dwindle as local responsibility is developed; and in a few years time I entertain little doubt that the Foreign Department will be less hampered and besieged by Frontier affairs than it is at the present moment.

90. Finally, if the question of financial cost be raised, I might point out that we already possess the authority of the Secretary of State for the submission of proposals that may entail an increase in our charges for administration. In his despatch of the 5th August 1898, he wrote, with reference to his own proposal, already discussed: "I am aware that any such alteration of system may require additional expenditure"; and "I shall not object to the exercise by your Government of a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to these considerations." But, as a matter of fact, we have no occasion at present to profit by

this latitude, since I have shown good reason for believing that the scheme which I have proposed, so far from increasing, may possibly even diminish our annual outlay. The financial objection which has impeded the realisation of earlier projects need not, therefore, be considered at the present time.

91. I have now examined and argued the various objections that have been raised in times past to proposals similar to that which I now make, or that may be raised to mine. I trust that I have shown them to be not only much less formidable than has hitherto been believed to be the case, but for the most part destitute of serious foundation. On the other hand, I hope also to have shown that the scheme for the constitution of a new Frontier province, that I have put forward, possesses these positive merits. It will express and enforce the direct responsibility of the Government of India for Frontier affairs. It will enable the Viceroy to conduct the most important business of the Department of which he is the personal chief. It will free the management of Frontier politics from the delays that are inseparable from a chain of reference, whose strength is sacrificed to its length. It will promote greater rapidity and consequently greater freedom of action. Its tendency should be not towards aggression, but towards peace: since war with the tribes is commonly the result of ignorance or indecision at earlier stages. It will entrust tribal management exclusively to those who know the tribes. It should train up a school of officers, worthy of the most critical but splendid duty that is imposed upon any of the officers of the Queen's Government in India. For myself I will only add that, having initiated a definite policy on the North-West Frontiers of India, which I believe to contain the germs of possible success, I ask to be relieved of the conditions which appear to me to jeopardise its operation at every turn, and to be presented with those by which alone, in my opinion, its future can be reasonably assured.

(Signed) CURZON.

August 27th, 1900.

No. 14.

Despatch from the Secretary of State for India to His Excellency the Right Honourable the Governor General of India in Council, dated India Office, London, 20th December 1900.

I have received and given my attentive consideration in Council to the despatch of Your Excellency's Government, dated the 13th of September 1900.

2. Your Excellency in Council records your conviction that the present system of Frontier control is entirely unsatisfactory, interposing as it does hesitation, delay, and difficulties in the execution of a policy for which the Supreme Government is directly responsible, subject to the orders of Her Majesty's Government, but the execution of which is entrusted to the Local Government of the Punjab. You consider, upon a careful review of the past history of the Frontier, that if firmness, promptitude, or continuity of policy in the future are to be secured, a radical change in the present procedure is needed, and you draw attention to the additional burden which the Durand Agreement has put upon the Frontier administration by rendering it to a large extent responsible for the conduct and misdeeds of those living inside the line of demarcation settled by that agreement. Your Excellency sketches in outline a scheme for the construction of a new agency immediately under the control of the Government of India, which seems to you desirable, and which after a full consideration, your Government endorses as the only scheme that in principle will avoid the evils of the present system. This scheme, regarding the details of which you propose to consult the Government of the Punjab, is described with some fulness of outline in a Minute written by Your Excellency, and dated the 27th of August 1900. It contemplates the creation of a Frontier

Province under the direct control of a Chief Commissioner and Agent to the Governor-General, who would have charge, not only of the four districts now under the Punjab Government, namely, Peshawar, Kohat, Bannu, Dera Ismail Khan, with the tribal country that lies beyond their limits, but also of the Political Agencies of Dir, Swat, and Chitral, the Khyber, Kurram, Tochi, and Wana. The area detached from the Punjab Province would approximate to $\frac{1}{14}$th of its total area, with $\frac{1}{15}$th of its total revenue, and $\frac{1}{18}$th of its entire population. Your proposals differ from those which have at former times been discussed, in their avoidance of several dislocations of the existing provincial systems, but there are a few details, such as the possible transfer of the control over the Black Mountain Tribes from the Deputy Commissioner of Hazara, which are expressly reserved for final consideration. Although the cost of the new staff which would be required at Peshawar would exceed that of the present establishment by 3,600 rupees a month, it is expected that the total cost of the civil administration will not exceed, and may, perhaps, be less than, that which is now incurred. While the holders of the subordinate administrative posts would be drawn from the Punjab or other provinces, you propose to provide for the wants of the higher posts and the political appointments by an increase to the strength of your Foreign Department, and you have discussed the probable effect of these changes upon the prospects of the Punjab Commission.

3. Her Majesty's Government recognise that the adoption of the policy of concentration inculcated in my telegram, dated 13th October 1897, and more fully set forth in my despatch of the 28th of January 1898, paragraph 18, has modified the previous situation, and may require organic changes in administration. The Government of India, in pursuance of the two objects specified by me in that despatch, namely, concentration of your military force, and the limitation of interference with the tribes, so as to avoid the extension of administrative control, has carried out a series of changes along the Frontier, which have received the approval of Her Majesty's Government. In my despatch, dated the 5th of August 1898, I anticipated that the alteration of system introduced into the Khyber Pass would involve further arrangements, both financial and executive, in order to ensure their success, and I indicated certain transfers of authority which might deserve consideration, especially as they would reduce to a minimum any disturbance of the provincial administration in the Punjab. I learn, however, that the Government of the Punjab is strongly opposed to these limited re-arrangements, and the larger scheme proposed by Your Excellency is based upon this conclusion.

4. Your Excellency has referred to the objections which, as I pointed out in my despatch of 5th August 1898, may be raised against the severance of settled districts from the Government of the Punjab, and against the direct control of the Government of India which it is proposed to substitute for that of the Local Government over them and the neighbouring Frontier. To a considerable extent the second and the third of the objections indicated in my despatch of the 5th of August 1898 are provided against in Your Excellency's scheme. I recognise that, in avoiding any alteration of the position of Sind, and in limiting the transfer of districts from the Punjab to those mentioned, your Government will avoid an undesirable series of territorial rectifications and compensations; and that, when the control of the Government of the Punjab is for the most part confined to Cis-Indus districts, the advantage of training its officers in tribal tracts beyond, but adjoining, the administrative Frontier of the Punjab will cease to be of much practicable value. But there are certain unavoidable drawbacks associated with the proposed scheme which will require very careful consideration in order that they may be minimised, and to which the first and fourth of the objections above mentioned were intended to refer.

5. The staff of the new Frontier Province will not be large, and the Governor-General's Agent at its head will have two very different sets of duties to perform and supervise. In respect of the Frontier tribes his duties will be political, and his policy will be under the direct control of your Government. But, in the case of the settled districts, which you propose to detach from the Punjab, it is clearly undesirable that the people having already enjoyed the benefit of a highly organised administration with its careful land

settlements, its laws and regulations, and the various institutions of a progressive Civil Government, should be thrown back from the stage which they have already reached. The Governor of a large province not only possesses a special and large experience of British administration, but can summon to his aid and counsels heads of Departments and Commissioners of Divisions whose advice may be of the utmost value. The Governor-General's Agent will not, without special arrangements, be able to count upon such assistance. I have not overlooked the fact that your Excellency intends to draw upon the Punjab for skilled officers in the subordinate branches or in the technical departments, but I am not satisfied that this will meet the whole case; for the important question of superior direction remains to be dealt with. Nor does recent experience in Baluchistan appear to me to be altogether relevant, since no part of that agency can claim to have a district, or part of a district, in any respect so advanced and settled as the Trans-Indus British districts which you propose to detach from the Punjab.

6. The question of the recruitment of officers for the new agency, to which I have referred above, will obviously be one of very great importance. The nature of the duties to be performed, and the necessarily limited numbers of the staff, make it essential that a very high standard of individual efficiency should be attained and preserved in administrative as well as in political duties. It seems to be probable that in so small a province it will not be easy to keep the staff at the requisite level of efficiency, unless picked officers are largely imported from other provinces; a measure which can hardly fail to produce discouragement among the regular staff of the province by retarding promotion in the lower grades. I should be glad to be more fully informed as to the measures by which Your Excellency proposes to deal with this difficulty, and to be assured that you are satisfied as to their probable effect.

7. There is another point to which I wish to draw Your Excellency's attention. In remarking that the need of a strong administration equipped with all the resources of Government would be felt on the Frontier, I did not refer to the political administration. I referred to the advantages that must accrue to the Frontier districts of British India from the application to them of the ways and means at the command of a first-class administrative unit. The construction of roads, bridges, rest-houses, and hospitals, and generally the assignment of provincial resources to a particular district, may be of the utmost value, and are best secured if the district is an integral part of a large province. In times of disturbance or threatened danger a large province can draft in additional police, procure transport, change local officers, and do much to prepare for trouble before they arise or assume the form of military operations. If it is necessary to transfer settled districts from the control of the Punjab Government, and to place them under the same administration as the adjoining tribal country, it is important that the possible results of such a policy should be fully considered and provided for.

8. Your Excellency in Council will, no doubt, weigh these points carefully in working out the details of your scheme. If, on close examination of the various changes and adaptations inseparable from the constitution of a new Commission, apart from the Punjab Government, it is found that they do in fact involve no additional expense, the result will be undoubtedly satisfactory. But I can hardly anticipate, judging from general experience, that Your Excellency's preliminary estimate will not have to be modified in this respect; and although I do not desire to lay down any fixed limit in the matter, I trust that no pains will be spared to prevent the imposition of any unnecessary burden on the revenues. In the meanwhile Her Majesty's Government approve generally of your proposal, as tending to express and enforce the direct responsibility of your Government for Frontier affairs, and to free the management of Frontier politics from the delay inseparable from the present system. So far as the details of your project, which I shall await, appear likely to secure these objects, they will receive my favourable consideration.

9. In the 29th paragraph of Your Excellency's Minute the argument is pressed that the transfer of the Frontier administration from the Punjab Government to the Government of India will involve no diminution of special

aptitude for and knowledge of Frontier affairs. I am convinced that your remarks were in no way intended to depreciate the eminent abilities of the Lieutenant-Governors who are named in that paragraph, or to undervalue the substantial services which all Lieutenant-Governors of the Punjab, beginning with Sir John Lawrence, have rendered in the discharge of the difficult duties connected with these affairs, although none of them had any previous personal experience of political work on the North-Western Frontier. I gather that the general object of Your Excellency's Minute is to prove the present system to be unworkable, and not to reflect unfavourably upon the manner in which the Punjab Government has attempted to work it; and I desire it to be understood that my approval of Your Excellency's proposals is based on my acceptance of the main conclusions which I find that Your Excellency in Council has adopted, that the present system of Frontier management, however worked, is unsatisfactory, that some radical change in that system is required, and that this change should take the form described at length in Your Excellency's Minute.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 15.

Opinion recorded by Sir Dennis Fitzpatrick, K.C.S.I., Member of the Council of India, dated 17th January 1901.

PUNJAB FRONTIER ADMINISTRATION.

Having at the meeting of the Council, held on the 18th December 1900, dissented from the resolution regarding my proposal to insert an additional paragraph in the draft Despatch relating to the scheme for constituting a Chief Commissionership of the North-Western Frontier, I desire that my opinion may be entered in the minutes of the proceedings, together with the following reasons for it which I laid before the Council on the occasion referred to.

1. I find myself in a somewhat peculiar position with reference to this draft Despatch to India. I agree in the conclusion at which Lord Curzon has arrived, that the Punjab Frontier administration must be placed directly under the Government of India, indeed I have long foreseen that that would one day be necessary. Further I agree with Lord Curzon in thinking that the only workable arrangement* is to separate off the Punjab Frontier districts bodily and make them into a Chief Commissionership. But I at the same time see a certain danger attending the change proposed, and I should have thought that a word of caution as to that danger ought to have been inserted in the Despatch. Moreover, when I look into the arguments and observations contained in Lord Curzon's Minute, I find that, while some of them are sound and sufficient to establish his point, others are of such a nature as to convey an erroneous or distorted impression as to the positions occupied for many years past by the Government of the Punjab and the Government of India respectively with reference to frontier questions, and as to the relations between them so far as concerns those questions. I feel some hesitation about discussing these matters, for, having myself held the office of Lieutenant-Governor down to not quite three years ago, I am liable to be suspected of prejudice; but, on the other hand, if, possessing the knowledge I do, I hold my tongue, I may be supposed to have accepted and endorsed all Lord Curzon's arguments and observations as well as his conclusions. It is impossible for me to allow this to be supposed, and for

* I ought to state that I was absent from here at the time the Secretary of State's Despatch of the 5th August 1898, proposing the alternative arrangement now dropped, was prepared and issued.

this reason, as also because it will serve to make the whole position clearer, I am anxious to place before the Secretary of State and my colleagues a statement of the condition of things that, so far as my knowledge extends, has actually and as a matter of fact prevailed under the system which we are all now agreed should be abolished.

2. To begin with, it must be admitted that in spite of the anxiety of the Punjab Government to carry out the policy of the Government of India and of the consideration shown to the Lieutenant-Governor by successive Viceroys, differences of opinion have from time to time prevailed, which, though they seemed at one time on the point of being thrashed out in a friendly spirit, have evidently not as yet been cleared up. But in order that an exaggerated importance may not be attached to those differences of opinion, it is necessary to explain that the Punjab Government has had nothing to do with the discussion of the great general question as to the merits of what is called the "forward policy." So far as I know, no Lieutenant-Governor of the Punjab has ever been consulted on that great question, and I doubt whether any one of them has ever quite understood what the "forward policy," when taken in its full extent and as advocated by various authorities from time to time, exactly means. All that it concerns the Lieutenant-Governor to know is the fact that the Government of India desire to establish some amount of control over the trans-border tribes, up to a certain geographical limit, and that since the Durand line has been laid down, and so long as it may continue to have any meaning, that line is understood to be the limit.

3. As to the nature and extent of the control so to be established, the views of the Government of India seem to have expanded considerably after the Durand delimitation agreement. As shown in the dissent appended by Sir C. Pritchard, Sir J. Westland, and Sir A. MacDonnell to the Government of India Despatch of the 31st July 1894 (Parliamentary Paper C. 8713, Vol. I., pp. 25-27), the Government of India had by the time that Despatch was written come to take a far wider view of our responsibilities than was required by anything in the Durand agreement, or than was contemplated either by those who in 1892 proposed to the Secretary of State that such an agreement should be negotiated, or by the Secretary of State in accepting their proposals. Later on the views of the Government of India seem to have expanded still further. They appear to have got as far as this, that we were bound to establish over the tribes not merely such control as was needed for our own protection and to enable us to check raids against the Ameer on certain parts of the Durand line, but further, such control as might be necessary in order to stop the internal quarrels of the tribesmen among themselves, and authoritatively settle their disputes; and that the Government of India, notwithstanding the emphatic warnings against interference and extensions of administrative control given by the Secretary of State after the disastrous events of 1897, still hold that view, is clear from certain recent discussions. I mention all this not for the purpose of casting any reflection on the wisdom of the general policy adopted by the Government of India, which it would be out of place to discuss here, but simply to make the position with which I have to deal intelligible. Whatever the policy of the Government of India might be, it was, of course, the bounden duty of the Government of the Punjab, as the subordinate, to carry it out loyally and to the best of its ability, and it would be only as to the *modus operandi* and the rate at which particular portions of the work should be pushed on that it would be permissible for the Lieutenant-Governor to raise any questions.

4. As a matter of fact, it was only in regard to these subordinate, though by no means unimportant, matters that questions arose between the Punjab Government and the Government of India, and it is necessary to note the position in which those two authorities have generally stood towards each other when they have been inclined to differ. We have all known cases of a subordinate administration with a hinterland on its border over which it has been burning to expand, while its superior has been endeavouring to restrain its ardour. We need not look beyond the limits of Her Majesty's Indian Empire to find a case which is, to a certain extent, an illustration of this. The Baluchistan Agency has pushed on, drawing the Government of India after it, at

times in spite of the resistance of that Government, until it has got right up to the Gomal on one side and right up to the Durand line on another; further, it has recently extended its posts out along the Nushki Seistan line to the border of Persia. On the Punjab Frontier it has been the reverse. It is the Government of India that has been pushing the local administration forward, and that administration, though it has always loyally obeyed the call, has sometimes done so under a sort of protest.

The main reason of this is simple enough. The Government of India looks at the whole North-Western Frontier line from the Black Mountain round to the neighbourhood of Kurrachee from a remote point of view, and like a person looking at a long coast line from a great distance out at sea, has been at times apt to suppose that there is a greater uniformity about it than there really is; and in particular it has sometimes found it difficult to understand why methods which have been so successful along the line from the neighbourhood of the Gomal southwards, should not be employed with equal success to the north of that river, and especially in the Waziri country. The Punjab Government is in a very different position. In paragraph 29 of his Minute, Lord Curzon gives a list of the Lieutenant-Governors of the Punjab from Sir Robert Egerton down to Sir Mackworth Young, showing that none of them had in the earlier part of their service been employed on the North-Western Frontier. He might have gone further, and said that no Lieutenant-Governor from and including Lord Lawrence down had ever been so employed. It may be supposed, from what he says in his 33rd paragraph, that Lord Lawrence was an exception, but that is not so. No one of us would presume to compare himself with Lord Lawrence in other respects, but in this particular we were all in the same predicament. It does not, however, follow from this that Lord Curzon is right when he says that in practice it is found, as a rule, that no Lieutenant-Governor of Punjab knows anything of the frontier at all. A Lieutenant-Governor has not, of course, the sort of knowledge of the frontier that you find in an officer who has spent much of his service on the frontier, and talks Pushtu fluently, as all our best officers nowadays do—the sort of knowledge that we may hope to find in the new Chief Commissioner now to be appointed; but, to say nothing of what he soon learns in the ordinary course of his daily work, and on the many occasions on which the frontier officers come to him to discuss matters personally, the Lieutenant-Governor commonly spends the whole cold weather, with the exception of a short period at Christmas, in camp, and he gives the frontier a good deal more than its share of his camping time. He has the frontier officers living in his camp, it may be for several weeks at a time, riding the march with him every morning, in and out of his tent all day, bringing up the leading men to interview him in the afternoon, and probably renewing the discussion of pending questions round the table after dinner. It is these officers, and not, as Lord Curzon seems to suppose, the members of the Secretariat Staff, however able these latter may be, that are the Lieutenant-Governor's advisers on frontier affairs, and from them, or in their company, he before long succeeds in learning a not inconsiderable amount about frontier affairs. A great deal, no doubt, is second-hand knowledge, but a certain amount he acquires for himself, especially when, as often happens, some of the important men understand Hindustani. His knowledge is exactly the same sort of knowledge that all of us who have held the post of Chief Commissioner of Assam have had of the numerous tribes that surround that province on all sides but one, and are under our control.

5. Now, having thus at least a considerable knowledge of the position, the Lieutenant-Governor has had on certain occasions, as *e.g.*, when some of the forward moves mentioned by Lord Curzon were proposed, and also when the advance to the Malakand and the Chitral road and certain demarcations of the Durand line on the ground were under discussion, to represent to the Government of India that such measures would present certain difficulties and be attended with a considerable amount of risk. It is always an ungrateful task for a subordinate to have to suggest difficulties about carrying out the orders of his superior, and it is one from which a subordinate of lower rank

than a Lieutenant-Governor might sometimes shrink; but about the duty of a subordinate, of whatever rank, in such a position, there can be no room for doubt. It was thus the duty of the Lieutenant Governor to point out that the tribes we had to deal with, unlike the Pathans who fell under our sway on the annexation of the Punjab, had never been brought under the control of any ruler, and that, owing to various causes, they were far more difficult to control than those further south. One of these causes, I may mention, was the great strength of those tribes, and the bitter hostility against any interference on our part felt by the tribesmen generally as distinguished from the limited number of them who could hope to rise on our shoulders, or receive allowances from us. This after a little time came to be better understood. Another of these causes was the democratic constitution of those tribes, and the absence of powerful tumandars or maliks (leading men) through whom they could be controlled. It took longer to get this understood. An idea got started that you could make maliks (tribal leaders) out of almost anything, and it thus became necessary to explain that a strong malik was a natural product of the tribe, and that it was very difficult to make one grow strong by artificial cultivation. In 1896 the Government of India returned to the point and insisted that "experience has shown that in every Pathan tribe, however democratic, there are responsible headmen who are capable of maintaining order if they are properly supported." This proposition had to be combated by giving detailed explanations and illustrations. Reference was made to a report received not long before, showing that the maliks we have subventioned in the upper Tochi declared they could do nothing unless we placed a military force at their very elbow, and to petitions received from our Mahsud maliks, declaring that our countenance and support, far from strengthening them, had led to their being placed under a ban, and begging us to occupy Kanigoram and Makin, in the heart of their hills—places which we could not even visit except with a very large military force. It was further explained that, even in our own district of Peshawar, many of the Pathan zamindars would not stand any one of their number being raised above his natural position over them by our authority. What was then said was amply borne out by what subsequently occurred.

It was exemplified in the case of the Mohmunds in a most striking manner within a month or two later. We had, under the orders of the Government of India, to conclude an arrangement with those Mohmunds who had fallen on our side of the Durand line. When Mr. Merk proceeded to arrange preliminaries with them, they started by declaring that there were no maliks among them, that there might be seniors and juniors, but that, for the purpose of concluding an arrangement of that sort, they were all the same. I was marching along the Peshawar Frontier, and it was arranged that Mr. Merk, who had with infinite labour settled all preliminaries, should bring them before me at Shabkadr. About 900 of them claimed to come down to meet me and discuss the matter, and when they arrived they absolutely refused to put forward any men to represent them, even to the extent of being allowed to sit in front at the meeting. Almost the whole number sat down before us just as they managed to find room, and such of them as got near enough all tried to talk together. Thanks to Mr. Merk's skill, an arrangement was somehow concluded, but I felt bound to express some doubt as to its being effectual. What happened at that very place, Shabkadr, in less than a year after we all know.

It was, I may mention, chiefly with reference to the Waziris that this discussion as to the constitution of the tribes and the position of the headmen arose between the Punjab Government and the Government of India, and if anyone still thinks that the Government of India would be right in holding that in the case of a tribe like the Mahsud Waziris "there are responsible headmen "who are capable of maintaining order if they are properly supported," I would refer him to Mr. Merk's note of the 24th of July last, received here the other day with the Government of India's Despatch No. 145, dated 18th October 1900, from which it will be seen that there are really no persons who can be called maliks among the Mahsuds, and that we must deal with the ulus," *i.e.*, with the tribesmen *en masse*, merely making such use as we can of

any men who seem to have gained an influential position at the moment—a mode of procedure which, though it may answer for some purposes, will for others, I fear, prove altogether hopeless.

I have thought it well to mention all this *about the maliks* because it affords a good illustration of the sort of discussion that is apt to arise *between* the Local Government and the Government of India, and it is only by getting down from vague generalities to details that it is possible to make the position intelligible.

6. So much as to the nature of the position to be dealt with on the parts of the frontier to which I refer. Now as to the policy from time to time enjoyed on the Punjab Government towards the tribes there. Apart from the correspondences relating to particular cases, there were two correspondences, one in 1888-89 in Sir James Lyall's time and another in 1896 in my time, in which the general question of our policy towards these tribes was discussed, and in each instance the correspondence was started by a letter from the Government of India urging the Lieutenant-Governor to greater efforts to extend our control over them. Both these correspondences are worth referring to in this connection, but the second of them has a more direct bearing on the present position because, at the time it passed, the important change effected by the Durand demarcation had taken place, and, moreover, the intermediate discussions that had occurred in particular cases had brought out clearly the points on which the Government of India and the Government of the Punjab were at one, and the points which had still to be cleared up between them.

7. In the 21st paragraph of his Minute Lord Curzon, apparently referring to this latter correspondence, writes as follows :—"In the early years of Lord Elgin's administration an attempt was once more made to escape from the necessities of a radical change by again suggesting to the Punjab Government the initiation of a policy of friendly intercourse with the tribes for whom we had thus assumed political responsibility, and of the strengthening of the political service of the border. Into the discussion that followed with the Punjab Government I need not enter, suffice it to say that it was not followed, so far as I can ascertain, by any practical changes either in the principles or in the form of administration." Now, if Lord Curzon is here referring to the correspondence I have just mentioned—and I do not know to what else he can be referring—I must point out that, while his remarks are verbally accurate, they are likely to convey a wholly erroneous impression to his readers. Anyone reading his Minute would be led to suppose that the Government of India had, on the occasion referred to, made an attempt to induce the Punjab Government to initiate a change of policy, and had failed to get it to move. What actually occurred was this : The Government of India in Mr. Barnes' letter, No. 2197, dated 14th August 1896, to the Government of the Punjab, set forth certain general principles which, in their opinion, should be followed in dealing with the tribes on the North-Western Frontier of the Punjab, and asked for an expression of opinion as to how those principles could be best applied, and what modifications, if any, of the existing system were required. The Punjab Government complied with this request by forwarding a note, in which the whole position on various sections of the frontier was fully reviewed, and definite proposals for carrying out, on certain of those sections, the policy indicated in the Government of India letter were submitted for the approval and orders of the Government of India. The Punjab proposals were forwarded to the Government of India with the Punjab Chief Secretary's letter No. 14, dated 28th October 1896, and the reason why they were not "followed," to use Lord Curzon's words, "by any practical changes" was a very simple one, namely, that the Government of India never answered that letter. I understand they, at first, deferred answering it, as they preferred to wait for certain additional proposals which were promised, and which were not ready for submission until a couple of months later. This brought the matter down to the beginning of 1897, and then the time of my vacating office was so near that I suppose they thought it well to wait and see whether my successor approved of my scheme. Then a few months later

came the great rising of the tribes, and after that rising was suppressed the Government of India made a completely new departure. The whole thing is dead and gone now so far as any question of taking direct official action on it is concerned, but as that correspondence affords, within a short compass, a clearer and more detailed view than can be got elsewhere of the respective positions of the Government of India and the Government of the Punjab, of their relations (then very amicable relations) to one another, and of the opinions held by them respectively, I cannot help regretting that it has never been made public.

8. It would be out of the question for me to give anything like an abstract of that correspondence, but I think it well to refer to two or three points brought out in it in order to make the position as it then existed clearer.

The first of these points is that as to the rate at which the policy should be pushed on.

The view of the Government of India, as expressed in their letter of August 1896, appeared to be that we should endeavour to extend our control generally over the tribes up to the Durand line, and that we should everywhere exert ourselves more actively than we had previously been doing. As to this, after referring to the feeling of the tribes and the probability of opposition from them, the Lieutenant-Governor, while submitting definite proposals for extending our influence and establishing closer control in certain tracts, ventured to represent (in the note above mentioned) that the moment was not a favourable one for urging our frontier officers generally to greater activity. He wrote as follows :—

"I should be averse to issuing any orders which might seem to our officers to sound the advance along the whole line at a moment like this, when we are not yet out of the wood in Waziristan and on the Chitral road, when we have the great Mohmund business impending, and when the Lieutenant-General Commanding the Punjab is already crying out that the force under his command is not sufficient to meet the demands made on it by the forward movements we have already made. At the same time I feel bound to acknowledge the very full manner in which the Government of India, in their present letter, recognise the wide difference between the conditions that prevail on different parts of our frontier and the anxiety displayed throughout to enjoin moderation and caution, and I have in consequence every hope that, when we come to discussing matters in detail, it will turn out that there is really far less difference between my view and theirs than might at first sight be supposed. I have only to add that, however this may be, I shall, during the short time that remains to me here, exert myself to give effect to the views of the Government of India, whatever they may be, exactly as if they were my own."

9. Another question, and one of the first magnitude, was started by the Government of India letter of August 1896, and, as it seems to be still under discussion, I think it well to refer to it, I mean the question as to what instructions we should give our officers regarding quarrels and fighting among the tribesmen themselves in a tribal tract where we have not assumed any sort of administrative control, and where such quarrels and fighting in no way whatever affect us or any interests which we are bound to protect. It was admitted on all hands that our officers, whenever they saw an opportunity of doing so, should interpose in a friendly manner and use their good offices to promote peace; but it was also admitted on all hands that the effect of this sort of interposition would in most tracts be limited, and that, if peace was really to be established among the tribesmen themselves, it could only be done by a political officer interposing authoritatively, *i.e.*, as the Government of India expressed it, "*by forbidding bloodshed and insisting on a peaceful settlement.*" The question was how far we were to direct or allow our officers to interpose in the class of cases referred to in this latter way. The Government of India seemed to treat this question with a somewhat light heart, and to be prepared to give Political Officers a free hand to do in regard to it as they might think fit under all the circumstances in which they might find themselves placed. It therefore became necessary to point out that we were, in the class of cases

referred to, under no obligation of any sort to interpose authoritatively; that the suggestion that we should do so was an entirely new departure; that wherever we attempted to do so we should be drawn into a sort of interference with the internal affairs of the tribes, which, when once started, must from its very nature soon become of all others the most close and systematic, and would land us in reponsibilities which we could not discharge without having a strong backing of military force, and perhaps entering into occupation of the country. The root of the whole matter I may explain lies in this:—That if you take upon yourself authoritatively to forbid certain persons or certain sections of a tribe from attacking others not only must you, in order to prevent your face being blackened before the whole countryside, insist upon your order being obeyed and compel obedience to it if necessary by force, but further, as you have prevented those to whom it is addressed from redressing their wrongs in the only way open to them, you are bound, as a matter of common justice, to arrange that they shall have effective redress in some other way, and thus you will have all their quarrels with their many ramifications on your hands. If you interfere authoritatively at all you must be prepared to do justice all round. Having regard to considerations of this kind, it was recommended by the Punjab Government on the occasion referred to that a political officer should be authorised to interfere authoritatively to prevent fighting only in tracts where the Local Government and the Government of India, after considering our position, should decide that it was expedient that we should so interfere. Elsewhere what we sometimes call the "Khyber System" (as distinguished from the "Sandeman System") would prevail; that is to say, the system so successfully carried out for many years by Sir R. Warburton in the Khyber, under which it was not considered our business to interfere authoritatively with the fighting of the tribesmen among themselves, even within sight of Jumrood, so long as such fighting did not give rise to any danger to the peace of the road or any other interest which we were bound to protect. It should be added that at the same time, in order to meet as far as possible the views of the Government of India, proposals were submitted for at once giving the power of interfering authoritatively in certain tracts.

I had an opportunity of discussing this point with Lord Elgin when I went to bid him farewell at Delhi towards the end of 1896, and I gathered that he was disposed to accept the above view, but, as I have said, the fates were against our correspondence being brought to an issue, and I gather that on this all important point the Government of India and the Local Government are still at variance; indeed, from the recent correspondence regarding the internal feuds between the Mahsood and Darwesh Khel Waziris it would seem that the Government of India regard the distinction between authoritative and merely friendly interposition which has been long observed in the Punjab, and the momentary neglect of which has on some occasions led to embarrassing results, as a mere figment of some theorist's imagination.

10. I have only one more point to refer to in this connection. There were some passages in the Government of India letter of August 1896 calculated to create an impression that the Government of the Punjab was given to holding its political officers with a tightness which was altogether unnecessary, allowing them little discretion, and requiring them to refer every individual case for orders; and I see Lord Curzon now, in more than one passage of his Minute, makes the same charge. Now I may mention that when this charge was made in 1896 it was explained that it was based on a certain misapprehension, and I see in paragraph 36 of Lord Curzon's Minute a quotation from a note by Mr. Frederick Cunningham, in which a very similar explanation is given. That explanation is, that, except in particular classes of cases, the Punjab Government allows its political officers a very free hand indeed, and that when it requires them to refer to it for instructions this is, as a rule, not because it wants to deal with the case itself, but because the Government of India expects such cases to be referred to it for orders. Mr. Cunningham, no doubt somewhat overstating the point, speaks in the passage quoted by Lord Curzon of the Punjab Government as not having "power to give orders in any but the most trivial matters," and adds that he "cannot remember any question sufficiently important

to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta," and winds up in his epigrammatic way by saying that "under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India." Now I may observe in passing that even after allowing for a certain amount of exaggeration, by which Mr. Cunningham seems to reduce, not only the Local Government, but also himself and the other very able men who have held the office of Commissioner, to the position of mere ciphers, there is enough left in this statement to supply a strong additional argument in favour of the change now proposed by Lord Curzon; but I am not at this moment concerned with that. At the period to which I am now referring there was no proposal for such a change. The question was one merely of decentralising, of giving a wider discretion to the local officers, and I think it well to mention what was then suggested to the Government of India on this point, because it holds good still and will hold good after the change now proposed. One of the chief causes which compel the Government of India, and as a necessary consequence the Punjab Government, to keep such a tight hold has always been that the general lines of the policy to be pursued are not sufficiently settled—that we are to a great extent drifting without a plan. So long as that is so you cannot safely allow a local officer any large measure of discretion. Hence it was suggested, and not for the first time, by the Punjab Government, that we should consider each section of the frontier separately, that we should determine what objects we should aim at there, what sacrifices we would be prepared to make, and what risks we would be prepared to run, in order to attain those objects, and what methods of action we should adopt, and that we should issue to the officers concerned general instructions of certain degree of definiteness in accordance with the conclusions at which we might arrive. Our officers would thus have some idea of what they were at liberty to do on their own authority and what they should refer for orders. It was, indeed, admitted that there might be cases, though they would be very rare and exceptional cases, where we might dispense with anything of this kind. What was said on this last point was as follows:—

"There may now and again be a frontier tract over which it is manifestly desirable to establish a close control rapidly at whatever cost, and in the case of which we may consider that the simplest plan is to appoint a strong and reliable officer, and leave him to take his own course, without hampering him with any definite instructions, merely throwing the reins on his neck and letting him carry us along as seems best to him; but these would be rare and exceptional cases, and for any Government to take such a course generally along an extensive line of frontier or to any large extent would be simply to abdicate its most important functions and to incur risks, the extent of which it would be impossible to estimate."

11. Having thus given an idea of the sort of matters on which the Punjab Government ventured to express an opinion different to that which the Government of India was disposed to take, I have next to consider how far such expression of opinion by the Government of the Punjab did any harm and how far it did any good.

As to the harm, I think it may safely be said that until recently there were no complaints of its leading to any undue delay or to any friction in dealing with particular cases. The Government of India and the Government of the Punjab knew their respective places in the system perfectly well. When any course of action was proposed the Government of the Punjab stated its opinion, sometimes adding that that opinion was one formed from the limited point of view of local considerations, and leaving the Government of India, who had to look at matters from the broader point of view of military and Imperial considerations, to decide.* Upon this the Government of India commonly decided, as it was perfectly in its right in doing, without entering into further discussion.

* I suspect it is to this Lord Curzon alludes when, in the 37th paragraph of his Minute, he speaks of the Punjab Government as "anxious to shift the ulterior responsibility to the shoulders of the Government of India;" but it is hard to see how the Punjab Government could have taken any other course than that I have described. They rarely had a sufficient opportunity of fully learning the considerations that influenced the Government of India.

In this connection I cannot do better than quote the description of the position Lord Elgin gives in paragraph 20 of his Minute of 6th November 1898:—"I am prepared," he says, "to endorse most emphatically the claim that the Local Government has loyally co-operated in the declared policy of the Government of India. The late Lieutenant-Governor of the Punjab once said to me when discussing this subject, 'You have only to lift your finger, and the brake will be taken off in any place you think desirable.' That remark is more than an expression of personal loyalty, it contains in a few words a correct exposition of the only principle on which we can rest our arrangements, *i.e.*, that it is the business of the Government of India, and the Government of India alone, to formulate and prescribe a policy outside the borders of British India."

Lord Curzon in paragraph 38 of his Minute writes in a different tone. He says, "I do not see how any Governor-General could deny that if he desires a policy to be pursued or a step to be taken in Baluchistan, which is under the administration of an Agent to the Governor-General, directly subordinate to himself, however unpalatable such a policy or step might be to the Agent to the Governor-General, it will be carried out with incomparably less friction and delay than in a similar case in the Punjab, where the dignity and susceptibilities of a Local Government and of its head demand the most scrupulous and respectful consideration."

Now how far there is good ground for this change of tone it is difficult for us to judge, especially as we do not know what there may be to be said on the Punjab side of the question by the present Lieutenant-Governor, who, strange to say, does not appear to have been consulted regarding the proposals now under consideration; but, however this may be, I think that the mere fact that Lord Curzon takes the view of the present position that he does, and expresses that view in the way he does in various passages of his Minute, affords a considerable argument in favour of the change he proposes, unless, indeed, it can be clearly shown that the retention of the Local Government in the management of the frontier serves some highly important purpose, and I must say I doubt whether any argument against the change can be founded on this latter ground.

12. No doubt, the Punjab Government has, in the past, played an important part, and I hope generally a useful part, in moulding the details of a scheme after that scheme has been determined on, but that is a thing a Chief Commissioner could do equally well and possibly better. The real question is whether the Punjab Government has been able to do more than that, and this question is discussed by Lord Curzon in paragraphs 82 and 83 of his Minute. In these paragraphs, after referring to the matter of punitive expeditions, which I must reserve for separate notice presently, he goes on to speak of the military advances over the border which have carried us forward on to the Samana, into the Kurram, and far into North and South Waziristan, and of what came later, namely, that the Government of India were involved only three years ago in the greatest frontier conflagration that has ever been known. I may observe that the advance into the Kurram cannot properly be mentioned in this connection, as it stands on a totally different footing from the other forward movements, and on the other hand that the advance to the Malakand and the Chitral road ought to have been mentioned; but, however that may be, Lord Curzon asks how it is that, notwithstanding the peaceful disposition of the Punjab Government, things of that sort occurred, and his conclusion is that the plea that we are saved by the intervention of the Local Government from such things is one that will not stand a moment's examination. Now I do not know whether anyone would, at the present day, raise such a plea. Lord Elgin has indeed expressed an apprehension that a frontier Chief Commissioner, such as it is now proposed to appoint, might force the pace, but that it is a totally different thing. It is a case of *facilis descensus*. Either of the two parties that are coupled together may easily drag the other down; but it is not so easy for either to hold the other back. It is, however, unnecessary to pursue this. It is enough to say that I entirely agree with Lord Curzon's conclusion, and I may add that even if the Punjab Government were able to hold back the Government of India

in its forward progress, I do not think it could be decently argued that the Punjab Government should be retained in the system for that purpose. If it is desirable to exercise any control over the Government of India for this or any other purpose, such control should be exercised from above and not by a subordinate.

It is chiefly for these reasons, namely, that the relations of the Government of India and the Government of the Punjab in regard to frontier affairs have now become strained, and that the part the Punjab Government can now-a-days take in the management of those affairs is far from being one of first rate importance, that I accept Lord Curzon's proposal for the separation of the frontier.

13. I desire to add only one word more as to the general position in the past; and I do so in order to prevent misapprehension. I trust it will not be supposed from anything I have said that I mean to claim for the Punjab Government the position of a sort of Cassandra—"*Dei jussu non unquam credita Teucris.*" I have, indeed, endeavoured to show that the discussions that arose between the Government of India and the Government of the Punjab were to a considerable extent the result of the estimate formed by the latter of the local difficulties and risks of the forward policy; and that that estimate erred only by being a good deal below the mark is amply proved by all that has since happened. But it by no means follows from this that the Government of India were not wise in facing those difficulties and risks. Whether they were or not depends on the merits of the forward policy and the rate at which it is thought necessary to push it on in order that it may accomplish its objects in due time, and these are matters which it would be altogether beside my present purpose to discuss.

14. I now desire to say a few words on certain passages in Lord Curzon's Minute, which seem to me to reflect unfairly on the present system, or on the way in which it has been worked by the Punjab Government or its officers. To begin with, Lord Curzon, not content with showing that the Punjab Government failed to stop the forward movement, seeks, towards the end of paragraph 82 of his Minute, to saddle that Government with some share, though not the main share, of the responsibility for those movements, and a little higher up he speaks of those movements as carried out under the "patronage" of the Punjab Government. What he means by this I altogether fail to understand. You might almost as well say that, if I ordered my servant to brush my hat and he proceeded to do so, that the hat was being brushed "under his patronage." The fact is notorious that the forward moves in question were carried out in the execution of a vast system of policy established long before by the highest powers that be, and that, with the exception of the move to the Malakand and the Chitral road, on which the great political parties in England split, they had one way or another the sanction of both those parties. The Lieutenant-Governor of the Punjab had little to do but obey orders, except in so far as it may have been his duty to aid in settling details, and, as already explained, sometimes to point out the difficulties and risks involved.

15. Then as regards the great frontier conflagration of three years ago, for which also Lord Curzon holds the Government of the Punjab in some degree responsible—I think that, in spite of all the eloquence displayed on both sides in the debates in Parliament two years ago, most persons have come to the conclusion that that conflagration was not due to any particular forward movement, or to any defect in the detailed arrangements for carrying it out, but to so many forward movements having been compressed into so short a space of time, which was more than the mass of the tribes could stand; in other words, that the case was simply one in which the cup was filled up and overflowed.

We are not, however, called upon now to discuss at large the question of the proper apportionment of the responsibility for the events of 1897. We have to deal only with the merits of the present system as compared with those of the proposed system, under which the management of the whole frontier would be under the Government of India; and if it is meant to suggest that the outbreaks that occurred in 1897 in the frontier tracts under the control of the Government of the Punjab would probably not have occurred if the work of taking over and

managing those tracts had been kept by the Government of India in its own hands, the observation at once suggests itself that one of the earliest and most serious of the outbreaks that occurred in 1897 occurred not in a tract under the control of the Government of the Punjab, but in the country around and beyond the Malakand, a tract which had been from the start under the control of the Government of India itself.

16. Possibly what Lord Curzon means to suggest is that the conflagration of 1897 was the result of our taking regular troops with us to hold the positions into which we advanced, and that if, instead of doing that, we had organised militia corps recruited to a large extent from the people of the country, as he is now doing for North and South Waziristan, all would have gone smoothly. If this is his idea, I must say it is a very questionable one. I do not desire to express any opinion on the great experiment he is now about to try, and which, if it stands the test of times of trouble in a country like Waziristan, will do him infinite credit. It is enough for the purposes of the present discussion to say that there is not, so far as I know, the smallest reason to suppose that, if the administration of the frontier had been entirely in the hands of the Government of India at the time the forward moves were made, any such experiment would have been attempted. I am not aware that anyone connected with the Government of India or the Head-quarters Staff of the Army in those days ever thought of trying anything of the kind. The truth is that the idea of holding tracts like those of North and South Waziristan by militia corps of the sort referred to was never, so far as I know, taken up by any of the powers that be until it was found that our new acquisitions were of much less value, especially from a military point of view, than had been imagined; that we could not spare regular troops to garrison them without increasing the regular army, and that service in them was highly unpopular, both with the officers and men of that army. Lord Curzon seems, in paragraph 7 of his Minute, to make it a reproach to the Government of the Punjab that they never proposed to adopt any such scheme. Why they did not, it would be easy enough to explain if doing so would now serve any useful object; but it is enough for our present purpose to say that the matter was one of quite sufficient magnitude to engage the attention of Lord Curzon's predecessors and their advisers, and that they, too, did not propose anything of the sort.

17. I have only one matter more to refer to in connection with Lord Curzon's Minute, and that is the question put in paragraph 82, regarding what are commonly called punitive expeditions. He says:—"If the intervention of the Punjab Government acts as a barrier against aggressive schemes, I would ask how has it come about that in the 50 years that have elapsed between the annexation of the Punjab and the present day, during the whole of which time the frontier has been under the control of the Punjab Government, there have been no fewer than 40 military expeditions against the tribes of that frontier?" I have kept this question separate from the other questions asked in that paragraph of the Minute, because it has to be answered in a totally different way, and in a way in which it has been repeatedly answered before. Lord Curzon does not give a list of the expeditions to which he refers, or of the dates at which they took place. He treats the whole thing in a lump, but I have no doubt he is right in saying that there were from first to last forty expeditions, great and small. Further, I have no doubt that, as regards the great majority in number of them, it is chiefly for the Punjab Government and not the Government of India to explain how they came to be necessary, for the great majority of them took place in the days when the Government of India left the management of the frontier to a very much larger extent than it has done recently in the hands of the Punjab Government. But the explanation of the Punjab Government, which, as I have said, is not now given for the first time, is this, that when we first took over the Punjab the frontier tribes had been in the habit of raiding pretty much at their good will and pleasure. They had to be taught what our strength was, and one of the most effectual ways of teaching them was by punitive expeditions. They took a long period to learn their lesson, and during that period punitive expeditions were numerous, but, as time went on, the necessity for them diminished; and, to refer to the condition of things ultimately arrived at, I find that speaking of raids and punitive expeditions, in a note

which I wrote in 1896, I said "raids in any force to speak of across the frontier of British India,* which were formerly so common, are now practically unknown, and we have to deal only with crime of the type which always does and must prevail even in British India, where we have to do with turbulent people. Punitive expeditions properly so called have * * * practically done their work, and have now almost ceased to be necessary." I added, "The only punitive expeditions properly so called, that have been undertaken within the last 15 years, *i.e.*, since we settled down after the second Kabul war, are the first Samana expedition and the first Black Mountain expedition. That is to say, these were the only two expeditions that were necessitated by spontaneous aggressiveness on the part of the tribes. The other expeditions that have taken place during the period referred to have been connected with some forward movement or demonstration on our part."

18. It remains to speak of the addition proposed by me to the draft Despatch. I have already (paragraph 12 *supra*) referred to a certain apprehension expressed by Lord Elgin, in paragraph 22 of his Minute of the 6th November 1898, as to the possible effect of establishing on the North-Western Frontier a special authority of the sort now proposed. What he said was as follows :—"If we create this new post, choosing for it, as we are bound to do, a man of energy and ambition, what outlet is he to find for his activity? The career of a Sandeman, the creation of a new Biluchistan, is debarred to him; for the policy which he must carry out is essentially one of *quieta non movere*. It was a policy of non-annexation, of non-interference, which was declared by Her Majesty's Government in the Despatch of 28th January (1898), and was expounded on their behalf by the Prime Minister, the Secretary of State, and the future Viceroy.....It is because I wish to see this policy acted upon in the future, and because I regard it as the best hope of a peaceful and permanent settlement, that I deprecate the establishment on the frontier of an authority which, from the nature of things, must, in my judgment, endanger its continuance." Now, I myself do not think that, at the point we have now reached, we can allow any apprehension of that kind to stand in the way of what is proposed ; but, at the same time, I feel bound to state that, in my opinion, the danger referred to is real, and that it is one against which we have to be on our guard. Lord Curzon, it will be seen (in paragraphs 80 *et seq.* of his Minute) utterly scouts the idea of there being any such danger, but, though he has dealt with the matter at considerable length, he has not, I think, seen where the danger really lies. I do not myself think that there is any danger for a long time to come of any authority, high or low, deliberately planning and proposing an advance into any fresh tract beyond the frontier. We may, indeed, be forced to advance into fresh tracts. Having, for example, occupied the Goomal and Tochi valleys, we may be forced into occupying the great Mahsood hill tract which lies between them, as, indeed, the Mahsood maliks told us some years ago we should eventually be compelled to do; or again, having advanced to the Malakand and opened the Chitral road, we may be forced into occupying the surrounding country; but such things would now be looked upon by all responsible persons as most serious misfortunes, which we should strain every nerve to avert. Indeed, I see, from some papers recently received regarding the establishment of the Northern Waziristan Militia, that it is proposed by Lord Curzon to restrict our area of effective occupation in the Tochi valley within narrower limits than many of us would think practicable, having regard to the responsibilities we have taken upon ourselves there.

But though we are not likely to see any fresh forward moves deliberately planned for some time to come, there is another danger against which we have to be on our guard, namely, the danger that the local authorities might, especially by over-interference in the internal affairs of the tribes of the sort referred to above (paragraph 9), draw us gradually into responsibilities which it would be found impossible to fulfil, except by

* It will be observed that I spoke only of raids across the frontier of British India. Since we have advanced into the Goomal and into the Tochi, we have had three additional frontiers exposed to raiding, and the raids on them have been very numerous. In fact, on these three new frontiers we are now very much in the position in which we were fifty years ago on the frontier of British India.

occupying some additional tract, or establishing administrative control over it with the support of a military force of some sort. Now, whatever may be the shortcomings of the present system, it has at least been free from any danger of that sort. Lord Curzon himself evidently believes that, whatever a Lieutenant-Governor may be in other respects, he is at least pretty certain to be above, or perhaps I should say below, being ambitious.* But with a Chief Commissioner, specially appointed to administer the border, it would be apt to be somewhat different. I do not mean to suggest that he would be influenced by mere personal ambition or a desire to distinguish himself—we could all name men of that stamp, but they are happily the exceptions—what I mean is, that he would be apt to feel that his chief *raison dêtre* was to establish a firmer grip over the tribes than the Punjab Government had succeeded in doing, and that he would be inclined to better his instructions that he might, to use frontier expressions, be overanxious to "run the show," "to lift the purdah of the tribes," "to get well in among them," and "to wheel them into line;" and he would know, as we all know, that the most effectual way to do this, provided you can manage it without causing an explosion, is to get your hand well into their internal affairs. No doubt the official instructions to him would continue to be that he should abstain from all unnecessary interference, that he should exercise his control from without, that he should merely teach the tribesmen to govern themselves and manage their own affairs according to our views, and so on. But it is difficult to teach people like the tribesmen in question to do these things, and there would be always a tendency for the work to fall substantially into the only hands able to do it, and for the responsibility to be thrown on to the only shoulders strong enough to bear it, that is to say, into the hands and on to the shoulders of our officials. This would not so much matter if we had only a small tract of tribal territory to deal with; but the transborder tract which will be placed under the new Chief Commissioner is about 500 miles in length, and, even limited as it is at present by the Durand line, is of considerable, and in some places of formidable, breadth. It is, moreover, almost everywhere a country of extraordinary difficulty from a physical point of view, and the numerous tribes inhabiting it are about as hard to manage as any you would find on the face of the earth. No doubt, having started on the lines we have, it may be our ultimate destiny to occupy all that country up to the Durand line, and even that line cannot be counted on as a limit for all times and circumstances. But the rate of progress is to a large extent under our control, and if we let ourselves be drawn on too rapidly, we may before long find ourselves on various sections of the frontier with more on our hands at one and the same time than we can well manage; moreover, even taking the most sanguine view of the experiment now being tried in North and South Waziristan, we may find ourselves in places and in circumstances where it would be impossible to rely on levies raised to any considerable extent from the tribes, and where we should need the support of regular troops. This being the position, I should have thought it desirable on the eve of this new departure to reiterate the injunctions contained in the Despatch of January 1898; and I should have thought this the more desirable because it seems to me, as I have already stated, that the Government of India are on the one hand inclined to take a somewhat exaggerated view of the obligations thrown on us by the Durand Convention, and on the other hand are not sufficiently alive to the difficulties of the position. I should further, with reference to what I have said above, at the end of paragraph 10, have thought it well to say that while the Secretary of State concurred with Lord Curzon in thinking that any minute interference of the Government in the details of frontier work was objectionable, he at the same time thought it necessary to bear in mind the observations made by Lord Elgin in paragraph 20 of his Minute of 6th November 1898, and to be on our guard against pushing too far the theory that the local authority should be "given a free hand."

* He says, in paragraph 88, evidently dealing with the point as one of curious speculation "I can conceive that an ambitious Lieutenant-General, if such a phenomenon were to occur, etc."

(Signed) D. FITZPATRICK.

The 17th January 1901.

HOME DEPARTMENT.

NOTIFICATIONS.

PUBLIC.

Calcutta, the 27th March 1901.

No. 2752.—Under the provisions of section 9 of the Statute 24 and 25 Victoria, Cap. 67, the Governor-General in Council is pleased to direct that His Excellency's Council shall assemble at Simla in the jurisdiction of the Lieutenant-Governor of the Punjab.

The 28th March 1901.

No. 2757.—The following drafts of certain Rules which it is proposed to make in exercise of the powers conferred by sections 5 and 7 of the Indian

Explosives Act (IV of 1884) are published, as required by section 18 of the said Act and Government of India, Home Department, Notification No. 1964, dated 2nd September 1887, for the information of persons likely to be affected thereby, and notice is hereby given that the drafts will be taken into consideration by the Governor General in Council after the 1st day of June 1901.

2. Any objection or suggestion which may be received from any person with respect to the drafts before that date, will be considered by the Governor General in Council.

NOTE.—*All changes proposed in the existing rules are indicated in italics.*

DRAFT RULES TO REGULATE THE TRANSPORT AND IMPORTATION OF EXPLOSIVES.

IN supersession of the Notification by the Government of India, Home Department, No. *1393* (Public), dated the *8th July 1897*, and in exercise of the powers conferred by sections 5 and 7 of the Indian Explosives Act (IV of 1884), the Governor General in Council is pleased to make the following rules to regulate the transport and importation of explosives.

These rules extend to the whole of British India, but the rules relating to the transport of explosives shall cease to apply to any port as defined in the Indian Ports Act (X of 1889) for which special rules made by the Local Government are for the time being in force, in so far as they are expressly superseded by, or are inconsistent with, such special rules.

Nothing in these Rules shall apply to the manufacture, possession, use, sale, transport, or importation of any explosive —

(*a*) by order of the Government, or

(*b*) by any person employed under the Government in the execution of the Indian Explosives Act (IV of 1884), or as a keeper of a magazine, artizan, soldier, sailor, policeman, or otherwise, or enrolled as a volunteer under the Indian Volunteers Act (XX of 1869), in the course of his employment or duty as such.

PRELIMINARY.

1. For the purposes of these rules explosives shall be classified as follows, namely :—

Class 1	Gunpowder,
Class 2	Nitrate-mixture,
Class 3	Nitro-compound,
Class 4	Chlorate-mixture,
Class 5	Fulminate,
Class 6	Ammunition,
Class 7	Firework,

and when an explosive falls within the description of more than one class it shall be deemed to belong exclusively to the latest of the classes within the description of which it falls.

CLASS 1.—*Gunpowder Class.*

The term "gunpowder" means exclusively gunpowder ordinarily so called.

CLASS 2.—*Nitrate-mixture Class.*

The term "nitrate-mixture" means any preparation, other than gunpowder ordinarily so called, formed by the mechanical mixture of a nitrate with any form of carbon or with any carbonaceous substance not possessed of explosive properties, whether sulphur be or be not added to such preparation, and whether such preparation be or be not mechanically mixed with any other non-explosive substance.

The nitrate-mixture class comprises such explosives as —

Chilworth special powder,
Fortis explosive,
Ripp-Lene,
Safety blasting powder,
Westfallite,

and any preparation coming within the above definition.

Class 3.—*Nitro-compound Class.*

The term "nitro-compound" means any chemical compound possessed of explosive properties, or capable of combining with metals to form an explosive compound, which is produced by the chemical action of nitric acid (whether mixed or not with sulphuric acid) or of a nitrate mixed with sulphuric acid upon any carbonaceous substance, whether such compound is mechanically mixed with other substances or not.

The nitro-compound class has two divisions.

Division 1 comprises such explosives as—

Amberite No. 1,
Ballistite,
Blasting Gelatine,
Carbonite,
Cordite,
Dynamite,
Gelatine Dynamite,
Gelignite,
Lithofracteur,
Nitro-glycerine,
Stonite,

and any chemical compound or mechanically mixed preparation which consists, either wholly or partly, of nitro-glycerine or some other liquid nitro-compound.

Division 2 comprises such explosives as—

Amberite No. 2,
Ammonite,
Bellite,
Coopal's powder,
Cotton gunpowder,
E. C. powder,
Gun-cotton ordinarily so-called,
Nitrated gun-cotton,
Picrates,
Picric powder,
Roburite,
Sawdust and gun-cotton powder,
Schultz's powder,
Tonite (or cotton powder),

and any nitro-compound as before defined which is not comprised in the first division.

Class 4.—*Chlorate-mixture Class.*

The term "chlorate-mixture" means any explosive containing a chlorate.

The chlorate-mixture class has two divisions.

Division 1 comprises such explosives as—

Horsley's blasting powder,
Brain's blasting powder,

and any chlorate preparation which consists partly of nitro-glycerine or of some other liquid nitro-compound.

Division 2 comprises such explosives as—

Horsley's original blasting powder,
Erhardt's powder,
Reveley's powder,
Hochstadter's blasting charges,
Reichen's blasting charges,
Teutonite,
Chlorated gun-cotton,

and any chlorate-mixture as before defined which is not comprised in the first division.

Class 5.—*Fulminate Class.*

The term "fulminate" means any chemical compound or mechanical mixture whether included in the foregoing classes or not, which, from its great susceptibility to detonation, is suitable for employment in percussion-caps or any other appliances for developing detonation or which, from its extreme sensibility to explosion and from its great instability (that is to say, readiness to undergo decomposition from very slight exciting causes), is especially dangerous.

The fulminate class has two divisions.

Division 1 comprises such compounds as the fulminates of silver and of mercury and preparations of these substances, such as are used in percussion-caps, and any preparation consisting of a mixture of a chlorate with phosphorus, or certain descriptions of phosphorus compounds, with or without the addition of carbonaceous matter, and any preparation consisting of a mixture of a chlorate with sulphur, or with a *sulphuret*, with or without carbonaceous matter.

Division 2 comprises such substances as the chloride and the iodide of nitrogen, fulminating gold and silver, diazobenzol, and the nitrate of diazobenzol.

Class 6.—*Ammunition Class.*

The term "ammunition" means an explosive of any of the foregoing classes when enclosed in any case or contrivance, or otherwise adapted or prepared so as to form a cartridge or charge for small-arms, cannon, or any other weapon, or for blasting, or to form any safety or other fuze for blasting or for shells, or to form any tube for firing explosives, or to form a percussion-cap, a detonator, a fog-signal, a shell, a torpedo, a war-rocket, or other contrivance other than a firework.

The term "percussion-cap" does not include a detonator.

The term "detonator" means a capsule or case which is of such strength and construction, and contains an explosive of the fulminate-explosive class in such quantity that the explosion of one capsule or case will communicate the explosion to other like capsules or cases.

The term "safety fuze" means a fuze for blasting which burns and does not explode, and which does not contain its own means of ignition, and which is of such strength and construction, and contains an explosive in such quantity, that the burning of such fuze will not communicate laterally with other like fuzes.

The expression "safety cartridges" means cartridges for small-arms of which the case can be extracted from the small-arm after firing, and which are so closed as to prevent any explosion in one cartridge being communicated to other cartridges. The term also includes rifle-calibre machine-gun cartridges if they are of the above description, whether they are for use with machine-guns having chambers identical with those of rifles or with machine-guns which have special chambers.

The maximum diameter at which a small-arm or machine-gun cartridge can be accepted as "safety" is one inch.

The ammunition class has three divisions.

Division 1 comprises exclusively—

Safety cartridges,
Safety fuzes for blasting,
Fuzes for shells, and tubes friction for guns, provided there be no more than five fuzes or 25 tubes in one package, and that the package be a hermetically sealed metal cylinder.
Railway fog-signals,
Percussion-caps.

Division 2 comprises any ammunition, as before defined, which does not contain its own means of ignition and is not included in division 1, such as—

Cartridges for small-arms, which are not safety cartridges,
Cartridges and charges for cannon, shells, mines, blasting, or other like purposes,
Shells and torpedoes containing any explosive,
Fuzes for blasting, which are not safety fuzes,
Fuzes for shells,
Tubes for firing explosives,
War-rockets,

which do not contain their own means of ignition.

Division 3 comprises any ammunition as before defined, which contains its own means of ignition and is not included in division 1, such as—

Detonators,
Cartridges for small-arms, which are not safety cartridges,
Fuzes for blasting, which are not safety fuzes,
Fuzes for shells,
Tubes for firing explosives,

which do contain their own means of ignition.

By ammunition containing its own means of ignition is meant ammunition having an arrangement, whether attached to it or forming part of it, which is adapted to explode or fire the same by friction or percussion.

CLASS 7.—*Firework Class.*

The firework class has two divisions.

Division 1 comprises firework compositions, that is to say, any chemical compound or mechanically mixed preparation of an explosive or inflammable nature, which is used for the purpose of making manufactured fireworks, and is not included in the former classes of explosives, and also any star and any coloured fire composition, subject to the proviso hereinafter set forth.

Division 2 comprises manufactured fireworks, that is to say, any explosive of any of the foregoing classes and any firework composition, when such explosive or composition is enclosed in any case or contrivance, or is otherwise manufactured so as to form a squib, cracker, toy cap or amorce, serpent, rocket (other than a war rocket), maroon, lance, wheel, Chinese fire, Roman candle, or other article specially adapted for the production of pyrotechnic effects or pyrotechnic signals or sound signals:

Provided that a substantially constructed and hermetically closed metal case containing not more than 1lb. of coloured fire composition of such a nature as not to be liable to spontaneous ignition shall be deemed to be a "manufactured firework."

TRANSPORT.

(*a*) *Packing.*

2. The following general rules shall be observed with respect to the packing of explosives for conveyance:—

I.—Each class of explosives shall be separately packed.

II.—An explosive not being an explosive of the 5th (fulminate) class, or of the 2nd and 3rd divisions of the 6th (ammunition) class, or of the 1st division of the 7th (firework) class, shall, if not exceeding 5lbs. in quantity, be contained in a substantial case, bag, canister, or other receptacle made and closed so as to prevent the explosive from escaping.

III.—In every other case the explosive shall be contained in a double package. The inner package shall be a substantial case, bag, canister, or other receptacle made and closed so as to prevent the explosive from escaping, and the outer package shall be a box, barrel, or case of wood or metal or other solid material, and shall be of such strength, construction, and character that it will not be broken or accidentally opened, or become defective or insecure whilst being conveyed, and will not allow the explosive to escape:

Provided as follows:—

(*a*) If the explosive is of the 1st (or gunpowder) class or of the 2nd (nitrate-mixture) class, or of the 2nd division of the 3rd (nitro-compound) class the quantity of the explosive in any one outer package shall not, in the case of explosives of the first two classes, exceed 100lbs., and in other cases 50lbs.

If the explosive is picric acid, the inner package must be of such a nature as to effectually prevent any picric acid from coming into contact with any basic metallic oxide.*

(*b*) If the explosive belongs to the 1st division of the 3rd (nitro-compound) class or to the 4th (chlorate-mixture) class, the inner package shall be without any metal in its construction, and the inner or outer package, or both, shall be thoroughly waterproof.† No one of the

* *Note.*—This rule is intended to prevent picric acid being packed in a case lined with certain metals, such as zinc or lead, which would result in danger arising from the formation of a picrate. Waterproof bags inside powder-barrels are suggested as a simple and safe method of packing picric acid for transport or storage.

† *Note.*—From the requisition that the package should be waterproof are excepted—

(1) All explosives falling in the 2nd division of the 4th (chlorate-mixture) class.

(2) Those explosives included in the 1st division of the 3rd (nitro-compound) class which do not yield up their nitro-glycerine in contact with water, such as blasting gelatine, gelatine dynamite, cordite and ballistite and gelignite: provided that any other substance than those named has been certified to be of this character by a Chief Inspector of Explosives.

inner packages shall contain more than 10lbs., and the aggregate quantity of the explosive in any one outer package shall not exceed 50lbs.

(*c*)—1. If the explosive belongs to the 5th (fulminate) class, and is of such character that it cannot be packed mixed with water, or that danger would arise from such mode of packing, it shall be packed in such manner as shall be specially directed by the Governor General in Council.

2. Any other explosive of the fulminate class shall be packed as follows: It shall be packed in bags or coverings of calico, canvas or other material permeable to water, and containing each not more than 25lbs. of fulminate, and so made and closed as to prevent any explosive from escaping. Such bags or coverings shall be packed in a case containing sufficient water to ensure the explosive being kept constantly wet, and such case (hereinafter called the inner case) shall be packed in an outer case containing sufficient water constantly to surround the inner case; and the inner case and the outer case shall each be of such strength, construction, and character that it will not be broken or accidentally opened or become defective or insecure whilst being conveyed, and will not allow any fulminate or water to escape; and the amount of the explosive in any one outer case shall not exceed 200lbs., except with the consent of, and under conditions approved by, an Inspector of Explosives.

3. Every package when actually used for the packing of one fulminate shall not be used for the packing of any other fulminate or for any other purpose.

4. On the outer case there shall be affixed in conspicuous characters by means of a brand or securely attached label or other mark the word "Explosive," with the name of the explosive followed by the words "Fulminate, Division 1" (or 2 as the case may be) and name and address of the owner or sender.

(*d*)—1. If an explosive belongs to the 1st division of the 6th (ammunition) class, it shall be contained in a box, barrel, or case of wood, metal, or other solid material, and of such strength, construction, and character that it will not be broken or accidentally opened, or become defective or insecure whilst being conveyed, and will not allow any explosive to escape.

2. If the explosive belongs to the 2nd division of the 6th (ammunition) class, the following rules shall apply, *viz.*:—

(i) A shell or torpedo containing any explosive material, whether such shell or torpedo be separate or form part of a rocket or other appliance, shall be packed in such manner as may be specially directed by the Governor General in Council with reference to such explosive.

(ii) Any explosive material when made up into a cartridge or charge for cannon, shells, mines, blasting, or other like purposes, shall be packed in the manner required for the same explosive material when not so made up:

Provided that where a double package is required, the enclosing case of such cartridge or charge, if it satisfies the conditions required for the inner package, may be held to be such inner package.

(iii) Any other explosive of the 2nd division shall be packed in a box, barrel, or case of wood, metal, or other solid material, and of such strength, construction and character that it will not be broken or accidentally opened, or become defective or insecure whilst being conveyed, and will not allow any explosive to escape: and any one such package shall not contain more than 100lbs. of ammunition.

(*e*) If the explosive belongs to the 3rd division of the 6th (ammunition) class, it shall be packed in a double package. The inner package shall not contain more than 2lbs. of such explosive and no more than 50lbs. shall be contained in the outer package.

"Provided that, in the case of detonators, the following further rules shall also be observed, namely :—

(*i*) The detonators, and the spaces between the detonators and between the sides of the inner package and the detonators, shall all be filled, as far as practicable, with fine sawdust or other similar material. A layer of cotton wool or other soft elastic material shall be placed between both ends of all the detonators and the interior of the inner package in which the detonators are placed in such manner and so secured that both ends of the detonators will rest upon the said cotton wool or other material. Every inner package, if of metal, shall be lined throughout with paper or other soft material.

(*ii*) Where the number of detonators packed for conveyance exceeds in all one thousand (1,000), or such greater number as may from time to time be assigned with the consent of, and under conditions approved by, an Inspector of Explosives, all the inner packages as aforesaid shall be placed inside a substantial case of wood or metal, made and closed, so as to prevent any of the inner packages escaping therefrom, and the case shall be placed inside such outer packages as is required by the above general rule relating to the packing for conveyance of explosives of the 3rd division of the 6th (ammunition) class, in such manner and so secured as to leave a clear space of not less than three inches between every part of the interior of the said outer package, notwithstanding that such clear space may, if preferred, be filled with sawdust, straw or other similar material, or may contain a light framework or battens of wood to keep the case aforesaid in position in the outer package."

(*f*) If the explosive belongs to the 1st division of the 7th (firework) class it shall be contained in a double package. The inner package shall be a substantial canister, case, or other receptacle hermetically closed, and containing no more than 1lb. of explosive, and no more than 20lbs. shall be contained in the outer package; and,

(*g*) If the explosive belongs to the 2nd division of the 7th (firework) class, it shall be contained in a box, barrel, or cases of wood, metal, or other solid material, and of such strength, construction, and character that it will not be broken or accidentally opened, or become defective or insecure whilst being conveyed, and will not allow any explosive to escape, and the quantity of explosive in any one package shall not exceed 100lbs.

IV.—Whatever be the amount of the explosive, and to whatever class or division of a class it belongs, the following conditions shall be observed :—

(*a*) the interior of every package, whether single or double, shall be kept free from grit and otherwise clean ;

(*b*) every package, whether single or double, when actually used for the packing of the explosive, shall not be used for the packing of any other explosive of the same or any other class or for any other purpose, except with the consent of, and under conditions approved by, an Inspector of Explosives ;

(*c*) there shall *not* be any iron or steel in the construction of any such single package or inner or outer package unless the same is effectually covered with tin, zinc, or other suitable material ;

(*d*) on the outermost package there shall be affixed, in conspicuous characters, by means of a brand or securely attached label or

mark, the word "Explosive" followed by the name of the explosive or other description of the contents and the name and address of the owners or senders; and

(*e*) the amount of the explosive in any single package or, if there is a double package, in any one outer package, shall not exceed the amount specified in the foregoing rules, except with the consent of, and under conditions to be approved by, an Inspector of Explosives or other officer appointed by the Local Government in this behalf.

3. Whoever commits a breach of any of the foregoing rules relating to the packing of explosives for conveyance shall be punishable with fine which may extend to ₹1,000.*

(*b*) *Mode of conveyance.*

4. The following general rules shall be observed with respect to the conveyance of explosives:—

I.—No explosive shall be conveyed from place to place unless packed in the manner provided for in the foregoing rules.

II.—There shall not be conveyed in any carriage or vessel which is being used for the conveyance of an explosive, any explosive of a different class and division, of whatsoever nature, which contains its own means of ignition, unless it is sufficiently separated therefrom to prevent any fire or explosion which may take place in one such explosive being communicated to another.

III.—Except in the case of small consignments carried by railway, which may be unloaded at any time, explosives shall be loaded or unloaded only between sunrise and sunset. For the purposes of this rule no consignment of more than half a wagon-load booked to one station shall be deemed to be a small consignment.

IV.—Whilst the explosive is being loaded on or unloaded out of any carriage or vessel, no fire or artificial light, nor any article which is liable to cause or communicate fire or explosion [such as charcoal, lucifer-matches, articles for striking a light, petroleum to which the Petroleum Act (*VIII of 1899*) or any other Act for the time being in force regarding the importation, possession, and transport of petroleum, applies, or any spirit or oil or substance that gives forth an inflammable vapour at a temperature below 100° Fahrenheit] shall be, or shall be allowed to be, brought, had or used dangerously near to such carriage, ship, or boat, and no smoking shall be allowed in, on or dangerously near to, the same:

Provided that when the use of a light for the purposes of such loading or unloading is unavoidable, a lamp of such construction, position, or character as not to cause any danger from fire or explosion may be used; and no person, while handling any explosive (except an explosive of division 1, class 6, if packed in accordance with the packing rules), shall wear boots or shoes with iron or steel nails, heels or tips.

V.—In the loading or unloading of any explosive, the casks and packages containing the same shall be passed from hand to hand and not rolled upon the ground; they shall not be thrown or dropped down, but shall be carefully deposited and stowed.

VI.—The explosive shall not be conveyed except in the interior of a carriage so enclosed on all sides with wood or metal, or in the hold of a ship or boat having a close deck so closed, as effectually to protect the explosive against accident by fire from without. If the explosive cannot be so secured, it shall be completely covered with painted cloth, tarpaulin, or other suitable material so as to effectually protect it against communication of fire.

VII.—There shall not be any iron or steel in the interior of the portion of the carriage or vessel with which the case containing the explosive is *or may come* in contact, unless the same is effectually covered with leather, wood, cloth, or other suitable material.

* Rules regarding search for, and detention of, explosives contravening regulations have been issued by the Local Governments.

VIII.—In the stowing of the explosive, due precautions shall be taken by means of a partition or otherwise and by careful stowing to secure such explosive from being brought into contact with, or endangered by, any other article or substance conveyed in such carriage or vessel which is liable to cause fire or explosion; and if the explosive is dangerously affected by water, due precautions shall be taken to exclude water from coming into contact with such explosive.

IX.—The amount of the explosives conveyed in any one carriage or vessel at any one time shall not exceed 2,000lbs. unless the carriage be so enclosed on all sides with wood or metal, or the vessel have a close deck so closed, as effectually to protect the explosive against accident by fire from without, in which case the amount of the explosives conveyed shall not exceed the following:—

	Tons.
In any one carriage on a railway	10
In any one other carriage	2
In any one vessel	20

NOTE.—This rule shall, in the case of dynamite conveyed by railway, be read subject to paragraph XII of Rule 6.

X.—Nothing in the foregoing rules (except Rule I) shall apply to any explosive of the 1st division of the 6th (ammunition) class:

Provided that all due precautions are taken for the prevention of accidents.

5. The following rules shall be observed with respect to the conveyance of explosives otherwise than by railway:—

I.—No explosive shall be conveyed in a carriage or boat whilst carrying or plying for public passengers, unless the quantity is less than 5lbs. and notice has been given beforehand to the person in charge of such carriage or boat: *and all due precautions are taken for the prevention of accidents by fire or explosion.*

Provided that there shall not be conveyed in any such carriage or boat any explosive of the 5th (fulminate) class or any explosive of the 3rd division of the 6th (ammunition) class, or of the 1st division of the *7th (firework)* class, except detonators *packed according to the proviso to Rule 2 (III) (e), to the number of 200,*

Provided that the amount of explosive of the 5th (fulminate) class in the detonators shall in no case exceed in the aggregate 3 oz. (a certificate to this effect being given by the Agent of the Company by whom the detonators are tendered for transport):

Provided also that no *other explosive* is carried in the same compartment.

II.—With respect to the conveyance by carriage or vessel of explosives of the 5th (fulminate) class, or of the 3rd division of the 6th (ammunition) class, or of the 1st division of the 7th (firework) class, or of larger quantities than 5lbs. of any other explosive, the following regulations shall be observed:—

(1) The person in charge of the carriage or vessel shall not drive or conduct the same in a dangerous or reckless manner, and shall take all due precautions to avoid fire and explosion, and no person shall do any act or thing in relation to the explosive which tends to cause fire or explosion, and is not reasonably necessary for the conveyance of the explosive or for work immediately connected with such conveyance; and a person who is intoxicated shall not have charge of any carriage or vessel conveying explosive, and shall not be permitted to be in, or on, or attending the same.

(2) A person shall not forward to any warehouseman or carrier a consignment of explosive, unless he has given notice to such warehouseman or carrier beforehand, stating the name and quantity of the explosive proposed to be conveyed, and the name and address of the proposed consignee, and has had an intimation that the warehouseman or carrier is prepared to receive the consignment, and a warehouseman or carrier shall not make such an intimation, nor receive such consignment, unless he is prepared to receive it, and forthwith to despatch the same, or to deposit it in a magazine or at a place at which a person is licensed to possess the same.

(3) The carriage or vessel conveying the explosive shall be in charge of, and constantly attended by, some competent person, or by a sufficient number of competent persons, and such persons shall not, if the amount of the explosive conveyed exceed 100lbs., stop or delay for a longer time than may be reasonably necessary, or stop unnecessarily at any place where such stopping would be attended with special public danger.

6. The following rules shall be observed with respect to the conveyance of explosives by public railway :—

I.—No person shall send for carriage upon any railway any consignment of an explosive, unless he has given to the officer in charge of the railway station previous notice in writing which, at the option of the Railway Administration, may extend to 48 hours, of his intention to send such consignment, and stating the true name, description, quantity, and mode of packing of the explosive proposed to be conveyed, and his own name and address, and also the name and address of the proposed consignee, and unless he has had an intimation in writing from an authorised officer of the railway that such consignment will be received.

II.—No explosive which a Railway Administration shall, by any notice or regulation for the time being in force, notify that they will not receive, shall be brought, sent, or forwarded to, or upon any railway of the said Railway Administration.

III.—Consignments of explosives shall be sent to the forwarding station and shall be received by the railway servants only at such times, between sunrise and sunset, as the Railway Administration may appoint ; and every package containing any explosive proposed to be conveyed on any railway shall immediately on arrival at the station be unloaded and placed in a safe place under the special direction of the officer in charge of the station.

All gunpowder under despatch or receipt by a Government arsenal, depôt, or factory, shall be loaded or unloaded in the railway vans by Government servants employed in such arsenal, depôt, or factory. In each van used by the railway for the transport of gunpowder the packages of gunpowder shall be secured in such a way as to prevent concussion when the train is in motion.

IV.—An explosive shall be removed by the consignee from the receiving station during the twelve hours of daylight after arrival ; if this condition is not strictly complied with, the Railway Administration may return the consignment to the consignor at his risk and expense. And such packages shall in the meanwhile be kept as far away from the station buildings as possible, in the wagon they were conveyed in, or, if unloaded, shall be completely covered with tarpaulins or other suitable material, and if necessary, shall be protected by a police guard.

V.—The Railway Administration may refuse to receive any packages which they suspect to contain any explosive packed or sent in contravention of these regulations. And in case any package, which the Railway Administration suspect, shall be upon any railway, the Railway Administration may open, or require to be opened, such package, to ascertain the fact, at the risk and expense of the consignor, and may return the explosive contained in the package to the consignor at his risk and expense, keeping the packages, pending such return, in the manner prescribed in the preceding rule.

VI.—Subject to the exception provided for in clause (*e*), no explosive shall be conveyed by passenger-train except of the kinds and in the manner hereinafter specified in this rule :—

(*a*) Safety cartridges and percussion-caps and safety-fuze (for blasting), also fog-signals for railway use which may be conveyed in ordinary wagons or carriages.

(*b*) *Explosives of the 3rd (nitro-compound class)* which may be carried in the form of cartridges up to the limit of 5lbs. :

Provided that no detonators are carried in the same compartment.

(*c*) Detonators *packed according to the proviso to Rule 2* (III) (*e*) may be carried to the number of 200 :

Provided that in no case the amount of fulminate of mercury in the package or packages containing the detonators exceeds in the aggregate 8 oz. (a certificate to this effect being given by the Company, firm, or person tendering the detonators for transport or by its or his agent) :

Provided also that no *other explosive* is carried in the same compartment.

(*d*) Sporting gunpowder or non-safety cartridges packed in double cases as before provided, so long as the gunpowder is contained in one-pound tin canisters packed in a stout wooden case with an outer covering of tin or zinc completely spark-proof, or in metal-lined cases of a pattern approved by the Railway Administration. But no outer case shall contain more than 25lbs. of gunpowder, and the total consignment of gunpowder or non-safety cartridges by one train shall not exceed 80lbs.

(*e*) Explosives may be carried by mixed trains on any line on which goods trains are not running, subject to the conditions that they are loaded in properly constructed powder vans; that not more than one *powder van* containing explosives is forwarded at any one time by a mixed train; that there are not less than three vehicles between the powder van and either the engine or the passenger coaches; that the powder van is close coupled to the adjoining vehicles; and that directly a powder van containing explosives arrives at a section on which goods trains are running, it is detached from the mixed train.

VII.—Not more than five carriages containing explosives shall be loaded or unloaded at any railway station, or be conveyed by any one train at any one time; and the quantity of explosive to be contained in any one carriage shall not exceed two-thirds of the normal load, unless the carriages shall be specially built and approved of by the Government of India for the conveyance of explosives. But nothing in this clause shall be held to apply to separate consignments of *safety cartridges for small-arms.*

VIII.—There shall not be conveyed in the same carriage with any explosive any lucifer or other matches, *fuzees*, pipelights, acids, naptha, paraffine, petroleum to which the Petroleum Act (*VIII of 1899*), or any other Act for the time being in force regarding the importation, possession, and transport of petroleum, applies, or any other volatile spirit or substance liable to give off an inflammable vapour or liable to spontaneous ignition, or to cause or communicate fire or explosion.

IX.—The consignor shall attach to the consignment note a certificate or (provided the original is produced for verification) copy of a certificate, signed by an officer authorised by the Local Government in this behalf that the explosive, if it is an explosive of class 3 or 4, is of the standard purity; and further in the case of dynamite, and all nitro-glycerine compounds, that there are no signs of exuded nitro-glycerine or of liquefaction. The consignor shall also certify that the explosive has been packed in accordance with the packing rules in force in England or in British India.

X.—In the case of explosives under classes 3 and 4 the outer packages shall be marked with the date of the manufacture of the explosives. The abovementioned certificate shall contain sufficient information to admit of all packages being easily recognised.

XI.—The certificate referred to in Rule IX shall be valid for six months after date, if the examination has been made between the 15th October and 31st March; but any Railway Administration which accepts dynamite *and other nitro-glycerine compounds* for transport may demand a fresh certificate for *these explosives if* presented for conveyance between 1st April and 15th October (both inclusive).

XII.—Packages containing dynamite *and other blasting explosives of the 3rd* (*nitro-compound*) *class, or explosives of the 4th* (*chlorate-mixture*), *5th* (*fulminate*) *classes or of the 1st division of the 7th* (*firework*) *class* shall be stowed in one layer only and secured so as to prevent movement during transit, and the gross load in any one wagon shall not exceed 3 tons:

Provided that, if the packages of *explosive* are in rectangular form and are properly secured so as to prevent movement during transit, they may be stowed in any number of layers not exceeding five, and the gross load in any one wagon shall not exceed 5 tons.

XIII.—No explosive *of* the 5th (fulminate) class or *of the 3rd division of the 6th* (*ammunition*) *class, or of the 7th* (*firework*) *class* shall be carried in the same train with *any explosive not of the class and division to which it*

belongs, unless it be sufficiently separated therefrom to prevent any fire or explosion which may take place in one such explosive being communicated to another.

XIV.—Wagons used for the carriage of explosive shall be examined to see that they are spark-proof, and have been cleaned out before they are loaded. Hair, cloth, hides, or other suitable materials shall be spread on the floor of the wagon and between each layer of packages, except when the packages are covered with gunny or felt, or contain *safety cartridges for small-arms* packed in tin-lined service-pattern boxes.

XV.—Wagons containing explosives shall be loaded and unloaded on sidings distant as far as possible from the station buildings.

XVI.—Packages containing explosives other than those referred to in Rule 6 (XII) shall not be stored in more than three layers one above the other. But if the packages are in rectangular form and of uniform size (provided they are double packages, and are so secured as to prevent movement during transit) they may be packed in five layers one above the other. But in the case of safety cartridges for small arms packed in tin-lined service-pattern boxes, there is no restriction. Subject to the provisions of Rule 4 (III), the loading and unloading of explosives when once begun shall be diligently proceeded with until the same is completed.

XVII.—When the train is being marshalled, wagons loaded with explosives may be shunted by a locomotive, if they are separated from the engine by not less than three wagons containing no explosive nor easily inflammable substance. This precaution is not necessary with wagons specially constructed for the carriage of explosives. The speed of these movements shall be restricted to 5 miles an hour; they shall be superintended by a duly authorised officer, who shall be held responsible for the observance of these orders. Flying shunts are strictly prohibited.

XVIII.—Wagons containing explosives shall be placed at the end of the train away from the locomotive, and shall be close coupled to one another, as well as to the adjoining wagons, and preceded and followed by three wagons not loaded with explosives or other traffic of an inflammable nature.

XIX.—If the wagons employed in the transport of explosives are provided with brakes other than iron brakes, the brakes thereon shall on no account be worked while the wagons are running with a train, nor shall brakes, other than iron brakes, on vehicles immediately adjoining such wagons, be worked while such wagons are so running.

XX.—Wagons shall in every case be locked when loaded with explosives.

XXI.—All operations connected with the transhipment of explosives at junction stations shall take place during daylight.

7. Whoever commits a breach of any of the foregoing rules relating to the mode of conveyance of explosives shall be punishable with a fine which may extend to R100.

IMPORTATION.

8. An explosive shall not be imported by sea into British India, except under, and in accordance with, the conditions of a license to import the explosive granted under these rules:

Provided that any explosive other than an explosive specified in Rule 11 may, previous to the grant of an importation license, if certified to be of British manufacture or, if not of British manufacture, if imported from the United Kingdom and covered by the certificate granted by one of Her Majesty's Inspectors of Explosives in England, be landed in accordance with such regulations as the Local Government may prescribe in this behalf, and be stored in a place set apart by the Local Government for this purpose. The Governor General in Council may extend this privilege to any such explosive not of British manufacture regarding which he is satisfied that it has been manufactured under adequate official supervision.

Before any explosive is landed under the proviso to this rule, the consignee shall give to the Chief Customs Officer of the Port such undertaking, with or without security, as the said officer thinks sufficient, to obey, in the event of

the explosive failing to satisfy the prescribed tests, such directions as to its disposal as the Local Government may see fit to prescribe.

If samples are taken by an officer deputed by the Chief Customs Officer on board the ship on its arrival the procedure shall be that prescribed in Rule 15.

9. Whoever imports an explosive in contravention of Rule 8 shall be punishable with fine which may extend to three thousand rupees.

10. An explosive shall not be imported by sea except at one of the Ports of Calcutta, Madras, Bombay, Rangoon, Calicut, Karachi, Aden and (in the case of crackers only) Negapatam. But a license to import an explosive by sea from Rangoon into the port of Akyab, Moulmein. Sandoway, Kyouk Phyoo, Tavoy or Mergui, as the case may be, may be granted by the Magistrate of the district in which such port is situated. The fee payable in respect of each such license shall be one rupee, and the license shall be in Form A in the Schedule hereto annexed.

11. If the explosive is gunpowder or an explosive of the 1st division of the 6th (ammunition) class or an explosive of the 7th (firework) class, the license to import the same may be granted at the Port of Calcutta, Madras or Bombay, by the Commissioner of Police, and at the Port of Rangoon, Calicut, Karachi, Aden or Negapatam, by the District Magistrate.

12. The fee payable in respect of each such license shall be ₹10; but, if any explosive imported under a license into a British port is exported thence to another British port named in Rule 10, the necessary license for such re-import may be granted on payment of a fee of one rupee instead of ₹10.

13. Licenses for the importation by sea of any explosives other than those specified in Rule 11 shall be granted by the Local Government or by some officer specially authorised by the Local Government in this behalf.

14. No license shall be granted for the importation of any explosive of the description referred to in Rule 13, *unless it is an explosive authorized for manufacture in or importation into the United Kingdom for general sale and*, if it *is* an explosive for which a test or examination has been prescribed by or under the orders of the Government of India, unless samples of the explosive taken as hereinafter provided are certified by the Chemical Examiner or some other officer appointed by the Local Government in this behalf to have passed the test or examination from time to time prescribed.

15. On the arrival in any port at which the importation of explosives is lawful, of a ship having on board an explosive other than an explosive of the description referred to in Rule 11, such officer as the Chief Customs Officer authorises in this behalf shall, as soon as may be, proceed on board and shall, if testing or examination is requisite under the last preceding rule, obtain samples of the explosive.

All explosives of which samples are taken for examination shall be forthwith deposited in a duly licensed place or places of storage, and shall not be distributed for use until the importer has received from the licensing authority notice that it may be so distributed.

The master of the ship shall give to the said officer, without charge, such samples as he may require. The said officer shall affix to each such sample the name of the ship and of the consignee and such other distinguishing marks as he may think necessary, and shall forward the same to the Chemical Examiner or officer, as aforesaid, for report.

The Chemical Examiner or officer as aforesaid, after testing the said samples, shall without delay forward to the licensing authority, through the Chief Customs Officer a report under his signature certifying whether the explosive has satisfied the prescribed test.

15-A. Explosives, other than those referred to in Rule 11, which have already undergone the test prescribed by Rules 14 and 15 at the ports of Calcutta, Madras, Bombay, Rangoon, Calicut, Karachi, or Aden, may be re-imported by sea into any other of those ports under a license granted under Rule 13, without re-testing, but subject, in the case of such explosives as are mentioned in Rule 6, Clause IX, to the production of the certificate prescribed in that clause.

Such certificate shall be valid for six months after date, if the examination has been made between the 15th October and 31st March; but in the case of

dynamite, a fresh certificate may be demanded if the consignment is imported between the 1st April and 15th October (both inclusive).

16. The period for which a license to import an explosive, granted under Rule 13, shall continue in force shall not exceed such period as may seem necessary to the authority granting the license.

17. The fee payable on a license granted under Rule 13 shall be R10, but if any explosive imported under a license into a British port is exported thence to another British port named in Rule 10, the necessary license for such re-import may be granted on payment of a fee of one rupee instead of R10.

18. Every license granted under Rules 11 and 13 shall be in Form A in the Schedule hereto annexed, and shall be subject to the conditions therein prescribed, and also to such additional conditions with respect to the time and place of unloading, landing, delivery and conveyance of the explosive, and such other conditions as may in each case be thought by the licensing officer to be necessary for the public safety or in the interests of the State.

19. Whoever commits a breach of any condition subject to which a license under Rules 11 and 13 is granted, shall be punishable with fine which may extend to three thousand rupees.

GENERAL.

20. Every license granted under these rules shall be liable to be forfeited on breach of any of the conditions subject to which it is granted.

21. If a person licensed to import an explosive dies or becomes bankrupt or becomes mentally incapable or otherwise disabled, the person carrying on the business of such licensee shall not be liable to any penalty or forfeiture under the Indian Explosives Act (IV of 1884) or the rules thereunder for acting under the license during such reasonable time as may be necessary to allow him to make an application to the authority granting the license for a new license in his own name during the currency of the unexpired portion of the original license. Such new license shall be granted on payment of one rupee.

22. The fees leviable under these rules shall be taken in the shape of impressed stamps. Ordinarily the applications for licenses or renewals of licenses shall, if not otherwise provided, be written on impressed stamps of value equal to the amount of fee leviable in respect of such licenses or renewals, the licenses themselves being issued on plain paper. But when the licenses themselves are written on printed or impressed stamps, the application may be on plain paper. When an application for license is written on an impressed stamp, and the license is refused, the value of the stamp will, on application, be refunded to the applicant.

23. When a license granted in accordance with these rules is lost, or accidentally destroyed, a duplicate may be granted to the licensee on payment of a fee of 8 annas.

24. Any person holding a license, or acting under a license granted in accordance with these rules, shall be bound to produce the same when called upon to do so by any Magistrate, or by any Police officer in charge of a Police station, or by any Police officer of higher rank.

25. All Magistrates or other authorities acting under these rules shall perform their duties subject to the control of their executive superiors and of the Local Government.

26. Any authority empowered to grant a license under the foregoing rules may, if he thinks fit, direct by any order written on the license that it shall have the effect of a like license under the Indian Arms Act (XI of 1878).

27. Any persons lawfully entitled under the Indian Arms Act, 1878 (X of 1878), or the rules thereunder, to possess any explosive coming under the head of ammunition, as defined in that Act, may possess or import without license under these rules any such explosive in such quantities as may be prescribed by that Act or the rules thereunder, or, when no quantities are prescribed, in reasonable quantities for his own private use; but, when an explosive is so imported, the Collector of Customs or any other officers empowered by the Local Government in this behalf by name or by virtue of his office may at any time detain such explosive until he receives the orders of the Local Government thereon.

FORM A.

(See Rules 11, 13 and 18.)

FEE TEN RUPEES IN STAMPS.

License to import Explosives into the Port of _____

Name, etc., and address of license-holder.	Number of packages.	Explosive.			Purpose for which required.	Destination.	Period for which the license is valid.

Conditions.

1. This license is given subject to the provisions of the Indian Explosives Act (IV of 1884) and the rules thereunder. Certain general rules are quoted separately below.

2. This license shall become void after expiry of the period named thereon.

3. This license is valid for importation only : if the articles named herein are to be transported to any place outside the Presidency Town, they must be protected by a transport license, to be issued in accordance with the rules under the Indian Arms Act (XI of 1878).

4. On the outside of each package there shall be affixed in conspicuous characters by means of a brand or securely attached label or mark the word "Explosive," followed by the name of the explosives or other description of the contents and the name and address of the owners or senders.

GENERAL RULES.

* * *

20. Every license granted under these rules shall be liable to be forfeited on breach of any of the conditions subject to which it is granted.

21. If a person licensed to import an explosive dies or becomes bankrupt or becomes mentally incapable or otherwise disabled, the person carrying on the business of such licensee shall not be liable to any penalty or forfeiture under the Act or the rules made thereunder for acting under the license during such reasonable time as may be necessary to allow him to make an application to the authority granting the license for a new license in his own name during the currency of the unexpired portion of the original license. Such new license shall be granted on the payment of one rupee.

22. The fees leviable under these rules shall be taken in the shape of impressed stamps. Ordinarily the applications for license or renewals of licenses shall, if not otherwise provided, be written on impressed stamps of value equal to the amount of fee leviable in respect of such licenses or renewals, the licenses themselves being issued on plain paper. But when the licenses themselves are written or printed on impressed stamps, the application may be on plain paper. When an application for license is written on an impressed stamp, and the license is refused, the value of the stamp will, on application, be refunded to the applicant.

23. When a license granted in accordance with these rules is lost, or accidentally destroyed, a duplicate may be granted to the licensee on payment of a fee of 8 annas.

24. Any person holding a license, or acting under a license granted in accordance with these rules, shall be bound to produce the same when called upon to do so by any Magistrate, or by any Police officer in charge of a Police station, or by any Police officer of higher rank.

Draft Rule for Testing Explosives.

WITH reference to Rule 14 of the Rules to regulate the transport and importation of explosives, published with Home Department Notification No. , dated the 1901, the Governor General in Council is pleased to make the following Rule on the subject of the tests which explosives should be required to pass before their importation is permitted :

RULE.

Class 1.—Gunpowder class. Gunpowder is not required to pass a test.

Class 2.—Nitrate-mixture class. Nitrate-mixture explosives are not ordinarily required to pass a test. The Local Government, however, or the authorized officer granting the import license under Rule 13 of the Rules to regulate the transport and importation of explosives published with Home Department Notification No. 1393, dated the 8th July 1897, may in any particular case or class of cases require that a sample of the explosive which is to be imported be sent first to the Chemical Examiner for an analysis of its constituent parts.

Class 3.—Nitro-compound class. It is for explosives of this class that testing is chiefly required, in respect to the purity of their composition and their liability to liquefaction or exudation. The tests prescribed for nitro-compound explosives are contained in Schedule A attached to this rule.

Class 4.—Chlorate-mixture class. See Schedule A for remarks regarding the testing of this class (*).

Class 5.—Fulminate class. No test has been laid down for explosives of the Fulminate class(*).

Class 6.—Ammunition class. No test is required for explosives of the 1st Division of this class. If the substances of which explosives of the 2nd and 3rd Divisions are composed have to be tested under the preceding rules, they will be equally liable to be tested when enclosed in any case or contrivance and thus falling under the Ammunition class.

Class 7.—Firework class. Explosives of this class are not required to pass a test.

SCHEDULE A.

Heat Test as applied to Explosives of the Nitro-compound Class.

GENERAL INSTRUCTIONS.

Apparatus required.

1. A water bath, consisting of a spherical glass or copper vessel [(*a*) Fig. 1] of about 8 inches diameter, and with an aperture of about 5 inches; the bath is filled with water to within a quarter of an inch of the edge. It has a loose cover of sheet copper about 6 inches in diameter (*b*), and rests on a tripod stand about 14 inches high (*c*), which is covered with coarse iron wire gauze (*e*), and is surrounded with a screen of thin sheet tin or copper (*d*). Within the latter is placed an Argand burner (*f*), with glass chimney. The cover (*b*) has four holes arranged as seen in Fig. II, No. 4 to receive the regulator, No. 3 the thermometer, Nos. 1 and 2 the test-tubes containing the gun-cotton or other materials to be tested. Around holes 1 and 2 on the under side of the cover are soldered three pieces of brass wire with points slightly converging

(*) Licenses are not at present given for the importation into British India of any explosives of these classes.

Fig. III); these act as springs and allow the test-tubes to be easily placed in position and removed.

Fig. I.

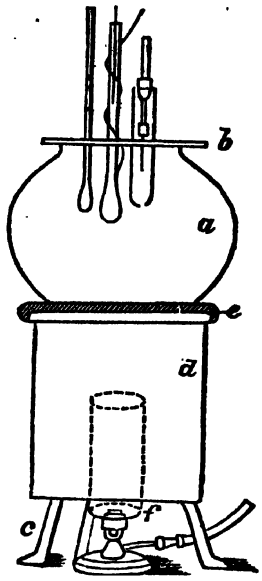

Fig. II.

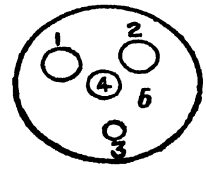

Fig. IV.

Fig. III.

* 2. Scheibler's or Page's temperature regulator.

* 3. Two cells of Le Clanché's battery No. 1 } if Scheibler's regulator is

* 4. A few yards of insulated copper wire } used.

5. Test-tubes from $5\frac{1}{4}$ to $5\frac{1}{3}$ inches long, and of such diameter that they will hold from 20 to 22 cubic centimeters of water when filled to a height of 5 inches.

6. India-rubber stoppers, fitting the test-tubes and carrying an arrangement for holding the test-paper, *viz.*, a narrow glass tube passing through the centre of the stopper, drawn out so as to form a hook, or terminating in a platinum wire hook (Fig. IV).

7. A thermometer, with range not less than from 30° to 212° Fahrenheit.

8. A minute clock.

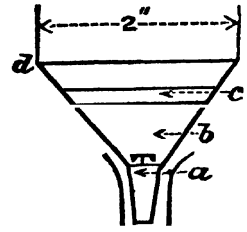
Materials required.

(*a*) *Test-paper.*—The test-paper is prepared as follows :—45 grains of white maize starch (cornflour), previously washed with cold water, are added to $8\frac{1}{2}$ ounces of distilled water, the mixture is stirred, heated to boiling, and kept gently boiling for 10 minutes ; 15 grains of pure potassium iodide (*i.e.*, which has been recrystallized from alcohol) are dissolved in $8\frac{1}{2}$ ounces of distilled water. The two solutions are thoroughly mixed and allowed to get cold. Strips, or sheets, of white English filter paper previously washed with water and re-dried are dipped into the solution thus prepared, and allowed to remain in it for not less than 10 seconds; they are then allowed to drain and dry in a place free from laboratory fumes and dust. The upper and lower margins of the strips, or sheets, are cut off, and the paper is preserved in well-stoppered or cork bottles, and in the dark.† The dimensions of the pieces of test-paper used are about $\frac{4}{10}$ inch by $\frac{8}{10}$ inch (10 mm. by 20 mm.).

* This is not absolutely required, as the temperature of the bath can be kept constant by proper attention to the heating flame.

† When a paper is freshly prepared, and as long as it remains in good condition, a drop of dilute acetic acid put on the paper with a glass rod, produces no coloration. In process of time, however, the stronger the light to which the paper is exposed, the sooner a drop of the acid produces a brown or bluish coloration (a single hour of direct sunlight produces a marked effect), and whenever this is the case, the paper should be rejected. On this account it is advisable not to prepare too much of the test-paper at one time, but to prepare it fresh every month or so.

(*b*) *Standard tint paper.*—A solution of caramel in water is made of such concentration that when diluted one hundred times (10 cc. made up to 1 litre) the tint of this diluted solution equals the tint produced by the Nessler test in 100 cc. water containing 0·000075 grm. of ammonia or 0·00023505 grm. of chloride of ammonium. With this caramel solution lines are drawn on strips of white filter paper* by means of a clean quill pen. When the marks thus produced are dry the paper is cut into pieces of the same size as the test-paper previously described, in such a way that each piece has a brown line across it near the middle of its length, and only such strips are preserved in which the brown line has a breadth varying from $\frac{1}{2}$ mm. to 1 mm. ($\frac{1}{50}$ of an inch to $\frac{1}{25}$ of an inch).



I.—Testing Dynamite, Blasting Gelatine, and other Explosives of the First Division of the Nitro-compound Class.

A.—Dynamite, etc., etc.

Nitro-glycerine preparations, from which the nitro-glycerine can be extracted in the manner described below, *must* satisfy the following test, otherwise they will not be considered as manufactured with "thoroughly purified nitro-glycerine" within the terms of the licenso.†

Apparatus required.

A funnel 2 inches across (*d*), a cylindrical measure divided into grains (*e*). (*See* sketch.)

Mode of operation.

About 300 to 400 grains of dynamite (*b*) finely divided are placed into the funnel, which has previously been loosely plugged by some freshly-ignited asbestos (*a*).

The surface is smoothed by means of a flat-headed glass rod or stopper, and some clean washed and dried Kieselguhr (*c*) is spread over it to the depth of about $\frac{1}{8}$ inch.

Water is next carefully dropped from a wash bottle upon this Kieselghur, and when the first portion has been soaked up, more is added; this is repeated until sufficient nitro-glycerine has been collected in the graduated measure (*e*) below.

If any water should have passed through with the nitro-glycerine, it should be removed with a piece of blotting paper, and the nitro-glycerine, if necessary, filtered through a dry paper filter.

* This paper must be carefully washed with distilled water, in the first instance, to remove any traces of bleaching matter, and dried.

† This test, though at present looked upon as the most important, as far as testing the purity of the nitro-glycerine is concerned, is in England only one of several which any given sample of nitro-glycerine preparation has to satisfy in order to establish its compliance with the definition in the license.

Application of the Test.

The thermometer is fixed so as to be inserted through the lid of the water bath described under I, page 2, into the water (which is to be steadily maintained at a temperature of 160° Fahr.) to a depth of 2¾ inches. Fifty grains of nitro-glycerine, to be tested, are weighed into a test-tube in such a way as not to soil the sides of the tube. A test-paper is fixed on the hook of the glass rod so that when inserted into the tube it will be in a vertical position. A sufficient amount of a mixture of half distilled water and half glycerine to moisten the upper half of the paper is now applied to the upper edge of the test-paper, by means of a camel's-hair pencil, the cork carrying the rod and paper is fixed into the test-tube and the position of the paper adjusted so that its lower edge is about half-way down the tube; the latter is then inserted through one of the perforations of the cover to such a depth that the lower margin of the moistened part of the paper is about five-eighths of an inch above the surface of the cover. The test is complete when the faint brown line which after a time makes its appearance at the line of boundary between the dry and moist part of the paper equals in tint the brown line of the standard tint paper.

The nitro-glycerine under examination will not be considered as "thoroughly purified" within the terms of the license unless the time necessary to produce the standard tint as above described is at least 15 minutes.

B.—BLASTING GELATINE, GELATINE DYNAMITE, AND ANALOGOUS PREPARATIONS.

Fifty (50) grains of blasting gelatine are to be intimately incorporated with one hundred (100) grains of French chalk.* The mixture is to be gradually introduced into a test-tube of the dimensions prescribed above for the dynamite heat test, with the aid of gentle tapping upon the table, between the introduction of successive portions of the mixture into the tube, so that when the tube contains all the mixture it shall be filled to the extent of 1¾ inches (one inch and three-quarters) of its height. The test-paper is then to be inserted and the heat is to be applied in the manner prescribed above for the dynamite heat test, and the sample tested is to withstand exposure to 160° Fahr. for a period of ten (10) minutes, before producing a discoloration of the test-papers corresponding in tint to the standard colour test which is employed for governing the results of the dynamite heat test.

(For Exudation and Liquefaction tests for Blasting Gelatine, etc., etc., see Appendix, p. 7.)

N.B.—Non-gelatinized nitro-glycerine preparations, from which the nitro-glycerine cannot be expelled by water, are tested without any previous separation of the ingredients, the temperature being as above (160° Fahr.) and the time being seven (7) minutes.

C.—CORDITE AND BALLISTITE.

1. Apparatus required.

The apparatus necessary for the application of the heat test to cordite is identical with that described above (see page 2) for explosives of the nitro-compound class generally† with the addition of a mill and a nest of sieves similar to those used at Waltham Abbey for preparing the cordite for testing (see instructions below).

* This can be readily effected by carefully working the two materials together with a wooden pestle in a wooden mortar.

The French chalk should be of good commercial quality, and after being carefully washed with distilled water and dried in a water oven, it should be exposed under a bell jar to moist air until it has taken up about 0·5 per cent. of moisture. It should then be bottled for use; and with ordinary care the limits of 0·5 per cent. can be maintained in keeping.

† In the Waltham Abbey apparatus the cover (Fig. II) has all the holes around the circumference, instead of having one in the centre and three around the circumference.

2. Preparation of the sample to be tested.

Pieces half an inch long are cut from one end of every stick selected for the test; in the case of the thicker cordites, each piece so cut is further subdivided into about four portions. These cut pieces are then passed two or three times through the mill, the first portion of material which passes through being rejected on account of the possible presence of foreign matter from the mill. The ground material is put on the top sieve of the nest of sieves and sifted. That portion which has passed through the top sieve and been stopped by the second is taken for the test. After each sample has been ground, the mill must be taken to pieces and carefully cleaned.

3. Application of the Test.

The thermometer is fixed so as to be inserted through the lid of the water bath, described under I, page 2, so as to be immersed in the water to a depth of $2\frac{3}{4}$ inches. The water is maintained at a constant temperature of 180° Fahr. When this temperature is reached, 25 grains of the sifted cordite are put into one of the test-tubes, and collected at the bottom by gentle tapping. A test-paper is fixed on to the hook of the glass rod, so that when inserted into the tube it will be in a vertical position. A mixture of equal parts of distilled water and pure glycerine (Price's) as now applied to the upper edge of the test-paper by means of a camel's-hair pencil, in sufficient amount to moisten the upper half; the stopper carrying the rod and paper is fixed into the test-tube and the position of the paper adjusted so that its lower edge is about half-way down the tube; the latter is then inserted through one of the perforations of the cover to the same depth as the thermometer. The lower margin of the moistened part of the paper should then be about five-eighths of an inch above the surface of the cover. The test is completed when the faint brown line, which after a time makes its appearance at the margin between the wet and dry portions of the test-paper, equals in depth of tint the brown line drawn on the standard tint paper.

4. The time which elapses between the insertion of the test-tube and the completion of the test must not be less than 15 minutes.

N.B.—In the case of ballistite the treatment is the same, except that when it is in a very finely granulated condition it need not be cut up.

II.—Testing Gun-cotton, Schultze Gunpowder, E. C. Powder, and other Explosives of the 2nd Division of the Nitro-compound Class.

A.—Gun-cotton, Tonite, etc., etc.

Sufficient material to serve for two or more tests is removed from the centre of the cartridge by gentle scraping, and, if necessary, further reduced by rubbing between the fingers.

The fine powder thus produced is spread out in a thin layer upon a paper tray 6 inches by $4\frac{1}{2}$ inches, which is then placed inside a water oven, kept, as nearly as possible, at 120° Fahr.

The wire gauze shelves in the oven should be about 3 inches apart. The sample is allowed to remain at rest for 15 minutes in the oven, the door of which is left wide open.

After the lapse of 15 minutes the tray is removed and exposed to the air of the room for two hours, the sample being at some point within that time rubbed upon the tray with the hand, in order to reduce it to a fine and uniform state of division.

Application of the Test.

The cover of the water bath is fitted with the gas regulator which is inserted through the centre hole (No. 4). The thermometer is fixed into hole No. 3. The water in the bath is then heated to 170° Fahr., and the regulator

set to maintain that temperature. Twenty grains of the sample to be tested are weighed out, placed in the test-tube, and gently pressed down until the specimen occupies a space of as nearly as possible $1\frac{5}{16}$ inches in a test-tube of the dimensions specified. A test-paper is affixed to the hook of the glass rod or tube, and moistened by touching the upper edge with a drop of distilled water containing 50 per cent. of Price's glycerine. The quantity of liquid used must be only sufficient to moisten about half of the paper. The cork carrying the rod and test-paper is then fixed into the test-tube, and the latter inserted into the bath to a depth of $2\frac{1}{2}$ inches, measured from the cover, the regulator and thermometer being inserted to the same depth. The test-paper is to be kept near the top of the test-tube, but clear of the cork until the tube has been immersed for about five minutes. A ring of moisture will about this time be deposited upon the sides of the test-tube a little above the cover of the bath; the glass rod must then be lowered until the lower margin of the moistened part of the paper is on a level with the bottom of the ring of moisture in the tube; the paper is now closely watched. The test is complete when a very faint brown coloration makes its appearance at the line of boundary between the dry and moist parts of the paper.

The interval of time between the first insertion of the tube containing the sample of gun-cotton in the water at 170° and the first appearance of discoloration on the paper constitutes the test, and this interval of time must be not less than 10 minutes, or the sample will not be accepted as properly purified.

B.—Gelatinized Gun-cotton Preparations.*

Twenty-five grains introduced into test-tube of the dimensions prescribed for the dynamite heat test, then proceed as for Blasting Gelatine, etc., taking the temperature at 180° Fahr., and the time as 15 minutes.

C.—Schultze Powder, E. C. Powder, Collodion Cotton, etc., etc.

Sufficient of the sample, without further mechanical division, is dried in the oven as above, and then exposed for two hours to the air. The test as directed above for Compressed Gun-cotton, etc., is then applied, the minimum duration of test being the same, *viz.*, 10 minutes.

D.—Picric Acid.

(1) The material shall contain not more than 0·3 part of mineral or non-combustible matter in 100 parts by weight of the material dried at 160° Fahr.

(2) One hundred parts of the dry material shall not contain more than 0·3 part of total (free and combined) sulphuric acid, of which not more than 0·1 part shall be free sulphuric acid.

(3) Twenty grains of the material shall stand the heat test as laid down for dynamite (*see ante*, p. 206) for not less than 15 minutes.

E.—Ammonite, Bellite, Roburite, and Explosives of similar Composition.

These are required to stand the same heat test as gun-cotton (*see ante*, p. 208).

III.—Testing Chlorate Mixtures.

No tests have yet been laid down, as at present there are no authorized explosives of this class, but in the event of any being authorized, it would be

* If in a compressed form it should be broken up in the same manner as cordite and ballistite.

necessary to require that they should satisfy the heat test laid down for Gun-cotton, and from time to time the degree of sensitiveness to percussion or friction (especially a glancing blow) should be observed.

APPENDIX.

Exudation and Liquefaction Test for blasting Gelatine, Gelatine Dynamite and Analogous Preparations.

TEST FOR LIQUEFACTION.

A cylinder of blasting gelatine is to be cut from the cartridge to be tested, the length of the cylinder to be about equal to its diameter and the ends being cut flat.

The cylinder is to be placed on end on a flat surface without any wrapper, and secured by a pin passing vertically through its centre.

In this condition the cylinder is to be exposed for one hundred and forty-four (144) consecutive hours (six days and nights) to a temperature ranging from 85° to 90° Fahr. (inclusive), and during such exposure the cylinder shall not diminish in height by more than one-fourth of its original height, and the upper cut surface shall retain its flatness and the sharpness of its edge.

N.B.—If the blasting gelatine and the gelatine dynamite to be tested be not made up in a cylindrical form, the above test is to be applied with the necessary modifications.

TEST FOR LIABILITY TO EXUDATION.

There shall be no separation from the general mass of the blasting gelatine or gelatine dynamite of a substance of less consistency than the bulk of the remaining portion of the materials under any conditions of storage, transport, or use, or when the material is subjected three times in succession to alternate freezing and thawing, or when subjected to the liquefaction test hereinbefore described.

ESTABLISHMENTS.

The 28th March 1901.

No. 213.—The services of Mr. H. J. McIntosh, of the Indian Civil Service, are placed at the disposal of the Finance and Commerce Department for employment as Deputy Secretary in that Department.

No. 217.—Mr. A. Williams, of the Indian Civil Service, is appointed to be Deputy Secretary to the Government of India in the Home Department, with effect from the date on which he may assume charge of the office.

MEDICAL.

The 27th March 1901.

No. 439.—The services of Major P. W. O'Gorman, I.M.S. (Bengal), are replaced at the disposal of the Military Department.

The 28th March 1901.

No. 446.—Colonel T. H. Hendley, C.I.E., I.M.S. (Bengal), Inspector-General of Civil Hospitals, Bengal, is granted leave out of India on private affairs under article 724, Army Regulations, India, Volume I, Part I, for eight months, with effect from the 2nd April 1901, or the subsequent date on which he may avail himself of it.

No. 454.—The services of Lieutenant-Colonel G. C. Hall, F.R.C.S., I.M.S. (Bengal), are replaced temporarily at the disposal of the Military Department.

No. 457.—The services of Captain G. Gunn, 2nd Battalion, the Royal Scots, are repalced at the disposal of the Military Department.

The 29th March 1901.

No. 460.—Lieutenant-Colonel J. McConaghey, M.D., I.M.S. (Bengal), Civil Surgeon, Lucknow, is appointed to officiate as Inspector General of Civil Hospitals, Bengal, during the absence on leave of Colonel T. H. Hendley, C.I.E., I.M.S. (Bengal), or until further orders.

SANITARY.

PLAGUE.

The 25th March 1901.

No. 683.—Whereas the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Tiruvannamalai in the South Arcot District of the Madras Presidency, if pilgrims or other persons from the Mysore State are permitted to assemble at that place on the occasion of the ensuing Vasanta Utsavam festival:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the stations of Agaram, Sibbandi, Tiruvannamalai and Tandarai on the South Indian Railway shall be sold from the 16th April to the 5th May 1901 (both days inclusive) within the Mysore State to any pilgrim or other person intending or believed to be intending to proceed on pilgrimage to the Vasanta Utsavam festival.

The 28th March 1901.

No. 697.—Whereas the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Conjeeveram in the Chingleput District of the Madras Presidency, if pilgrims or other persons from the Bombay Presidency (including Sind), and the Mysore and Hyderabad States, are permitted to assemble at that place on the occasion of the ensuing Brahmotsavam festival of Sri Devaraja Swami:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the Arkonam Junction and the stations of Pallur, Conjeeveram, Walajabad, Villiyampakkam and Chinglepu on the South Indian Railway shall be sold from the 23rd May to the 12th June 1901 (both days inclusive) within the Bombay Presidency (including Sind) and the Mysore and Hyderabad States to any pilgrim or other person intending or believed to be intending to proceed on pilgrimage to the Brahmotsavam festival of Sri Devaraja Swami.

The 29th March 1901.

No. 704.—Whereas the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Madura in the Madura District of the Madras Presidency, if pilgrims or other persons from the Mysore State are permitted to assemble at that place on the occasion of the ensuing Chitrai festival or Cattle fair:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the stations of Ayyalur, Vadamadurai, Dindigul, Ambatturai, Ammayanayakkanur, Sholavandan, Samaiyanallur, Madura, Tiruparankunram, Tirumangalam and Kalligudi on the South Indian Railway shall be sold from the 13th April to the 18th May 1901 (both days inclusive) within the Mysore State to any pilgrim or other person intending or believed to be intending to proceed on pilgrimage to the Chitrai festival or Cattle fair at Madura.

PORT BLAIR.

The 27th March 1901.

No. 184.—Lieutenant-Colonel R. C. Temple, C.I.E., Superintendent of Port Blair and Chief Commissioner of the Andaman and Nicobar Islands, is granted privilege leave for one month and eleven days combined with four months and nineteen days' special leave out of India, on urgent private affairs, with effect from the 8th May 1901, or the subsequent date on which he may avail himself of it.

No. 185.—Colonel S. H. P. Graves, Assistant Adjutant General, Lahore District, is appointed to officiate as Superintendent of Port Blair and Chief Commissioner of the Andaman and Nicobar Islands, during the absence on leave of Lieutenant-Colonel R. C. Temple, C.I.E., or until further orders.

JUDICIAL.

The 26th March 1901.

No. 401.—In Home Department Notification No. 309, dated the 8th March 1901, granting furlough to the Hon'ble Mr. Justice Stevens, a Judge of the High Court of Judicature at Fort William in Bengal, for the "15th September 1901" read "10th November 1901."

The 27th March 1901.

No. 408.—The Hon'ble Sir H. T. Prinsep, Kt., a Judge of the High Court of Judicature at Fort William in Bengal, is granted furlough, with effect from the 6th April 1901, or from any subsequent date on which he may avail himself of it, to the 16th November 1901.

No. 411.—Under the provisions of the Indian High Courts Act, 1861 (24 and 25 Vict., C. 104), section 7, the Governor-General in Council is pleased to appoint Mr. F. B. Taylor, Indian Civil Service, Judicial Commissioner, Chota Nagpur, to officiate as a Judge of the High Court of Judicature at Fort William in Bengal during the absence on furlough of the Hon'ble Mr. Justice Stevens, or until further orders.

The 28th March 1901.

No. 421.—Mr. A. B. Miller, Official Trustee of Bengal, is granted leave of absence for eight months, with effect from the 1st May 1901, under article 726 of the Civil Service Regulations.

No. 423.—The services of Captain W. C. S. Prince, 20th Madras Infantry, are placed at the disposal of the Government of Bombay for employment as an Officiating Cantonment Magistrate.

No. 425.—Captain C. B. Thornhill, Cantonment Magistrate of Mian Mir, is granted privilege leave for one month and eight days combined with furlough out of India for ten months and six days under article 340 (*b*) (iii) (*2*), Civil Service Regulations, with effect from the afternoon of the 16th March 1901.

The 29th March 1901.

No. 431.—Mr. Ramaya Punja, Registrar of the Court of the Resident in Mysore and Judicial Commissioner of Coorg, is appointed to be Subordinate Judge in Coorg, with effect from the date on which he may assume charge of that office.

POLICE.

The 28th March 1901.

No. 238.—The Governor General in Council is pleased to direct that in the notification of the Government of India in the Home Department, No. 83, dated the 11th February 1898, after the words "by the Bombay, Baroda and Central India Railway" the words "by the Jodhpur-Bikaner Railway system" shall be added.

J. P. HEWETT,

Secretary to the Government of India

DEPARTMENT OF REVENUE AND AGRICULTURE.

NOTIFICATIONS.

LAND SURVEYS.

Calcutta, the 23rd March, 1901.

No. 678.—Captain H. H. Turner, R.E., Officiating Deputy Superintendent, 2nd grade, Survey of India Department, is granted 2 months and 25 days' privilege leave in combination with 9 months and 10 days' furlough with effect from the 15th March, 1901, or the subsequent date on which he may avail himself thereof.

No. 687.—Colonel R. A. Wahab, C.I.E., R.E., Superintendent, 1st grade, Survey of India Department, is granted privilege leave for one month and 18 days in combination with 6 months' furlough out of India, with effect from the 17th April, 1901, or the subsequent date on which he may avail himself thereof.

FAMINE.

The 25th March, 1901.

No. 928-*F.*—The services of Captain R. L. Morris, 3rd Regiment of Bengal Cavalry, which were placed at the disposal of the Government of the Punjab for employment on famine duty, by Notification No. 440 F., dated 29th December, 1899, were replaced at the disposal of His Excellency the Commander-in-Chief in India, with effect from the 7th October, 1900.

T. W. HOLDERNESS,
Secretary to the Government of India.

FOREIGN DEPARTMENT.

NOTIFICATIONS.

Fort William, the 25th March 1901.

No. 521-*G.*—Captain C. Archer, Indian Staff Corps, a Political Agent of the 2nd class, is posted as Political Agent for Dir, Swat and Chitral.

No. 522-*G.*—Captain F. W. P. Macdonald, Indian Staff Corps, a Political Agent of the 3rd class, is posted as Deputy Commissioner, Thal Chotiali, and Political Agent, Sinjawi and Railway District.

No. 523-*G.*—Major S. H. Godfrey, Indian Staff Corps, a Political Agent of the 4th class, is posted, on return from furlough, as Political Agent in Zhob.

No. 525-*G.*—Captain A. H. McMahon, C.S.I., C.I.E., Indian Staff Corps, a Resident of the 2nd class, is appointed to officiate as Revenue and Judicial Commissioner in Baluchistan, with effect from the date of assuming charge, *vice* Mr. E. G. Colvin, of the Indian Civil Service, and until further orders.

No. 528-*G.*—Lieutenant-Colonel A. P. Thornton, Indian Staff Corps, a Resident of the 2nd class, is appointed to officiate as a Resident of the 1st class, and as Agent to the Governor General in Rajputana, with effect from the date of assuming charge.

No. 529-*G.*—Captain K. D. Erskine, Indian Staff Corps, a Political Agent of the 3rd (Officiating 2nd) class, is posted as Resident in the Western States of Rajputana.

No. 531-*G.*—The Governor-General in Council is pleased to recognise the appointment of the Honourable E. J. Hawke as Acting Consular Agent for France at Karachi, during the absence of Mr. H. Curjel.

No. 534-*G.*—Lieutenant F. Bigg-Wither, Indian Staff Corps, a probationer for the Political Department, is appointed to be a Political Assistant of the 3rd class, with effect from the 27th February 1901.

Lieutenant Bigg-Wither is posted as an Assistant to the Agent to the Governor-General in Baluchistan, with effect from the date of assuming charge.

No. 537-*G.*—Lieutenant R. E. A. Hamilton, Indian Staff Corps, a probationer for the Political Department, is appointed to be a Political Assistant of the 3rd class, with effect from the 8th March 1901.

Lieutenant Hamilton is posted as an Assistant to the Agent to the Governor-General in Rajputana, with effect from the date of assuming charge.

The 26th March 1901.

No. 766-*F.*—Whereas the Governor General in Council has power and jurisdiction within the tracts noted in the margin;

The tract bounded by the plains of the Dera Ghazi Khan District on the east and south, by the territories included in the Thal-Chotiali and Zhob Political Agencies of Baluchistan on the west, and by the tract subject to the political control of (*a*) the Deputy Commissioner, Dera Ismail Khan, and (*b*) the Political Agent, Zhob, on the north.

In exercise of such power and jurisdiction, and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor General in Council is pleased to make the following orders and to declare that they shall be deemed to have taken effect on and from the 1st May 1899, in supersession

of the Notifications of the Government of India in the Foreign Department, Nos. 1771 F., dated the 15th November 1889, and 2694 I. A., dated the 7th October 1898 :—

PART I.

1. (1) The provisions, so far as they can be made applicable in the circumstances for the time being, and as amended for the time being by subsequent enactments, of the enactments specified in the First Schedule to this Part, are hereby applied to the aforesaid tracts, subject, in the case of the Code of Criminal Procedure and the Punjab Frontier Crimes Regulation, to the modifications specified in the Second Schedule to this Part.

(2) For the purpose of facilitating the application of the said enactments to the said tracts, any Magistrate or Court for those tracts may construe any provision in any such enactment with such alterations not affecting the substance as may be necessary or proper to adapt it to the matter before the Magistrate or Court.

THE FIRST SCHEDULE.

Enactments applied.

Number and year.	Subject.
Act XLV of 1860.	Penal Code.
Act XXIII of 1867.	Punjab Murderous Outrages.
Act IX of 1877.	Reviving and amending Act XXIII of 1867.
Regulation IV of 1887.	Punjab Frontier Crimes.
Act V of 1898.	Criminal Procedure.

THE SECOND SCHEDULE.

Modifications in the Code of Criminal Procedure, 1898, and the Punjab Frontier Crimes Regulation, 1887.

(1) *In the Code of Criminal Procedure, 1898*—

(*a*) The Court of Session may take cognizance of any offence as a Court of original jurisdiction without the accused person being committed to it by a Magistrate, and shall, when so taking cognizance of any offence, follow the procedure prescribed by the Code of Criminal Procedure, 1898, for the trial of warrant-cases by Magistrates.

(*b*) No appeal shall lie from any order of the Sessions Judge.

(*c*) Trials before the Court of Session may, in the discretion of the Sessions Judge, be without jury or the aid of assessors.

(2) *In the Punjab Frontier Crimes Regulation, 1887*—

(*a*) For section 1, sub-sections (*2*), (*3*), (*4*), (*5*) and (*6*), the following shall be substituted, namely :—

"(*2*) This Regulation shall not be enforced against (1) European British subjects, or (2) persons of any such class as the Local Government may by notification in the local official Gazette declare to be exempt therefrom, or (3) any person in the civil or military service of the Government unless such person is accused of having committed an offence conjointly with a person to whom this Regulation applies."

"(*3*) The word 'class' as used in sub-section (*2*) includes any persons who may be collectively described in a notification under this section as persons exempt from the provisions of this Regulation."

(*b*) Section 2 and section 7, sub-section (*2*), shall be omitted.

(*c*) For clause (2) of section 3 the following shall be substituted :—

"(2) 'Commissioner' means the Commissioner of the Derajat Division, and

"(3) 'Deputy Commissioner' means the Deputy Commissioner of the Dera Ghazi Khan District."

(*d*) For sub-section (*1*) of section 10 the following shall be substituted :—

"(*1*) When the Deputy Commissioner thinks it expedient that any dispute should be settled in the manner provided by this section, he may make an order in writing stating the grounds of his opinion and referring the dispute to a Council of Elders."

PART II.

For the purposes of the exercise of criminal jurisdiction as regards the aforesaid tracts—

(1) (*a*) The Deputy Commissioner for the time being of the Dera Ghazi Khan District, as regards those tracts, shall exercise the powers of a District Magistrate as described in the Code of Criminal Procedure, 1898, and may try any offence or pass any sentence which a District Magistrate specially empowered under section 30 of that Code may try or pass ; and

(*b*) Every Magistrate having for the time being any jurisdiction within the Dera Ghazi Khan District shall exercise the like jurisdiction as regards those tracts :

Provided that, if in any case in which the complainant (if any) and the accused person or all the accused persons are not British subjects the Deputy Commissioner or any such Magistrate deems it expedient for political reasons to decline to exercise the powers so conferred on him, it shall be in his discretion to do so, subject to any directions which may be issued by the Commissioner of the Derajat Division or by the Lieutenant-Governor of the Punjab and its Dependencies.

(2) The Commissioner for the time being of the Derajat Division shall be the Sessions Judge, and its Court the Court of Sessions, as regards the said tracts.

(3) The functions of the High Court as a Court of Reference and Revision shall be discharged by the Lieutenant-Governor of the Punjab and its Dependencies.

(4) All other functions of the High Court shall be discharged by the Court of Session.

(5) This part of this Notification applies to all proceedings except proceedings against European British subjects or persons jointly charged with European British subjects.

No. 767-*F.*—In exercise of the powers conferred by sections 4 and 6 of the Foreign Jurisdiction and Extradition Act, XXI of 1879, the Governor General in Council is pleased, in supersession of the notification of the Government of India in the Foreign Department, No. 1770-F., dated the 15th November 1889, to appoint the Deputy Commissioner for the time being of the Dera Ghazi Khan District, being an European British subject, to be a Justice of the Peace for the tracts noted in the margin, and to direct that the Chief Court of the Punjab shall be the Court to which the said Deputy Commissioner shall, as such Justice of the Peace, commit for trial.

The tract bounded by the plains of the Dera Ghazi Khan District on the east and south, by the territories included in the Thal Chotiali and Zhob Political Agencies of Baluchistan on the west, and by the tract subject to the political control of (*a*) the Deputy Commissioner, Dera Ismail Khan, and (*b*) the Political Agent, Zhob, on the north.

No. 1279-*I.B.*—The Governor-General in Council is pleased to direct that the following modifications shall be made in the schedules attached to the notifications of the Government of India in the Foreign Department, Nos. 355-I.B. and 356-I.B., dated the 25th January 1901, namely :—

In column 1, after the words "Bikaner Frontier (towards Jodhpur) to Bikaner" the words "including the Gigasar-Palana Branch" shall be added,

and after the words "Jodhpur to Jodhpur Frontier (towards Bikaner)" the words "including the Gigasar-Palana Branch" shall be omitted.

No. 1280-*I.B.*.—Whereas the Chiefs of Jodhpur, Bikaner and Patiala have ceded to the British Government full and exclusive power and jurisdiction of every kind over the lands lying within their respective territories which are, or may hereafter be, occupied by the Jodhpur-Bikaner Railway system (including the lands occupied by stations, by out-buildings, and for other railway purposes) and over all persons and things whatsoever within the said lands:

In exercise of such jurisdiction and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor General in Council is pleased to direct that the following addition shall be made to the schedule to the notification of the Government of India in the Foreign Department, No. 3063-I.B., dated the 13th August 1897, as modified by the like notification No. 322-I.B., dated the 4th February 1898, namely :—

After the entries relating to the Jamnagar Railway, the following shall be added :—

Jodhpur-Bikaner Railway system	Jodhpur Bikaner	...	The Agent to the Governor-General in Rajputana.
	Patiala	...	The Government of the Punjab.

No. 1281-*I.B.*.—Whereas the Chiefs of Jodhpur, Bikaner and Patiala have ceded to the British Government full and exclusive power and jurisdiction of every kind over the lands lying within their respective territories which are, or may hereafter be, occupied by the Jodhpur-Bikaner Railway system (including the lands occupied by stations, by out-buildings and for other railway purposes), and over all persons and things whatsoever within the said lands :

In exercise of such jurisdiction and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to direct that the following addition shall be made to the schedule appended to the notification of the Government of India in the Foreign Department, No. 3573-I., dated the 29th October 1895, as modified by the like notifications No. 3289-I.B., dated the 28th August 1897, No. 2143-I.B., dated the 5th August 1898, and No. 1159-I.B., dated the 7th March 1900, namely :—

Before the entries relating to the Nagda-Ujjain Railway, the following shall be added :—

Jodhpur-Bikaner Railway system	Jodhpur. Bikaner. Patiala.

The 27th March 1901.

PUBLIC WORKS DEPARTMENT.

RAILWAYS.

NOTIFICATIONS.

Calcutta, the 23rd March, 1901.

No. 131.—Mr. J. L. P. Hogan, Superintending Engineer, 2nd class, State Railways, whose services were lent to the Bombay, Baroda and Central India Railway Company, is, on return from leave, appointed to officiate as Junior Consulting Engineer to the Government of India for Railways, Calcutta, until further orders.

No. 132.—Mr. T. W. Bartlett, Superintending Engineer, 3rd class, sub. *pro tem.*, State Railways, and Engineer-in Chief, Eastern Bengal State Railway extension surveys, is granted privilege leave for 3 months combined with furlough for 4 months under article 340 (*b*) of the Civil Service Regulations and Government of India, Home Department, Resolution No. 224-240, dated 25th January, 1901, with effect from the 15th April, 1901, or such subsequent date as he may avail himself of the same.

No. 133.—Mr. E. Cooper, Assistant Traffic Superintendent in class III, grade 4, of the Superior Revenue Establishment of State Railways, was granted extraordinary leave, without allowances, under article 366 of the Civil Service Regulations, from the 10th March to the 21st December, 1900.

The 26th March, 1901.

No. 136.—With reference to Public Works Department Notification Nos. 83 and 86, dated 2nd and 4th March, 1901, respectively, Mr. W. F. Barrow, Examiner of Public Works Accounts, is appointed to officiate as Government Examiner of Accounts, East Indian Railway, and will continue to so officiate in addition to his duties as Examiner, Public Works Accounts, Bengal, pending relief by Mr. H. W. Conduitt.

No. 138.—With reference to Public Works Department Notification No. 313, dated 11th August, 1900, Mr. A. J. Chase, Officiating District Locomotive Superintendent in class II of the Superior Revenue Establishment of State Railways, reverted to his substantive appointment of

Assistant Locomotive Superintendent in class III, grade 2, of that Establishment, with effect from the 22nd October, 1900. He again officiated as District Locomotive Superintendent in class II, during the absence of Mr. W. R. Pearce, Officiating District Locomotive Superintendent, on privilege leave from the 7th November, and reverted to his substantive appointment on the 18th November, 1900.

This cancels Public Works Department Notification No. 485, dated 30th November, 1900.

No. 140.—The Governor-General in Council is pleased to order the following promotions and reversion of Executive and Assistant Engineers attached to State Railways, with effect from the dates specified :—

No. 141.—Mr. J. Adam, Executive Engineer, 2nd grade, State Railways, whose services were lent to the Kashmir State, is, on reversion to Government service, granted privilege leave for 2 months and 26 days combined with furlough for 3 months and 28 days, under articles 264A and 340 of the Civil Service Regulations, with effect from the 4th April, 1901, or such subsequent date as he may avail himself of the same.

No. 137.—The following is published for general information :—

Circular No. 3 Railway.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY ESTABLISHMENTS.

Calcutta, the 22nd March 1901.

Recruitment of the Superior Traffic Department of State railways.

Read—

Public Works Department Circular No. 2 Ry., dated 10th October 1888.

RESOLUTION.—The system of recruitment for the Superior Traffic Establishment of State railways by appointment after examination in India having been abolished, the Governor General in Council is pleased to cancel paragraph 5 of Public Works Department Circular No. 2 Ry., dated 10th October 1888, relating to that system.

ORDER.—Ordered that copies of this resolution be communicated, for information and guidance, to the Local Governments and Administrations, and to the Officers marginally noted.

The Governments of Madras, Bombay and Burma, Public Works Department, Railway Branch.
The Governments of Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Honourable the Chief Commissioners of the Central Provinces, Assam and Coorg.
The Honourable the Resident at Hyderabad.
The Honourable the Agents to the Governor General in Rajputana, Central India and Baluchistan.
The Accountant General, Public Works Department.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Assam.
The Managers, North Western, Oudh and Rohilkhand, and Eastern Bengal State railways.
The Engineers-in-Chief, Ludhiana-Dhuri-Jakhal, Ghaziabad-Moradabad and Kushalgarh-Kohat-Thal railways.
The Engineer-in-Chief, Jherriah Connection and Fatehpur-Markandi Chord Railway Surveys.
The Port Store-keeper, State Railway Department, Calcutta.

Ordered also, that it be published in the *Gazette of India*.

No. 139.—The following is published for general information :—

No. 599 R. E.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY ESTABLISHMENTS.

Calcutta, the 20th March 1901.

Period for election of the Revised Provident Fund Rules.

Read—

Public Works Department Resolution No. 09 R. E., dated 24th January 1899.

Public Works Department Resolution No. 1737 R. E., dated 14th September 1899.

RESOLUTION.—In supersession of the orders contained in paragraph 4 of Public Works Department Resolution No. 1737 R. E., dated 14th September 1899, read in the preamble, in regard to the period for election of the revised Provident Fund Rules, the Government of India are pleased to rule that any employé who wishes to come under those rules may be permitted to do so from the commencement of the half-year in which he elects or of the following half-year.

ORDER—Ordered, that a copy of this Resolution be forwarded to the Governments of Madras, Bombay and Burma, Public Works Department, Railway Branch, the Honourable the Chief Commissioner of Assam, the Honourable the Resident at Hyderabad, the Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Assam, and the Managers, North Western railway, Oudh and Rohilkund railway and Eastern Bengal State railway, for information and guidance.

Ordered, also, that a copy be forwarded to the Accountant General, Public Works Department, for information, and that it be published in the *Gazette of India*.

The 27th March, 1901.

No 142.—The following is published for general information :—

Circular No. II Railway.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY TRAFFIC.

Calcutta, the 19th March 1901.

Modification of rule IV (8) (*a*) of Appendix A to the General Rules of 1895 for working open lines of railway in British India administered by the Government.

READ—

Section 47 of the Indian Railways Act, 1890 (IX of 1890).

Government of India, Public Works Department, notification No. 118, dated the 21st March 1895, and the Government of India circular No. 6 Railway, dated the 12th March 1895.

READ ALSO—

Letter from the Consulting Engineer to the Government of India for Railways, Calcutta, No. 4452, dated the 25th September 1900, and its enclosure.

OBSERVATIONS.—It has been represented that inconvenience, loss of time and expense are caused to firms importing spirits of wine in casks, owing to the necessity for repacking the consignments when tendered for carriage by railway in order to comply with the requirements of rule IV (8) (*a*) of Appendix A

to the Open Line General Rules, read above, which requires spirits of wine, methylated or rectified, to be packed in corked and capsuled bottles or in corked and capped drums securely packed.

2. The Government of India are advised that there is no objection to spirits of wine being carried by railways in India in strongly made casks securely closed.

RESOLUTION.—In exercise of the powers conferred by section 47 (4) of the Indian Railways Act, 1890 (IX of 1890), the Governor General in Council is pleased to sanction the adoption by the administrations of all railways, whether in British India, in foreign territory or in Native States, to which the General Rules for working open lines of railway promulgated with the Government of India circular No. 6 Railway, dated the 12th March 1895, apply, of the accompanying corrigendum to the said General Rules.

ORDER.—Ordered, that this circular and its enclosure be published under a notification in Part I of the *Gazette of India*, as required by section 47, sub-section (3) of the Indian Railways Act, 1890 (IX of 1890), and that a copy thereof be kept open for inspection at railway stations, as directed by sub-section (6) of the same section.

Ordered, also, that a copy of this circular and of its enclosure be communicated to the Local Governments and Administrations, and to the Officers noted in the margin, for information and guidance; and to the Governments of the North-Western Provinces and Oudh and the Punjab, the Honourable the Chief Commissioner of the Central Provinces, the Honourable the Agents to the Governor General in Central India and Baluchistan, the Honourable the Resident in Mysore, and to the Accountant General, Public Works Department, for information.

The Governments of Madras, Bombay, Bengal and Burma.
The Honourable the Chief Commissioner of Assam.
The Honourable the Resident at Hyderabad.
The Honourable the Agent to the Governor General for Rajputana.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Assam.
The Managers, North Western, Eastern Bengal and Oudh and Rohilkhand (State) railways.

[Enclosure to Government of India circular No. II Railway, dated the 19th March 1901.]

Corrigendum to rule IV (8) (*a*) of Appendix A to the General Rules for working open lines of railway in British India administered by the Government, which were promulgated with the Government of India circular No. 6 Railway, dated the 12th March 1895.

For IV (8) (a) of Appendix A, substitute—

(*a*) Spirits of wine, methylated or rectified, must be packed either in corked and capsuled bottles or in corked and capped drums securely packed or in strongly made casks securely closed so as to prevent all possibility of leakage.

No. 143.—The following is published for general information:—

Circular No. III Railway.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY TRAFFIC.

Calcutta, the 22nd March 1901.

Modification of Part II, Chapter II, rule 6 of the General Rules of 1895 for working open lines of railway in British India administered by Government.

READ—

Section 47 of the Indian Railways Act, 1890.

Government of India, Public Works Department, notification No. 118, dated the 21st March 1895, and the Government of India circular No. 6 Railway, dated the 12th March 1895.

READ ALSO—

Government of India resolution No. 1424—31 R., dated the 8th April 1879.

Letters from the Government of Madras, Nos. 1157 Ry. and 1373 Ry., dated, respectively, the 18th August and 8th October 1900, and enclosures.

Government of India letters Nos. 1152 R. T. and 1256 R. T., dated, respectively, the 24th October and 27th November 1900.

OBSERVATIONS.—It has been noticed that, while rule 1* embodied in this Department's resolution No. 1424—31 R., dated the 8th April 1879, permits of civil prisoners, who are not insane, violent or dangerous, when in parties of *three and under three including guards*, being accommodated with ordinary passengers travelling by railway, rule 6,† chapter II, Part II of the General Rules for working open lines of railway in British India promulgated with the Government of India circular No. 6 Railway, dated the 12th March 1895, requires *all* prisoners to be segregated.

* Military prisoners in all cases, and civil prisoners if insane, violent or dangerous, are never to be despatched by rail except in reserved compartments. Other parties of prisoners and guards, when, inclusive of guards, the party exceeds three in number, are also to be carried in the same manner.

† Prisoners and insane persons shall not be allowed to mix with other passengers, but must, upon reserved accommodation being engaged, be placed with their escort or attendants in a prison-van or in a separate compartment, as the case may be.

2. The question has also been raised whether *accused* persons travelling by railway in police custody are to be regarded as "prisoners" within the meaning of the General Rule referred to in the preceding paragraph.

RESOLUTION.—In exercise of the powers conferred by section 47 (*4*) of the Indian Railways Act, IX of 1890, the Governor General in Council is pleased to sanction the adoption by the administrations of all railways, whether in British India, in foreign territory or in Native States, to which the General Rules for working open lines of railway promulgated with the Government of India circular No. 6 Railway, dated the 12th March 1895, apply, of the accompanying revised rule in substitution of rule 6, chapter II, Part II of the said General Rules.

ORDER.—Ordered that this circular, with the accompanying revised rule, be published under a notification in Part I of the *Gazette of India* as required by section 47, sub-section (*3*), of the Indian Railways Act, 1890, and that a copy thereof be kept open for inspection at railway stations as directed by sub-section (*6*) of the same section.

Ordered, also, that a copy of this circular, and of its enclosure, be communicated to the Local Governments and Administrations, and to the officers noted in the margin, for information and guidance, and to the Governments of the North-Western Provinces and Oudh and the Punjab, the Honourable the Chief Commissioner of the Central Provinces, the Honourables the Agents to the Governor General in Central India and Baluchistan, the Honourable the Resident in Mysore, and the Accountant General, Public Works Department, for information.

The Governments of Madras, Bombay, Bengal and Burma.
The Honourable the Chief Commissioner of Assam.
The Honourable the Resident at Hyderabad.
The Honourable the Agent to the Governor General for Rajputana.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Assam.
The Managers of the North Western, Oudh and Rohilkhand and Eastern Bengal (State) railways.

[Enclosure to Government of India circular No. III Railway, dated the 22nd March 1901.]

Corrigendum to rule 6, chapter II, Part II of the General Rules for working open lines of railway in British India administered by the Government, which were promulgated with the Government of India circular No. 6 Railway, dated the 12th March 1895.

For rule 6, chapter II, Part II, *substitute*—

6. (1) Military prisoners in all cases, civil prisoners if insane, violent or dangerous, and insane persons, shall not be allowed to mix with other passengers, but must, upon reserved accommodation being engaged, be placed with their escort or attendants in a prison-van or in a separate compartment, as the case may be.

(2) Other parties of prisoners, when, inclusive of guards, the party exceeds three in number, are also to be carried in the same manner.

(3) The term "prisoner" covers accused persons and persons under trial or travelling for the purpose of undergoing trial, as well as persons who have already been convicted.

F. R. UPCOTT,
Secretary to the Government of India.

No. 121 of 1901.—John Howard Ross, manufacturer, of 35 Wills Street, Aston near the city of Birmingham, England. *Improvements in acetylene gas generators.*

No. 122 of 1901.—James Gilbert Daw, engineer, of 2 Goring Road, Llanelly in the county of Carmarthen, in the United Kingdom. *An improved form of stamping-heads and dies or anvils on which the heads beat for the purpose of crushing metaliferous ores.*

No. 123 of 1901.—Ferdinand Fanta, consulting engineer, of London, England. *Improvements in and relating to the manufacture and repair of incandescent electric lamps.*

No. 124 of 1901.—Vincenz Macku, engineer, residing in Brünn, Neugasse 113, in the Empire of Austria-Hungary. *Improvements in wire healds for looms.*

No. 125 of 1901.—Henry D. Perky, manufacturer, of Buffalo Avenue and Fourth Street, Niagara Falls, in the county of Niagara and state of New York, U. S. A. *Improvements in and relating to machines for making biscuit and other articles.*

No. 126 of 1901.—Joseph Hunt Elliott, late engineer to the Indigo Planters in Tirhoot, at present retired and residing at No. 30 Elliott Road in Calcutta. *A new or improved arrangement for hanging and pulling punkhas, to be called "Elliott's patent aeriform motion."*

No. 127 of 1901.—Augustus Henry Sparling, superintendent of the Postal Workshop and Press, Aligarh, North-West Provinces, British India. *Improvements in padlocks.*

No. 128 of 1901.—Bernard Coventry, Indigo Planter, residing at Dalsing Sarai, Tirhoot, Bengal. *Improvements in the manufacture of indigo.*

No. 129 of 1901.—Arnold Caesar Wernigg, engineer, Entally, Tangra Road 8, Calcutta. *A fan for cooling railway carriages.*

No. 1224 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments

of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying :—

No. 441 of 1899.—John Walter Ottley, Colonel, President of the Royal Indian Engineering College, of Cooper's Hill, Englefield Green, in the county of Surrey, England. *Improvements in covers for the barrels of small arms.* (Specification filed 21 March 1901.)

No. 270 of 1900.—John Hamilton Brown, manufacturer, of No. 251 Broadway, in the borough of Manhattan, in the city and state of New York, U. S. A. *Improvements in explosive charges for propelling projectiles.* (Specification filed 20 March 1901.)

No. 309 of 1900.—Henri Weymersch, electrician, of 2 Rue Collette, Paris, in the Republic of France. *Improvements in electric accumulators or secondary batteries.* (Specification filed 20 March 1901.)

No. 454 of 1900.—John Hodgart, superintending engineer of the Volkart's United Cotton Pressing Company, Limited, of Amraoti, Berar, India. *A machine for opening, cleaning and preparing cotton before pressing it into bales for export, entitled "Hodgart's Patent cotton preparing machine."* (Specification filed 18 March 1901.)

No. 42 of 1901.—William Murray Miller, factory manager and chemist, of Caledonia city, Province Wellesley, Penang, Straits Settlements. *Improvements in and relating to evaporating, boiling and drying appliances.* (Specification filed 16 March 1901.)

No. 1225 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 218 of 1889.—Carl Olof Lundholm. *Improvements in the manufacture of dynamite.* (From 11 April 1901 to 11 April 1902.)

No. 283 of 1892.—Carl Olof Lundholm and Joseph Sayers. *Improvements in the manufacture of explosives.* (From 21 April 1901 to 21 April 1902.)

No. 311 of 1892.—William Richard Sumption Jones. *Improvements in central buffers for railway and other vehicles.* (From 20 April 1901 to 20 April 1902.)

No. 295 of 1894.—George Alexander Kennedy, William Senior and Ira Wood. *Improved apparatus for securing card clothing to the flats of carding engines.* (From 25 March 1901 to 25 March 1902.)

No. 214 of 1895.—The National Opalite Glazed Brick and Tile Syndicate, Limited. *Improved or improvements in connection with fancy or ornamental bricks, tiles, slabs, wallings, ceilings and the like.* (From 26 March 1901 to 26 March 1902.)

No. 1226 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (*2*), of the said Act, the exclusive privilege of making, selling, and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 155 of 1896.—Gaston Ragot. *Improvements relating to the production of acetylene gas and to the utilisation of the same for lighting purposes.* (Specification filed 11 December 1896.)

No. 185 of 1896.—M. B. Mahadev. *A water-lift.* (Specification filed 14 December 1896.)

No. 190 of 1896.—Alfred Parry and Eigil Möller. *An automatic tip tub suitable for loading or unloading coal, salt and other materials.* (Specification filed 12 December 1896.)

s in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of R50 for each of the above inventions.

OTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be dressed to the "Secretary to the Government of India, Department of Revenue and griculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. 4 P.M. on all days, except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the aning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and appli- ants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications iled in the Secretary's office are now on sale to the public at one anna and eight annas a copy respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitor's room of the Patents Office for ten days from the date of he *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,
Secretary under the Inventions and Designs Act, 1888.

CALCUTTA MINT,
The 26th March, 1901.

SURVEY OF INDIA DEPARTMENT.

NOTIFICATIONS.

Calcutta, the 23rd March, 1901.

No. 109.—With reference to Revenue and Agricultural Department Notification No. 416—29-2, dated the 22nd February, 1901, commuting the furlough of Captain A. H. B. Hume, R.E., to privilege leave, that officer officiated as Deputy Superintendent, 2nd grade, from 18th May to 16th November, 1900, both dates inclusive. He is seconded on deputation to the China Expeditionary Force, with effect from 13th July, 1900.

No. 110.—In consequence of the above changes Lieutenant H. L. Crosthwait, R. E., Officiating Deputy Superintendent, 2nd grade, reverted to his substantive appointment of Assistant Superintendent, 1st grade from 18th May to 12th July, 1900, both dates inclusive.

SIR G. GORE, *Colonel, R.E.,*
Surveyor General of India.

DIRECTOR OF RAILWAY TRAFFIC.

NOTIFICATIONS.

Calcutta, the 26th March, 1901.

No. 15.—Mr. W. R. Pearce, Officiating District Locomotive Superintendent in class II of the Superior Revenue Establishment of State Railways, reverted to his substantive rank of Assistant Locomotive Superintendent in class III, grade 2, of that Establishment, with effect from the 19th November, 1900.

No. 16.—With reference to Director of Railway Traffic's Notification No. 8, dated 25th January, 1900, Mr. J. Silvester, Assistant Locomotive Superintendent in class III, grade 2 of the Superior Revenue Establishment of State Railways, and Officiating District Locomotive Superintendent, will continue to officiate as District Locomotive Superintendent in class II of that Establishment, until further orders.

A. BRERETON,
Director of Railway Traffic.

TELEGRAPH DEPARTMENT.

NOTIFICATIONS.

Simla, the 22nd May, 1900.

TELEGRAMS FOR THE TROOPS IN SOUTH AFRICA.

No. 9.—The following revised notification is published for general information :—

Until further notice, State and Private telegrams *in plain language* addressed to persons serving with the Field Force in South Africa will be accepted *at Sender's risk*, and charged for at the rate of R1-8 per word from offices in India or Burma. Telegrams in Code or Cypher cannot be accepted at this reduced rate. The address should consist of the following :—

(1) The name, or number, or both of the person to whom the telegram is addressed (in the case of officers the rank may be omitted, and in the case of telegrams for Non-Commissioned Officers and men the name may, in like manner, be omitted if the number is given. Such omissions, however, add to the risk of the telegram going astray, more especially when addressed to Non-Commissioned Officers and men), and

(2) The Regiment (*this will be counted and charged for as one word irrespective of the number of words used*).

These telegrams should be addressed "Bombay for South Africa" (*which words will be signalled free*), and not to any particular Telegraph Office in South Africa. The Bombay Telegraph Office will forward them to the Officer Commanding at Capetown, who will deliver them to the Addressees at whatever place in South Africa they may be stationed.

Senders of telegrams should accurately describe the Regiment, Battalion, Battery or Corps, to which the Addressees are attached, as it appears in the "Army List." For example: the address of an Officer or Private in the "Rifles" should give the number of the Battalion, and make it quite clear whether it is a Battalion of the "Rifle Brigade," the "King's Royal Rifle Corps," the "Royal Irish Rifles," or the "Scottish Rifles (Cameronians)."

The reduced rate will also apply to telegrams addressed to members of the Nursing Staff serving in South Africa, and any telegrams addressed to a Nurse will be treated in the same way as those intended for soldiers and sailors.

Telegrams for officers, Non-Commissioned Officers and men in South Africa who are known to be suffering from wounds or sickness may be addressed to them as if they were with their regiment or corps. Such telegrams, on arrival at the place where the regiment or corps is stationed, will be redirected to the proper hospital.

When, however, the name of the hospital is known to the sender of the message, he may address the telegram direct to that hospital, *e.g.*, "Field Hospital, 1st Cavalry Brigade," or to "No. 2 General Hospital" or to "Mooi River Hospital."

In any case, the telegram should, as already stated, be addressed by the sender to "Bombay for South Africa," which words will not be charged for.

The following are given as examples of addresses and counting :—

"Captain Armstrong, 64th Royal Field Artillery, Bombay for South Africa" (*three words*); "Captain Armstrong, Wynberg Hospital, Bombay for South Africa" (*three words*); "7303 Murphy, 2nd Battalion, Royal Dublin Fusiliers, Bombay for South Africa" (*three words*); "7303, Mooi River Hospital, Bombay for South Africa" (*two words*).

II. Notification No. 5, dated the 8th May, 1900, is hereby cancelled.

The 5th December, 1900.

No. 37.—The British Government announces that the transmission of Private telegrams for the Orange River Colony and the Transvaal, *vid* Cape Colony and Natal, is now suspended.

Telegrams for Pretoria, Johannesburg, Vereeniging, Germiston, Middelburg, Heidelberg, and Standerton are, meanwhile, being accepted for transmission, *vid* Lourenco Marques, at the usual rates. These telegrams should be written in plain English and will be accepted only at the risk of the sender. They are also subject to censorship and to delay in transmission.

The 31st January, 1901.

TELEGRAMS FOR SOLDIERS AND SAILORS OF THE BRITISH AND INDIAN FORCES IN CHINA.

No. 43.—The following revised Notification is issued for general information :—

Until further notice, private telegrams, *in plain language*, for members of the British or Indian Military and Naval Forces in China, from their friends in India or Burma will be accepted *at sender's risk* and at the reduced rates mentioned below to the three following stations only, *vid* Madras :—

1. To Shanghai at R 0-15-0 per word.
2. „ Weihaiwei „ 1-3-0 „
3. „ Taku „ 1-4-0 „

In the Official Instructions the words "*Reduced Rates*" should be inserted, and will be signalled free.

Telegrams intended for Military or Naval members stationed at Hongkong should be addressed to *Shanghai*, and those for members stationed at Tientsin or Pekin should be addressed to *Taku*. These reduced rates will also apply to telegrams for Civilians in Military or Naval employ in China.

In the address the name and number of the Regiment, Battalion, Battery, or Corps will be counted and charged for as *one* word, irrespective of the number of words used. For instance, in a telegram addressed to "Capt. Brown, 23rd Field Battery, Royal Artillery, Shanghai," the number of words to be charged for will be *four* only, instead of *eight* words, as usual.

II. Notification No. 34, dated the 22nd November, 1900, is hereby cancelled.

Calcutta, the 7th March, 1901.

No. 47.—The following revised notification is published for general information :—

The Post Master General, London, announces that the British Government have decided to suspend at Aden and the Cape of Good Hope the transmission of all telegrams in Code or cipher, whether of Foreign Governments or private persons, to or from British Central Africa, St. Helena and Ascension. Telegrams in plain language are subject to censorship, and can only be accepted at the risk of the sender.

Code messages for the following places, *viz.*, Cape Colony, Natal, Rhodesia, Zanzibar, Seychelles, Mauritius, Madagascar, British and German East Africa, Mozambique and Lourenco Marques may, however, be accepted, if the words used are in one or other of the following Code Books, which have been deposited with the authorities at Aden, *viz.* :—

(1) A B C (4th edition).
(2) A Z.
(3) Scott's (9th edition).
(4) A I.
(5) Telegraphenschluessel of W. Staudt and O. Hundius (published by Julius Springer at Berlin).
(6) The Mercuur Code (2nd edition), enlarged and revised, with the First Supplement.
(7) Broomhall's Comprehensive Cipher Code.
(8) Western Union Telegraphic Code and International Cable Directory, Universal Edition, 1900.
(9) Atlantic Cable Directory of registered addresses and Directory Code, 1898.
(10) Atlantic Cable Directory of registered addresses and Directory Code, 1900.
(11) Watkin's Telegraphic Code with Appendix (17th edition), 1900.
(12) International Mercantile Telegraph Code (Meyer), 1880.
(13) The General, Commercial, and Mining Telegram Code, 1897, by C. A. Moreing and F. C. McCutcheon.
(14) Bedford McNeill's Mining and General Telegraphic Code 1899

Telegrams should be endorsed to the effect that the words used actually represent the corresponding expressions given in the above-named Code Books.

As delays occur at Aden in consequence of the difficulty of determining which Code has been employed, senders of telegrams to the above-named places in East and South Africa should write on the message draft the name of the Code employed. For instance A B C; A Z; Scott's; A I; Staudt; Mercuur; Broomhall's; Directory; Atlantic, 1898, Atlantic, 1900; Watkin's; Meyer; McCutcheon; or McNeill. This information will be included in the "Official Instructions" and transmitted free of charge.

II. Notification No. 39, dated the 13th December, 1900, is hereby cancelled.

No. 47-*A*.—In the event of the establishment in British India of a censorship over telegrams, the first twelve Code Books mentioned in Notification No. 47, dated the 7th of March, 1901, will be used in India for purposes similar to that for which they are employed in Aden.

The public are recommended to provide themselves with such of the Codes as may appear suited to their requirements.

H. A. KIRK,
Director, Traffic Branch.

OLD AND NEW CEMETERIES, HYDERABAD, SIND.

The following monuments in these cemeteries being in a ruinous condition, notice is hereby given, in accordance with the Ecclesiastical Regulations, Part I, Rule XX, that if the said monuments be not repaired by some interested party or parties they will be treated at the next annual repairs according to the rules laid down :—

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason Civil Engineering College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876 :—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage*. . . . R22-8

	Without postage.	With postage.
	R a. p.	R a. p.
For the Calcutta Series	10 0 0	12 8 0
" each of the Madras, Bombay, and Allahabad Series	6 0 0	7 0 0
" a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...	2 0 0
" a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	..	1 0 0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit :—

	For town.	For mofussil.
	R a. p.	R a. p.
For the Calcutta Series ; per copy . .	0 8 9	0 10 0
" each of the Madras, Bombay, and Allahabad Series ; per copy . .	0 5 3	0 5 9
" the Calcutta Series. For the year . .	7 2 6	8 6 3
" each of the Madras, Bombay, and Allahabad Series. For the year . .	4 4 6	4 11 0

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.
The Superintendent, Government Central Press, Bombay.
The Curator of Government Books, North-Western Provinces and Oudh.
The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapper of the Indian Law Reports, Calcutta Series, at the following rates payable in advance :—

	One page.	*Half page.*	*Quarter page.*
For one issue .	R 20	R 14	R 9
" three issues	" 55	" 36	" 24
" six "	" 100	" 68	" 45
" nine "	" 145	" 96	" 64
" twelve "	" 180	" 120	" 80

Several volumes of the BENGAL LAW REPORTS, from August 1808 to December 1875, and FULL BENCH RULINGS, Parts I and II, are available at the following rates :—

	Without postage.	With postage.
	R a. p.	R a. p.
Bengal Law Reports, for one year . .	20 0 0	22 8 0
Single copies, R2 per copy.		
Full Bench Rulings, Parts I and II . .	20 0 0	22 8 3

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta.
Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription, R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calendar year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House, Calcutta, on Wednesday, the 27th March, 1901.

PRESENT:

His Excellency Baron Curzon, P.C., G.M.S.I., G.M.I.E., Viceroy and Governor General of India, *presiding*.
His Honour Sir John Woodburn, K.C.S.I., Lieutenant-Governor of Bengal.
The Hon'ble Major-General Sir E. H. H. Collen, G.C.I.E., C.B.
The Hon'ble Sir A. C. Trevor, K.C.S.I.
The Hon'ble Sir C. M. Rivaz, K.C.S.I.
The Hon'ble Mr. T. Raleigh.
The Hon'ble Sir E. FG. Law, K.C M.G.
The Hon'ble M. R. Ry. Panappakkam Ananda Charlu Vidia Vinodha Avargal, Rai Bahadur, C.I.E.
The Hon'ble Kunwar Sir Harnam Singh, Ahluwalia, K.C.I.E., of Kapurthala.
The Hon'ble Mr. J. Buckingham, C.I.E.
The Hon'ble Mr. H. F. Evans, C.S.I.
The Hon'ble Rai Bahadur B. K. Bose, C.I.E.
The Hon'ble Sir Allan Arthur, Kt.
The Hon'ble Sir A. Wingate, K.C.I.E.
The Hon'ble Mr. F. A. Nicholson, C.I.E.
The Hon'ble Mr. D. M. Smeaton, C.S.I.
The Hon'ble Mr. C. W. Bolton, C.S.I.
The Hon'ble Rai Sri Ram Bahadur.
The Hon'ble Mr. R. P. Ashton.
The Hon'ble Mr. R. H. Henderson.

DISCUSSION OF THE FINANCIAL STATEMENT FOR 1901-1902.

The Hon'ble SIR EDWARD LAW moved that the Financial Statement for 1901-1902 be taken into consideration.

His Excellency THE PRESIDENT said:—"If any Hon'ble Member cares in the course of this debate to adopt the plan that was followed in some cases last year, of laying upon the table either his speech, or such portions of his speech as are of a detailed or technical character, I will not stand in the way of his doing so."

The Hon'ble Mr. ASHTON said:—"My Lord, that part of the Budget which relates to railways has such a direct bearing on the industry which I represent in this Council, that I venture to ask permission to make the following remarks.

"I see with very great satisfaction the steps that have been taken by Government to more clearly differentiate between expenditure incurred on behalf of those enterprises which are profitable both in respect to their indirect benefits to the country and in respect to their very satisfactory working balances and on expenditure on the general administration and defence of the country.

"The subject of the separation of railway accounts from the general accounts of the country has engaged much public attention of late years. At the time of the currency agitation it was pointed out how the aspect of that item which was called 'Exchange' in Government accounts, but which was called 'Loss by Exchange' in controversy, was made more serious by

balances that were transferred to it from actually profitable undertakings. Mr. Clinton Dawkins referred last year to the misapprehension which arose from this and kindred circumstances which he justly said confounded the public and misled even English financial experts. I think I detect in Mr. Dawkins' use of the word *even* an insinuation that experts other than English were misled to a still greater extent. I refer to this merely to show how the want of clearness in the Government accounts has led to misapprehension in the past. In later times, however, the subject has forced itself on public attention in connection with the influence that it has had in times of stress and famine in preventing the development and working of open main lines of railway which for want of funds have been starved and have therefore not been in a position to earn so much as they would have done had their demands been met as they deserved and required to be met. Within the last twelve months the British Chambers of Commerce, the Indian Chambers of Commerce and many other authorities have strongly urged the very separation of accounts towards which Government has now so wisely taken the first steps. But, my Lord, while greater authorities here and at home have been arguing the need of reform, the same need has been forced on the attention of the coal-trade by a most instructive object lesson. When these Chambers of Commerce were discussing the subject in England, the Acting Agent of the East Indian Railway was advising the Bengal Chamber of Commerce that the wagon supply could not be kept up to requirements, because, though Government sanctioned additions to the supply, they withheld the grant of money necessary to pay for them. To quote his own words :—

'The amount of money available for the purpose of the Company from time to time depends entirely upon the provision in the General Budget Estimates of the Government of India and the allotments made therefrom, and for the last two years, owing presumably to financial difficulties, the amounts so provided or apportioned by the Government of India for expenditure on the requirements of the East Indian Railway have fallen short of the requirements of the Company, both for the provision of admittedly necessary works and accommodation to deal effectively with the increasing traffic, and also for the engines and rolling stock to move it.'

'This led to correspondence between the Indian Mining Association, the Chamber and Government, eliciting from the last a letter dated 4th October explaining the difficulties to which the present system led. I quote the following extract :—

'Such difficulties as may have been experienced are due to the impossibility of always ensuring that the actual disbursements on account of sanctioned indents shall coincide with the year against the allotment for which they have been certified. It takes a considerable time to obtain the stores required, and it would be of no use to set aside funds in a year prior to which it may be anticipated that the outlay will be incurred. Even so, it not infrequently happens that, owing to various circumstances, the supply is not obtained as early as anticipated, and in such cases the liability for payment has to be thrown forward to another year. It also sometimes happens, on the other hand, that articles are obtained earlier than was expected, and in that case an additional provision to meet their cost is demanded Difficulties of this sort, however, are obviously beyond the control of the Government of India, who have discharged their responsibility in providing funds according to the forecast of the railway authorities. They are to a great extent also beyond the control of the railway authorities, and, so far as that is the case, must be accepted as among the inevitable drawbacks of the system under which the funds required for railway expenditure are at present provided.'

"Now, my Lord, I do not feel competent to say how far the new system of accounts will mend matters. But I do not like those words 'obviously beyond the control' of Government, who have 'discharged their responsibility' and 'inevitable drawback.' The Hon'ble Sir Arthur Trevor last year admitted that the making of one desirable line was postponed because difficulty arose in finding money for the line within the programme. Will the new system prevent a recurrence of such an incident? As at present happens and as I understand will still be the case, the schedule for each official year which begins with April is prepared in October previously, although, as pointed out by the Agent of the East Indian Railway, it is in the very nature of a railway business that requirements of a pressing nature often declare them-

selves after the Railway has submitted its schedule. Surely this is wrong. Is there not still fear that railways will be again starved of funds when the country's cash balances are being eaten up by famine or war expenditure, and can we be sure that we are free of a system which weakens the chief power which the country possesses both for fighting famine and for making good the losses which famine causes to our revenue? I do not ask these questions with the view to advocating the spending of money on new railways, some of them in districts that are already furnished with lines of communication. The Hon'ble Maharaja of Durbhanga, for instance, last year drew attention to the folly of devoting funds to the extension of the hill sections of the Assam Railway which are not wanted and can only be a loss to the country, while money was required for the most elementary necessities of railways connecting the coal-fields of Bengal with the great industrial centres. But, my Lord, I am particularly referring to those existing and profitable railways whose further development is so important and who can show without any elaborate demonstration or estimates that they return a good percentage on every rupee which Government can borrow for them. May we now feel certain that Government will in future years provide fully for expenditure on the construction of profitable main line branches, and for the provision of suitable and sufficient rolling stock for main and branch lines which are immediately remunerative, undeterred by the claims of lines for military purposes and famine-reliefs, or by the claims of new railways for opening up new districts? The first class of railway work is so distinct in character from the others that it seems absolutely wrong to make it subservient thereto or dependent on what can be spared from the general revenues of the country. It seems to me the Public Works Department will in spite of the reforms made still be bound by hard-and-fast lines, for though in the new railway programme precedence is arranged on most unimpeachable lines, there appears to me nothing to prevent such precedence being absolutely upset by a recurrence of difficulties such as have been lately experienced. I fear that of late railways for the purposes of administration have swallowed up an undue portion of the funds which the Finance Department has been able to allot to the Public Works Department for railway works, much I should imagine to the disappointment of the Public Works Department, who know the urgent requirements of the open main lines. Hence the development of the railway system throughout the country has been delayed, and the trade of the country and the tax-payer are suffering. It therefore seems to me desirable that the financing of open main lines should not only take precedence but be wholly independent of the expenditure on railways which are not immediately reproductive, and whose rate of progress might fairly be made dependent on the country's general financial position, and I trust that the Hon'ble Financial Member will not cease to move forward till this end is reached. Separate borrowing powers should be granted to the main lines, and the fear of adversely affecting Exchange should not shake the determination of the Government to give the Public Works Department a fair chance and a free hand to help on as quickly as possible these developments. The main lines should be empowered to take advantage of all favourable offers of material and money. At present the Public Works Department have to spend the money as they get it, and the faculty of operating in the most opportune time in the material and money markets is denied them. It must be remembered that as the railway system extends and opens up new districts the traffic which is encouraged must cause a great increase in the demand for rolling stock on open main lines. We know that the East Indian Railway has been starved. It is probable that lines which are not so much in evidence suffer equally. The grain trade and many other trades are suffering; but it is sufficient for my argument to confine myself to the condition of the trade with which I am directly acquainted. At the present time steam coal is crumbling into dust at the wharves of every colliery on the East Indian Railway system. In America in such a situation a gigantic Wagon Company would at once spring into being and supply wagons to the railways, and traffic would force itself to the sea-board by new lines if the old could not deal with it. But we do not pursue American methods in this country. In England, colliery proprietors would have a ready remedy against the

railway by application to the Standing Commissioners under the Act; but in this country the Governor General in Council has the power to refuse to even constitute such a tribunal. Moreover, in the case of a railway whose policy and finance are practically controlled by Government, it is a question whether even if Commissioners were appointed the complainants would not be met by the plea that the railways are prevented from doing their duty by Government itself; and though I am advised that this plea would not avail the railway in view of the imperative nature of its statutory obligations, it would undoubtedly complicate the only method of relief which the public possesses—a relief which ought in justice to be ready and easy to the public as a set off against the monopoly which the railways possess. There seems to me no reason even in times of stress to limit the Public Works Department in their expenditure on works which are immediately reproductive.

"Finally, my Lord, I beg your leave to ask the Hon'ble Member in charge of the Financial Department if his Department hesitates to accede to the demands of the Public Works Department on the ground that the market within which the Government of India can borrow is limited, and that circumstances might arise which would make it incumbent on Government to borrow largely in order to maintain the gold standard fixity of exchange, and that the Financial Department regard the salvation of the gold standard as much more important than the development and proper working of paying lines of railway. Certainly such would not be the right way to face the position, for the gold standard will never be effective unless the export trade is carefully nursed, and to ensure this the people must not suffer through the incapacity of railways. Look at it in what light we may, free but not extravagant expenditure should be allowed on main open lines, and this will not be possible unless the money is specially borrowed, apart altogether from the general finances."

The Hon'ble RAI SRI RAM BAHADUR said:—"My Lord, the Hon'ble the Finance Minister is to be congratulated on presenting to the Council a Budget showing the finances of the country to be in a prosperous condition; and if no untoward circumstance happens the coming financial year will close with a surplus of £690,000. His predecessor, at the time of presenting the last Budget, had estimated the receipts at £70,155,800 and the expenditure at £69,995,500 leaving a surplus of £160,300, only. But better receipts from certain items of revenue (notwithstanding a considerable decrease in Land-revenue proper, on account of the Famine in Western and Central India) and large savings in certain heads of expenditure, notably under the heads of Army Services and Public Works, have swelled the estimated surplus from £160,300 to £1,640,000, or ten times the original estimate. A study of the figures relating to income and expenditure of the year which is about to come to a close leads persons like myself, who are uninitiated in the mysteries and ignorant of the system of the Finance Department, to come to the following conclusion. What I find is that the financial year 1900-1901, that is to say, the present year, began with a large surplus amounting to £2,774,623. The increase in the several items of receipt over the estimate is £2,395,000, from which, if we deduct £382,900 deficiency in Land-revenue, the net increase comes to £2,012, 100. Among the items of expenditure, then, there have been considerable savings in Army Services and Public Works, amounting to £1,185,000 and £118,000— total £1,303,000. The two items of expenditure in which more than the budgeted amounts have been spent are Famine Relief which accounts for an increase of £876,000 and 'Railway Revenue Account' £323 000. The Government borrowed £3,000,000 in England and three crores of rupees in India. If from these two loans we deduct four crores lent to the Native States and which will be repaid, there remains an addition of three and half crores to the permanent debt on account of the expenditure on the Famine, which cost the Government £4,245,000 only. This state of things shows that, notwithstanding the large surplus of the preceding year, the heavy increase in the items of receipt, and the considerable savings in certain items of expenditure, the Government did not or could not see its way to make a smaller addition to the permanent debt of the country than it has actually done.

"Coming now to the Budget estimates for the financial year 1901-1902, the

receipts are estimated to fall short by about £1,014,600, compared with those of the current year, and the expenditure is estimated to exceed a little less than by 4½ million pounds, two most important items being a little above 2 millions in the Army Services and a little over ¾ of a million on the Public Works.

"A crore of rupees has been provided for the Famine relief of the affected districts in Western India. The Government has announced its intention to make an addition of £ 2,240,000 to the permanent debt, of which two crores of rupees are contemplated to be borrowed in India. The necessity for adopting this course has been indicated to be 'to tide over the critical period of the 'earlier part of the financial year' when the revenue-collections are said to be much smaller as compared with monthly expenditure and the balances gradually diminish until the month of November, when the revenue-receipts begin to pour in. My Lord, if that is the principal reason for the loan, one naturally expects that, the necessity for such loan being of a temporary nature, no 'addition to our permanent debt should be made' on that account.

"My Lord, the past history of the Indian finances shows that there are mainly three potent causes which exercise a disturbing influence on the financial equilibrium of the country; these are frontier expeditions and wars, fluctuations in exchange, and recurrence of famines. Your Excellency's wise and farsighted policy has happily allayed apprehensions as to the first. The measures adopted in connection with the Indian Currency will, it is hoped, give stability to exchange; and no danger can for the present be possibly apprehended. With regard to the third, however, we are unfortunately in no better position than we were about a quarter of a century ago. Since then India has had to suffer from the ravages of no less than three great famines, each surpassing its predecessor in extent and intensity. The famine of 1877-78 caused the deaths of six millions of people according to official estimates. The one that occurred in 1896-97 was characterised by His Honour the present Lieutenant-Governor of Bengal as 'the greatest of the century'; while Your Excellency was pleased to remark with regard to the one which occurred only two years after 1897 as 'the severest that India has ever known'. Fortunately for the people of India, they had a Viceroy at the helm of affairs at this juncture who was as able as he was wise and sympathetic, and who with God's help succeeded in tiding over the difficulty in a manner which has elicited the admiration of the whole world. He fed six millions of people daily for months together at the cost of the State—a spectacle which was never witnessed within the memory of man and a feat which was never performed before. My Lord, the people of this country are under deep obligation to you for the measures adopted by Your Excellency's Government for saving lives from starvation, and they will ever remember it with heartfelt gratitude. Unfortunately, the days of India's misery are not yet over; for I find that, in the Budget for the coming year, the Hon'ble Finance Minister has provided for a sum of one crore of rupees, to meet the expenses of another Famine in the Bombay Presidency.

"The popular notion is that the annual drain in the shape of Home Charges to which India is subjected have great indirect effect on these frequent famines. But it is a large question and opinions are divided on the subject. I will not therefore enter into a discussion upon it. All I need remark is that it goes without saying that if the Indian Government can prevent the drain of India's wealth to foreign countries and retain the same here, then they will be in a better position to make the Indians prosperous than under the present circumstances; but whether or not it is possible to put a stop to these drains is more than I can say. It is, I believe, now admitted on all sides that India suffers more from famine of money than that of food. Food-grains are available in the country but the people have not the means to buy them. Any measure that may prevent India's wealth from being taken out of the country is thus most welcome.

"The official view is that it is the fitful rainfall or its failure that brings about famine. But other countries are also subject to freaks of the weather, and yet they are not overtaken by these calamities to the same extent as India. There is, however, no doubt that crops will fail if rains do not fall when they are wanted, or there is too much rain when sunshine is needed. Hence the duty of the Government is to provide for the storage of water; and I am deeply gratified to find that the Government have taken some practical steps in this direction. So

far as the opening of means of communication and providing highways in the different parts of the country for carrying food-grains in times of scarcity are concerned, the Government has done a good deal by constructing lines of railways.

"In my humble opinion, future famines may be prevented and their severity alleviated to a large extent by the adoption of the following measures:—

(1) distribution of takkavi or agricultural advances in time;
(2) establishment of technical institutes;
(3) establishment of agricultural schools;
(4) establishment of agricultural banks;
(5) light and permanent or long period settlements.

"(1) Takkavi advances are no doubt now made, but not in the way they should be done. The advances should be distributed as soon as the first symptoms of distress are visible and not when its pinch is actually felt.

"(2) One of the remedies pointed out by the first Famine Commission against the recurrence of famines is the spread of technical education and the establishment of industrial schools, so that facilities may be placed within the easy reach of the masses to learn handicrafts and to become good mechanics. Some such schools have, no doubt, been established here and there in India; but many more are required to attain the desired end. Besides, an institute for higher research like the one proposed by Mr. Tata of Bombay is absolutely necessary to enable the people to learn the higher branches of science and develop the resources of the country.

"(3) But India being pre-eminently an agricultural country, her wealth lies chiefly in the soil and the produce that can be raised from it. What is therefore urgently needed is to improve the present method and system of agriculture and teach the peasants how to make their fields yield more than they do now.

"The efforts of Government in this direction have not been of a far-reaching character. No effective steps have been taken to spread broadcast a knowledge of even the most elementary principles of agriculture among the masses, and the consequence is that the Indian cultivator uses the same implements of husbandry, and ploughs, sows and reaps in the same manner, as his ancestors did hundreds of years ago.

"A Department called the Department of Land Records and Agriculture has been established by Government in every Province. But the duties which that Department has to perform are multifarious. One of its functions, no doubt, is the supervision of the agricultural condition of the Province and the adoption of measures conducive to agricultural improvement. But from the results which have been produced it is clear that the discharge of this function has up to this time been considered of secondary importance only. The methods adopted by this Department towards the improvement of agriculture and diffusion of its first principles among the peasant classes, have not yet produced any fruitful results. The Department has got no machinery at its command through which it can diffuse instruction in the first principles of agriculture among the villagers, or give them advice on the seeds to be sown, crops to be produced, and manures having great fertilizing powers to be used. There is at present a paucity of men capable of carrying out such work. I venture to submit that, in order to improve agriculture in this country, the system of agricultural education like the one which prevails in the great countries of Europe and America, with necessary modifications, should be adopted, and primary schools to teach the first elements of practical agriculture to the peasant classes should be established in large numbers, as well as Agricultural Colleges to teach agriculture on a scientific basis and to turn out teachers for the primary schools should be opened in places where none exist now.

"That the people of this country enjoy the facilities for agricultural education to a very limited extent will be seen from a comparison of the number of institutions established in India with the number of such institutions to be found in some of the European countries and in the United States of America.

"In the year 1898-99 in Austria the number of primary institutions where chiefly practical agriculture is taught was 97, that of secondary institutions where students are prepared for agricultural service was 12, and that of higher

institutions in which the highest scientific knowledge of agriculture is imparted was 2.

"In the year 1898 in the German Empire higher education in agriculture was provided by agricultural institutes at eight Universities, by agricultural schools attached to three other Universities, and by three independent high schools, making a total of 14 institutions for higher instruction only. Besides the above there were 16 intermediate schools, 42 farm schools and 195 winter schools for imparting elementary and practical instruction in agriculture.

"Russia in 1898 had 3 higher, 8 intermediate and 109 lower schools.

"In the United States of America in 1899, there were 61 institutions in which agriculture was taught either exclusively or along with other subjects.

"India, my Lord, in this respect cuts a very poor figure indeed. We have only one Agricultural College at Saidapet in Madras. In Bombay, the Poona College of Science has an agricultural department attached to it. The Central Provinces have one school at Nagpur, and the North-Western Provinces one at Cawnpore. Recently one school has been established in Bengal and is located at Sibpur. My Lord, this completes our list, which all told comprises five institutions of all kinds for agricultural instruction in a vast continent like India, whose principal source of income is agriculture and where about 90 per cent. of the population are agriculturists.

"My Lord, there is another consideration also which attaches great importance to the subject of agricultural improvement in India. The improvement, if properly carried out, is sure to result in increasing the quantity and raising the quality of wheat and other commodities which can be exported to Great Britain, and thus place the first-named country in a position to look to her own dependency for the supply of her wants and not to foreign countries like Russia, America, etc At the Cawnpore Experimental Farm good cotton, far superior to the indigenous article, has been produced from seeds imported from America and other places. Samples of it were sent to the Bombay Millowners Association for examination, and a Sub-Committee of that Association pronounced a very high opinion in favour of some of them, and recommended their cultivation in larger quantities. They were of opinion that yarns spun from the fibres of some of those samples were quite suitable for producing textile fabrics of the finer sorts. Now, if proper steps be taken to induce the cultivators in the cotton districts to grow cotton of the quality recommended by the Bombay Millowners Association and proper help and advice be given to them, it is sure to be grown in time in very large quantities sufficient to be exported to foreign countries, and Lancashire need not in future be under any apprehension of her industries being threatened by American cotton corners.

"(4) In times of distress the agricultural classes have to borrow money at a very high rate of interest from the village-bankers and thus add to their poverty. The money-lenders cannot be blamed if they charge a high rate, for they risk much by their dealings with men who cannot give good security. If Agricultural Banks can be established in rural centres with the object of advancing loans to raiyats at a moderate rate of interest, that will be really a move in the right direction. But, as the subject is under the consideration of a committee of experts, I need not say anything more on it just now.

"(5) Another remedial measure which is sure to have a very salutary effect on the condition of the agricultural classes, and render them less exposed to the baneful effects of a season of drought and scarcity, is the exercise of moderation in fixing the share which the Government should take on account of land-revenue, and the permanent fixation of this share in provinces or parts of Provinces where circumstances may be found to justify the adoption of this measure. My Lord, in places where the maximum culturable area has been brought under tillage, there is no good reason for not permanently fixing the Government revenue. So far as the North-Western Provinces and Oudh are concerned, the majority of the districts have reached that condition. Means of communication have been opened in these districts, and no further development in this respect can be expected. The plea of a further rise in the prices of marketable commodities can no more have any force, because the usual prices at present prevailing in those localities are what formerly used to be regarded as famine-prices. The prices have reached their utmost limits, and

the expectation of any further rise in sure to meet disappointment. Under these circumstances the proper course for Government is to make the settlement of such places permanent. I venture to say that the landlords will not grudge to give to the tenants more permanency in their tenures, if once they are assured that the Government revenue on their estates will not be liable to future enhancement. The cultivators of the soil will thus have greater security of their tenures and will be enabled to make better provision for times of distress.

"My Lord, I am aware of the Secretary of State's despatch of 1883 on the subject of permanent settlement in the Upper Provinces. But I venture to submit that, in questions like this, the decision once arrived at should not possess the finality of a decree of fate, and, if a good and sufficient cause be shown for reopening of the question and its reconsideration, the Government will be pleased to give it a favourable hearing.

"If the Government do not find their way to reopen that question, they can at least extend the period of the existing settlement from (say) thirty to fifty years. The thought of revision of assessment at short periods hangs like the sword of Damocles over the landowner's head and does not give to him that peace of mind which is so necessary to enable him to improve his own estate and help his tenants in improving their condition.

"My Lord, there is another point in connection with the subject of the periodical revision of assessment of land-revenue which deserves particular attention. The different enactments on the subject do not contain any legislative limit of the minimum and maximum amount of percentage which the Government can take as its share of revenue out of the gross rental. The fixing of such limits is left to departmental circulars, which I do not consider to be a desirable course. Legislative enactments on the subject should fix such limits.

"There is one more point concerning this subject. Government has been imposing cesses and rates from time to time, and the landholder has to pay them out of the share of gross rental which the Settlement-officer pleases to leave to him. The number and amount of these cesses have reached such a limit that here should be a declaration made by the Government that no new cess will be levied in future, nor their rate be enhanced.'

"The next and last point to which I beg to invite Your Excellency's attention is the amount which the North-Western Provinces and Oudh are allowed to spend locally out of the revenues raised by them. This is a subject of great importance to my province. I would, therefore, crave the indulgence of Your Excellency's special attention to certain facts and figures in this connection which I shall mention later on. First of all, the sum allotted by the Imperial Government to the United Provinces for their provincial expenditure is not only inadequate, but does not bear a fair proportion either to the amount of revenue raised by the provinces or to the surplus contributed by them to the Imperial Exchequer. Then again, of all the provinces, the North-Western Provinces and Oudh pay the largest contribution to the Imperial Government. The result is that those provinces require larger allotments for education, administration of justice and other reforms which are so necessary to secure the advancement of the people and keep them happy and contented.

"My Lord, the North-Western and Oudh Government is rather in a disadvantageous position in regard to its financial arrangement with the Supreme Government. A look at the figures given in the Finance and Revenue Accounts of the Government of India for the year 1899-1900 will at once show such to be the case. This will be all the more vividly realized when a comparison is made with 'the important and wealthy provinces of Bengal, Madras and Bombay.' In order to make my case more clear, I give below a tabular statement (the figures having been taken from the Finance and Revenue Accounts referred to above) showing in its several columns the total revenues raised by Bengal, Madras, Bombay and the North-Western Provinces respectively (the totals of the several items of the Imperial revenue such as Opium, Salt, Customs, Tributes from Native States, Post Office, Mint, Railways, Receipts by Military Departments, collected by each province being deducted from the above); the contribution

made to the Government of India; the amount left to the Provincial Governments to be spent locally; and the percentages of the last two items on the net revenue. I have not taken into consideration, for purposes of this comparison, the figures for the Central Provinces, nor for 'Assam, the poor province with many wants,' nor for 'the young and rapidly progressive Province of Burma, nor for the Punjab, as all these provinces stand on a different footing.

Name of Province.	Total Revenue of all kinds collected by the Province.	Total of items of exclusively Imperial Revenue collected by the Province.	Revenue after deducting item in column 3.	Portion of Revenue specified in column 4 taken by the Imperial Government.	Portion of Revenue specified in column 4 left to the Province.	Percentage of Revenue specified in column 5 on that specified in column 4.	Percentage of Revenue specified in column 5 on that specified in column 4.
1	2	3	4	5	6	7	8
	Rs.	Rs.	Rs.	Rs.	Rs.		
Bengal .	22,39,15,233	12,00,56,159	10,38,59,074	4,98,03,591	5,40,55,483	47	53
Madras .	14,13,38,175	4,45,11,163	9,68,27,012	5,36,99,475	4,31,27,537	55	45
Bombay .	13,57,03,045	6,32,89,752	7,24,13,293	2,65,48,008	4,58,65,285	36	64
North-Western Provinces and Oudh.	12,74,82,628	2,05,50,971	10,69,31,657	6,04,02,038	4,65,19,619	57	43

"A study of the figures given in the above tables shows that 'rich' Bengal paid only 47 per cent. of her revenue to the Imperial Exchequer, Bombay 36 per cent. (something might be said in favour of Bombay for this special year), Madras 55 per cent., while the North-Western Provinces and Oudh had to pay 57 per cent., having only 43 per cent. left to them for provincial expenses. Our Local Government have repeatedly made representations to the Government of India on the inadequacy of the allotment made to them for their provincial expenditure. When the former quinquennial contract, which terminated with the financial year 1896-97, was about to come to an end, and the terms of the contract at present in force were being settled, the Local Government again pressed their claim for an increase in the allotment for expenditure made to them. The inadequacy of such allotment was admitted by the Government of India and provision was made for allowing the Provincial expenditure on a more liberal scale, by fixing it at 342½ lakhs of rupees, *i.e.*, 22½ lakhs above the figures of the contract of 1892.

"The quinquennial contract having expired at the end of the financial year 1896-97, a new contract for the same period would in the usual course have been settled to come into force in 1897-98; but, as the United Provinces were at that time in the midst of a great famine it was thought that any calculations then made could not have formed a reliable basis for fixing the standards of income and expenditure for future years, and it was therefore decided that for that year a working arrangement was to be made to remain in force for one year only. In the next year contractual relations between the Supreme and Local Governments were renewed, and in March, 1898, a contract for two years was settled, the arrangements for provincializing certain items of income and expenditure, and for dividing others between the Imperial and Provincial Governments, remained with one exception, the same as in the quinquennial contract which expired with the financial year 1896-97; the one exception being an alteration in the old arrangement for sharing certain items of revenue arising from Irrigation. I shall show later on what effect this alteration produced on the Provincial finances.

"It appears that, before the expiration of the biennial contract just mentioned, the Local Government in 1899, with the view of securing more advantageous terms for the future, approached the Government of India on this subject, and the latter Government took into consideration the question 'whether '(1) revised figures should be settled for the years 1900-1901 and 1901-1902 'for the heads of revenue and expenditure treated special in the current Provincial 'settlement with the Government of the North-Western Provinces and Oudh, or '(2) an entirely new settlement to last for five years from 1st April, 1900, should

'be made in respect of these heads.' In considering the above question the Government admitted the fact that 'there has been an improvement of revenue 'under some of the excepted heads which might justify some increase of the 'figures adopted under those heads,' but came to the decision 'to let the figures 'taken for the years 1898-99 and 1899-1900 stand for the remaining two years 'of the current Provincial settlement'.

"From the above it is therefore clear that the existence of the necessity for re-adjustment of certain heads of revenue, and for re-fixing the proportionate shares which the two Governments should get in those heads, has been recognized by the Government of India.

"With Your Lordship's permission I shall now refer to two departments of administration to show how they are affected by the insufficiency of the sums allotted to the Local Government of my province for Provincial expenditure. Our Local Government has no alternative but to spend a much smaller sum upon education than the Governments of other provinces.

"In the year 1899-1900, out of the total sum of Rs. 4,52,46,355 spent by Bengal in the items of Provincial expenditure, Rs. 40,43,682 were spent on Education, giving a percentage of 8·8 per cent. on the total expenditure. Madras spent Rs. 3,90,10,064 on Provincial items of expenditure, devoting Rs. 28,30,087 to Education, which gives a percentage of a little over 7 per cent. on the total expenditure. In Bombay the total expenditure under the Provincial heads was Rs. 4,88,50,342, the sum spent on Education Rs. 34,44,507, thus giving a percentage of a fraction less than 7 per cent. The North-Western Provinces and Oudh occupy the lowest position, their total expenditure on all heads being Rs. 3,59,53,332, and that on education being Rs. 23,51,531, giving a percentage of 6·4 only. The educational wants of the United Provinces are several. Some of the higher educational institutions are in need of greater and better means for teaching Physical Science. The Medical School at Agra, which at present teaches up to the Native Hospital Assistant standard, requires to be raised to the status of a college which can teach up to the M.B. and M.D. degrees, and turn out students qualified as Assistant Surgeons. The establishment of an Agricultural College, and the addition to some of the schools of tuitional staff to give lessons in practical agriculture, as well as the establishment of additional institutions suited to impart technical education, are other educational wants of the United Provinces.

"The judicial administration is another branch which requires strengthening. The state of business, increase of work, as well as the nature and value of the cases, and the important points involved in them, call for the permanent addition of a third Judge to the highest appellate court of the province of Oudh, and also the raising of that Court to the status of a Chief Court—a measure most urgently desired and needed by the people of that province.

"There are other branches of administration which require reforms and improvements, and, if Your Excellency's Government will be pleased to take the claims of the Provincial Government into favourable consideration and increase the amount allotted for Provincial expenditure, they will be placed in a position to remove the wants above described.

"My Lord, I will now cite two specific instances to show how the partnership, if I may be permitted to use the expression, entered into between the Government of the North-Western Provinces and Oudh and the Supreme Government has turned into something like a friendship formed between the dwarf and the giant. Indeed, the Government of India have not only taken the lion's share of the profit, but something more. I doubt not Your Lordship's generous heart will sympathise with the condition of the United Provinces when the disadvantages under which they have been placed are described.

"After the introduction of the Provincial contract system, in the eighties, the Local Government, by the observance of very rigid economy in every branch of administration, and perhaps at the sacrifice of several useful works, accumulated a balance of a crore of rupees from their savings. The Government of the day, with a view of securing an assured income, which they thought would be left at their disposal, applied that accumulation to the construction of certain railways. These railways have proved very profitable and have substantial income at the present time. But after their completion the Government of India, for reasons not known to the public, took over these railways into their own hands in 1892;

and their income, instead of going into the local exchequer, has since been appropriated by the Imperial Government. The Local Government has thus been deprived of its crore, which it had saved at such sacrifices. I submit, my Lord, that it is fair that either the profit of the railways should be given, or an equivalent increment in the Provincial allotment should be made, to the Local Government.

"My Lord, I have said before that the temporary arrangement in 1897-98 was followed by a two-years contract in 1898-99, and a change was made in the old arrangement for sharing certain items of revenue under the head of Irrigation. The alterations in the terms of sharing the Irrigation revenue were made with the view of benefitting the Provincial Government. But these changes, instead of doing any good to the Provincial exchequer, have proved otherwise. I give below in a tabular form the amount of revenue arising from Irrigation under the different heads, the expenses which are borne by the Imperial and Provincial Governments in connection with those heads, and the profit or loss to the two Governments. These figures are for a period of three years previous to the present settlement coming into force, and for a similar period after its enforcement. The figures for 1900-1091 are not the actuals, but are taken from the Budget Estimates, which alone are available. A glance at this statement will disclose the startling fact that the Local Government has been losing a large sum in this bargain.

1895-96.

"Now the present arrangement with regard to the Irrigation-works in my province is as follows: (1) the Local Government should pay interest at 4 per cent. to the Imperial Government on the total capital outlay from all sources; (2) the Local Government should get only half the net direct receipts from major productive works, and the whole of the direct receipts from minor irrigation-works; (3) the Government of India should get half of the net direct receipts from major productive works, 4 per cent. interest and the total land-revenue due to irrigation.

"The working expenses are however heavy and the minor irrigation-works have no profit, and as the Government of India would not remit a pice of the interest, so the arrangement has proved, as I said, injurious to the Local Government. A study of the table of figures which I hold in my hand and which I have given above will show what I mean. These arrangements have been in force since the last three years. Let us begin with the year 1898-99. In that year we find that the Government of India secured a solid income of Rs. 35,52,578. But what was the gain of the Local Government? Why, it lost Rs. 7,84,662 by the bargain! Similarly, in the following year, the loss of the Local Government was Rs. 6,46,679. And when the accounts for the present year are closed it will be seen that in this year also the North-Western Provinces Government has suffered a similar loss.

"My Lord, I have barely stated the facts as I have found them in official papers, and it is for Your Excellency to dispose of the matter in the way Your Lordship deems fit. In my humble judgment, the fair course in regard to this irrigation question is that the India Government should give up their claim upon the net direct receipts from major productive works and land-revenue due to irrigation, and be satisfied only with the 4 per cent. interest paid on the total capital outlay. Otherwise it would be a great mercy shown to the Local Government if it were relieved from the charge of these irrigation-works, if the present arrangements cannot be altered.

"My Lord, the contract now in force will terminate at the close of the next financial year. The revision of its terms and settlement of the next quinquennial contract will most probably come under the consideration of Your Excellency's Government some time in the course of the financial year which is to begin four days hence, and before the next Budget debate. It is submitted that, at the time of settling the terms of the future contract, due regard should be paid to the claims of the United Provinces to have a more liberal allotment for their Provincial expenditure.

"My Lord, in addressing Your Excellency's Council on this point, I consider it my pleasant duty to acknowledge, on behalf of the United Provinces, the liberal and unstinted financial help which the Imperial Government gave to them during the famine of 1896-97, and the readiness with which the Imperial

Government extended a helping hand to the Local Government in restoring the Provincial finances to their equilibrium."

The Hon'ble MR. SMEATON said :—" My Lord, my remarks will be very brief, and will be chiefly concerned with Provincial finance; but before I touch upon that I have just one word to say with regard to an Imperial matter. I congratulate the Hon'ble Financial Member on the exceedingly lucid exposition of a successful year's finance, and notably upon the addition of a new chapter to the statement under the name of Economic Progress. It is a new and a very welcome feature of the Statement, and I hope it is to continue to be a conspicuous feature in future Statements. The Imperial matter to which I wish to draw attention is connected with the circulation of currency notes referred to in paragraphs 93 to 100 of the Statement. Any careful observer must have noticed how confidence in the currency note has increased and how its circulation is also steadily increasing, and I entirely agree with the remarks of the Hon'ble the Financial Member in paragraph 98, in which he says: 'I am, however, strongly of opinion that if the use of currency notes became more general, and larger amounts were held in circulation, the percentage of rupees required to meet demands for encashment would be considerably less than that which is required to-day, when unfortunately the circulation of notes is still hampered by the fact that the holder of the note cannot be assured of converting it into rupees at the Treasury, and is therefore willing, and sometimes obliged, to dispose of his note in the bazar, at a discount.' This I think cannot be disputed. But when we come to the second of the two tables given in paragraph 99 and to the remark in paragraph 100 to the effect that 'the above tables show a decided and satisfactory increase in the average note circulation in the hands of the public,' I venture to think that these words are somewhat misleading. These currency notes are concentrated in the vaults of 267 District Treasuries and in some 1,500 Sub-Treasuries. I do not think that this can be held to be 'in the hands of the public.' I should be inclined to suggest, if I may do so, that perhaps it would be more correct to say that the last column of the second schedule indicates 'an approximate ratio of the increase of circulation.' It is very difficult at any time to estimate the amount of the note money in the hands of the public, but these figures will show the approximate ratio in which the increase of circulation is proceeding.

"And now in regard to Provincial finance. I am very sorry, my Lord, to have to revert to that old and fatiguing subject—the Burma salt. We have had enough of that already, but I really must enter my protest against two remarks which have been made in the Statement and which will be found in paragraphs 19 and 157. The Hon'ble the Financial Member appears to be somewhat dissatisfied with the revenue from the Burma salt. I think that, considering the amazing progress under the other heads of revenue, it is a little hard, even if there had been some reason for it, that we should be found fault with for a small deficit in one year. I will now proceed to explain how the deficit has occurred and to exculpate the Provincial Government from the blame which the Hon'ble Financial Member attaches to it. There is a deficit no doubt in the year that is just closing, and there will be a slight deficit in the year that is now about to open. But, my Lord, what is the reason? It is chiefly in imported salt that the deficit occurs; but that has been caused by the large import of Madras salt which already paid duty in Madras. If the salt which comes to Burma from Madras in large quantities has paid revenue in Madras, it cannot pay it in Burma; the Government cannot eat its cake and have it still; hence the deficit, and I hope that this explanation will be taken as an adequate one. With regard to this matter I said the last word I had to say last year and I will not repeat my arguments. But it seems to be clear that the Hon'ble Member and the Financial Department are looking forward longingly to the eventual extinction of the Burma local salt-industry. Well if it is to be so, I would ask on behalf of the people that the process of extinction be gradual and as merciful as possible; and the plea for this is strengthened, my Lord, by the remarkable fact that Burma pays now in its general revenue, per thousand of the population, six times more than Bengal, three times more than Bombay and Madras,

four times more than the North-Western Provinces, four or five times more than the Punjab; and I think that, if these large contributions are considered, the little deficit in Salt, even if it had been a real deficit—which it is not—will appear a small matter. And, moreover, Burma makes hardly any drain, as Your Excellency knows, on the Imperial finances for famine, and is of incalculable value as a storehouse and feeding ground for the rest of India. I make no complaint of excessive taxation notwithstanding these very large contributions; for I know, having been the guardian of these finances for some years, that the resources of the province are equal to the demand and that the burden is fairly equitably adjusted. I admit that, but still there is a limit to the extraordinary expansion that is now witnessed in the direct taxation of Burma, particularly in the land-revenue, and I would solicit Your Excellency's attention to the necessity of caution and moderation in taxing the land and to the wisdom of endeavouring to develope the indirect sources of revenue, such as forests and minerals. We know these exist, but they have been lying for centuries idle and only now are being tapped to a very infinitesimal extent. They are the most promising resources in Burma, and I would ask the serious attention of Your Excellency's Government to the necessity of doing everything that is possible to encourage and develope these resources.

"Last year, my Lord, I had occasion to mention, at the instance of Sir Frederick Fryer, the need of a reinforcement of the forest superior staff, and the reasons which the Lieutenant-Gevernor gave were, I think, very strong indeed. He showed that for every increase of that staff there would be a very large proportionate increase of revenue, and he now begs me to point out that owing to the deficiency in the superior controlling staff the forests are not being adequately worked, and such as are being worked are not being economically worked. He asks me to point out that, for instance, in the estimate for 1901-1902 the revenue to be derived from the forests is 77 lakhs of rupees; the expenditure probably will be 31 lakhs of rupees; and the nett surplus will be 46 lakhs of rupees. These forest-revenues are capable of almost indefinite expansion; and so I think there is a very strong case indeed for the reinforcement which Sir Frederick Fryer so earnestly desires. Last year a promise was given that there should be this reinforcement. The promise was given, but I understand it has not yet been redeemed. I would ask that this matter be taken into consideration as early as possible, and that in addition to this the long delayed Forest Bill may also be expedited.

"The surplus, my Lord, of the Provincial revenues, as the Hon'ble the Financial Member points out, is large. He says in paragraph 270: 'The Provincial revenues of Burma are in a most prosperous condition. The revenues have increased very much above the standard of 1897, and the Lieutenant-Governor is in the fortunate position of finding difficulty in usefully spending all the funds at his disposal.'

"The Lieutenant-Governor very wisely resolved to attempt to utilize his very large balances in the construction of a Provincial railway, not connected with the Burma Railway Company—a Provincial railway which shall tap the central part of the Southern Shan States—a railway which has long been expected and anxiously looked for by the people of the Shan States, and one which will do very much to stimulate agriculture in these fertile plains. Your Excellency in the Public Works Department has sanctioned a survey of that line. I hope that when the survey is completed early sanction will be given to the prosecution of the project; and I will add in conclusion, seeing that such a promising project is in hand, that I hope the Hon'ble Financial Member, when the time for the provincial settlement comes round, will make it as liberal and as generous as possible."

The Hon'ble SIR ALLAN ARTHUR said:—"My Lord, I would join the other Members of the Council in congratulating the Hon'ble the Financial Member on the satisfactory condition of the finances of India. To the fixing of the rupee is no doubt to be ascribed in great part the comparative ease with which India can recover from an apparently staggering blow, such as last year's famine; and I venture to think that in a very few years, unless something unforeseen occurs, the Government of India will be able to show a steadily

increasing surplus. I should like to make a few remarks on some points which have occurred to me in studying the Hon'ble Member's highly interesting Financial Statement.

"The first point I would notice is in paragraph 47, in which it is stated that it has often been urged that the relatively high rates of discount prevailing in the busy winter season are due to the low figures of Government deposits with the Presidency Banks during that season. This is not exactly what the banking and mercantile communities urge. Their point is that the Government deposits are much the same all the year round and are not increased sufficiently in the busy season. The busy season comes on concurrently with the season when withdrawals from the circulation to meet Government demands are greatest; and what leads to the relatively high rates of discount in the busy season, apart from the question that more rupees are required to finance the trade of the country, is the fact that a large portion of the circulation is locked up in the Government coffers, just when it is most wanted. To the figures showing the Government deposits with the Presidency Banks, which the Hon'ble the Financial Member has given on page 7 for the months of December to March to prove his case, I have added the figures for April to November to prove my case, although my figures do not correspond with the Hon'ble Member's. He, I think, gives the figures for the last week of each month, when the Government deposits with the Banks are raised to meet the large demands for salaries, etc., in the beginning of the following month; and consequently he shows—quite inadvertently I believe—greater liberality than there has in fact been. The figures I give are the *average* Government deposits with the Banks in each month. The figures are as follows:—

Average Government Deposits with the Presidency Banks during each of the following months, in lakhs.

	1897.	1898.	1899.	1900.	1901.
	₹	₹	₹	₹	₹
January . .	255	275	270	248	264
February . .	277	272	280	258	287
March . . .	306	316	327	271	...
April . . .	331	344	342	272	...
May . . .	216	327	337	262	...
June . . .	264	319	334	257	...
July . . .	241	307	347	287	...
August . .	250	325	314	255	...
September . .	195	302	272	267	...
October . .	204	299	264	241	...
November . .	219	288	235	231	...
December . .	251	242	239	246	...

"I think that these figures when compared with the variations in the total Treasury balances, which I shall shortly place before the Council, completely support the contention of the commercial community not that the Government keep their balances with the Presidency Banks low in the busy season, but that they do not increase them sufficiently in that season. In paragraph 49 the Hon'ble Member admits that the Government of India are not unmindful of the advantage to the business community of placing comparatively large balances at their disposal during the busy season, and I trust this solicitude will be shewn more markedly in future years than it is shewn by the figures which I submit to the Council. I understand that it is held in some quarters that, if the Government balances were markedly increased in the busy season, sales of Council bills would be affected; but the sales of Council bills, like the net imports of specie, will always be regulated in the long run by the balance of foreign indebtedness. The Government of India, by locking up excess amounts of money in the busy season, will probably force the Exchange Banks to enlarge their purchases of Councils and their imports of specie for a time; but the effect will be temporary, as the balance of indebtedness is the ultimate regulator, and there is a danger that later on, when the Government reduces its lock up of money, the currency will be found superabundant. Our Financial authori-

ties have on various occasions hesitated to coin rupees for fear of creating a redundancy of currency; but nothing is more likely to lead to excess imports of currency and to a redundancy than this dog-in-the-manger policy of locking away an excess quantity of rupees in the busy trade season.

"In paragraph 46 the Hon'ble the Financial Member, in deploring the non-existence of a Financial institution sufficiently strong to lend the Government money at all times for short terms as they may require it, seems to overlook the great differences that at present exist between the rates of interest in the busy and slack seasons, and also between the cash balances of the Presidency Banks at these two periods. The position is that the Hon'ble the Financial Member wants a strong Bank to lend Government money from August to November, and the commercial community want Government to hoard less money during the busy season, January to April. If the Government will comply with the request of the commercial community by increasing the Government deposits with the Banks from January to April, the Banks will, I am sure, be happy to make over a corresponding amount to Government from August to November. At all events, an arrangement such as this might be attempted, and I attach some tables to show how mutually advantageous such an arrangement would be:—

"*The closing cash balances of the Government Treasury for each month of the year undernoted.*

1901.

January—610 February—554

"The rate of interest is usually much lower during the second half of the year than during the first half, and one reason for the discrepancy is that the Bank cash balances are low when the Treasury balances are high. From the

foregoing figures it will be observed that the average balances for the year 1897 to 1900 were as follows:

	Treasury Balances. Lakhs.	Presidency Bank Balances. Lakhs.
January to April	1,336	494
August to November	1,060	634

"The Banks can spare money when Government are in special need of it, and Government lock away excess sums when the Banks are drained by the seasonal trade demands; and yet the practice of Government is to maintain a steady balance with the Banks all the year round.

"Before leaving this part of the subject, I would remark that the Hon'ble Member's apparent desire for a large Central Bank seems to be not so much to assist trade as to save the situation for the Government during the autumn, when the state of the Treasury balances is such that the Secretary of State is unable to offer his bills freely. But thanks to the amendment of the Gold Note Act introduced by the Hon'ble Member, a stoppage or curtailment of Council bills need no longer hamper trade, provided an ample stock of rupees is maintained in the Paper Currency Reserve, because drafts can be issued under that Act and silver can be shipped to India to meet the drafts with ease and promptitude. It should surely be the business of the State to see that they are always in a position to sell either Council bills or gold note drafts so as to avoid disturbance in the Indian money market. It is in their own interest to do so, otherwise the Exchange Banks must finance their operations by the importation of sovereigns, which have so far proved anything but a blessing to the Government of India in the working out of their currency policy.

"I now pass on to paragraphs 81 and 83, from which I am glad to see that the Government intend to invest the profits on the coinage of rupees in a special fund, which will no doubt immensely assist them in maintaining exchange at 1*s.* 4*d.* It is unfortunate that circumstances have occurred which have made it impossible to remit the whole of the profit already made to London and to invest it; but I would submit that in future the profit should be remitted as made; otherwise, if it is accumulated, the amount when remitted will practically go to swell the amount which the Government of India has to remit to London; and in a year when the balance of indebtedness is less favourable to India than usual, there might be some difficulty in selling the full amount of Council bills.

"From paragraphs 84 and 85 and 88 to 91 it is not quite clear whether the Hon'ble the Financial Member intends in future that the imports of gold and silver for coinage purposes will be regulated in response to the demands of trade as indicated by the proportion of gold to silver in the Paper Currency Reserve, or by some arbitrary amount fixed by the Financial Department. It has been the practice in the past to postpone the regulation of the respective quantities of gold and silver in the currency until excess amounts of sovereigns reached India, and it is doubtless this policy which has brought about the undue proportion of gold to silver in the Paper Currency Reserve. Lately the Secretary of State has reduced his rate for Council bills so as to compete with the import of sovereigns into India, and it is to be hoped that the authorities in London will, when necessary, substitute drafts under the Gold Note Act for Council bills when sales are necessary to put a stop to imports of gold which are shown to be superfluous by the proportion of gold to silver in the Reserve.

"The Hon'ble Member says there are practical difficulties in the way of any attempt to stereotype such a system by legislative enactment; but if one metal can be imported by automatic process to the precise extent required, and if the Secretary of State can substitute the flow of the one metal for the other whenever the Paper Currency Reserve indicates that the change is desirable, it is not clear what difficulties could arise, and it appears highly desirable that the procedure for regulation of the coinage of rupees as well as for the setting aside of the profits on the coinage of silver should be enforced by legislative enactment.

"My Lord, I agree with my Hon'ble friend Mr. Smeaton that a very admirable innovation in the Financial Statement is that part of it dealing

with the economic progress of India. It is not apparent to what extent the Hon'ble Member desires to claim credit to the Government for the progress he shows; but there are many people who think that Government might have done much more than they have done, and that progress is remarkable in spite of a somewhat lukewarm attitude on the part of the authorities as regards many questions. There are not wanting signs, however, that a greater sympathy is being shown by the Government in regard to many matters, and I am particularly glad to note that the Hon'ble Member is of opinion that the question of economic development is one in which those responsible for the financial situation must take the keenest interest. I would direct my Hon'ble friend's attention to a few weak spots still demanding attention, *viz.*, the scarcity of railway wagons not only for transporting coal from the Bengal coal-fields to the sea, but also in nearly all parts of the country; the comparatively meagre support which figures show is given by the Government to local industries; the obstruction which is shown to private enterprise in the matter of the assistance private enterprise may render Government in the construction of railways; and lastly we have our old friend, the highly expensive telegram to Europe, which, notwithstanding that its reduction was declared by the Government of India to be a measure of Imperial importance so far back as 1893, continues, like Tennyson's brook, its monotonous and defiant song of 'I go on for ever.'

"My Lord, I understand that considerable latitude is given to Members of the Council in respect of the subjects on which they may speak on Budget day, and I propose to avail myself of this latitude to make a few remarks on a question which is not a financial question. If it were regarded as such, and the financial screw applied, it would benefit not only the finances of the country but also the dumb creatures for whom I should like to say a word. From all parts of the country one hears that the destruction of the wild animals of India, even in forest-reserves, goes on at an appalling rate; and I cannot think it inappropriate to draw attention to this important subject in the first Council of the land on the only day of the session when Members may speak freely without restricting themselves entirely to the point brought up for discussion.

"From Travancore I have particulars of a low caste man, originally a tea-garden coolie, who has supported himself and his family for many years and saved money by shooting game and selling the flesh to tea-estate labourers, sparing neither cow nor calf, hind nor fawn, all coming alike to him. I hear of two hills in Mysore, once swarming with ibex, where not one of these beautiful animals is now to be seen. From the Satpura Range, the scene of that charming book *Seonee*, come reports of the reckless slaughter of cow bison, of hind sambhur and of deer of every description. Near Agar, where there is no restriction as to the possession of guns, every man who carries a gun shoots every sort of game all the year round, without respect to sex or season. The Government of His Highness the Nizam of Hyderabad not long ago issued a very excellent set of rules to prevent the destruction of game in his dominions. The difficulty of finding game in Cashmere is too well known to require demonstration. On the Nilgiris, it has been found necessary to form a Nilgiri Game Association, and from other parts of India one can get innumerable instances and convincing proof of the cruel and wanton destruction that is going on. Unless something is done to check the evil, the wild animals of India will soon become practically extinct.

"It may be urged that an appeal to preserve the wild animals of India is made for the sportsman only; but it must not be forgotten that all animals are created for a purpose, and the folly of indiscriminate slaughter is only too apparent.

"If certain birds, which are eager insect-destroyers, are killed, the crops suffer by reason of a plague of insects. If the usual food of the tiger, such as deer, pig and so on, are wantonly destroyed, the tiger by the inexorable law of nature must find some other victim, probably the village-cattle, not infrequently the villager himself. If it is necessary that a large number of wild animals be killed in famine years to provide food for the people, the killing should be done with system and in moderation; otherwise, when another famine comes, there will be no wild animals left owing to the slaughter of the young and of females. It should surely be possible to find a remedy for this state of things.

"After the experience of the past session, it seems undesirable to press for fresh legislation on any subject, but the only remedy for the evil I have pointed out would appear to be in legislation. I should make every European or Native alike who wishes to shoot game take out a license to do so, and among other things I would make the globe-trotter pay a heavy export-duty on every trophy that he buys and that he cannot prove to have been shot by himself. Care should be taken not to deprive the cultivator of his legitimate means of protecting his crops from the ravages of wild animals. But it is not the cultivator who is the butcher. The butcher who sits over the drinking places and slays even a female in young, is the man to be got at. What would probably meet the requirements of the case would be a skeleton Bill on the lines of the Mines Act, which the Native States should be invited also to pass into law, and in the Bill the fullest powers should be given to local authorities to make laws and regulations for the correction of the present abuses, including the netting of game, and for, among other things, fixing close seasons. Above all, the basis of the Act should be the protection and preservation of tender age and of the weaker sex. If anything is to be done to prevent one of the great charms of Indian life to Indian and British sportsman alike from becoming a memory of the past, it should be done quickly. My Lord, I am told on good authority that in some parts of the country the people themselves are beginning to recognize and regret the folly and license they have permitted themselves in this indiscriminate slaughter, and they would be less than human if they did not welcome a measure that will bring them back their friends of the jungle."

The Hon'ble RAI BAHADUR BIPIN KRISHNA BOSE said:—"My Lord, before submitting the remarks I have to make I beg to say a word about what the Hon'ble Mr. Sri Ram has said regarding the revenues of the different provinces not being properly distributed for purposes of expenditure. He apparently forgets that the different provinces are not like independent kingdoms standing by themselves. They form integral parts of one great Empire. There are some backward provinces which have not the same revenue as the richer ones, and in order that all may have an equal chance of prospering it is essential that the poorer provinces should be treated more liberally than the richer ones. To lay down one cast-iron rule of proportion or any other rule of that character applying to all alike, rich and poor, thriving province and backward province, will be to accentuate, if not to perpetuate, the backward condition of the backward provinces.

"I join in lamenting with the Hon'ble Sir Allan Arthur that the railway now and then fails to respond to the demands on it. In the height of the famine in the Central Provinces, the price of food-grains was going up by leaps and bounds for several weeks because the railway was unable to supply sufficient rolling stock to carry the grain that the merchants were ready and willing to pour into our distressed tracts.

"In summing up the economic situation, reference was made to the satisfactory character of the evidence of recuperative power except in some unfortunate territories affected by temporary difficulties. I grieve to say that the day when the troubles and tribulations of the people of the Central Provinces will be over is not yet within sight.

"The official year about to close opened there badly. Following upon an almost total destruction of the kharif, the rabi of 1900 was, under the blighting influence of the terrible drought, even worse than that of 1897. Some idea of the heavy loss which this entailed may be formed when it is said that the export of wheat from 1st October 1899 to end of April 1900 was less than one-eighth of the quantity exported during the corresponding period of the last normal year we had, namely, 1893-94. How completely the crops were destroyed would further appear from the fact that, whereas in a normal year the value of imports of food-grains into the province is under six lakhs, in 1899-1900 it rose to 205½ lakhs. The vast quantity represented by this figure was almost wholly paid for with the money given by Government as famine-relief. The miseries resulting from these grievous crop-failures were aggravated by a considerable destruction of plough-cattle. Even before the hot season of 1900, about two lakhs of them had

perished. The export of hides and skins during the year ending 31st March 1900 was 162,000 maunds, which is three times the quantity exported in 1893-94. But when the account of losses comes to be finally made up, it will be found to be more serious than what is indicated by the above figures. For, even in a normal year, it is just after the rains begin that the cattle, half-starved and hard-worked in the hot season, largely die, and this mortality must have been exceptionally high during the rains of 1900, when the conditions were very much more unfavourable than in an ordinary year. Besides, the belated monsoon made matters worse. The returns of rail-borne traffic during the half-year ending 30th September 1900 show that the exports of hides and skins during this period reached the enormous figure of 1,31,000 maunds. The effect of these misfortunes was painfully apparent in the unprecedented rise in the numbers on relief, a rise which was more than maintained in spite of the stiffening of the conditions of relief. In the spring of 1900, for the first time in the history of famines in the province, cultivators who had once seen better days were driven in considerable numbers with their womenfolk and children to seek refuge from starvation in the relief-camps, to labour and live there with people who sweep the village-sites and eat the flesh of dead cattle. Another sad feature of this famine, bespeaking its terribly severe character, has been the loosening of the bonds of caste. I speak not without painful personal knowledge when I say that severe privations were silently put up with as long as there was anything of value left which could be turned into food. But a time at last came when the only safety from the agony of death from hunger lay in accepting State relief. In these melancholy facts mainly lies the explanation of the high percentages on relief, a circumstance which formed the subject of some discussion last year. The highest percentage of people who might have eked out a miserable existence otherwise than by coming on relief was put at ten by some of the witnesses before the Famine Commission at Nagpur.

"The monsoon of 1900, though late, burst upon the country in a steady downpour, and this enabled the people to sow a large kharif area. But in spite of 25 lakhs most generously given as *takkavi* from the public funds and 18 lakhs as gift from the noble charity fund inaugurated by Your Excellency, so great was the loss of resources, that the area sown could not have been much above what was needed for the food of the people. Complete figures are not yet available, but I find that the exports of rice, the principal kharif, from 1st October 1900 to end of February last was 3,21,000 maunds, which is a little less than one-third of the exports in the corresponding period of 1898-99, which itself was not a very favourable year. At the same time the imports of food-grains continued to be large, thus showing that the local produce (after setting off exports) was not enough to meet local wants. The imports from 1st April to 30th September 1900 aggregated as much as 67 lakhs of maunds. But while the kharif gave them their food the hopes of the people to recover the ground lost lay in the rabi. Here, however, and it is most unfortunate, they have met with heavy disappointment. Proper cultivation of rabi was interfered with in several places by heavy rain in August and September and the absence of the *Dewali* showers, which soften the ground for sowing and help germination. Nevertheless, when I left the province in the middle of December last, the people were looking forward to a fair outturn. But the untimely rains since then, accompanied as they have been in some parts by destructive hail-storms, have changed the situation for the worse. It is estimated that the outturn of wheat will not go beyond a third of a normal outturn on a normal area and that of linseed beyond one-fifth. In two districts, which were very hard hit last year, all the spring crops, except wheat, are said to have been wholly ruined. Then again, unlike what happened in 1897, when the prices went down as soon as the famine conditions ceased, the prices this year never regained the normal rates. Indeed, they touched famine figures in many places. Since the new wheat and gram have begun to come to the market within the past ten days or so, the rates have become somewhat easier. The future is full of anxiety both for the people and the Government. I am afraid when the harvesting of rabi will be over and the employments in the fields cease, it may be necessary to start relief in some parts of the province.

"I gratefully acknowledge that proceedings with a view to lighten the

burdens on land and thus facilitate the progress towards recovery have begun. The ten to twelve years' settlement in Bilaspur and Raipur will expire in June next, and the proceedings set on foot last year for a revision of the assessments are, I understand, in abeyance. Considering how hard these two districts were hit during the recent famine and how even this year their rabi has failed, I hope and pray that, when the settlement-operations will be taken in hand again, it may not be with a view to further enhance the total assessment, but, to adopt the language of the Hon'ble Mr. Ibbetson, to redistribute the burden of rent and revenue which might have become unequal during the last twelve years under ordinary circumstances and still more so under the depressing conditions of recent years. Proceedings with a view to abatement of rents of tenants payable to malguzars and of revenue payble by the latter to Government are in progress in Hoshangabad, a district twice described by its Deputy Commissioner as 'bankrupt,' even before the famine of 1899-1900. Speaking at Khurai in the Saugor District lately, the Hon'ble Mr. Fraser thus described the measures taken there:

'It would be difficult to conceive a more serious succession of calamities than I have indicated and the effect on the country and the people has been most disastrous. When I visited Khurai last year, and now as I have again gone through some of its once flourishing but now ruined villages, I have realized something of what the people must have suffered, and of the feelings of compassion that have stirred the hearts of some of your officers. The facts on which the abatement proceedings are based are certainly startling. In 1892-93 the cropped area of Khurai was 183,825 acres. In 1898-99, the year before this last famine, it had fallen to 81,928 acres—a decrease of 55 per cent. The decrease in rabi cultivation, on which the country mainly depends, was as much as 75 per cent. .....The revenue-assessment, I say, was Rs. 1,29,459; the actual collections during the past seven years have averaged only Rs. 45,800 per annum.....Under the abatement scheme now in progress, the revenue will be reduced to Rs. 55,123, or by 57 per cent. as compared with the assessment. This reduction in revenue is a little more than the percentage of reduction in cropped area (55 per cent); and it will remain in force for the whole period of the settlement. This is the sacrifice which the Government has made with the hope of securing the restoration of this tract to the prosperity which it enjoyed before these seven years of calamity.'

"I entertain no doubt that other tracts which have suffered, though not so grievously as Khurai, will receive similar generous treatment. In connection with this matter I may quote here what Mr. Robertson, Deputy Commissioner, Jabalpur, is reported to have said in his evidence before the Famine Commission:

'The district was in a distressed state. This is attributable to seven very bad seasons. Under the circumstances, the present assessment in some parts was too high. I would advocate a reduction for the remaining five years of the settlement.'

"I find that under the head of 'Land-revenue' Rs. 80,67,000 have been put down in the Budget against the Central Provinces. The revenue on the roll, including the enhancements of the new settlement, stood at Rs. 85,82,000 on 1st October 1899. Thus the Budget assumes a realization of 94 per cent. Considering that the yield of kharif in 1900 had to be supplemented by imports to meet the local demand for food-supply and that the *rabi* of 1901 is likely to give a poor return, it seems doubtful whether, even with a propitious monsoon, the people will be able to pay as much as 94 per cent. of the revenue-demand. In the year following the famine of 1896-97 the percentage of realization was 82. But the people are more resourceless now than they were after the previous famine; and there will be, besides, this additional difficulty that good seed will be scarce. For, under the unfavourable climatic conditions of this year, the yield of *rabi* will be poor not only in quantity, but also in quality. The Budget provides a most generous grant to the province to enable it to rehabilitate its finances. I venture to hope the same generous treatment will be meted out to the people if their condition does not permit of such a large payment of revenue as 94 per cent. out of the year's produce. I have ventured to draw attention to the matter as the subordinate officials directly responsible for the realization are generally apt to be influenced in their proceedings by what they think Government expects of them than by the capacity of the people to pay.

"Along with the measures that are being taken to relax the pressure of the Government demand, conciliation proceedings with a view to an amicable settlement of private debts referred to by me last year have made further progress. It would appear from Mr. Fraser's Khurai speech that in the district of Saugor unsecured debts aggregating nine lakhs of rupees owed by tenants were remitted in 1899. A wider extension was given to the scheme during this year. Debts owed by pattidars and secured by mortgages and even decrees and amounting to over five lakhs and a quarter have been remitted to the extent of two-thirds. Further remissions to the extent of half in the case of other similar debts are expected. The creditors who took part in this good work well deserved the thanks they received at the hands of their Chief Commissioner.

"But the relief given by remission of existing debts is not likely to lead to any lasting good, unless it is accompanied by banking facilities, which will hereafter provide the tenants and land-owners with funds on fair terms for their current needs and for the improvement of their lands. The question of rural Banks may be said to have been under consideration during the latter half of the now expired century. For I find it pressed on the attention of the Bombay Government by the Collector of Poona as far back as 1854. Nevertheless, it does not seem to have advanced beyond the stage of academic discussion. In 1884, however, a scheme was matured by the Government of India for starting such Banks as an experimental measure in the Purandhar Taluqua of the Poona District. Its main feature may be thus described: (1) the Government was to advance to the Bank a sum of 6½ lakhs for the liquidation of the existing debts of cultivators, loans made out of this advance to be a first charge on their lands; (2) where the Bank would under these liquidation-proceedings acquire the position of first mortgagee, it would enjoy, in respect of further limited advances, the same priority as a first mortgagee can acquire by stipulation under section 79 of the Transfer of Property Act; (3) the Bank was to be permitted to recover through the revenue-authorities the debts referred to above, a light fee being payable on the process of recovery; (4) as regards other loans, no stamp-duty or registration-fee was to be charged on deeds executed in connection with them and no court-fee on suits instituted to recover them was to be levied for a period not exceeding ten years. The scheme fell through, apparently because the Secretary of State would not sanction it. Acts have now and then been passed to release the peasantry and land-owners in some localities of their load of debt, but nothing has as yet been done to enable the thrifty and industrious cultivator to secure loans for agricultural purposes on easier terms than what are obtainable now. I earnestly hope that the enquiry which Your Excellency has been pleased to order will at last bring about the devoutly wished-for consummation. For the people who are to benefit by any scheme that may be sanctioned are sick almost unto death, and whatever has to be done should be done at an early date. The system that seems to find favour is what is called the mutual credit institution based on the principle of co-operation among those who enrol themselves as its members. Evidence regarding its feasibility in the Central Provinces was taken by the Famine Commission at Nagpur, and, as far as I can gather from newspaper reports, there seems to be a consensus of opinion among official and non-official witnessess that its success there is doubtful. This accords with the opinion of some well-informed friends I have consulted and also with my own opinion formed after such enquiry as my limited opportunities have enabled me to make. The scheme we need and which is likely to succeed is the scheme formulated by the Government in 1884. The Bank should take the place of the present money-lenders and be able like them to lend on individual responsibility. This would not, of course, prevent loans being given to associations of borrowers, who would borrow on their combined credit and lend the sum thus borrowed among themselves. The concessions which the Government was prepared to make in 1884 would, I believe, suffice to bring about a reduction of the present rates of interest and also to make the terms otherwise easier for the borrower. These rates and terms are now determined not only by the law of demand and supply but also by considerations arising from the difficulty of recovery through the Civil Courts and the expenses incidental thereto.

"In November last there was a conference at Nagpur between Mr. Higham, Inspector General of Irrigation, and our Engineers and Revenue-officers on the subject of irrigation in the Central Provinces. Speaking before the Council on the 19th of October last, Your Excellency was pleased to say, with regard to the methodical preparation in advance of programmes of famine relief-works, that railway earthwork had been pretty well exhausted and that more roads existed than could be properly kept up, but that there were few parts of the country where works for storage of water were not practicable. They might not, probably would not, be directly remunerative. But if such a work would conduce to greater security of the crops, and if it could be maintained at a moderate cost, it was just the sort of work that should be kept in hand for an emergency. Your Excellency further stated that the recommendation of the last Famine Commission, that the cost of investigating and preparing new projects for protective works should form a charge against the famine grant, has been accepted by the Secretary of State. I believe that it has been made clear in the investigations that have followed the Nagpur Conference that there is a wide field for useful irrigation-tanks in the Waingunga Valley Districts and in the Chhatisgarh, where rice is largely grown, and that, if funds could be made available, surveys could be undertaken and projects prepared. The whole question is now before Your Excellency's Government, and I may be permitted to hope it will receive sympathetic consideration, and that ere long our people may have the satisfaction of seeing these useful projects taken in hand. Further some irrigation-tanks have been partially made in the district of Raipur by famine-labour, and unless they are completed the money spent on them will bring no return. I hope we shall not have to wait for the next year of drought to see them brought to completion. I may mention here that during the recent drought, in one rice-district, a considerable area of cultivation was saved from destruction by two large irrigation-tanks. The villages served by them had a good rice crop and were able to meet with ease the revenue-demand, while in adjoining villages, outside the influence of these tanks, crops failed grievously and large remissions had to be granted.

"In the midst of our misfortunes, the one thing that cheers our heart and makes it overflow with deep thankfulness is the conspicuous success of the campaign, which, under Your Excellency's guidance, our Chief Commissioner, the Hon'ble Mr. Fraser, helped by a noble and devoted band of local officers, waged against an unprecedented combination of calamities that had well nigh threatened to submerge the province. The scars left will no doubt take long to be healed, even with a succession of kindliest of monsoons. Considering the nature of the visitation, it could not be otherwise. But nothing which the indomitable resolve of a great Government to save its people could do to repair its terrible havoc was left undone, and the consequence has been an administrative feat of which any Government may well be proud. How this gratifying result was attained is easily told. To begin with, as soon as it became clear that the kharif was likely to fail, elaborate instructions were issued to grapple with the threatened calamity. As early as the 14th of August 1899, Mr. Ibbetson sent out circular after circular prescribing, down to the minutest details, the various modes of relief to be given, the manner of administering them, the duties and responsibilities of each class of relief-officers, and their relations to one another as forming parts of an integral whole. The result was that, when the distress actually appeared, it found the machinery of relief perfected in every part, and though the demand for help reached proportions far exceeding the limits prescribed on the basis of past experience, on the whole it did not outstrip the capacity, or dislocate the organization, to meet it. Valuable time was not lost in hazardous experiments to gauge the existence of distress needing relief through test-works with stringent deterrent conditions attached. As has been demonstrated elsewhere, even starvelings will prefer death to working for a wage that will not let them have a mouthful for themselves and their dependents. That most important part of relief, village-relief, was organized from the very outset. Relief-works, specially large works, were not possible until the rains ended, and in order that the poorer able-bodied labourers might not starve and thus run down in condition, necessitating expensive medical relief later on, it was ordered as an exceptional and temporary expedient

to extend gratuitous relief to them. Necessary safeguards were laid down to prevent abuse, but everything was subordinated to the high ideal that no one was to be allowed to starve or suffer serious privation for want of relief, and thus it was that, when after the rains the works were opened, they found the people in good heart and good condition. A special feature of the works was the prominence given to village-works. Their greater usefulness as compared with much of the road-work that has perforce to be undertaken to create employment for famine-labour was fully recognised. Stress was laid on the desirability of getting these works done as much as practicable through the agency of the village-headmen. Their too great attractiveness was provided against by a rigorous labour-test and a restricted wage. A great deal of most useful work has thus been done. One of the saddest incidents of the famine of 1896 was the collapse of the ordinary system of relief in the case of the aboriginal jungle-tribes. For them Mr. Ibbetson laid down special measures of relief mainly on the lines of the recommendations of the Commission of 1898. The success of this wise and humane policy has been complete; while a too anxious solicitude to save the morals of the people have elsewhere resulted in failure to save their lives. Nor was the protection of cattle forgotten. One of the great horrors of this famine lay in the fact that in many tracts to a famine of food was added a famine of fodder and water for cattle. Government forests were thrown open to grazing, either free, or at reduced rates. The jungle-tribes were employed in the congenial task of cutting grass, which was then baled and sent to places where it was wanted for the cattle, or for supply to large towns. Mr. Ibbetson offered to supply any quantity of fodder to Bombay, but apparently the railway would not or could not supply the rolling stock, and thus it was that, while cattle were dying for want of fodder in other parts, it was lying idle in the forests of the Central Provinces. The above efforts to save our cattle were unfortunately to some extent nullified by the late appearance of the monsoon, which, by prolonging the hot-weather conditions, proved disastrous to the beasts that had till then been kept alive. With the approach of the rains, a somewhat new departure was taken by Mr. Fraser, with the approval, as I understand, of Your Excellency's Government. Most of the large works were closed, both because it was essential in the interest of agriculture that the people should be sent back to their fields, and also because it was difficult to keep large works open during the rains. But it was not forgotten that the resources of the people would at this juncture be at their lowest ebb, that the ordinary openings for private employment would, owing to the exhaustion of resources of the tenants and malguzars, be much contracted, and that in any case the wages earned would, owing to the high prices, be insufficient to buy food for the labourer's whole family. So it was decided to supplement private employment and wages by expansion of village-relief. This took the form of cooked food at kitchens for dependents and of money-doles to able-bodied labourers in return for work supervised by the village-headman in the shape of local improvements and, what is to be specially noted, of weeding and transplanting in fields of raiyats who were themselves unable to employ labour. It would be difficult to over-rate the good this system of relief has done. But for it an appalling mortality, not unlike what took place elsewhere, would have taken place in the Central Provinces and nullified the effect of the gigantic efforts hitherto put forward to keep the people alive. And, what is no less satisfactory, this helped thousands of broken-down raiyats to grow and reap a good harvest. The savings from the wages given are said to have been not inconsiderable, and some have further said that these, without any further State aid, would have carried the people through until the crops ripened. Whether the savings were made because the wages were more than what was needed for bare subsistence, or because the people were determined, whatever the wage, to save a fraction by pinching themselves to provide against the time when Government relief would close and for their other necessaries, certain it is these savings were not enough even with the liberal help from Government to keep the death-rate during the monsoon months within normal limits. In spite of these advantages, the people evidently had to live on reduced rations, and thus, with a system debilitated by insufficient nourishment, they fell an easy prey to the diseases which always break out during the rains. The death-rate began to rise perceptibly from June, when the provincial average

stood at 6·78 as against 2·43 in the same month of the previous year. In July the rate was 6·88 as against 2·05 in the previous year. In August it rose to 7·71. Here I may note that at this time there was no curtailing of relief, the numbers relieved reaching a total of over two millions and a quarter out of a population of ten millions of the affected tracts. In September, with the ripening of the smaller millets, the death-rate went down to 6·82, and in October to 5·65 as against 2·13 in previous October; and it was not till November was reached that we get such a rate as 3·78, which, however, is nearly double the rate in the same month of the previous year. During this period the rate in some tracts approached 18, 17, 16, 15 and 14. The recent census has shown that, whereas between 1881 and 1891 population had increased by 9·61 per cent., between 1891 and 1901 it has decreased by 8·71 per cent., or by nearly 10 lakhs of people. In the face of these significant after-facts, the question whether the wage given was too liberal because the people saved a pinch out of it, and were at the same time able to keep body and soul together *for the time being*, would require most careful consideration. A battle against the forces of nature could not be fought and won as it has been in the Central Provinces without a heavy expenditure, but, if human life is worth saving and human misery worth alleviating, then has the money not been ill-spent. At the same time the danger that lurks in the setting-up of a system of relief on this colossal scale is not to be lightly passed over. But the fear of pauperising the people was not allowed to paralyse the hands of the relief-officer. And, now that the thing is over, I do not find that any of our Deputy Commissioners complained that relief had sapped the independence of the people. Possibly in some places they stuck to relief a little longer than what was absolutely necessary, but on the whole it does not appear that there has been any demoralization. Two millions of agriculturists and labourers have gone back to their ordinary occupations in good heart and trim, and, as stated by one Deputy Commissioner before the Commission, the work in the fields was quietly resumed when the proper time came without any sign of loss of self-respect. I must confess I feel a glow of supreme satisfaction at these achievements of my Government under circumstances of unparalleled difficulty. I am sure the general verdict will endorse what it has been my privilege to say before this Council today.

"I cannot conclude my reference to the famine in my province without a word about the Charity Fund. I need say no more than this, that it is impossible for those whose high privilege it has been to take part in its blessed work not to acknowledge with the warmest gratitude the benefit it has conferred on the people. As I have said elsewhere, a mere enumeration of the numbers relieved will give but a faint idea of the incalculable good it has done. For the hope that has been infused into the hearts of the people, for the opportunity they have to build up once more the fabric of their prosperity, they are no less indebted to the noble Charity Fund than to the help from the State funds. And, if they have not been loud in proclaiming their gratitude at this splendid exhibition of charity and devotion in the sacred cause of humanity, none the less the moral effect of all that has been done for them in drawing closer together the tie that binds them to their rulers must make for good government in its truest, highest sense."

The Hon'ble MR. BUCKINGHAM said:—"My Lord, two very important Bills affecting the industries of India have been passed into law this session, but I do not think it is sufficiently recognized how narrowly we escaped from these Bills coming into force last year in their amended, and I may say objectionable, form. This only shows how disastrously the industries of this country may be affected by undue precipitation in passing any Bill into law, and to Your Excellency alone we are indebted for the postponement of them to the present session.

"My Lord, domestic legislation may be necessary in some cases, but there has of late years been too great a tendency to legislate on Western principles, which not only produces a bad effect, but creates imaginary grievances, and gives agitators the opportunity of saying it is the policy of the Home Government to sacrifice Indian to English interests. The industries of India must, to a great extent, be allowed to develop spontaneously, according to her requirements and

needs, and, if this can be brought about without over-legislation, capital must and will come more freely into the country. Indian labour is not organized in the same way as it is at home, and it will probably take generations to bring this about. It was very truly said by the late Mr. S. E. J. Clarke, who had made 'India and its people' his chief study for a lifetime, that 'Native labour, whether at a mine or in a factory, has no sort of resemblance to anything known the other side of the Suez Canal. For all purposes of comparison, India might be a part of the planet Mars.' Labourers come and go in a way which would appear disastrous to an Englishman ignorant of their ways—they disappear for months to get married once, twice or even oftener, and on the pretext of a relation dying, which same relation has more than the proverbial nine lives of a cat: a liberal amount of leave is granted for each such death.

"Regarding the financial position of Assam, Your Lordship said at Tezpur that a larger proportion of the gross receipts of Assam was expended upon the administration and development of that Province than of any other Province in India, and that we were absorbing a large amount of Imperial capital, our balance being on the wrong side of the ledger. I notice, my Lord, that at page 58 of the Assam Revenue Account for last year, the gross income from Assam (Imperial, Provincial and Local) amounted to 146½ lakhs of rupees and the gross expenditure to 109⅓ lakhs; to this expenditure may perhaps be added the interest paid on account of the capital of the Assam-Bengal Railway, which I find at page 126 of the Finance and Revenue Accounts amounts to Rs. 20,27,000 on account of Indian interest and an equivalent of about Rs. 10,12,000 English interest, or a total of Rs. 30,39,000. This sum, added to our expenditure, will still leave a balance of 6½ lakhs on the right side of our ledger. It is true that we have not been able to contribute anything to the military and other general charges of the empire; but still I think it will be admitted, my Lord, that we are advancing in the right direction and that we are not such a burden to the Imperial exchequer as we are generally supposed to be. It is also satisfactory to find in this year's Financial Statement, at paragraph 271, that a grant in aid of Rs. 2,00,000 only was required from the Imperial Treasury, and that the damages caused by the earthquake constituted the sole reason for requiring such aid.

"I feel sure, my Lord, nothing would hasten a more satisfactory state of affairs than the construction of a system of tramways and feeder lines to the river and to the main line of railway. One has only to see the development of the country in two years, in the vicinity of the main line, to be convinced that, even if remuneration is not at once forthcoming from the actual working of the line, still the revenue side of the Provincial balance sheet is most beneficially affected.

"I trust therefore, when the time comes, Your Excellency will give us a substantial guarantee towards a system of railroads and tramways throughout the province."

The Hon'ble KUNWAR SIR HARNAM SINGH said:—"My Lord, it is a matter for congratulation that the Finance Member has been able to present to the Council a Financial Statement of such an extraordinary character. It shows how carefully, in a year of unparalleled calamity, the resources of the State have been husbanded, how economy has been exercised in all branches of administration without affecting efficiency, how manfully the struggle has been maintained, how successfully the difficulties of the financial position have been overcome without imposing fresh burdens on the people, and how all gloomy forebodings have been falsified. Receipts have improved, with a single exception, under every main head of revenue, and the originally estimated small surplus has been converted into a handsome one.

"The exception I refer to has been with regard to land-revenue receipts. A heavy deficiency has been recorded, as between the Revised and Original Estimates of land-revenue, amounting to £382,900. I took the liberty of pointing out, during the Budget debate last year, that a rather sanguine view was taken of our sources of Revenue. I said that in Provinces affected by famine the mortality among agricultural cattle would be considerable, that large tracts of land would be lying waste, and that

low prices following on a plentiful harvest would reduce the receipts of cultivators, and that on all these grounds the revenue realizations would be greatly affected. I ventured to observe that in tracts of the country afflicted with famine the increase of land-revenue was overestimated. The Revised Estimates show that I was not wrong in my conclusions.

"I notice that in the Budget Estimate for the coming Financial year, Land-revenue is estimated to produce £474,800 more than last year, and the Finance Member says that, in view of improved prospects throughout the greater part of India, this estimate is unlikely to prove too sanguine. I have my misgivings, my Lord, with regard to this view of the question. Famine has not yet disappeared from the land, and it is feared that a considerable time must elapse before there will be any likelihood of its disappearance. I have to repeat what I said last year with regard to revenue realizations in provinces affected by famine. And then I quite agree with the Finance Minister that, until we are sure of a favourable monsoon, the most moderate estimates may be suddenly and hopelessly falsified.

"The large surplus shown at the end of the financial year was due to exceptional circumstances. Had normal causes been in operation, I believe that the estimated surplus announced last year, in spite of improvement under every main head of revenue, would have been considerably diminished, if not converted into an actual deficit. Had it not been for the saving due to the absence of troops in China and South Africa, and consequent increase in Telegraph receipts, Military Department receipts, and reduced expenditure on Military Works, the financial condition of India would have greatly deteriorated. These extraordinary causes will now soon cease to operate, and the consequence will naturally be a material reduction of receipts. I point to these facts with the view of showing that our sources of revenue are not on a stable footing, and that the increase of receipts in most cases is purely fortuitous

"I find that in the Budget Estimate for the coming financial year Railways are expected to yield an important increase of revenue. The receipts are expected to exceed those of last year by £331,400. I do not know how this expectation can be fully justified. It is true that some increase may be due to an adjustment of accounts, and also to some extent to an increased mileage opened to traffic. But it must be borne in mind that there will be a considerable diminution of Railway receipts owing to the absence of any large movement of food-stuffs for famine requirements. I believe, therefore, that the increase from the Railway source of revenue has been overestimated.

"Then again considerable reduction has been anticipated under various important heads. I am afraid that the reduction has been under-estimated. Owing to calamities in China, the Opium revenue is sure to be affected, and not only will the abnormally high prices of last year be greatly reduced, but the consumption of opium is likely to be decreased. As has been anticipated, Customs will yield far less than they did last year, owing to reduced imports of sugar. The duties on the extraordinarily large importation of sugar abnormally swelled our receipts during the past year, but there is reason to apprehend that these receipts cannot continue to be in the same proportion in which they have hitherto been fixed. I believe the reduction from this source of revenue also has been under-estimated. Although opinion as to the effect of the countervailing duties on bounty-fed sugar cannot yet be definitely formed, yet it must be admitted that the addition to our revenue from this source exists under most abnormal conditions. It is certainly not an unsatisfactory reflexion, in the language of the Finance Member, that 'this addition to our revenue has been realized at the expense of the European taxpayers, taxed by their respective Governments to provide the bounties which enable foreign sugar-refiners to sell their sugar in India at prices below the cost of production.' But this satisfactory reflexion is constantly accompanied with the apprehension that foreign Governments may before long realize the impolicy of artificially maintaining the selling price of bounty-fed imported sugar, and may at any moment withdraw their subsidies—the effect of which will be the extinction of this source of revenue.

"It appears to me, my Lord, that from what I have said above Indian finan-

ces are not in a satisfactory condition, and our sources of revenue cannot be depended upon with certainty. The Finance Member observes that expenditure in all directions has been so greatly restricted during the period of financial distress, that 'now that we may fairly estimate for an improvement in revenue and an important diminution of charges for Famine Relief, we have been glad to show some comparative liberality in meeting urgent administrative demands.' This to my mind means, my Lord, that the precautions which have hitherto been taken, the vigilance which has been so effectually exercised, are to be relaxed, and that considerable increase in expenditure is proposed. I cannot but view this proposal with apprehension. I fear, as I have pointed out, that there will be a considerable reduction in the estimated receipts. If my fears prove to be well-founded, the proposed increase in expenditure will place our finances in an embarassed position. I am led to think, my Lord, that it is a bad State policy, as it is bad domestic economy, to sanction increased expenditure in anticipation of increased revenue. When the increase is well assured, and the increased revenue is in the Treasury, then extensive schemes of reform may be matured, and money may be freely expended in successfully carrying out those schemes. But when our revenue has not yet recovered its lost balance, or rather I should say when our finances are not in a prosperous condition, when we have to meet urgent administrative demands by raising loans every year, and thus adding to our permanent indebtedness—this, I venture to say, is not the time to launch into large undertakings necessitating a large outlay.

"The Government of India proposes to make a considerable addition to the expenditure on the Army. I admit of course that our whole existence depends on proper provision for the defence of our frontiers, and that the lessons derived from the war in South Africa could not be neglected. I fully realize the gravity of the situation, but still I am inclined to think that the proposed increase on Army expenditure is abnormally high. I am aware that I am treading on delicate ground. The question I have ventured to refer to is certainly an Imperial question, and must be settled on Imperial grounds.

"In dealing with the great question of meeting famine requirements, the Finance Member alluded to the recuperative power of India. 'The fact,' he says, 'that we have been able to meet the extraordinary demands on our resources, due to famine and plague, and that we are today able to present a Budget showing, notwithstanding the simultaneous serious depression in three such important industries as cotton, tea and indigo, a distinct and satisfactory increase of revenue obtained without increase of taxation, is in itself the strongest evidence of that recuperative power.' There is abundant proof that his belief in this recuperative power is not an idle assumption; it is certainly based on substantial facts. What I only wish to say is that this recuperative power and the economic conditions of the country are not so well assured as they have been represented to be. The land-revenue of the country is in a serious condition at present. The proportion of land-revenue to the general revenue is striking. Under normal conditions I think it ought to be over 27 per cent. I notice in the figures adduced by the Finance Member that this proportion has been fluctuating. This may be due to famine, but still the fact remains that the land-revenue taken as a whole has not been able to completely recover its balance. This is the only source of revenue which is on a stable footing. Opium, Salt, Stamps, Excise, Customs, Post Office, Telegraph, and other sources of revenue are not at all to be compared, as regards stability, to land-revenue. That land-revenue is not increasing, but that the porportion of land-revenue to the total of our resources shows a diminishing tendency, is not a matter for congratulation.

"The most important industry in India is agriculture. The prosperity of the agricultural population, to use the Financial Member's language, has, within the last five years, received apparently crushing blows through the unprecedented recurrence of famine. It is difficult to say how long it will take to remove the effects of these crushing blows. I am not prepared to say that the agricultural population in the Indian Empire is 'somewhat better off today than it was a year ago.' The agriculturist's want of staying power during severe famine is in itself a convincing proof of agricultural distress. Then, again, if it is an admitted fact that the indigenous industries of the country are

perishing, and that new industries in sufficiently large numbers are not replacing them, it will be easily conceived that the recuperative power of India in this direction does not assert itself. What I mean to say is that the economic situation of the country, in my judgment, is not so cheering as it has been described to be; and the evidences of general recuperative power are not so many and so satisfactory as they have been represented to be.

"It is, however, very gratifying, my Lord, as I have stated, that the Financial Member has been able to present to the Council such a remarkable budget, without increase of taxation; and the whole country will feel grateful to him for his invaluable services."

The Hon'ble RAI BAHADUR P. ANANDA CHARLU said:—"About this time last year, speaking of the terrible demands of famine, Your Excellency said that you were resolved to devote all the available resources at your disposal to the alleviation of suffering and the prevention of death. It would be as ungrateful as ungracious not to admit, in the most unequivocal manner, that this promise has been kept to the very letter. Nor is it less a matter for gratitude that, instead of adding insult to injury in the shape of diatribes against the alleged unthrift, wastefulness and extravagance of the suffering victims, the Finance Member has, in a spirit of unbiassed justice and strict impartiality, paid a well merited tribute to their frugality, their industry and their powers of endurance —attributes for which they have always received credit, except when disengenuous attempts were made to substitute false for true causes of famine and its attendant evils. As though Providence wished to reward Your Lordship's righteous resolves and hearty performances of them, more than one godsend has come to us with a sheaf of plenty to repair the incident damage or to re-fill the exhausted coffers; such for instance as the unforeseen flush of opium revenue and the repayment from the British Exchequer of charges which the Welby Commission made out to be an unauthorised or unwarrantable burden laid on the Indian tax-payer—although I, for one, think that the amount paid should have included not only arrears, as has been already contended, but also a contribution, as is to be yet contended, towards retiring pay, and pensions, etc., of Indian troops employed in South Africa and China, as was wrung from India in 1884 or 1885 by the British Exchequer when British forces served or were serving India. But amid all this overflow of thankfulness and gladness, it would be failing in an important duty not to notice the shortcomings that exist and not to examine the soundness of certain conclusions, as to economic conditions, recorded in the Financial Statement as following from the figures and facts therein set forth. It is impossible, and it will be unavailing and wearisome, even if it were possible, to go over the entire ground which has been traversed in the Financial Statement and its tables of figures and appendices. Some of the Hon'ble Members who have spoken before me have, besides, a good deal anticipated me, either by saying exactly what I meant to say or in analogically forestalling me. Expenditure, on the Army and on matters kindred to it, is indeed a legitimate battle-ground by reason of being, in the words of the Finance Member, the greatest drain on financial resources. But the Finance Member has said in paragraph 53 on this topic that 'every additional item which has been agreed to, has not only been most jealously scrutinised in the Finance Department, but has also been submitted to the close examination of the Governor General in Council.' In paragraph 54 he has also pointed out how the 'lessons derived from the war in South Africa could not be neglected and how the Government had done their best under the guidance of their military advisers to profit by them.'

"In the face of these assurances and deliverances, it would perhaps be too bold to indulge in criticism. Any little wish that might still linger to probe the question must be effectually quelled by the recollection of the short, decisive and perhaps too curt reply which was vouchsafed, in this very Council Chamber some three years ago, to one who ventured to suggest a modest reduction in the numerical strength of the Indian Army; for the circumstances now are far more inopportune than they were then, seeing how the war-pulse is at the high fever beat all the world over and realising how the doctrine now in the ascendant is that in all countries, great and small alike, to be armed *cap-a-pie* is the only way to be safe, as

much for the preservation of peace as for triumphs in war. The good fortune, and perhaps the best solace as well, in these circumstances, is that this country is ocean-protected on her three sides, by far the largest part for external attack, and that she is not called upon either to maintain a navy of her own or to make contributions towards the cost of the British Fleet.

"Quitting this nettle, which, however one may handle it, must prick one's fingers, I shall confine myself to some words on public works, on irrigation and on the conclusions of economic progress, drawn and recorded by the Hon'ble Finance Member from the figures before him. Judging by the figures set forth in paragragh 60 of the Financial Statement, it looks as though the extension of railways is regarded as several times more important than the works of irrigation—ranging from nine to nearly fourteen times. Upon the relative value of railways and irrigation-works there has always been, and there is sure always to be, a wide and equally decisive difference of opinion, depending, as it does and as it must, on the difference in the stand-points from which they are looked at. It is, however, noteworthy that after Sir Arthur Cotton, of irrigation fame, no one has made or has bid for a name for himself by pressing the exceptional claims of irrigation as energetically as he had done—one who, on the banks of the Kristna and the Godavari, is ranked with by-gone Indian saints and receives occasional oblations of sacred water on certain days when those sainted benefactors receive holy offerings for signal, unforgotten service. A great deal, besides, could be said on both sides; and a great deal has been said. Having regard to the main consideration that, while works of irrigation help in raising and multiplying food-stuffs and economic and commercial products, the railways help in their speedy transit to places most advantageous for making profit, the claims of production have plainly a precedence over the facilities of transit. The surplus things to be carried must exist before the carrying agency is called into request. If not, the inevitable consequence is that the bare sufficiency of one place is laid under contribution for the benefit of places where there is want, and the area of scarcity and desolation is made to grow wider and wider—though it must be admitted in the interests of humanity that, if nothing better could be done, it is less objectionable to swell the number of half-starved than to let even a few to die of utter want. One ought not therefore to dogmatise on this knotty problem. It is rather the duty of every one to discuss the question with himself soberly and with the paramount, if not the sole, object of preventing the too speedily recurring famine. I humbly think that, making the amplest allowance for every pertinent consideration, the claims of irrigation have not, and have not had, such warm and vigorous championship and such large and continuous outlays as they deserve. Neither in the Financial Statement nor in its annexures do I find any detailed or defined scheme for the creation of a Government system of wells, to tap subterranean streams by way of supplementing the service of canals and reservoirs, which are solely dependent on monsoons, which have, of late, learned too much the trick of being fitful or precarious. I know it may be said, as it has been said, that this was a pure Provincial affair and that the Provincial Governments would surely be attending to it in the requisite degree. So are many of the canals, in so far as they belong to this or that Provincial Government and so far as they are cut and excavated by the particular Government within whose limits they respectively are. We nevertheless find these canals named and specific allotments labelled on each of them in the Financial Statement. Why should not schemes, devised and formulated in respect of a system of well-supply, be similarly honoured? That there is urgent need for some such course is shown by regard being had for the scanty attention such a system or other irrigation systems command in the Madras Presidency as noted in the following extract from the Hindu newspaper of Friday last:

'From the annual report of the administration of the Irrigation Branch of the Public Works Department in this Presidency during the past official year 1899-1900, it will be seen what little has been done and what more remains to be done. The irrigation-works shown in the sketch map annexed to the report appear like specks in a vast area. The total cultivable area in the districts of the Presidency is 33,423,401 acres, out of which only 3,902,000 or about 12 per cent. only is commanded by the irrigation-works, coming under the classes of major and minor productive and protective works; about 2,601,088

acres are shewn as irrigated by works coming under minor works under the charge of the Revenue or Public Works Department—which are dependent upon rainfall for their supply of water. Deducting these two from the total cultivable area, we find that about 27 millions of acres or nearly 80 per cent. of the cultivable area has no sources of irrigation whatever. Herein lies a great field for the useful and benevolent operations of the Local Government. It may not perhaps be possible to bring all these lands under irrigation, but a large portion of them may be so brought. Unfortunately, however, Government draws its purse-strings tight when expenditure on useful public works has to be undertaken. During the last year, the amount spent on all classes of works from Imperial, Provincial and irrigation-cess funds was about Rs. 50,97,988 against a revenue of Rs. 2,01,75,080. This expenditure, be it remembered, included establishment charges which are not at all on an illiberal scale—tools, plant, construction and repair of quarters for officers and servants. How much of the fifty lakhs was actually spent on works is not clear from the report. It would be well if in future reports the cost of establishment, etc., is eliminated and the actual amount spent on works separately shown in the body of the report.'

"Paragraphs 72 to 76 are devoted to the consideration of the countervailing duties on sugar under the Act to which I lent my humble support in passing. The main ground on which the Act was sought to be passed and on which it was widely supported was that it would safeguard and promote the interests of the many thousands who had many thousands of acres under sugarcane cultivation. Looking over the paragraphs in question, one is sadly disappointed that no figures or facts in relation to that declared object are discernable, and it is no consolation to be told either that certain colonies profited thereby—one more than the rest—or that we were getting revenue at the expense of certain European countries. It is unfortunate that the avowed intention is presumably unfulfilled, and that the suspicion, freely expressed at the time, that it was legislation for the benefit of some of the colonies, seems not to have been altogether unfounded.

"I next beg leave to say a few words on the economic progress on which some stress is laid in paragraghs 101, etc. The propositions laid down in paragraph 102 are, in the highest degree, unexceptionable. They are as follows:—

'(1) The question of economic development is one in which those responsible for the financial situation must take the keenest interest.

'(2) It is comparatively easy for a Government to take money out of the pockets of the public, provided that those pockets are sufficiently well-filled.'

"The first of these propositions enunciates a rule of abstract duty and in it there is not the least flaw. The second proposition, too, is in one sense an abstract principle; and I presume that, in thus unreservedly predicating it, the Finance Member connotes that the pockets out of which the increased receipts have come, as noticed in the Budget, are, as a matter of fact, well-filled pockets; for otherwise there would be little relevancy in the statement of the principle. Is this true as a matter of fact? Reverting for a moment to his paragraph 18, we find that, except Land-revenue, the main heads of receipts are stated to show more or less of an important increase. In the next paragraph he goes into those main heads and virtually votes against many of them to be undeserving of acceptance as more or less permanent or established factors tending to or illustrative of economic progress. Firstly, increase of receipts in Opium is due admittedly to abnormal prices. The receipts from Railways and from Telegraphs are equally due to famine or other adventitious causes. Receipts under the Military Department are, in his own words, purely fortuitous. Eliminating all these, there are but two main heads which are left to be inferred as healthy sources of enhanced income, *viz.*, Salt and Customs. As to Salt, the dictum is inexplicable, unless indeed it is assumed that big lumps of salt are swallowed in lieu of morsels of solid food, or unless there is some chemical process under which salt, combined with air, turns into human pabulum. It is quite plain that salt by itself is no article of food, and that it is only when combined with very much bigger doses of solid substances that it is an ingredient of human consumption. It is therefore somewhat problematic how, except as flavouring the charity doles or famine-rations, so much salt could have been consumed by human beings. If consumed as last suggested, the amount of its consumption is an index of the wide extent of pauperism, relieved

by charity or the State, rather than any criterion of well-filled pockets. Salt might indeed have also been thrown into fields to improve the soil or given to plough-cattle to make them healthy. But in the face of the admittedly terrible holocausts of cattle and the parching-up of extensive areas for want of rain, it is rather a violent conclusion to draw that, in the track of the salt thus extended, prosperity or plenty followed in any appreciable degree.

"Then regarding Customs as an index of progressive well-being by being, as it is alleged, a certain sign of consuming capacity, I shall grant some force in it, and I am entitled to ask whether one swallow would make summer and whether the Customs returns are any indication of well-filled pockets as a matter of necessary inference. I have my serious doubts; and Customs income is no more an evidence of well-filled pockets than is the mere fact of the payment of revenue under distraints and threats of distraints is an evidence of recuperative power. We have had too frequent proofs of full payment of revenue in one year being followed by dearth in the succeeding year to derive from that single fact the comfort that the pockets out of which the revenue has come have much left behind. To make payment of revenue under stringent processes or under menace of them an index of well-filled pockets is like inferring a well-filled granary by the number of rats and bandicoots in the farm-house, or like assuming the solid solvency of one who borrows heavily and pays exorbitant interest. True economic progress will and can come only from the colossal demands on the country's resources being considerably reduced, from the administrative machinery being cheapened a great deal, by the raiyat being relieved of harrassments of re-assessments and re-settlement, and, above all, by the growth, development and multiplicity of industries which constitute a necessary complement of agriculture in working out the prosperity of a country, and which will converge towards producing what the Finance Member has very properly called the highly satisfactory result, from an economic point of view, of substituting expenditure in India for expenditure abroad."

The Hon'ble SIR CHARLES RIVAZ said:—"I have only a very few words to say. My Hon'ble friend Mr. Bose has remarked that 'the day when the troubles and tribulations of the people of the Central Provinces will be over is not yet within sight,' and he seems to think that the estimated land-revenue collections of the coming year have been put at too high a figure for these provinces in the Budget. My Hon'ble friend has, I think, taken rather too gloomy a view of the situation. The present spring harvest has unfortunately been a good deal damaged in parts of the Central Provinces by unseasonable rain, but not to so serious an extent, according to the latest official reports, as my Hon'ble friend has stated; and the last autumn harvest was on the whole a very fair one, especially as regards the rice and cotton crops. The estimated land-revenue collections of the coming year as entered in the Budget are 10 lakhs below the figures sent up by the Chief Commissioner, which again were 5 lakhs below the estimates of the District and Divisional Officers; so it will be seen that the Government of India have fully recognized the necessity of dealing leniently with the land-holders of the Central Provinces in their present circumstances. The estimated collections of $80\frac{3}{4}$ lakhs are made up of $67\frac{3}{4}$ lakhs on account of the current demand of the year and 13 lakhs on account of arrears of suspended revenue; and I may remark that the current demand amounts to $88\frac{3}{4}$ lakhs or 3 lakhs more than my Hon'ble friend has stated it to be. In any case, he need be under no apprehension that any undue severity will be exercised in realizing land-revenue if the coming agricultural season should again unfortunately prove unfavourable. The Chief Commissioner has been authorized, in response to an application recently received from him, to remit all arrears of revenue, amounting to about 21 lakhs of rupees, which accrued previous to the revenue year 1899-1900 that is, the year which ended last July, and to exercise his discretion as to remitting up to one-half the demand of the year 1899-1900; and my Hon'ble friend will perhaps accept these orders as an indication of the desire of both the Local Administration and the Government of India to treat the land-holders of the Central Provinces with

generous consideration in view of the undoubted misfortunes which they have lately undergone.

"With reference to the Hon'ble Mr. Smeaton's remarks about the deficiency in the superior forest-establishment in Burma, we have not been unmindful of the promise given by Mr. Ibbetson during the discussion of the Financial Statement last year, but unfortunately we are still hampered by the want of forest-officers in all Provinces. The annual recruitment has been enlarged, but it will take some time before this is felt. I am informed that, compared with other Provinces, Burma is not badly off, and that on the 1st January last there were four young forest-officers stationed there in excess of the sanctioned cadre. The matter shall, however, be looked into again. The forest-revenue of Burma is large, and we will do our best to meet the wish of the Local Government."

The Hon'ble SIR ARTHUR TREVOR said:—"My Lord, I do not think it would serve any useful object for me to try to anticipate what my Hon'ble Colleague in the Finance Department may have to say in reply to the remarks of the Hon'ble Mr. Ashton and the Hon'ble Sir Allan Arthur, on the subject of the financing of productive public works. I may remark, however, that I should have esteemed myself fortunate if things had been as easy during my term of office as I think we may hope they will be in future.

"The question of railway rolling stock to which the same two gentlemen have referred is in a fair way of solution, so far as the grant of funds to meet all demands under this head in full can avail to solve it.

"I agree with the Hon'ble Mr. Smeaton as to the *primâ facie* desirability in the interests of Burma of a line to open up the Southern Shan States. Several alternative proposals for such a line which have been put forward are now under investigation. It will rest with my Hon'ble Colleague in the Finance Department to say, when that time comes, whether, if the results of the investigation are favourable, the accumulated Provincial balance can be made available as suggested for the prosecution of the work.

"I have had the pleasure of a conference with the Hon'ble Mr. Buckingham and the Hon'ble Mr. Henderson on the subject of light railways in Assam, at which the Hon'ble Sir Edward Law was good enough to attend, and which I hope may result in the submission of proposals which the Government of India may be able to accept."

The Hon'ble MAJOR-GENERAL SIR EDWIN COLLEN said:—"My Lord, I have already laid upon the table an explanation of the estimates with which I am concerned—the Indian military estimates, the Home (Indian) military estimates, the Military Works, and the Marine estimates. I have submitted an abstract of them, and have explained the causes which have led to a considerable extra expenditure for the coming year. It is not necessary for me to repeat the figures which I have already presented. But, as this is the last time I shall have the honour of addressing the Council, I shall ask permission to trespass on their patience while I deal with certain matters upon which I think a somewhat fuller explanation is necessary than that I have already given.

"I have explained more than once how the military expenditure has increased since the measures were carried out in 1885-86-87, under the auspices of Lord Dufferin and the guidance of Lord Roberts and Sir George Chesney, for raising the strength of the British and Native armies, the establishment of reserves, and for the creation of coast and frontier defences. I have also set before them the fact that, besides these great measures, there have been many others which have caused additional military expenditure. The equipment of the field army for mobilisation, the rise in prices and wages, and the increase of the pay of the British and Native army, account for a very large sum; and I have also shown to the Council that in the ordinary annual military expenditure a very large proportion consists of money spent on the pay, the food-supply, clothing, doctoring, and arming of our military forces.

"When I took office five years ago I hoped to have had the leisure to pursue the aim, which for a great many years I had set before myself, to do everything in my power to assist in the completion of all our preparations for

the field army and for the efficiency of the army in general, and to forward all measures which would make for the internal security of India, while endeavouring to apply the money granted to the best advantage, and at the same time searching for means of economy in every branch of the military administration. But besides these I felt that there were many other questions which I might at least help in bringing forward—measures which would be beneficial to the army and to the country, not all of them perhaps of surpassing interest to the public, but which would, if carried out, lead to a considerable improvement in our army system in India. I hoped to have had the leisure to pursue these subjects, and that time would be given me to carry them forward to a conclusion. We had learned many lessons from our experience in the Chitral expedition, and there was no one who had considered the military questions of the day who did not feel that there was a vast deal to be done. But a year had hardly passed when we were confronted by the campaign of 1897-98, on the north-west frontier. In 1898 we were engaged in gathering up the fruits of our experience of the war, in 899 we had to send a force to South Africa, which saved the situation in Natal, not only by the presence of the gallant troops who left these shores, but by the supply of the stores and munitions of war which we sent with them. In 1900, as I have shown in my memorandum on the estimates, we had to despatch a large expedition to China, and it must be a satisfaction to all of us to know that Her late Majesty's Government expressed their admiration of the promptitude with which the Indian reinforcements were delivered in South Africa, and again that similar satisfaction was expressed at the expedition with which a much larger body of troops was despatched for service in China. It must be remembered that we have no enormous fleet of sea transports at our command. If we had these, with the arrangements for mobilisation at which we have so long laboured and with the reserves we keep up, we should be able to despatch troops beyond sea in much less time. But, gratifying as these results have been, it must be allowed that a time of constant pressure and hard work to all concerned is not one in which reforms and improvements of all kinds can be threshed out. I have certainly not been able to do all that I had hoped for, but I trust that, with the support received from Commanders-in-Chief and from Your Excellency and my colleagues, I at least have been able to pave the way and to make it easier for my successor.

"I have attached to my memorandum on the estimates a paper showing what has been done in the past sixteen years, and I have specially desired to indicate the progress we have made, although we have had no extraordinary grants of money, because some critics have affirmed that since the great measures of 1885, 1886 and 1887, very little has been done to improve our military position in this country. Now, it must be remembered that since these years we have had exceptional financial difficulties—difficulties caused by exchange, by widespread pestilence, by frontier wars, and by two great famines; so that it has been a difficult thing to obtain money to fulfil those military requirements which are necessary.

"Fifteen or sixteen years ago there was no field army, but by degrees, and with comparatively small grants, we have done an immense deal to put that army into a state of efficiency, and time, labour and money have been spent on these preparations. Besides the mobilisation we have had to face rearmaments, though not to the extent that is now necessary; we have reorganised a large portion of the Native army in the direction of higher efficiency; the presidential army system was not suited to the circumstances of the time or to efficiency in war; but, although its abolition involved an enormous amount of labour, it has been replaced by a simpler system of organisation. The pay of the British and Native armies has been increased, and many improvements have been effected in every arm and in every branch of the service. In the North-West Frontier campaigns of 1897-98 our mobilisation scheme had been heavily tried and our resources had been heavily taxed, and we therefore took up all those questions which stood out as the lessons to be learned from the war.

"In 1899, the Commander-in-Chief, the late Sir William Lockhart, and I presented to the Government of India a statement of the measures which we considered necessary for improving the efficiency of the army. In March last

year the Mobilisation Committee sat continuously for some weeks, and the whole situation was again reviewed; and almost with his last breath Sir William Lockhart expressed his approval of the labours which had been undertaken. And in that month we laid before the Government further proposals. The remainder of the year and the first quarter of this has been occupied in a similar manner, and the Government are now in possession of a complete statement—complete at all events for the present time—of what is needed for the army both for the defence of the country and its internal security.

"But, if the Council will permit me, I shall hope to show as concisely as I can, what the large expenditure is, which has been agreed to since we considered not only the lessons of the frontier campaigns of 1897-98, but the still more striking experience of the war in South Africa. The initial expenditure which has been agreed to or proposed by the Government of India amounts in round numbers to Rs. 3,50,00,000 or £2,333,000. I will deal with these measures of improvement under the headings which I have adopted in my memorandum, but, as some of the greatest of them affect every branch of the army, I will mention these in the first instance.

"First and foremost is the rearmament of the Native Army and the volunteers, and upon that we have to expend a total sum of Rs. 2,05,00,000 or £1,367,000; a portion only of which is included in the sum already mentioned, because some of the expenditure on rearmament will fall upon the year after next; that is, we have incurred a portion of the expenditure this year, a further sum is provided in next year's estimates, and the year after the total expenditure should be finished. We hope to complete the armament in a three years' programme instead of in five years as originally settled for financial reasons. The next important measure affecting the army is the increase in the number of officers. I need not go into the merits of that question, because it is well-known and appreciated by all that we require a much larger number of officers not only for war, but to provide an establishment sufficient to meet the normal drain upon it from all causes, and for the increased training of the army which must now be undertaken in peace time.

"The third measure is the increase and reorganisation of the transport.

"The subject is too large to deal with in all its details, but experience had shown that our transport was inadequate, that there was no organisation for its rapid expansion, and that we had no system of permanent registration of the transport resources of the country. The proposals made were considered too large to meet at the present time, and we therefore had to re-examine the question to bring it in closer harmony with the exigencies of our financial position. The measures which have been finally accepted were, first, the addition of 26 officers to the transport service; secondly, the organisation of permanent cadres of mule corps, camel corps, and pony-cart trains; thirdly, the creation of a permanent registration staff; fourthly, an improvement in the status of transport drivers together with the formation of reserves of drivers. This plan will give us, besides the 26 officers, an increase of 21 warrant officers, 34 British non-commissioned officers, 273 native officers and non-commissioned officers, 30 veterinary assistants, 228 artificers, and 4,396 drivers. We increased the complement of transport by 7,000 mules last March and have added 2,143 camels under the silladar system; so that we shall have, when our establishment is complete, 54 transport officers, 40 departmental warrant officers, 52 non-commissioned officers, 277 native officers, 149 veterinary assistants, 943 artificers, 21,226 drivers, 21,924 mules, 5,393 camels, 6,660 bullocks, 594 ponies, and 7,067 transport carts.

"The whole subject has received from the transport committee under General Sanford and from other authorities the most exhaustive consideration, and both the late and the present Commander-in-Chief, Sir William Lockhart and Sir Power Palmer, strongly supported the proposals. The transport under the system we have initiated will be capable of expansion. The machinery of the cadres will be linked with the operations of the registration staff in districts, and the transport service will be placed on a footing which will induce good men to enter it; while the military organisation we have proposed will do much to bring about this result. We have also an auxiliary plan for obtaining camels which has so far been most successful, that of making grants to camel-

owners of culturable land on the Chenab canal, with grazing privileges attached, on the condition that they keep a specified number of registered camels for military service; and we hope to apply the same principle to the lands adjacent to the Jhelum canal. This should give us a large reserve of camels, and the results so far have been very encouraging. Of course, our actuals by no means tally with our establishments, because we have had to send a considerable amount of transport to South Africa and also to China; but we are gradually getting the new plan into working order, the mule cadres previously organized under the provisional scheme are in process of completion, and I hope that by the end of this month they will be in fair working order, and that the equipment and gear required will be stored at the head-quarters of each cadre by that time. The purchase of ponies for the pony-cart trains is in progress, and the siege-train and army transport bullock establishments have been reorganised. A vast number of details have had to be settled, and a good many still remain for disposal. We have been greatly hampered by the shortage of officers, but the Commander-in-Chief has been good enough to give us aid from the army—although this has acted injuriously on regiments—as we were unable to supply the officers from the Commissariat-Transport Department. If these officers had not been supplied from the army, we should not have been able to start the new organization. I have only been able to see the initiation of the scheme, but I am sure that under my successor, and General Christopher and Colonel Mansfield, the reorganisation will be carried to a satisfactory conclusion. And, before concluding the subject of transport, I may mention that we have accepted, in a modified way, the conclusions of the committee on ambulance transport which was presided over by Sir Alfred Gaselee. We propose that the existing establishment of bearers or kahars shall be enrolled in companies, that the pay, clothing, etc., shall be improved, and that each company shall be properly organised and commanded; the control of each division composed of a certain number of companies, to be under the Principal Medical Officer of each command. We hope that each company will have the nucleus of further expansion in itself, which will be left, when the company takes the field, as the depôt. In this way we trust that we shall get, what we have not had for many years, bearers physically fit, and that they will know that there is some one to take charge of them and to look after their interests. Under ambulance we have also provided for a large reserve of ambulance riding saddles.

"In the artillery during the past two years we have accepted various measures for its improvement, such as an increase of mountain artillery, improvement of ammunition columns, purchase of material for batteries, increase in howitzer batteries, increase in the number of artillery horses, improvement of the equipment of field batteries, provision of new mountain guns, and an increase to the scale of practice ammunition. The artillery is greatly in need of improved arrangements for mobilisation so as to avoid breaking up batteries to supply those of the field army, and it requires thoroughly and completely organized ammunition columns. All I can say on this point is that the subject has been exhaustively discussed.

"With regard to the cavalry, we have provided for an issue of Maxim guns for the regiments of the field army and for the supply of mekometers and binoculars, also additional heliographs for Native cavalry; and we have also acquired land for cavalry exercise. As to the infantry, a good many minor measures have been accepted in respect to British infantry, and to the Native infantry we propose to give additional officers. Here again we provide Maxims for a portion of the infantry for the field army and bandolier equipment; we have also been able to provide for the improvement of army signalling in the Native army, gymnastic instruction, an increase in the tools for the Pioneer battalions, an office allowance to Quartermasters of Native infantry regiments, and a great many minor items which time does not allow me to mention. We have also provided for five schools for mounted infantry, which will train a considerable number of officers and men and by degrees will establish a fairly large force of mounted infantry in this country both British and Native.

"In the Engineers we have provided for an equipment of war balloons, for ten miles of light tramway and fifty miles of light field railway, for the com-

pletion of the bridge-train equipment, for electric-firing apparatus with service companies of sappers, and for other requirements.

"I have already dealt with transport. Under the head of commissariat we propose an increase of officers as an instalment and various improvements which we trust will make this service more attractive; and we have somewhat improved the pay of warrant officers of the department. If we cannot get officers to enter the Commissariat Department, we must try other inducements, as if we desire economy as well as efficiency we must have adequate supervision and a sufficient number of officers.

"Under the head of medical and hospital service we hope to increase the number of officers of the Indian Medical Service; we have provided for the completion of the equipment of field and general hospitals. In future wars the provision of medical officers, hospitals, etc., will have to be largely increased, and we must not overlook that fact.

"There are also several items in connection with mobilisation, such as the provision of the requirements of mobilisation rest-camps, railway sidings, and water-supply and other things which make for the efficiency of the field army.

"It will be allowed that the development of our manufacturing power is of the highest importance. We are pushing on the cordite factory, and the central gun-carriage factory, and additional grants have been made for this purpose. Both these will well repay the outlay which is proposed not only from the point of view of efficiency but of economy. Then we have decided to propose the establishment of a small-arms factory, so that India may, as far as possible, be independent. This policy will be generally approved, but although it receives its greatest and most attractive development in the manufacture of war material, we must not forget that there are other branches of local industries of the greatest use to the Military Department and most economical to the State. For very many years the brewing industry of India has supplied the soldier with good and wholesome malt-liquor. We have the power of inspection and analysis, and the soldier is supplied at a uniform price wherever he is stationed. From local mills we obtain large quantities of clothing and other supplies, and I trust that every effort will be made to extend this local supply; the boot factory at Cawnpore worked by Messrs. Cooper, Allen manufactured 174,793 pairs of British army boots in 1899 and 246,669 in 1900 up to 30th November; of this number 198,660 pairs were supplied to South Africa. In addition to these quantities the factory supplied 314,262 pairs of boots and shoes for the Native troops in India and for troops elsewhere, or a grand total of 735,724 pairs in the two years. These figures speak for themselves, and testify to the important reserves and manufacturing powers we possess. Before I leave this branch of the subject let me mention that the Army Clothing Department at Alipore under Colonel Buckland have made up nearly 500,000 articles of clothing for South Africa and China, besides supplying about 180,000 helmets, and this without any addition to the normal permanent establishment, a remarkable result only to be accomplished by the zeal and energy of the Superintendent and his subordinates. I know that my Hon'ble Colleague Sir Edward Law is deeply interested in the development of local industries, and I feel sure his efforts in this direction will be rewarded.

"Under the head of internal defence I am glad to be able to announce the measures which the Government of India have accepted for the increased efficiency of the volunteers, such as proficiency and other allowances to officers, larger amount of ammunition, additional help in the construction of ranges, band allowances, and prizes for rifle shooting; and I hope that the better equipment of the volunteers may be carried out later. No one can regret more than I do the delay in the issue of rifles to the volunteers, but we perhaps may hope to issue a percentage, and that steps will be taken the year after next to supply the volunteers with the new rifle. We hope, too, that before very long an officer may be appointed who shall be specially charged with the interests of the volunteers.

"Under the head of coast defences we have provided for various improvements, such as electric lighting, submarine mining, additional garrison artillery, supply of cordite ammunition for certain guns, and a partial rearmament. I

have touched on frontier defences and frontier railways in my memorandum, and it is exceedingly satisfactory to know that there is a large development of traffic on the Nowshera-Dargai Railway.

"But besides such measures as I have mentioned or are enumerated in my memorandum, we are constantly endeavouring to improve the sanitation, health, and comfort of the army. These measures involve large expenditure, but I am convinced that none will repay expenditure so well. We have been able to do something in the way of improving the gymnastic training and, as I have shown in my memorandum, to improve the sanitary requirements. I have been particularly interested in what is being done to improve the meat which is issued for the British soldier's ration; experiments of great value have been undertaken by Captain Meagher; and we are improving and extending grass farms and dairy farms, and increasing them so as to be able to give fresh and plentiful supplies of meat, butter, and milk. And besides the goodness of the supplies, an advantageous financial result is obtained; while cattle-breeding is improved, and fodder production is increased, and I look to the whole of the fodder for the mounted branches being supplied by these farms. The system of fattening slaughter cattle has been a great success, and is being extended, and we hope that the beef and mutton issued to the troops will be immensely improved. Better food and better cooking will, I feel certain, do a great deal for the British soldier. We want more trained directors and managers, and if we get these, I believe that these military farms will prove a remarkable success all over India, and this will be due in a high degree to the enthusiasm, knowledge, and industry of Captain Meagher.

"The sanitary condition of cantonments must always be a matter of the greatest interest to those responsible for the military administration, and although a good deal has been done, and in the course of years we have spent a considerable amount on hospitals, water-supply, drainage and the like, we cannot say that we have approached perfection. We require to derive our piped water-supply from the purest sources, and this may mean going to a greater distance in many cases. This piped water-supply should be connected with all buildings where water is required. The removal of refuse, both liquid and solid, is a matter of immense importance to the health of stations. In my belief the present means of removal, where scientific trenching cannot be undertaken are inadequate. In some cases we ought to have tramways, as they have indeed in some Native States. We are endeavouring to pursue this subject to the best of our means, but those means are not large, and I submit that it would be a good measure to take certain stations and bring them up to the best possible conditions of sanitation in every detail. I commend to my successor the steady pursuance of the policy of quartering British troops in the hills during the hot weather. Our hutted camps have not been increased as much as I could have wished for.

"There is one matter to which I referred very briefly in my memorandum, and which will, I believe, when carried to a conclusion, be one of the greatest reforms which has ever been undertaken for the comfort and welfare of the soldier in barracks, that is, the application of electricity in punkah-pulling and the lighting of barracks by electricity. It cannot be doubted that the discomforts experienced do tell on the health of the British soldier in the extremely trying hot weather in many parts of the country, and the transformation of the barracks into cooler, more cheerful, and better lighted quarters, will effect a vast amelioration in the condition of British troops serving in the plains of India. I may venture to say that Your Excellency has taken the deepest personal interest in this matter, and, although the expenditure will be large, I am sure that there is no greater benefit which can be conferred on the British soldier in this country—a benefit which will be due to the personal interest and sympathy of Your Excellency. I only hope that the name of Lord Curzon will be for ever associated with the carrying through of this beneficent measure for the improvement of the condition of the British soldier serving in the plains of India.

"I would just allude for a moment to three great questions of importance which cannot be left out of consideration in discussing the needs of the

army. The first is the question of the distribution of the troops. I have alluded to that on a previous occasion, and all I need say here is that it has never been lost sight of, but that the enormous expenditure involved has undoubtedly prevented practical effect except in small and minor ways. But we have at this very time under consideration a project which will remove many of the defects which have been noticed in our distribution of troops in this country. The second question is the composition of the Native army as it exists at present. That is a matter which has been considered over and over again. I have shown that we have made great improvements within the last ten or fifteen years, but we must progress further in this path, and at this moment under the Commander-in-Chief's auspices an endeavour is being made to obtain better material and to raise the standard of efficiency in one portion of the army. The third question is that in which I have been specially interested, *viz.*, the creation of a more powerful agency by reorganisation both at Army Head-Quarters and the Military Department to cope with the great work which is before them, and by the more practical training of the staff in all the duties of staff officers.

"Last year I mentioned Lord Welby's Commission and my Hon'ble Colleague Mr. Ananda Charlu has alluded to it today For many years it was one of my duties to help to fight the battle of India in respect to the War Office charges. If we have not got all we hoped for—and I gather that my Hon'ble Colleague does not think we have got enough—I think a reduction of £230,000 a year is a very substantial relief to our Indian military estimates. My statements of the military value of India to the Imperial army made before the Commission were hotly contested at the time, but I think South Africa and China have supported my view of the question.

"And now, if I may be permitted, I should like to say a few words about certain measures with the initiation of which I have been concerned but the completion of which I have not been able to see. The first is with regard to horse and mule-breeding in India and the remounting of the army; this is a matter of immense importance to the efficiency of the army, and from the financial point of view it deserves the highest consideration; while the promotion of horse and mule-breeding among the people of the country concerns the welfare of large numbers. The appointment of a commission under General Tyler to consider the subject was only resolved upon after very great consideration, but it was apparent that we should not arrive at a thorough investigation without such a commission, and I believe—and I have the authority of General Tyler for saying so—that, if their conclusions are correct, there is no reason why India should not take her place as one of the great horse-breeding countries of the world.

"The second matter is the inquiry which has been made by the Special Commissioners, Colonels Huchinson and Wingate, regarding compensation for dearness of provisions, commissariat procedure and accounts, and other matters. I again must affirm that their reports are in every way practical and admirable I believe we shall derive great benefit from their enquiries, and that the Commissariat Department itself will be vastly improved. One of the results of their labours will, I hope, be the lightening of the burden now thrown upon that Department. Another question in which I have been deeply interested is that of the account and audit system of the army. That system has grown up in course of time; it has in my opinion become over-elaborate, and we are trying to see whether the burden laid upon the army cannot be lightened with due regard to the requirements of audit and financial regularity; in fact, we wish to substitute a simpler system for the complex one which now is in vogue. Colonel Anderson, who has a complete knowledge of the whole business, and has the confidence of the army, is president of the committee which is now considering the subject, and I shall look forward to seeing the results of their labours.

"I have alluded on a previous occasion to the question of the reduction of reports and returns. Very much has been effected under the orders of the Commander-in-Chief, and I hope we have succeeded in the Military Department in doing a good deal. Your Excellency, as I mentioned before, has taken a powerful interest in the matter, and we have undoubtedly reduced a considerable number of returns and have shortened the terribly lengthy reports and

reviews. A great deal still remains to be carried out, but I can thoroughly trust my successor to press on this work with vigour.

"But there is one great subject to which I must refer at the last. I took it up with enthusiasm when I entered upon my term of office, but wars and expeditions and other difficulties have prevented my achieving what I hoped to have done in a matter which I have had at heart for so many years—I mean the decentralisation of military business. Still we have done something. When the presidential system was abolished we decentralised a considerable amount of business. We have since carried this on, and we have now under consideration the report of the committee of which General Burnett was president to see how far the powers of General Officers Commanding districts can be enlarged, and we have also under consideration certain proposals made in the Military Department for what may be called the higher decentralisation of army business and military finance. That is an immense subject to enter upon which would carry me far beyond the limits of a speech of this kind. I can only say that, although I have not seen the realization of the project, I confidently leave it in the hands of the Commander-in-Chief and of my successor, feeling assured also that Your Excellency will do everything in your power to further this great reform.

"Last year I said that the continuity of the hostile criticism of military expenditure had been broken, and, with one exception, those of my Hon'ble Colleagues who have mentioned the subject have spoken of the measures we have undertaken, with approval. Sir Harnam Singh has, however, alluded to the military charges as abnormally high. But as in the same breath he agreed that the army should be efficient and the country secure, I do not think I can regard him as a hostile critic, and hope I have convinced him that the cost of the army is a national insurance which we are bound to incur.

"My Lord, I think that it will be admitted that we have done very much to improve the efficiency of the army and to secure the defence of this country. We have been greatly assisted by a large sum from the savings due to the absence of the troops in South Africa and China and the recurring expenditure is not a very heavy burden, but I am convinced that very great efforts are still necessary. The Commander-in-Chief and I have endeavoured to place before the Government the whole of the requirements of the army, and, so far as it is humanly possible to forecast them, I do not think we have omitted a single item. We can only tell the Government what we consider to be necessary at the present time or in the immediate future, as new scientific, warlike, or political developments may arise which may be followed by great changes. A great deal has been done, but a great deal remains to be done. We cannot propose a state of finality in military affairs. We require to be able to put a powerful army into the field and to ensure the safety of the country. More I cannot say, and I am afraid I have often been accused of too great persistency in this matter, but at all events the Government have the materials for further and greater efforts. The preparation of these materials—and the exhaustive elaboration and discussion of the measures which have actually been carried out—has thrown an immense amount of extra labour on General Maitland and the other officers of the Military Department, not to speak of the very heavy additional calls on the clerical establishment.

"I feel I have trespassed on the attention of the Council long enough, but before I conclude, and as this is the last time I shall have an opportunity, I should like to say a few words with regard to those with whom I have been specially connected in the work of military administration. From successive Commanders-in-Chief I have received the greatest consideration and support; and I am also much indebted to the officers of Army Head-Quarters for their efforts to assist me in my labours. The officers of the Military Department it would be invidious to particularise by name, but I must express my very deep appreciation of the ability and industry with which they have worked, and I would also at the same time desire to express my appreciation of the support which has been given to me by the assistants in that department, who have rendered me the most efficient help. Of the heads of the great departments with which I have been specially connected, the Ordnance, Commissariat-Transport, Military Accounts, Military Works, Medical, Horse-

breeding and Army Remount Departments, I can only say that General Wace, General Hobday and Major-General Christopher, the Commissaries-General for Transport, Colonels Hawkes and Mansfield, Colonel Miley, the Accountant-General, my lamented friend General Turner, Surgeon-General Harvey, Colonel Queripel, and Colonel Goad, have always given me the most valuable assistance. And although I have already mentioned in my memorandum the Royal Indian Marine, for the administration of which the Military Member of Council is responsible, I cannot conclude without referring to the services of Admiral Sir John Hext, and of Captain Goodridge, the Directors of Marine during my tenure of office, through whose work and exertions the Royal Indian Marine has attained, and continues to maintain, the fine position it now occupies. My belief is that the Indian Marine, which I have seen grow up from very tiny beginnings into an admirable service, will prove a powerful auxiliary to the resources of the Empire. From the Commander-in-Chief, Sir Power Palmer, I have always received the greatest help and consideration, and there is no one who is more deeply interested in the efficiency of the army. It is naturally a very great regret to me that I shall no longer be concerned in the military administration of this Empire, or associated in the carrying out of measures for the good of the British and Native Army of India. But my successor, Sir Edmond Elles, is well versed in all the great problems with which we have to deal, and I look forward confidently to his tenure of office being marked by a still further development of wh atwe all have at heart—the efficiency of the army and the security of the country. And now, my Lord, in conclusion permit me to thank Your Excellency and my colleagues, not only for the patience with which you have listened to me today, but also for the kindness and courtesy which I have invariably received in this Council."

The Hon'ble SIR EDWARD LAW said:—"With Your Excellency's permission I will endeavour to answer some of the questions which have been more particularly addressed to the Finance Department during the course of this discussion.

"The Hon'ble Mr. Ashton has spoken forcibly on a question which, in view of the great importance of railway finance on our general financial situation, properly attracts considerable attention.

"I may perhaps, with advantage, first reply to some of his observations on the question of railway accounts as distinguished from the larger question of railway finance.

"My Hon'ble Colleague refers to certain questions connected with the heading 'Loss by Exchange' in our statements. It is perhaps sufficient to say on this point that the heading 'Loss by Exchange' no longer appears in our accounts.

"On the general question, I have already expressed my opinion that it is particularly desirable, in order to encourage investors, that we should seek so to show our main headings of accounts that possible investors, not versed in accounting, and not sufficiently interested to seek for explanations in our very elaborate, and, I consider, very complete, detailed statements, may be able at once to grasp the situation and see at a glance that Indian railways are a very important, and as a whole, a paying undertaking.

"We have, as I pointed out in my Statement, made a practical step in this direction by shewing, grouped together in that part of our accounts more especially devoted to Capital expenditure, the different heads of Capital expenditure on railways, while under the heads Revenue and Expenditure Charged against Revenue, the net result of the working of all our railways is at once evident. I do not say that it is impossible to still further improve our system of railway accounts; but, under present conditions of railway financial organization, it is very difficult in practice to introduce such simplification as may appear easy of accomplishment, until the question is studied closely in detail.

"The Hon'ble Mr. Ashton dwells with great earnestness on the system of raising money for railway construction and asks if our present arrangements are such as to obviate difficulty in finding money for the construction of a desirable railway within the programme. I think that to answer this question

it may be well to endeavour to explain somewhat fully our situation as regards securing capital for railway construction.

"Our resources for this purpose consist of such proportions of surplus revenue as we may be able to devote thereto, of capital which we may raise in India by rupee loans, and of sterling loans which may be raised in England either for direct account of Government or for railway companies under Government guarantee.

"When then the Public Works Department presents its statement of desirable and feasible railway expenditure for any given year, the Finance Department have to consider (1) what, if any, is the proportion of surplus revenue which they can afford to give to railways; (2) what is the amount which they can raise in India without unduly straining the resources of the Indian money market; (3) what is the amount which can be raised in sterling in England, whether for direct account of Government or under Government guarantee, without causing the depreciation of credit which must result from any endeavour to raise capital in excess of what the market is freely disposed to give.

"There are only a certain number of investors in England inclined to place their savings in Indian investments at the low rate of interest which we offer, and at any given season their disposition to invest in Indian securities is influenced by the condition of the money market and the profit obtainable at the time in other forms of investment.

"I think it must be admitted that the foregoing considerations place a distinct limit on the sums which we can possibly raise for railway development. I must therefore admit that the construction of the most desirable railways may be unavoidably postponed for want of funds, and I must add that until the investing public shew themselves ready to enter into railway enterprise in India without a Government guarantee, this condition of affairs is likely to continue. With reference to the observations made by the Hon'ble Mr. Ashton in connection with the relation between Exchange and railway enterprise, I would here point out that British investors will never invest their money in England if they have no confidence in the maintenance of Exchange. The question of Exchange, therefore, takes a very primary place in the question of railway finance and the provision of money for railway enterprise.

"I would next say a word with reference to the system adopted for the allotment of capital for the different classes of railway expenditure, and I would call attention to the information given in the Budget Statement shewing that in our programme for 1901-1902 we have given the first place to expenditure on open lines, the second to the completion of lines under construction, and the third, and a very small place, to new lines.

"Before quitting this subject I would like to impress on the mind of my Hon'ble Colleague the fact that from the financial point of view it makes practically no difference to Government whether we are called upon to raise the money ourselves, or whether it is raised under Government guarantee. The responsibility of the Imperial Government remains the same in either case, and further I may point out that, when Provincial Governments offer a provincial guarantee for the construction of railways which they have much at heart, the Imperial Government cannot but feel that they are practically just as responsible for the provincial guarantee as if they had given it themselves.

"The Hon'ble Rai Sri Ram Bahadur in the course of his remarks made a statement regarding the amount of capital raised or debt incurred by the Government during the year, and compared that with the cost of the famine as shown in the Revised Estimates. He said the Government borrowed £3,000,000 in England and three crores of rupees in India, and that if from these two loans we deduct four crores lent to the Native States and which will be repaid, there would remain an addition of three and a half crores to the permanent debt on account of the expenditure on the famine which, however, only cost the Government £4,245,000. I think there is a slight misapprehension in this calculation, for the sums borrowed in England and in India provided not only for famine expenditure, but also for capital expenditure, including railways.

"Another point discussed by the Hon'ble Rai Sri Ram Bahadur is the treatment of local revenues by the Central Government, and in support of his argument that the provinces are not always well treated he adduces

certain figures; but I think that here also the Hon'ble Member is under a slight misapprehension. In the tables which he has drawn up, he shows what he calls proportions of revenue taken by the Imperial Government, and, deducting this from the total, the proportions left to the provinces; but he appears to have assumed that the province has no advantage from the administrative and other expenditure undertaken by the Imperial Government in the province. This is an assumption which I think we cannot admit because expenditure in the province, whether it passes through the accounts of the Local Government or through the accounts of the Imperial Government, is expenditure by which the province is directly benefited. My Hon'ble Colleague further raised the question, which I believe has been frequently discussed before, of the Provincial settlements, and pointed out that according to certain calculations he has made the North-Western Provinces were specially hardly treated in that they contributed a larger percentage of their revenue to Imperial needs than any other of the provinces which he mentioned, and for which he gave figures. The percentages assumed are in themselves subject to discussion, but I think it is hardly worth while to endeavour to establish other figures which in their turn might also be criticised. It is better to consider the subject from the broader ground of the necessary financial relations between the provinces and the Central Government. I think it must be held to be quite impossible that any particular province should be considered as having a special right to a special quota of Imperial revenues. We must look upon the country as a whole, and, where there is a weak and struggling province, it must receive assistance from the richer and more prosperous provinces. Others of my Hon'ble Colleagues at this table today have made certain remarks showing their acceptance of this principle. We have heard remarks from the representative of the Central Provinces, the Hon'ble Mr. Bose, on the subject of the need of his province for assistance beyond that which its revenues can afford, and we have further heard statements by the Hon'ble Mr. Buckingham as regards the needs and the resources of Assam, admitting that Assam is unable at present to provide any contribution towards what we may call Imperial expenses for defence, etc. Well, it stands to reason that if Assam cannot provide a contribution for such expenditure, some other province must, and consequently I think the idea of fixing anything like uniform percentages necessarily falls to the ground. It is a very difficult matter to arrange provincial settlements in an equitable manner, and I fear it is impossible to arrange them in such a manner as to give satisfaction to all concerned. We must, I think, maintain a system which in appearance is more or less arbitrary, but which has, as a guiding rule, that what has been found to be the necessary expenditure of provinces must be the figure used as a criterion in estimating what its future expenditure should be. I do not say that this is a satisfactory system, but it appears to be the only practicable one.

"The Hon'ble Mr. Smeaton has made some observations on the subject of the figures given in my Budget Statement on the circulation of notes, and he objected that my Table II included notes in the Treasuries, and does not therefore really show the amount of notes in the hands of the public. It is perfectly correct that the said table does include the notes in Treasuries, but not those in the Reserve Treasuries; it only includes the amount of notes in the local Treasuries, and these are notes which are practically in continual circulation. Strictly speaking, the figures given are not those of notes solely and exclusively in the hands of the public, but I think they practically represent what may be understood by the expression 'notes in the hands of the public;' they represent notes in general circulation, the notes in the general Treasuries not being, like those in the Reserve Treasuries, locked up and kept aside.

"The Hon'ble Mr. Smeaton has also made some observations concerning our notice that the salt revenue in Burma was not giving all the satisfaction that we might reasonably hope for, and I gathered from my Hon'ble Colleague's remarks that he admitted there might be some ground for criticisms, because he said it was a very little matter—but the idea of the Government of India is that the Burma salt revenue should become a more important matter. We think that at present this revenue is unduly small, but we have no doubt that with

the measures the Local Government are preparing to take, some satisfactory progress will be registered in the course of the next few years.

"With Your Excellency's permission, I may now refer to the important remarks which have been made by the Hon'ble Sir Allan Arthur, and I may at once express my sense of the service which he renders to Government as well as to the commercial community by his competent and unbiassed study of different financial questions.

"Our Hon'ble Colleague takes exception to my remark that 'it has often been urged that the relatively high rates of discount prevailing in the busy winter season are due to the low figures of Government deposits with the Presidency Banks during the busy season' He says that this is not exactly what the business community urge, but rather that the Government deposits are pretty much the same all the year round, and are not sufficiently increased in the busy season. I do not dispute my Hon'ble Colleague's statement. He is in an excellent position to know and to state the views of the commercial community; but I must observe that this view is not quite in accordance with one which is, I believe, also held, namely, that it is advantageous to have a fairly constant balance with the Presidency Banks, while the excess receipts flow into the Reserve Treasuries, the Banks being thereby relieved from the sudden and fluctuating demands which the exigencies of a great Government may entail. It may be possible to find some means of reconciling the two views mentioned, but although I should be glad to see measures devised which might tend to give greater ease to the money market in the busy season of the year, the question of the precise nature of the measures which could reasonably be adopted is a very delicate one, since it is clear that it would not answer in the long run for the money market to be led to consider that Government was in any way definitely bound to provide for its requirements. On this subject I may say that I do not see how, under existing conditions as between the Government and the Presidency Banks, any serious change can be made. It is, however, possible that we may at an early date come to some agreement with the Banks which will enable us to review some of the existing arrangements, and Government will be prepared to give every consideration to the question now raised.

"In the meanwhile, I may once more point out that the balances which are shown by my hon'ble friend's figures to have been at the disposal of the Presidency Banks have not been inconsiderable; while in other ways also, Government has shown its consideration for the requirements of trade.

"As regards the figures showing the average monthly amounts of Government deposits with the Presidency Banks, my Hon'ble Colleague is correct in his supposition that the figures which I gave last week, and with which he compares his own, were those for the last day of each month. They are the figures which were furnished to me by the Department, from our usual monthly statements, on my request for information on the subject, but I am quite willing to admit that the averages now tabulated are more useful than my figures for the purposes of our argument.

"As regards the suggestion concerning the possible effect on the sales of Council Bills which might be caused by placing more currency at the disposal of the Banks in India during the busy season, I can only say that Government has not acted under the influence of such considerations, and has endeavoured to follow, rather than attempted to control, the demands of the market. My own view is that, even if we had the desire to exercise such a control, we have not the power as long as we give rupees for sovereigns at our Mints and Treasuries. We cannot, I think, as the Hon'ble Sir Allan Arthur suggests, 'lock away an excess quantity of rupees' when rupees are required. They would speedily be extracted from us by the importation and presentation of sovereigns. When we find sovereigns being imported in an inconvenient manner, we must increase our offers of Council Bills, and accept, if necessary, lower rates. That is all we can do. The machine will work automatically, and control our general operations.

"On the next question, the desirability of Government being able to raise temporary loans, I fear that my Hon'ble Colleague has somewhat misunderstood the situation as I endeavoured to explain it. We are not in a position to repay temporary loans in November even if we could count on existing Banks being able

(of which I am not perfectly sure) to make advances repayable at that date. November is our month of lowest balances and greatest financial stress, and it is then that we most need money, which we could only repay in the latter part of December, in January, or in February. But these are precisely the months when trade requires funds, and we could not be sure of repaying in time to meet their demands. Possibly some arrangement may be come to, to meet the difficulty, but I do not, so far, see my way clearly. This is also my answer to the Hon'ble Sri Ram Bahadur, who commented on our apparently unnecessary increase of permanent debt. I may assure my Hon'ble Colleague that we shall not increase our permanent debt by one penny which, with due regard to our legitimate requirements, we can possibly avoid.

"On this point some other questions have been raised. An explanation has, I believe, been asked as to why, if we hold the large balances which we have shown, it should be necessary to borrow I think that people who ask that question have asked it through want of experience of the necessity of a very considerable working balance for any Government or indeed any large administrative or commercial organization. The fact that we have money in our Treasuries is not a fact which prevents the necessity for borrowing. Of course, if the money in our Treasuries shows a surplus over the amounts required for daily current requirements, which are always fluctuating and for which we must be prepared, then we need not borrow; but it shows a misapprehension of the whole situation if we are asked why, having considerable balances, we nevertheless find it necessary to borrow. The balances are required and must be maintained.

"With regard to the suggestion that the profits of coinage should be remitted without delay for investment in London, I think that the arguments of my Hon'ble Colleague have an important bearing, but, in any case, we should never make large accumulations for later investment, since it would never be profitable to offer too large sums for investment at one time.

"The next question dealt with by the Hon'ble Sir Allan Arthur is that of the regulation of imports of gold and silver for coinage. As regards gold, I do not think that Government is likely, for some considerable time to come, to be obliged to consider the question of importing gold on its own account. As to private importation of the metal, as matters now stand there is an evident waste in allowing gold to be imported by private parties which Government must subsequently re-export, and we have lately shown by our action that we are prepared to regulate our Council drafts so as to stop, or at all events check, such unnecessary importation. As regards the importation of silver for coinage, I have already endeavoured to explain that we are prepared to import and coin silver whenever the demand for rupees appears to render such a course necessary to insure their supply. Experience enables us to gauge fairly the amount of rupees which, under existing conditions, should be maintained as a minimum in the Currency Reserve, and as soon as it may appear that we are unlikely to be able to maintain that minimum by other means, we shall lose no time in importing and coining silver, at the same time reducing by the necessary corresponding proportion the amount of gold held in the Currency Reserve.

"For reasons which I gave in making my statement on the Budget, I am unable to accept my Hon'ble Colleague's opinion that automatic action can be secured by legislative enactment. We cannot definitely fix for any length of time the amount of gold which, with due regard to the requirements for rupees, can be held in the Currency Reserve; equally, we cannot definitely fix the amount of rupees which should be so held. If our circulation expands, we shall require a smaller proportion of rupees, and can safely hold a larger proportion of gold. If our circulation should contract, we shall be bound all the same to maintain our minimum stock of rupees for current purposes, and we must, therefore, reduce the amount and proportion of gold held. I cannot find any general factor governing the proportion between gold and silver to be held. What is the right proportion with a circulation of 28 crores would (other general conditions remaining unchanged) be a wrong proportion with 32 crores. The only sure guide, to my mind, is the minimum stock of rupees which it is necessary to hold for current requirements.

"The Hon'ble Mr. Bose in the course of his remarks has dwelt strongly on the unfortunate position of the Central Provinces, and though he did not make any direct or special appeal to Government on their behalf, and although he acknow-

ledged with great sincerity and warmth all that has been done by the authorities to meet the distress of those unfortunate provinces, still it seemed to me that he had a feeling that possibly something more might be done. Perhaps I am wrong; but, being under this impression, I may state that, besides contributing Rs. 34,15,000 to the Provincial exchequer, we incurred a direct famine-relief expenditure of Rs. 2,86,32,000, and gave allotments for agricultural advances up to Rs. 40,00 000, making a total of Rs. 3,60,47,000 which Government provided for the benefit of that single province.

"My Hon'ble Colleague also spoke on the subject of Agricultural Banks and expressed his hope that means would be devised and measures taken at an early date for establishing such Banks in the Central Provinces. The Government of India are most anxious to forward some satisfactory scheme, and Your Excellency has taken a first practical step in ordering the assemblage of a Committee to consider the question of establishing such Banks; but I am bound to say that the remarks made by the Hon'ble Mr. Bose are to my mind somewhat discouraging; for I think that for an Agricultural Bank or any Bank of that class to be successful in the long run, it is absolutely necessary that we should establish the principle of mutual liability and that it should be founded on the basis of mutual co-operation. The great idea which has prevailed where such Banks have been successful is that, where a single individual cannot obtain credit, a group of individuals knowing one another, judging of the necessities of one another, judging of the character of one another, and intimately acquainted with the resources, means and character of their neighbours, can co-operate, and offer their joint security, which is a valuable and a tangible one, and unlikely to fail. Where credit is sought by an individual, and Government is invited to take the place of the money-lender, I should greatly fear that Government would find itself sooner or later somewhat in the position of the money-lender as regards the recovery of its debts, that is, Government would find itself either unable to recover the moneys advanced or would appear to that class which it desired to help as a harsh and severe creditor. I do not say that no arrangement can be made; it may be possible to devise some system to meet the special wants of special classes or special provinces; but I am bound to say that I think that any scheme which departs from the general principle of mutual co-operation will be very difficult to carry out.

"I may once more refer to the remarks made by the Hon'ble Mr. Buckingham, and I would say that the Government of India have naturally the interests of Assam quite as much at heart as those of any other portion of the country. I must observe, however, that the country as a whole cannot consider any particular province as a thoroughly satisfactory portion of the body corporate from the financial point of view, when it is found necessary to secure its financial stability by a contribution from the pockets of other provinces. My hon'ble friend himself admitted that Assam is not itself at present in a position to contribute its full quota to the military and other charges of the Empire.

"I now turn to the observations made by my hon'ble friend Sir Harnam Singh. My Hon'ble Colleague has criticized our estimates of revenue as unduly optimistic. I must say that it is rather a surprise and somewhat of a relief to me to hear criticism taking this direction; for I confess that I had rather feared that the contrary might be the case and that we might be assumed to have been over-cautious and to have under-estimated possibilities. I can assure my Hon'ble Colleague that we have done our best to be cautious in every direction in framing our estimates of revenue. In regard to land-revenue, the Local Governments are certainly in the best position to frame accurate estimates, and the Government of India ordinarily accept, after consideration, the amounts proposed by the Local Governments. The proposals of the Local Governments this year were subjected to exceptional and specially careful examination, in both the Revenue and Finance Departments; and we adopted the unusual course of reducing the estimates proposed by 20 lakhs in Bombay, 10 lakhs in the Central Provinces, and 6 lakhs in the Punjab, making a total reduction of 63 lakhs below the amount which Local Governments estimated to realize. It must, however, be borne in mind that the estimates are framed on the assumption that the coming monsoon will be normal. If the monsoon fails in any way, our estimates will be upset, and that not only in regard to land-revenue. The non-realization of the estimates of land revenue in the current year was entirely due to the

delay in the establishment of the monsoon, and in some districts to its practical failure. The collections of land-revenue including that from irrigation in the now closing year are expected to be less than the estimate made last March, by 54½ lakhs. Of this falling off, however, no less than 47 lakhs occurs in Bombay, the province in which famine-relief operations have to be continued during the coming year.

"My Hon'ble friend expresses a fear that Government may become too lavish in its expenditure. I am happy to repeat the admission I have already made that we have been encouraged by a moment of comparative financial ease to act as liberally as strict prudence permits in making grants to the Local Governments amounting in the aggregate to 164½ lakhs.

"It is certain that, owing to financial stress during past years, the administration in many provinces has been unduly starved, and a most serious check has been imposed on that material and moral development on which the welfare and prosperity of the people depend. I am convinced that when expenditure is possible we should welcome the possibility of providing for it, and I fancy that, as far as his own province is concerned, he will not cavil at the expenditure of Rs. 12,40,000, the amount of our grant-in-aid to the Punjab, and that he will approve the increase of the grant for Civil Works there to Rs. 37,33,000.

"As regards my Hon'ble Colleague's criticisms on our railway revenue estimates, I think we need not be under any apprehensions that our estimate is excessive. It is perfectly true, and we stated it clearly, that the revenue of last year was abnormally augmented by the exceptionally large transport of food-stuffs required for famine purposes; but the nine lakhs by which we have increased our estimate for the coming year, over what we practically know to have been the realizations of the closing year, is a small addition compared with what we should have been justified in adding on account of the steady development of our railways if we had not taken into account the exceptional causes which increased the revenue last year; indeed, an exceptional increase of mileage would have entitled us to anticipate a special augmentation of revenue above the average of past years.

"I now turn to certain remarks made by my Hon'ble Colleague Mr. Ananda Charlu. I think that my Hon'ble Colleague does not sufficiently realize the importance of railways as a means of alleviating distress by the transport of food-grains to famine districts. This is a question on which the Hon'ble the Chief Commissioner of the Central Provinces has recently borne strong testimony.

"My Hon'ble Colleague has made some remarks on the question of the countervailing duties on sugar, and has asked if those duties had been imposed specially for the benefit of the colonies of the Empire. I would suggest to my Hon'ble Colleague that it is absolutely impossible that such a duty could operate exclusively for the benefit of any colony or any single foreign country, and that as long as the duty is levied, as it now is, on produce which it is sought to bring into this country at an artificially cheap price, the Indian producer of sugar must benefit by the maintenance of the duty.

"The Hon'ble Mr. Ananda Charlu then passed on to criticise our estimates of revenue in the sense that he considers them unduly optimistic, and he spoke with considerable severity on the question. As regards salt, he says that salt is not an article of food by itself. That is a truism which we may admit, but he appears inclined to assume that the considerable increase in the consumption of salt must have been solely due to the fact that salt was issued with famine-rations. I can assure my Hon'ble Colleague that such is not the case. Northern India was exempt from famine-conditions, and the increase in the revenue from salt obtained through the Northern India Salt Department was from Rs. 1,94,65,000 in 1899-1900 to the revised estimate of Rs. 1,99,50,000 for 1900-1901, while in Bengal the revised estimate was within Rs. 94,000 of the highest figure ever attained in a generally progressive series of years, and this notwithstanding the fluctuations due to the fact that the greater part of the salt-revenue in this province is due to duty on importation. In Madras, again, which was very slightly affected by famine during the last year, in the sense in which my Hon'ble Colleague spoke, that is, as regards the distribution of rations, we find that the salt-revenue rose from

Rs. 1,85,50,000 to Rs. 1,89,06,000. I think that these figures sufficiently establish my contention that, notwithstanding great trouble and depression in certain Provinces and among certain sections of the population of this country, there was, taking India as a whole, increased general prosperity, and such increased prosperity is, I believe, clearly indicated by an increased consumption of salt.

"My Hon'ble Colleague Mr. Ananda Charlu also dealt with the question of customs, and he observed that customs-revenue returns were no criterion of the situation. He apparently considers customs-duties as revenue raised by compulsion. I must confess that I am quite unable to follow his arguments in this direction. There are necessaries which, to maintain life, a man must obtain no matter how distressed his circumstances, but of such, in a country so happily productive as India, few, if any, can be cited among those articles imported from abroad and paying customs-duty. My hon'ble friend talks of the population as being under a process of distraint. I never knew an honest man under process of distraint consuming articles which were not essential to his existence, and, seeing no reason to call in question the honesty of the Indian peoples, I think I must assume that, if they were able to consume and pay duty on larger quantities of articles not essentially necessary to their well-being, their pockets must have been better filled than at dates when they consumed smaller quantities of the same.

"My Hon'ble Colleague is, I am sure, convinced of my sincere desire to appreciate correctly and to promote, if possible, the welfare of the Indian peoples, and I trust that I may have succeeded in convincing him that, as regards customs-revenue, I am on firm ground in holding that its increase is a sign of increase in average well-being.

"My hon'ble friend says that one swallow does not make a summer. It does not, but I thought I had pointed out a whole flight of swallows when I cited the increases of revenue over budget estimates during the closing year.

"The items of increase excluding those which may be esteemed as fortuitous are as follows:—

Increases in revised over budget estimate, 1900-1901.

Revenue.

	£
Salt, increase	106,000
Stamps, increase	76,300
Excise, increase	137,700
Customs, increase	189,900
Post Office, increase	33,100
Telegraph, increase	85,900
Receipts by Civil Departments, increase	60,500

"I really hope and think that this flight of swallows may be looked on as an indication of the approach of a happy Indian summer!"

His Excellency THE PRESIDENT said:—"We have arrived at the close of what I venture to claim as a practical and businesslike session. A year ago, in my Budget speech, I had to confess and to explain the withdrawal or the postponement of our most important legislative measures. In the present year we have a better record; for not merely have we placed upon the Statute-book a number of subsidiary measures, to one of which, providing a much desired relief in respect of inheritance and of succession-duties to Native Christians, I attach no small weight; but we have also carried into law two Bills of the highest importance, the Assam Labour Bill and the Mines Bill, both of which raised issues of a very controversial character, and were keenly watched by public opinion. I ventured to prophesy last year that we should profit, rather than lose, by postponement; and I have little doubt that, whereas we have in both cases secured general assent, and in one case absolute unanimity, in the final stages of these measures, we should not have been so fortunate had we persisted in pushing them forward at that time. I feel, therefore, that we may all compliment ourselves upon good work done: and although my test of the success of a legislative session in India certainly would not be the amount of the legislative outturn, I yet feel that, even judged by this standard, we have not done amiss. It is hardly

necessary for me to reiterate the opinion to which I have given expression on a previous occasion and which, I am sure, will meet with the enthusiastic acceptance of the Hon'ble Mr. Buckingham, that I am not anxious to strain too heavily the productive capacity of our legislative machine during the remainder of the time that I am in India.

"If our session has been one of a workmanlike character, we may also claim that it has terminated in a very businesslike Budget, and in a discussion of solid interest. My Hon'ble Colleague, Sir Edward Law, has hardly met with the conditions which a financier of repute would voluntarily choose for the inauguration of an Indian term of office. He has had to fight a famine of exceptional severity, and to watch a financial situation that has always been delicate, and sometimes anxious. Nevertheless, at the end of a year of strain, he has been able to convert the almost nominal surplus that was estimated for by his predecessor into a sum of nearly 1¾ millions sterling. He can congratulate the country and himself that the currency policy which was inaugurated just before he joined us has gained in strength and stability at his hands, so much so that all those gloomy ravens who sat about and croaked of disaster, at about the time when the London Committee issued its report, seem to have vanished from the scene; and after making the most ample provision for a generous famine expenditure in the Bombay Presidency, which unfortunately is not yet free from serious drought, for increased military expenditure, for a much larger outlay upon railways and upon irrigation, in the forthcoming year, he is yet able to predict a substantial surplus at its close, which, if only we can count upon a recurrence of normal conditions, I shall hope to see largely increased.

"I do not wish to strain these achievements, or the figures upon which they rest, beyond their legitimate scope. I am well aware that we have had a number of windfalls during the past year, which no one could foresee, and upon which we most certainly cannot reckon in the future. But, nevertheless, making due allowance for them, I still claim that the situation is one that is hopeful, both as regards the economic and the financial position of India. I shall revert to the first of these subjects later on. But, as regards the latter, while I should always be cautious in dogmatising either about the durability of any financial situation, or the vitality of any fiscal system, I yet think that, if we examine our main sources of revenue and note their steady increase, we may feel some confidence that, barring a recurrence of disasters which are beyond our foresight or control, India is already beginning to tread upon a brighter and happier pathway.

"There is one heading of the estimates upon which I desire to say a word. I allude to the Military Estimates. They have been introduced in a statement, and have been explained today in a speech, by the Hon'ble Military Member, enumerating the very considerable reforms and additions which we have already undertaken, or are about to undertake, and summarising in a concise manner the principal measures of improvement that have been carried out in the Indian army during the sixteen years with which, in one or another capacity—culminating in the highest—Sir Edwin Collen has been connected with the Military administration of the Government of India. He is now retiring from our service with a record of long and honourable work, such as few administrators can point to, and that has left an enduring mark upon the *personnel*, the organization, and the equipment of the Army in India. May I be allowed to congratulate him upon the record which he has so modestly compiled, and also upon the very substantial addition that he has been able to make to it during the past two years? I am sure that he will be willing to make the reciprocal acknowledgment that, although his proposals have never been more searchingly investigated than during the many hours which the Members of the present Executive Council have spent at the Council table in discussing with him the problems of our military administration during the past year and a half, and although there are many respects in which we have not been able to concede the full measure of his demands, he has not in his long experience been associated with colleagues who were more profoundly impressed with the gravity of their responsibility for the defence of the Indian Empire, both to the inhabitants of this country, and to the larger unit of which India forms a part. I need not repeat today what I said in the Budget debate last year.

I gave a clear warning on that occasion that there would be a rise in the Military Estimates, and that rise has come. I am not in the least disturbed by the argument that all this Military expenditure is a waste, and that the money had much better be spent upon projects of economic development. I would gladly spend the whole of our revenues in the latter way, but I say frankly that I dare not. The Army is required to make India safe; and it cannot be said that India is safe. In the event of an invasion or a campaign, those very theorists who are so fond of the phrase 'bloated expenditure,' and who denounce any attempt to make the Army more efficient that costs money, would be the first to run round and take shelter under the armaments whose expansion they had resisted. Exorbitant or ill-considered outlay, equally with them, I would decry; but my Hon'ble Colleague will bear me out that there is not an item in the new Military expenditure of one million sterling in the forthcoming year which has not been exhaustively threshed out and sifted at the Council table, whether the outlay was half a lakh or twenty lakhs. He has given to Council in his memorandum an indication of the objects to which this expenditure is to be devoted. They are not fanciful experiments, the emanation of the brain of the faddist or the doctrinaire. Still less do they spring from schemes of aggression or advance. There have never been two years in India less marked by a bellicose ambition. The purposes to which the money is to be devoted are such objects as rearmament of the entire Army with the latest weapon, the increase of our artillery and its supply with the most modern guns, a very substantial addition of officers, the creation of an organised transport corps, instead of the fumbling units which have hitherto been a substitute for it, the proper armament of our coast defences, the building of light railways with which to strengthen our frontier posts, the establishment of factories with which to turn out our own military material. I am far from saying that the list of necessary improvements is exhausted. Year by year the discussion has to be resumed in the light of fresh experience and of demonstrated needs. But at least no one can say that, while the whole world has been busy with military reform, we in India have stood still. I remember last autumn reading in the leading organ of the English Press an article about the Indian Army. It was one of those rather sensational letters which, from the cover of anonymity, fling broadcast the accents of denunciation and doom. I never blame the writers of these productions; because their purpose is almost always honest, even where their knowledge is imperfect; and because their invective, though sometimes exaggerated, very often calls attention to positive blots. This particular writer declared that our armaments in India were hopelessly inadequate, our *personnel* insufficient, our equipment obsolete and absurd. How far these opinions are correct must be judged in the light of the information contained in the present Budget and in that of last year. But when the writer went on to say that nothing was being done, or, if being done, was being done so slowly and so incompletely as to be little better than absolute inaction, and that the Government of India was not in the least likely to take the necessary steps, he revealed an ignorance which was profound and, if he possessed any opportunity of learning the facts, culpable.

"In my first Budget speech two years ago, I alluded to twelve important reforms to which I hoped to address myself while in India. I was sufficiently cautious at the time not to indicate their nature, and I remember that there was some playful conjecture as to what they might be. Inasmuch as before we meet again at this table, more than half of the normal term of office of a Governor General will have elapsed, and as I shall be terminating my third, and entering upon my fourth year of administration, I may perhaps take advantage of the present occasion to indicate in more precise language how far the Government of India has travelled up to the present date along the road which we then set before ourselves. I hope I may not be misunderstood. Neither my colleagues nor I desire to claim for ourselves any premature credit for measures as yet only recently introduced, and to which the test of experience has yet to be applied. We also know enough of India not to be sanguine or to prophesy. Just as two years ago I never anticipated that we were standing on the brink of an appalling famine—

the second within three years—so now there may be vicissitudes or risks ahead of us of which we know nothing, and which may upset all our calculations. All I desire to do upon the present occasion is to take the public into our confidence as to the measures which we have placed before ourselves, and to indicate to it that we have not so far been idle.

"First in importance among these objects I placed the creation and pursuit of a sound frontier policy. It seemed to me that many of our blunders and misfortunes had arisen from the fact that there was no settled basis of policy, no principle of action operating throughout that long and troubled zone, but that each situation was apt to be dealt with as it arose and according to the advice or influences that happened to be uppermost. I do not think that there is in this picture any disparagement of the officials who were responsible for what was done. They were dealing with a transitional epoch, in which the frontiers were being pushed forward by the pressure of events, without any policy having been formulated to keep pace with them, and in which there was a tendency to oscillate, according to the predominant influence of the hour, between advance and retrogression. It has always seemed to me that a survey of the whole situation, in the light of our experience, our pledges, our armaments, and our general resources, ought to be productive of a code of frontier policy, which could, with consistency and without violent interruptions, be applied to the whole line of our North-Western Frontier from the Pamirs to Baluchistan. Such a code we have endeavoured to evolve. Its main features consist in the withdrawal of our regular troops from advanced positions in tribal territory, and their concentration in posts upon or near to the Indian border, their replacement in tribal tracts by bodies of tribal levies trained up by British officers to act as a militia in defence of their own native valleys and hills; in other words, the substitution of a policy of frontier garrisons drawn from the people themselves, for the costly experiment of large forts and isolated posts thrown forward into a turbulent and fanatical country. This is the policy that we have been engaged in carrying into effect from Chitral on the north to the Gomal Valley on the south. I do not say that it is a policy unattended with risk. There is no frontier policy capable of being framed that could be described as absolutely safe. I have not uttered one boastful word about it since we began two years ago; and I am not even going to indulge in a murmur of self-congratulation now. The policy has to justify itself: and that it can only do in time. I do not say that it will save us from frontier warfare or from occasional expeditions, or from chronic anxiety. They are the inevitable heritage of a boundary with the physical and ethnographical characteristics of the Indian frontier. All I claim for it is that it is a policy of military concentration as against diffusion, and of tribal conciliation in place of exasperation: and I desire that it should be given a fair chance. I do not at all care by what name it is called. One of the main errors of the past seems to me to have been that, instead of realising that there could be such a thing as a policy upon which all parties could agree, it has been assumed that there were only two policies—the Lawrence policy and the Forward policy—and that a man who was fit to think must be an advocate of one or the other. In my view both of these policies have long ago been superannuated. I have frequently argued in the House of Commons, and elsewhere, that the policy of Lord Lawrence is dead, from the complete change in the situation and from the efflux of time: and I think that there is nothing more dangerous or more futile than to summon dead men from their graves, and to dogmatise as to how they would have dealt with a situation that they could never have foreseen. Similarly, as regards the Forward School, the word is one of those elastic and pliable adjectives which are capable of assuming the most different meanings, from a statesmanlike prevision of military and political danger on and beyond the frontier, to a rash indulgence in military adventure. All I would say is, let us get away from the paralysing influence of labels. Let our new frontier policy be called by any name that men choose. Only let it be based, not upon obsolete political formulas, but upon up to date common sense; and, if it approves itself as time goes on, let it become a tradition and endure.

"The second reform that I set before myself was the constitution, after I had had time carefully to examine the whole situation, of the best form of administration for the Frontier districts. As Hon'ble Members know, these studies led to the recommendation of a new Frontier Agency to be created out of the Trans-Indus Districts of the Punjab, and to be placed under the direct control of the Government of India. This proposal was unanimously accepted by my colleagues here, and has received the assent of the Secretary of State and of His Majesty's Government at home. The papers have already been printed in the form of an Extraordinary Gazette, which will show to the public what were the steps by which we were led to these conclusions. I need not recapitulate them now. We may perhaps feel some reasonable pleasure at the solution of a problem which has baffled successive Governments for twenty-five years. But our new province will have to be judged not by its promise, but by its results. In one respect I observe a great change in public opinion; for, whereas when I left England the majority of those persons whom I had consulted on the desirability of such a change were hostile to it and it was doubtful what might be the reception accorded to it by the Press, I now observe with satisfaction that it is everywhere described as inevitable, and taken as a matter of course. This is rather the way with reforms. They are often vigorously and successfully resisted, as this proposal has been ever since the days of Lord Lytton, who was its first parent. But, when they are ultimately carried, every one shakes hands, and says that the result was a foregone conclusion.

"Third in order of importance I place the steps that we have taken, with the consent of the Secretary of State, to remedy what I hold to have been one of the greatest abuses that have grown up in recent years in this country, and the most subtle and insidious danger to Indian administration. I allude to the frequency of official transfers arising partly out of our leave rules, partly from local systems of official promotion, partly from a preference of the convenience of the individual to the exigencies of the public service. It is hopeless to expect good administration without continuity, intelligent administration without local knowledge, popular administration without personal interest. If these considerations apply to government in any country, much more are they true of a country like India, where large masses of people are being ruled by a small minority of alien extraction. The abilities, the training, and the enthusiasm of the latter are all discounted or thrown away if the officers are shifted hither and thither before they know the district, or have mastered the local dialect, or have acquired the confidence of the inhabitants. It is as though the captain of a cricket eleven were to place his field indiscriminately, and to shift a man from post to post before he had learned the work of one. This great danger in India, as to which I never fail to make enquiries wherever I go on tour, and which in some parts of the country has attained to extravagant dimensions, has attracted our earnest study; and the reform in the Leave Rules which we have instituted, and which, without detracting from the privileges of the Service, will prevent the frequent removal of officers upon leave at short and insufficient intervals, with a consequent chain of transfers and far-reaching dislocation, will, we hope, tend very greatly to mitigate the evil. At the same time we are taking up independently the case of particular Presidencies or Provinces where a bad system seems to call for special treatment, and we have issued general rules, applicable to all, as to the conditions under which district posts should in future be held. Any administrator who in his time can feel that he had done something to draw closer together the ties between rulers and ruled in this country, and to produce that sympathy that can only result from mutual knowledge, may go away with a consciousness of not having altogether failed.

"A corollary of this abuse is the divorce that has been brought about between an officer and his work, or at any rate the most important part of his work, by the interminable writing that has grown up in the administration of this country, and that threatens to extinguish all personality, or initiative, or despatch, under mountains of manuscript and print. The real tyranny that is to be feared in India is, not the tyranny of executive authority, but that of the pen. I do not say that the system is without its good features.

It could not have grown up, it could not have reached its present dimensions, in India, had it not had substantial justification. In a country so large, where the life of officials, even the most sedentary, is so fleeting, where customs and traditions and practice vary so greatly, and where such importance rightly attaches to precedent, it is essential that there should be preserved the written records not merely of administrations but of departments. In this way only can an officer upon arrival in a new district find out what has been going on there before him; and in this way only are the perpetually changing officers in the various Secretariats able to deal with cases, of which, without the written records, they would be in entire ignorance. These are the good and necessary sides of the system. But there is a consensus of opinion among those who are qualified to speak that the engine has become so powerful as to have got the better of its driver, and that those who should be the master of the system have become its slaves. In the Departments of Government I found, when I came here, inordinate writing, unjustifiable repetition, unbusinesslike procedure, and much easily avoidable delay. I do not think that any individual or series of individuals could be blamed for this. It had grown up, so to speak, by stealth; and every one was a half unconscious victim. Three things were necessary. The first step was to make a careful study of the system in the various departments, and to ascertain when and how and why it had grown. I found that it was almost entirely the product of the last twenty-five years, and that it synchronised with the great development of communications, and more especially of the telegraph; in other words, that it was the product of modern centralisation. The next step was to compare our system with those of the best offices in the Government at home, and to see what lessons could be derived from them. The third step was, by consultation with all those officers who are responsible for working it, to ascertain where the pruning knife could most effectively be applied. In this way was drawn up an entirely new set of rules of business for the Secretariat of the Government of India, providing for greater simplification of procedure, less penwork, more frequent verbal consultation, superior despatch. These rules were sent round to all the Local Governments, and with suitable modifications have been largely adopted by them. They have now been in operation for a year and a half in the departments of the Government of India. I watch over them, as my Hon'ble Colleagues and the Secretaries and Under Secretaries know, with all the interested vigilance of a parent, and I have received and desire to acknowledge the most loyal cooperation at their hands. More recently, after prolonged examination, we have attacked that more mischievous development of the same abuse which arises out of the multiplicity and length of reports, and we are striking at its very roots. It is no exaggeration to say that the system of report-writing that prevails in India is at once the most perfect and the most pernicious in the world—the most perfect in its orderly marshalling of facts and figures, and in the vast range of its operation, the most pernicious in the remorseless consumption of time, not to mention print and paper, that it involves, and in its stifling repression of independence of thought or judgment. The Government have made public their views in a Resolution recently published in the Gazette, and we are now addressing all the Local Governments. It is of no use to deal with the matter in pious generalisations, or with academic counsels of perfection. Resolutions or appeals of that sort are gratefully acknowledged, and as speedily forgotten. We have made a detailed examination of every report that comes in from any quarter to the Government of India, and have collated them over a period of years. In this way we have been able to strike a mean, both as to contents, and character, and length. A great many have been found to be useless, and have been abolished altogether. With regard to the remainder, we have issued definite orders in each case, prescribing the manner of compilation and the limits of length. We have invited the Local Governments to do the same with the reports that go up to them but do not come on to us. We are thus thinning the forest, not by a general order to reduce the amount of superfluous timber that it contains, but by ringing every tree in it that ought either to be lopped or to be cut down, and by sending in the woodmen with axes to perform the task. But I may be asked, what is going to come out of all this? Will not

this reformatory zeal soon die down, and be replaced by the normal apathy? Who is going to secure continuity either of energy or plan? I observe that this was the tone of a recent gathering in England that met to discuss this question. A large number of Indian officers of authority and experience attended, and they were all good enough to say that our reforms were excellent, but a good many added that they would be ephemeral. Indeed, one gentleman said that no permanent reform would ever originate in India. Let us wait and see. I at any rate do not mean to be put off by these counsels of despondency and despair. As I said in the Government Resolution, there is no reason why a good practice should not endure just as well as a bad practice, if once it be given a fair start; and I think I have a right to appeal for the cooperation of every officer of Government, from a Governor to a Deputy Collector, to see that that start is given. It is true that Viceroys are fleeting phantoms, whose personality is transient, and whose term is soon over. But this is a work in which is involved not the prestige or the whim of an individual, but the entire credit of British rule in India; and it is even more to the interest of every Local Administration that it should continue than it can be to mine.

"Fifthly comes the great change in our Currency system, to which I have already adverted, and which is now in the second year of successful and tranquil operation. It is, I think, a considerable thing to have escaped for so long from all the inconveniences and troubles arising from an unstable and fluctuating exchange. It was fatal to accuracy of financial forecasting and it was in the highest degree prejudicial to trade. We are now all settling down to a 16*d*.-rupee as if it had existed since the beginning of time; and we make our calculations upon a basis of reasonable certainty. Even the prospects of a redundant circulation of rupees, by which some are frightened, are rendered innocuous by the Gold Reserve Fund which we have established upon the advice of Sir Edward Law, and which is to hold in reserve the gold with which to meet any sudden plethora in the silver coinage. It really seems as though India were entering upon a period of reasonable stability as regards currency: and this new and happy era, which was inaugurated by Mr. Dawkins, may, I hope, be converted into a settled tradition by his successor.

"One of the objects with which I have always welcomed the introduction of the gold standard, placing India as it does in closer contact, and upon even terms, with the money-market of Great Britain, has been the hope that it might accelerate the flow of capital to this country in industrial and other undertakings. This will not come all with a rush; but I think that I see signs that the movement is spreading. And this brings me to the sixth subject, upon which I have bestowed close attention, and to which I have been anxious to communicate a positive impetus. I allude to railways, and I speak not merely of railway construction, but of railway policy and railway finance. I remember, before I came out to India, saying that I hoped that 25,000 miles would be completed in my time. I erred on the side of caution. Though we have had to deal with a curtailed programme in consequence mainly of famine, this total has already been reached and passed. When I made my first Budget-speech, the total length of open lines was 22,500. It is now 25,155. In the last two years, our railway account has, for the first time in the history of Indian railways, exhibited a net surplus—a result which must be very gratifying to my Hon'ble Colleague, Sir Arthur Trevor, who has administered the Public Works Department with so much acumen for five years; and we are proposing in the forthcoming year to spend over 10¼ crores upon railways, as compared with 8¼ crores during the past year of famine, and 9 crores in the preceding year. But here I am confronted by a point to which I must make a passing allusion. I observe that a question has been raised as to whether the increase of railways is not an injury rather than a gain to India, and whether by carrying away the food-supplies of the country in times of plenty, they do not leave the raiyat impoverished and exhausted when famine comes. It has been suggested in consequence that, if we do not stop our railways, which are supposed to swell our exports, we ought to restrict the latter. Inasmuch as these arguments appear to me to involve a fallacy of the first order, and to rest upon presump-

tions for which there is no foundation, I may perhaps halt for a moment in order to expose them. The first of these presumptions is that our export of food-grains is largely upon the increase, and that this increase has been in the main caused by railways. There is no ground for this hypothesis. The total export of food-grains from India between 1880 and 1890 was 22,687,000 tons; between 1890 and 1900, 23,257,000 tons, or an average annual increase during the second decade of only 57,000 tons over the first. Had the exports increased in proportion to the extension of railways, the volume of trade in the second decade would have been half as much again as that in the first. In the last year the grain export has been far below the average of any previous year. The second presumption is that a large proportion of the total grain-produce of India is exported. This again is not the case. Out of a total estimated production of 73,000,000 tons, little more than 3 per cent. is exported, and, if rice be excluded, less than 2 per cent., the bulk of the export being wheat, which is not the food of the people in time of famine. If then we place a check upon exports in order to provide the population with more grain when famine comes, all that we shall do will be to ruin Burma, which lives upon its great export of rice to India, notably in times of famine, and to deprive the wheat-grower of the Punjab of the market which railways have created for him.

"As a matter of fact what was the old system which railways are alleged to have destroyed, and which we are now invited in some quarters to re-establish? It was the plan of grain-storage in ordinary years against the years of drought. This was a possible and a desirable system in the days of no communications. Each district had then to be self-sufficing, because it was landlocked. With the spread of railways such a policy has become a costly and a useless anachronism. The storage system itself was attended by the gravest drawbacks, which have now apparently been forgotten. Rice is a grain which will not easily admit of being preserved. Even the drier grains are apt to moulder under such conditions, and when the grain-pits of the Dekkhan were opened in 1897, a great deal of bad grain was thrust upon the market and caused widespread disease. Again, it seems to be forgotten that the grain-pit usually has a private owner, and that the price at which he will consent to open and sell is not determined by the needs of the public but by the interests of his own pocket. Under the storage system the most startling fluctuations of prices occurred even in adjoining districts. Grain was at famine prices in one place, while it was lying rotting upon the ground in another. Everyone knows the story of the Madras beach in 1876. Take the case again of Raipur in the Central Provinces under this system. In 1861 wheat was selling at 84 seers for the rupee, in 1863 at 32, in 1863 at 20, in 1869 at 15, in 1876 at 5$3\frac{2}{4}$, in 1878 at 19$\frac{1}{2}$.

"If anybody tells me that this is a condition of affairs good for the cultivator, or the consumer, or for trade, or for the Government of India, I must take leave to doubt his sanity. Now, as against this, what have railways done? They have equalised the prices all round. They have given to the landlocked districts access to external markets in times of plenty, and they have brought the produce of those markets to their doors in times of need. It must be remembered that the whole of India is never fortunately afflicted at the same time by famine. There are always flourishing parts to feed the parts that are famishing. In the old days the inhabitants of the latter consumed the grain in their pits, and then laid down and died. Now imported grain keeps alive the whole population. I gave just now the experience of Raipur under the old conditions. Let me tell Hon'ble Members what it has been under the new. I will quote the words of the Chief Commissioner, Mr. Fraser, with reference to the recent famine. 'It is impossible,' he writes, 'to over-estimate the benefits which railway extension has conferred upon the Province. If Chattisgarh, for instance, had not been opened up by railways, it is horrifying to think of what might have occurred. The recent extensions of the Bengal-Nagpur Railway poured in supplies of the cheap scalded rice of Orissa which penetrated far into the interior. In 1897 this source of supply was wanting, and the more expensive rice from Burma was the chief food-stuff brought in. In the famine of 1897, when exports were carried away in the early months, the Chattisgarh people pointed to the rail-

ways as an exaggeration of their ills. In this famine they have regarded them as their salvation. Within one year the railways have brought into the province grain enough to feed three millions of people for a year.' Now this is a very instructive quotation; for it shows how in 1897 when the Chattisgarh people held fairly large stocks, they resented the depletion of these by the railway and a rise in prices later on. On the other hand, in 1899 there was in over two-thirds of Chattisgarh no crop at all. Where I wonder in such a case would the grain-pits have been? On this occasion, had it not been for the railway, the entire population would have perished like flies. Storage may for a time supply a restricted area. It never has saved, and never will save, a district or a province.

"There remains the third fallacy, as I regard it, that railways have raised prices to a prohibitive level. I can discover no ground for this allegation. The export trade in food-grains cannot have produced any such result, because I have shown it to be infinitesimal. Railways themselves cannot raise prices; their tendency is to equalise them. Prices may rise from an increase of demand over supply, that is, by the increase in the number of those to be fed or in the standard of living. But railways are not accountable for this consequence. It has been due in India to a number of economic causes to which I need not now refer, and, before we set it down as a hardship, we should have to enquire whether there had not been a corresponding increase in the purchasing power of the population.

"I therefore shall certainly not be deterred by any of these economic heresies from a steadfast policy of railway construction in my time. I regard railways as a blessing to this country as a whole, and as the most unifying agency that exists in India. Indeed, I would like to go further and to free railway policy and finance from many of the shackles by which it is now hampered. Almost ever since I came here I have been examining this question, and we have been trying by discussion amongst ourselves and with the Secretary of State whether we cannot do what the Hon'ble Mr. Ashton has urged us to do, namely, find some means of separating railway finance from general finance, or for putting productive railways which pay more than the interest charges on their capital into a category apart from precarious or unremunerative concerns. It is easy enough to make out a good case on paper: but it is difficult to construct a workable scheme in practice. In the long run the money for railways has to be raised by loan, whether in England or in India, and the greater part of it has to be spent in India in rupees. The one is a question of borrowing, the other of ways and means for expenditure. Both questions fall at once within the range of the financial operations of Government. Sir Edward Law, however, is not less interested than myself in this question, and we hope to carry it to a successful issue. I have no time on the present occasion to speak of the steps which I have taken by the institution of a Travelling Railway Commission, which has already done valuable work, and by the publication of an annual summary of all the railway proposals before us, and of the attitude of Government towards them, to take the public into our confidence and to conduct railway development in this country on commercial rather than departmental lines. I hope to carry these efforts even further by means which I have in view: but already I claim that we have made not inconsiderable progress.

"Side by side with railways in India we always consider the subject of irrigation; and this is the seventh branch of administrative policy in which I have been most desirous to initiate a positive advance. I spoke last year of the limitations attending a too ambitious programme, and of the fields of investigation and activity still open to us. During the last two years I have persuaded my Financial colleague to raise the annual grant to 1 crore instead of the three-quarters of a crore to which it was confined when I came out to India. It is not always possible to spend this sum, for considerable time is required in the preparation of the various schemes; and last year, although we granted 1 crore, we only succeeded in expending 90 lakhs of rupees. In the present year we have gone much further. I pledged myself in my famine speech at Simla in October to conduct an enquiry into

the irrigation branch of the famine question. I want to be quite sure that no sources of water-supply or water-storage are neglected or ignored in this country. They may not always be great rivers flowing down unimpeded to the sea, though people at home seem to think that any river ought to be capable of being tapped in the Himalayas, and diffused either into the Central Provinces, or Gujarat, or Berar. Neither do I postulate everywhere profitable or remunerative schemes. What I want to ensure is that in each province the sources of water-supply best suited to it, whether they be canals or tanks, or wells, shall be scientifically investigated and mathematically laid down, so that we may be presented with a continuous programme which we may pursue in ordinary years as an insurance against the bad years when these come. If only people would give one some credit for common sense in the matter instead of writing to me as they do every week from all parts of the world to acquaint me with the astonishing discovery that they have for the first time made, namely, that no more famines need ever take place in India if only I would cut canals to the Himalayas or build reservoirs on the top of rainless plateaux, I should be very grateful. It is no good flogging a willing horse. No Government of India has ever been more profoundly impressed with the importance of encouraging irrigation than this. As I have said, it is one of the twelve problems, and I should have thought that the Resolution recently issued with the orders that it contained, foreshadowing a sustained investigation of all irrigation-projects in the possible areas of famine in the forthcoming autumn preparatory to a Commission in the ensuing winter, could have satisfied even the most exacting critic of the thoroughness and sincerity of our intentions. The Hon'ble Mr. Ananda Charlu has nevertheless complained that no such detailed or defined scheme is contained in the present Budget. I am afraid that he has never read the Resolution to which I refer. Anyhow I would beg him to give us a little time. It is not for the Finance Department to usurp the function of the Engineers. As soon as these have given us their reports, we are ready to set to work. The extra charge of the operations which we have ordered will be debited to the Famine Insurance Grant, and my hope is that its outcome may be a sustained policy of protective, even if non-productive, hydraulic works for a number of years to come.

"Eighth among the problems that I hinted at two years ago was the vexed question of the increasing indebtedness of the agricultural population, and the extent to which the land is passing out of their hands into those of the money-lending class. We have already dealt with the question in the Punjab by the Land Alienation Bill which was passed last autumn. That Bill was an act of innovation, but it was also an act of courage. It was to me a matter of surprise that so many organs of native opinion should have combined to attack a measure which was exclusively based on considerations of public interest and to which, whether it succeeds or fails, it was impossible to attribute a selfish motive. The same problem meets us elsewhere in ever-increasing volume and seriousness, and each case will require to be considered upon its own merits.

"Two years ago, in reply to the Hon'ble Sir Allan Arthur, I promised to take up the question of a reduction in the present high rate of telegraphic charges between India and Europe, which I described as inimical to trade and intercourse, and as obsolete and anomalous in itself. He has reverted to the subject in tones of anguish this afternoon. I had hoped long before now to be able to announce the successful termination of the negotiations which we undertook in prompt redemption of my pledge. My view was that no reform would be worth having that did not provide for a reduction of at least 50 per cent. in the present charges. Our negotiations were so far successful that we did persuade the companies to agree to an immediate reduction to *2s.* 6*d.* a word, with a prospective reduction to *2s.* a word, as soon as the increase of traffic justified it; and in order to secure this end we undertook to give a very liberal guarantee from Indian funds. So far all went well. But since then the matter has been hung up, owing to clauses in the Telegraphic Conventions which require the assent to any change of rate of certain foreign Powers through whose territories the wires are laid. This situation is engaging the earnest attention

of His Majesty's Government. It is to my mind an intolerable position that telegraphic communication between England and India, and the rates at which it is conducted, should be at the mercy of other parties; and I think that some way out of the difficulty will have to be found that will make Great Britain the mistress of her own principal lines of connection. I shall hope to see the reduction of which I have spoken realized in my time. But I may add an expression of my private opinion that the matter will not be satisfactorily or finally settled, and that there will not be the maximum development of traffic between the two countries, until the rate has been reduced to 1*s.* per word. That change will not come yet awhile, and we shall probably only reach it by gradual stages. But it will assuredly one day come, and I commend it to the reformers of the future.

"I may mention among other matters that have engaged our attention, and in which we have made material progress during the past two years, the preservation of archæological remains in this country. I have often emphasised what I conceive to be the duty of Government in this respect, and everywhere that I have been throughout India on tour, I have made a most careful inspection of the famous or beautiful buildings of the past, and have given orders as to their repair or preservation. We have addressed the Secretary of State as to a more liberal provision for this object in the future, and as to the appointment of a Director General of Archæology, and we hope before long to introduce a Bill that will provide for the safe keeping of historic monuments, and will prevent the removal of antiquarian treasures and relics from our shores.

"There is one subject upon which I have never hitherto spoken one word in India, because it is one of much delicacy, but to which I desire today to devote a few passing remarks. I speak of the relations between British soldiers and the natives of this country. The friends of the soldiers are greatly in error if they believe that there is the least wish to place harsh restrictions upon them or to deprive them of reasonable openings for sport and recreation. On the contrary, it is desired to give them such openings in the fullest manner compatible with the discipline and routine of military life, and as a well-earned relief therefrom. On the other hand, it is impossible for those who are entrusted with the Government to view with equanimity any risk to these relations arising from carelessness, or ignorance, or lack of restraint. That such risk has in many cases arisen, it is impossible to deny. I make no attempt to apportion the blame. Sometimes there may have been rashness resulting in collision on one side. I have heard of conspiracy culminating in attack upon the other. What we, as a Government, have to do is to minimise the opportunities for such friction, and to induce mutual self-respect. For such a purpose strict rules are required and strict attention to the rules when formulated.

"Now upon this point I wish to be especially clear. The Civil and the Military authorities have been and are absolutely united in the matter. The responsibility is shared between them. It cannot be shifted from the shoulders of one party to those of the other. The head of the Civil administration could not in a matter of discipline act in independence of the Military authorities. They, on the other hand, make a point of co-operating with the Civil power. There is no single rule now in operation as regards the reporting or trial or treatment of cases or otherwise which has not emanated from the Military authorities in the first place. There is no measure, proceeding, or step which has not been taken upon their authority, and with their full consent. When the shooting rules were revised last autumn, the task was entrusted to a Committee upon which the Military and Civil elements were equally represented, and further one of the Civilians was an old Military officer. Their report, and the rules as revised by them, were accepted without demur by the Government of India. I make these remarks, because it cannot be too widely known that there has existed throughout this unity of action, and because I have seen or heard of the most erroneous allegations to the contrary effect. I remember a case in which a Local Government reported to us what it called a gross miscarriage of justice in a trial for the murder of a punkha coolie. The Civil authority does not exist

to rectify the errors that may be committed in a Court of Law, and there was unfortunately nothing to be done. Some time later the Commander-in-Chief, having satisfied himself that the acquitted party had so conducted himself as to be unfit to wear Her Majesty's uniform, decided to dismiss him from the Army. This proposal was submitted to, and of course received the sanction of the Government of India, who would not interfere in a disciplinary matter with the supreme Military authority. Forthwith arose an ignorant outcry that the Civil power had usurped the functions of a final Court of judicial revision. I merely mention this case as typical of the misunderstandings that are apt to prevail in these matters I will only say for the Government that our attitude has been in every case one of the most scrupulous impartiality. Our one desire is to draw closer the bonds of friendly feeling that should unite the two races whom Providence has placed side by side in this country; and I venture to assert that no higher motive could inspire any body of men who are charged with the terribly responsible task of Indian administration.

"There remain a number of subjects, high up in the list of the original dozen, upon which we are still busily engaged, but as to which we have not found time as yet to carry our views to fruition. First among these I would name educational reform, the placing of education in India, in its various branches, university, higher, secondary, technical, and elementary, upon a definite and scientific footing, and the clear determination of the relations between private enterprise and the State. This great object has been for a long time occupying my attention, and I hope that we may be able to deal with it in the forthcoming summer or autumn.

"Another matter that is one of anxious pre-occupation to us is the reform of the police. Grave abuses have crept into this branch of the service, and are responsible for administrative and judicial shortcomings that are generally deplored, besides producing a widespread and legitimate discontent. We have already sanctioned very considerable improvements, notably in the direction of securing a better class of men in the higher grades at a superior rate of pay both in the Punjab, the North-Western Provinces, and Bengal. I will say no more at present than that the matter is one into which I hope to go more deeply.

"There are a number of other subjects which fall within my category, but of which I prefer not to speak at present, lest I might arouse false expectations There are others, again, which can seldom be absent from the mind of any ruler of India and to which, though he must speak with caution upon them, there is no need why he should not refer. The possibility of fiscal reforms, leading, if circumstances permit, to a reduction of taxation, is an object that is always in the background of his imagination. The protection and scientific propagation of agriculture, for which we have instituted a separate office of Inspector General, the possible institution of agricultural banks, the question of assessments, the fostering of native handicratts and the encourgement of industrial exploitation in general—these are all aspects of the larger question of the economic development of the country upon which my colleagues and myself are bestowing the most assiduous attention. *Salus populi suprema lex*; and all the reforms to which I have been alluding are, after all, subsidiary to the wider problem of how best to secure the happiness and prosperity of the helpless millions.

"Upon this subject I should like to add a few words which I hope may tend to dissipate the too pessimistic views that appear to prevail in some quarters. There exists a school that is always proclaiming to the world the sad and increasing poverty of the Indian cultivator, and that depicts him as living upon the verge of economic ruin. If there were truth in this picture, I should not be deterred by any false pride from admitting it. I should, on the contrary, set about remedying it to the best of my power at once. Wherever I go I endeavour to get to the bottom of this question, and I certainly do not fail to accept the case of our critics from any unwillingness to study it. In my Famine speech at Simla last October, in making a rough and ready assumption as to the agricultural income of India, I based myself upon the figures that were collected by the Famine Commission of 1880 and that were published in 1882. The agricultural income of India was calculated at that date as 350 crores, and at

Simla I spoke of it as being now between 350 and 400 crores. Thereupon I found my authority quoted in some quarters for the proposition that the agricultural wealth of the country had remained stationary for twenty years, while the population had gone on increasing by leaps and bounds. The further and equally erroneous assumption followed that there had been no rise in the interim in the non-agricultural income of the community; and I found myself cited as the parent of the astonishing statement that the average income of every inhabitant of India had sunk from Rs. 27 in 1882 to Rs. 22 in ordinary years and to Rs. 17½ in 1900: the inference of course being drawn that, while Nero has been fiddling, the town is burning.

"I have since made more detailed enquiries into the matter. There are certain preliminary propositions to which I think that every one must assent. In every country that is so largely dependent upon agriculture, there comes a time, and it must come in India, when the average agricultural income per head ceases to expand for two reasons; first, that the population goes on increasing, second, that the area of fresh ground available for cultivation does not increase *pari passu*, but is taken up and thereby exhausted. When this point is reached, it is of no good to attack the Government for its inability to fight the laws of nature. What a prudent Government endeavours to do is to increase its non-agricultural sources of income. It is for this reason that I welcome, as I have said today, the investment of capital and the employment of labour upon railways and canals, in factories, workshops, and mills, in coal-mines, and metalliferous mines, on tea and sugar and indigo plantations. All these are fresh outlets for industry, and they diminish *pro tanto* the strain upon the agricultural population. That they are bringing money into the country, and circulating it to and fro, is evident from the immense increase in railway traffic both of goods and passengers, in postal and telegraph and money order business, in imports from abroad, and in the extraordinary amount of the precious metals that is absorbed by the people. These are not the symptoms of a decaying or of an impoverished population.

"Turning, however, to agriculture alone, concerning which the loudest lamentations are uttered, I have had worked out for me, from figures collected for the Famine Commission of 1898, the latest estimate of the value of the agricultural production of India. I find that, in my desire to be on the safe side, I underrated the total in my Simla speech. I then said between 300 and 400 crores. The total is 450 crores. The calculations of 1880 showed an average agricultural income of Rs. 18 per head. If I take the figures of the recent census for the same area as was covered by the earlier computation, which amount to 223 millions, I find that the agricultural income has actually increased, notwithstanding the growth in the population and the increasingly stationary tendency of that part of the national income which is derived from agriculture; and that the average per head is Rs. 20, or Rs. 2 higher than in 1880. If I then assume—and I know of no reason why I should not—indeed I think it an under-estimate—that the non-agricultural income has increased in the same ratio, the average income will be Rs. 30 per head as against Rs. 27 in 1880.

"I do not say that these data are incontrovertible. There is an element of the conjectural in them; but so there was in the figures of 1880. The uncertainty in both is precisely the same, and if one set of figures is to be used in the argument, equally may the other. Again, I do not claim that these calculations represent any very brilliant or gratifying result. We cannot be very happy in the face of the recent census, which shows an increase of population so much less than we had anticipated—a falling off which is no doubt due in the main to the sufferings through which India has passed, and which by so much reduces the denominator in our fraction. But at least these figures show that the movement is for the present distinctly in a forward, and not in a retrograde, direction, that there is more money and not less money in the country, and that the standard of living among the poorer classes is going up and not down. Above all they suggest that our critics should at least hold their judgment in suspense before they pronounce with so much warmth either upon the

failure of the Indian Government, or upon the deepening poverty of the people.

"There is one point, however, in these calculations where we are upon very firm ground. In 1880 there were only 194 millions of acres under cultivation in India. There are now 217 millions, or an increase in virtually the same ratio as the increase in population. This alone would tend to show that there can have been no diminution of agricultural income per head of the people. The case for increase results from the increased standards of yield between 1880 and 1898. Perhaps the earlier estimates were too low. That I cannot say. The fact remains that the 1880 figures showed a yield per acre of food-crops in British India of 730lbs.; those of 1898 show a yield of 840lbs. In some cases this will be due to improved cultivation, perhaps more frequently to extended irrigation. They are satisfactory so far as they go; for they show that the agricultural problem has not yet got the better of our rapidly increasing population. But they also show how dangerous it will be in the future if India, with this increase going on within, continues to rely mainly upon agriculture, and how important it is to develop our irrigational resources as the most efficient factor in an increase of agricultural production.

"I have now brought to a termination this review of the present position in India and of the policy and attitude of Government. I have, I hope, extenuated nothing and exaggerated nothing. I am a believer in taking the public into the confidence of Government. The more they know, the more we may rely upon their support. I might have added that the policy which I have sketched has been pursued at a time when we have had to contend with a violent recrudescence of plague, and with a terrible and desolating famine. But these facts are known to every one in this Chamber, and an allowance will be made by every fair-minded person for conditions so unfavourable to advance or prosperity in administration. Should our troubles pass away, I hope that in future years I may be able to fill in with brighter colours the picture which I have delineated today, and to point to a realization of many of our projects which still remain untouched or unfulfilled.

"Thanking Hon'ble Members for their valuable contributions to the successful labours of the present session, I will now adjourn this Council *sine die*."

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 29th March, 1901.

SUPPLEMENT TO

The Gazette of India.

No. 13 } CALCUTTA, SATURDAY, MARCH 30, 1901.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

EAST INDIA (NORTH-WEST FRONTIER).

Papers regarding British Relations with the Neighbouring Tribes on the North-West Frontier of India, and Punjab Frontier Administration.

(Printed on page 26 of C. 8714 of 1898.)

(Telegraphic.) From Secretary of State to Viceroy, 13th October, 1897.

My telegram of 6th October. Political settlement should, in my opinion, follow as speedily as possible upon termination of military operations in the field. You will agree with me that in present circumstances, internal and external, political and financial, no new responsibilities should be taken unless absolutely required by actual strategical necessities and the protection of British Indian border. I also think that present opportunity should be used for defining our permanent position and policy. Some modifications of existing arrangements, especially with a view to concentration of force, will no doubt be necessary, but I understand you to be in favour of strictly limiting our interference with independent tribes, and thus avoiding serious eventual responsibilities involved in extension of administrative control over tribal territory. In this I entirely concur. The question of disarmament, so far as it appears to imply protection, should be examined from this point of view. Assuming that our policy is to maintain permanently our position as it existed before these disturbances, you will no doubt consider and let me know what posts and lines of communication you regard as indispensable for this purpose, due regard being had, first, to what is possible with existing military force, second, to financial situation, and third, to great political importance of avoiding any measures likely to cause discontent among tribes and consequently recurring disturbances. Local arrangements should be based upon a clear and well-defined general plan which it should be our object to obtain.

No. 2.

(Printed on pages 172, etc., of C. 8714 of 1898.)

Despatch from the Secretary of State for India to His Excellency the Right Honourable The Governor General of India in Council, dated 28th January, 1898.

I have received from time to time the various letters from your Excellency's Government, in which you have reported to me the progress of events on the Punjab frontier, and the success of the military operations which, during the past six months, you have been compelled to undertake against the tribes in arms against the British Government over a long tract of border land, extending from the valley of the Tochi to the country on the northern borders of the Peshawar

Peshawar the enemy were found in occupation of the low hills near Shabkadar, from which they were dislodged, with some loss on our part, on the 8th of August. The losses inflicted on the Adda Mulla's followers were very heavy, and these included not merely a number of Mohmands but also several Afghan subjects and levies from the country between Jalalabad and Dakka, as well as from Asmar. The Mulla withdrew to his home at Jarobi, which lies within the sphere of influence which you offered to recognise as belonging to the Amir, and when Major-General Sir Bindon Blood, advancing *viâ* Bajaur, effected a junction with a force advancing from Shabkadar, the Adda Mulla attacked the two forces and sustained a severe defeat. In September a brigade was detached to punish the Mamunds, and after the forcing of the Bedmanai Pass on the 23rd of that month, further resistance collapsed, and the terms imposed upon the various tribes and sections between the Swat valley and the Khaibar pass were in due course exacted. From your telegram of the 7th of October, I learnt that the Mohmand field force had been broken up.

7. It was inevitable that the popular disturbance caused by these events, of which the most exaggerated and erroneous accounts reached the tribes occupying the tract of country intervening between the Tochi valley and the Khaibar pass, should react upon the powerful clans of Afridis and their neighbours the Orakzais. Reports were current, sometimes of an impending Afridi rising and sometimes of a coalition between them and the Orakzais. Sir Richard Udny was, however, not disposed to credit these rumours, and on the 20th of August you informed me by telegram that the reports which you had already transmitted to me appeared to be very much exaggerated. In a later telegram of the same date you reported a gathering of the Orakzais in the hills north of Sadda, but "no disturbance in the Khaibar." Two days after this reassuring news you informed me that a large hostile gathering of the Afridis was then approaching the Khaibar, and on the 23rd August I learnt that Ali Masjid and Fort Maude were being attacked by them. Ali Masjid was captured and burnt on that day, and on the 25th of the same month Lundi Kotal was wrested from its garrison of Khaibar Rifles and the pass was completely closed for traffic. In your Excellency's telegram of the 26th August you referred to this unprovoked aggression as gravely affecting your position on the frontier, and asked my approval to an expedition against Tirah, which I sanctioned in my telegram, dated the 1st of September, on the express condition that all questions involving our future policy on the termination of the campaign must be referred for my consideration before any action should be taken. Further information respecting the treacherous attack upon Lundi Kotal only served to increase the gravity of the offence committed by the Afridis. They had entered into an agreement in 1881, undertaking to be responsible for the security of the road and the maintenance of all posts and buildings in the pass, and in particular for holding the fort of Ali Masjid. Liberal subsidies were paid to the tribesmen for these services, and the levies to which the custody of the Khaibar was entrusted were mainly recruited from them. As observed in your letter, dated the 14th October, 1897, "our relations with the Afridis founded upon "tribal subsidies and payment for tribal services, had stood the test, almost "unbroken, of sixteen years' experience. Their country has not been touched "and they have been left to govern themselves undisturbed." Under such circumstances, I can hardly doubt that the letters which were found on the 17th of November in the house of the Akha Khel Mulla, Sayad Akbar, in the Waran Valley, addressed to him by the Adda Mulla of Jarobi, and calling on the Afridis to join in a religious war, supply the real explanation of an attack which you justly describe as "fanatical in its origin."

8. Whilst these events were taking place in the Khaibar, the southern neighbours of the Afridis, the Orakzais, commenced to attack the British posts established on the Samana range for the safeguarding of British territory in the Miranzai valley of Kohat. In your telegram of the 16th of August you informed me of the preparations you were making, "owing to a report of a possible hostile combination of Orakzai and Afridi tribes." I observe that at the very outset the earliest information received by you associated the Adda Mulla with these disquieting rumours, but on the following day you reported that a Mulla, who was preaching a religious war in the Orakzai country, had returned to his

village on receipt of a further letter from the Adda Mulla. On the 1st August you learnt that the Orakzais were about to attack the forts on the Samana at the very time that the Afridis were marching on the Khaibar, and Parachinar was simultaneously threatened by the Massuzai section of the Orakzais. On the 20th, however, you were led to believe that these reports were "exaggerated," but on that same night an attack was made upon a village near Sadda in the Kurram, and reports of further disturbances in the Orakzai country reached you simultaneously with the news of the fall of Ali Masjid. The tribes, however, still seemed somewhat half-hearted in their movements, and on the 8th of September you informed me that all was quiet in the Upper Kurram, and that confidence was fully restored. Two days later Fort Lockhart was vigorously attacked and the gallant Sikh defenders of Saragari were killed to a man on the 12th of September. No time was lost in expelling the combined forces of the Orakzais and Afridis from the Samana range into the Khanki valley, but their open hostility left you no option but to carry out your preparations for the expedition into Tirah. As you state in your letter of the 14th of October, "we had given neither tribe any cause of offence. The "Orakzais, since they were punished six years ago for raiding in the Miranzai "valley, have been left undisturbed."

9. I do not propose to dwell at any length upon the details of that campaign, which was carried out with complete success by the 18th of December last as regards the Orakzais, but which has not yet been brought to a final close against the Afridis. But there are a few satisfactory incidents to which I may here advert. Her Majesty's Government have learnt with gratification that the Kohat pass Afridis, who are under an engagement with the Government of India to keep open the road through their country, and upon whom the main weight of the fiscal policy which led to the enhancement of the Kohat salt duty must have fallen, stood true to their engagements with your Government, and resisted the pressure of the Mullas. In Tirah, owing to the inclemency of the season, and to the exceptional difficulties of the country traversed, consisting of a succession of rugged passes, intricate defiles, and swampy valleys, success could only be attained at the cost of severe hardship and numerous casualties. But the conduct of the troops employed has been excellent, and Her Majesty's Government have heard with the highest satisfaction, not only of the alacrity with which loyal offers of help were made by the Native Princes of India, but also of the conspicuous part taken by the Imperial Service troops in the Tirah and other expeditions during the last six months. I desire to record my sympathy with His Highness the Raja of Kapurthala in the unfortunate catastrophe which overtook the Kapurthala infantry in the Kharmana defile on the 7th of November when the retreat of a party was cut off by a jungle fire.

10. Passing from the narrative of the events which preceded and marked the course of the several risings of the Pathan tribes, to a consideration of their causes, I entirely agree with your Excellency in Council in regarding fanaticism as the principal motive for an outbreak which has been unprecedented alike in the suddenness with which it broke out at each point, in the large extent of country affected, and in the simultaneous action of distinct tribes or sections of tribes. In referring to the outrage which had occurred in Tochi, you informed me on the 17th of June that the Commissioner regarded it as fanatical, and in your letter of the 21st of July you accepted the view that the attack was prearranged, but fuller information has led you to alter this opinion, and to attribute it to tribal quarrels. That religious excitement was not the predominant incentive in the Madda Khel rising may be inferred from the inaction of the Waziri tribes when the news of the attacks on Malakand and Shabkadar reached them. But elsewhere fanaticism principally accounts for the proceedings of the Swatis, Utmanan Khels, Mohmands, Afridis, Orakzais, and other Pathan tribes. Indeed there appears to be a remarkable unanimity of opinion on the part of your officers along the whole of the disturbed border that the outbreaks generally were fanatical in their origin. The proceedings of the tribes, the express statements of His Highness the Amir, and the correspondence discovered in the course of the subsequent military operations, all point to the

same conclusion. Although the first attack on the Malakand was unexpected, still several indications of a religious movement had already attracted the serious notice of your Government. You were aware that Mullas were busily engaged in circulating on the country side two books which had been published in Kabul, of a tone and character that must inevitably have stimulated the fanatical spirit of wild and ignorant tribesmen. From your letter dated the 14th of July, I learnt that efforts had been persistently made by Mullas, for several months previously, to arouse and combine the tribes, not merely in the Swat country, but also in Tirah and other parts of the Afridi land. Upon ground thus carefully prepared Najam-ud-din, the Adda Mulla, found it easy to work, and the letters addressed by him to the Mianguls of Swat, and to the Afridi Mulla, Sayad Akbar, in the Waran valley, show the range of his preparations and intrigues. That he was also the moving spirit in other parts is evident from the reply made by the Khani Khel section of the Chamkannis, when they stated that they could not refuse to obey the Fakir of Swat or the Adda Mulla. His Highness the Amir, in addressing the Commissioner of Peshawar on the 18th of August last, described Mulla Najam-ud-din as the reputed prophet of the Mohmands and the people of Jelalabad and the mountain districts of Jelalabad, and he added:—"What calamities are there that his "disciples have not suffered, and what blood is there that they have not shed by "his senseless commands?" In writing to your Excellency on the following day, His Highness enclosed for your information a proclamation written by the Adda Mulla to the people of Ningrahar, exaggerating the successes of the tribesmen, and calling upon the Afghans to join in a religious war. So late as the 2nd of September last, the Mulla was endeavouring to rekindle the sparks which had died out in Swat, and was impudently promising external assistance in an early renewal of risings in that part of the country. At one time reference was made to the victories achieved by Mahomedans in Europe, and at another the active intervention of the Amir of Afghanistan was promised by this unscrupulous preacher and his fellow-workers. It is evident that in several places the tribal organisation was powerless to oppose this outbreak of fanatical fervour, and the Maliks were reluctantly forced to follow where the Mullas or the fakirs led.

11. From the information which has reached me, it is evident that the necessary task of delimiting by marks and pillars, in accordance with the terms of the Durand Convention, the spheres of British and Afghan influence, furnished the religious preachers with material for stirring up alarm and jealousy among the tribes, who were thus persuaded to connect the delimitation with ulterior designs upon their independence that were in no way contemplated by your Government. The work of marking out a frontier line through hundreds of miles of wild tribal country could not fail to arouse such suspicions, notwithstanding the scrupulous observance by you of the conditions laid down by Her Majesty's Government in 1894 with a view to avoiding interference with the tribes. I have every reason to believe that your Government has carefully kept within the scope of the operations sanctioned by my predecessor in his Despatch of 24th August, 1894, to enable "you adequately to fulfil your "obligations in regard to your own territory and the trade routes which go "through it, and to the Amir and to the well-affected amongst the tribesmen "themselves." Although it is probable that the steps taken by you to delimitate the frontier under the Kabul Agreement of 1893 gave to the Adda Mulla and others an opportunity for misrepresenting your policy by associating it with an intention of depriving the tribesmen of their existing independence, I dot not think that this necessary work could have been carried out with greater circumspection and caution.

12. Amongst other reasons set forth to give some colour of justification for tribal unrest was the recent enhancement of the duty on Kohat salt from 8 annas to Rs. 2 for each Kohati maund. In your letter of the 30th of September last, you explained to me your domestic reasons for raising the duty to a rate nearly approximating to that fixed for cis-Indus salt, so as to allow of the abolition of the preventive customs line extending from the north of the Hazara district to the junction of the Indus with the Sutlej. I approved of your action in my Despatch, dated 25th of November 1897, and I have only to add here

that, although the enhancement of the duty was skilfully used to excite disaffection, I consider that, in the interests of your own subjects, it was justified as a measure of internal policy.

13. Having followed the course of the risings and discussed their causes, I proceed now to examine the stage which has been reached in the history of our frontier relations with the Pathan tribes, in order that I may indicate the direction which, in the opinion of Her Majesty's Government, our future policy must take. Our frontier relations assume so many varying phases, and include or touch so many interests, both local and Imperial, that a comprehensive survey of the objects to be attained is a necessary preliminary to any general enunciation of policy. The duties imposed upon your Government by the advance of British influence and by consequent contact with the territory occupied by Pathan tribes may be roughly classified under three heads,—first, the police and administrative protection to be given to British districts in the immediate vicinity of the tribal country; secondly, the strict exclusion of extraneous interference from the tribal area that has been placed by a formal agreement within the British sphere of political influence; and, lastly, the fulfilment of our obligations towards Afghanistan and the safeguarding of the natural frontiers of India.

14. The events of recent years have necessarily enlarged the area of your responsibilities to British subjects, and the chances of collision with the tribes. Commerce and trade between the tribal country and British India have grown to larger dimensions, intercourse for all purposes is more frequent, and the extension of cultivation and prosperity on the immediate border land offers a greater temptation to lawless neighbours and enhances the need for protective measures. A rising which suddenly closes a main artery of commerce, like the Khaibar pass, is not a matter merely affecting your foreign relations; it at once injures the interests of Indian trade. The tribes have learnt in your military service many lessons of war, and they are able to supply themselves with arms of precision and ammunition to a degree quite unknown in former days, when blockades and small punitive expeditions sufficed to bring them to terms. Their Mullas travel in India and proceed through India to Mecca, and on their return they propagate rumours and reports as to what is occurring in Europe and India of the wildest and most inaccurate character, but always appealing to the fanaticism of their entourage. A significant instance of this was afforded by the letter, dated 25th October 1897, which was found in the house of Mulla Sayad Akbar, and which contained the information that "Aden, a seaport which was in possession of the British, has been taken from them by the Sultan. The Suez Canal through which the British forces could easily reach India in 20 days has also been taken possession of by the Sultan, and has now been granted on lease to Russia. The British forces now require six months to reach India." Moreover, the utterances of British statesmen and of members of Parliament upon questions affecting the status and prospects of Islamism and its rulers are reproduced, distorted, and exaggerated. To these and other causes may be largely attributed the recent combination, under the instigation of their Mullas, of trans-frontier tribes which have hitherto acted disunitedly. Their fighting strength and their power to combine have simultaneously increased of late years. It must also be remembered that sections of these tribes have permanently settled down in the adjacent British districts, and as they are always in close intercourse with their fellow tribesmen across the frontier, they are naturally affected more or less, by the elements of disquietude and disaffection prevailing from time to time among them. Frequency and facilities of intercommunication have thus drawn together all sections, and incitements to Jehad on the common ground of religious fervour have gained adherents, not only from distant parts of the border land, but even on both sides of the British frontier. To these influences may be attributed the participation of British subjects in the disturbances on and around the Malakand pass, and even in the Mohmand attack on Shabkadar; and they provide additional and substantial reasons why the state of the tribal country immediately outside our settled territory should have become a matter of much more serious concern than heretofore.

15. The above observations are almost equally applicable to the second branch of your responsibilities.

For the present I would direct my remarks to that section of tribal territory which is between British territory and Afghanistan, commencing with Waziristan and running up northwards to the Swat river. The character and internal government of the Baluchi tribes controlled from Quetta so differ from those of the northern Pathans that the arrangements working satisfactorily there need not now be reviewed, or criticised, as necessarily forming a foundation upon which to base our action elsewhere. The relations of the northern tribes with your Government vary greatly, graduating from those where a tribe has accepted our protection, as in the Dawari section of the Tochi valley, to the case of a tribe undertaking independent responsibility for specified duties, as in the Khaibar pass. In some cases a light assessment is paid by a tribe, and in others it receives subsidies from the Government of India in return for military or police duties. Though the characteristics of the tribes and their normal attitude towards the British Government vary considerably, yet there are certain features in our relations with these which are common to all. In the first place, the fear of encroachment or attack upon their territory from Afghanistan has been removed by the Durand Agreement. The influence of fear which formerly led a threatened tribe to seek our help, is no longer felt. Nevertheless, the arrangements and the delimitation effected by the Durand Agreement have made the protectorate an accomplished fact, and no interference from outside can be tolerated within the territory now distinctly recognized as belonging to the sphere of British influence. Mr. Fowler, in his Despatch, dated the 24th of August, 1894, adverted to this subject, and expressed his opinion that the programme advocated in the minute of dissent appended to the letter from your Government would not meet the necessities of the case, "and that, in the existing state of our relations with Afghanistan and with the tribes, it is essential "that your Government should be in a position to maintain, if necessary, an "effective control over Waziristan." The Waziri frontier was only one part of the line demarcated under the Durand Convention, and now that the sphere of British influence has been traced along almost the whole Afghan border, your responsibilities in connection with the territory thus delimited cannot be ignored or put on one side. Though the agreement made with the Amir of Afghanistan has relieved your Government from the constant friction which the undefined and debateable land lying between Afghanistan and British India produced between their respective Governments, in other respects it has not been an unmixed benefit, from the suspicious and misgivings it has aroused amongst certain of the tribes as to the ultimate intentions of your Government. To gradually allay these doubts should be one of the primary objects of our future action. As communications multiply so the tribes will mix more freely with British subjects; and this intercourse, becoming closer in the course of years, cannot fail to increase our responsibilities on the frontier by drawing the tribesmen out of their highlands into closer contact with their neighbours and with your officers. Whether the risks of collision will have been thereby augmented or diminished, remains to be seen. By care and foresight it may be possible to avoid actual conflict, and the effect of frequent intercourse may be to mitigate the lawless and predatory instincts of the hillmen, without interfering with the tribal system of self-government.

16. If your obligations inside your territories and the sphere of British influence have been increased, the case is not otherwise in respect to the Amir of Afghanistan and his country. The engagement with His Highness in July, 1880, as set forth in the communication* from the Marquis of Ripon, contained this clause:—

"If any Foreign Power should attempt to interfere in Afghanistan, and if such interference should lead to unprovoked aggression on the dominions of your Highness, in that event the British Government would be prepared to aid you, to such extent and in such manner as may appear to the British Government necessary in repelling it, provided

* *See* pages 40 and 89 "Afghanistan (1881) No. 1, C. 2776," presented to Parliament by Command of Her Majesty, 1881.

"that your Highness follows unreservedly the advice of the British Government "in regard to your external relations." These responsibilities were again confirmed but not extended, when Sir Mortimer Durand concluded the agreement* of the 12th of November, 1893; and as a proof of the increased good will existing between the two Governments, the subsidy of the Amir was at the same time increased by six lakhs. To the obligations thus contracted is added the ever present duty of watching over the frontier passes of the mountains into India, so as to maintain sufficient control over the main routes connecting Afghanistan with India, for the purpose of preventing the establishment of any political influence adverse to your Government in the higher plateaux which within Afghanistan dominate these passes.

*Printed in "East India (North-West Frontier), C. 8037," presented to Parliament by Command of Her Majesty, 1896.

17. Frontier questions ranging thus from the daily performance of a policeman's duties to the possible despatch of a large army present so many complications and entanglements that any set of precise instructions would prove to your Government a source of embarrassment rather than an assistance. The call for interference, or even for military help, may arise from different quarters and under conditions wholly distinct. You may be required suddenly to fulfil your duties of protecting your own subjects, as recently at Shankargah when it was attacked by the Mohmands, or perhaps to discharge your obligations to the Amir. In either of these cases the points attacked or threatened may be few or numerous. You may have to insist upon the stipulated performance of tribal service in a pass, or to punish treachery or attack upon your posts. It is conceivable that under certain circumstances you might have to fulfil all these obligations at one and the same time. It is obvious, therefore, that the steps which may have to be taken by your Government cannot be reduced to a formula, or your procedure mapped out on a pre-arranged plan. The extent of the demand made upon your resources, military and financial, cannot be foreseen until the occasion arises and has had time to develop itself. Any attempt to lay down a set of uniform rules for your guidance would be apt to defeat the main object of the general policy which Her Majesty's Government desire to pursue, namely, to show that we are as determined to respect the rights of others as we are able to enforce our own.

18. At the same time, there are certain leading principles underlying our frontier policy to which Her Majesty's Government have resolved to adhere, and to which I proceed to invite your attention. The extent and difficulty of this mountainous border render it expedient that posts and cantonments should be limited to those positions only which are indispensable to the fulfilment of the policy just indicated. In my telegram of the 13th of October I addressed your Excellency as follows:—"You will agree with me that in present circumstances, internal and external, political and financial, no new responsibility should be taken unless absolutely required by actual strategical necessities and the protection of the British-Indian border. I also think that the present opportunity should be used for defining our permanent position and policy. Some modifications of existing arrangements, especially with a view to concentration of force, will no doubt be necessary." As a practical instance of the questions to which I desire to invite your attention, I would refer your Excellency to my Despatch of the 9th of August, 1895, in which I insisted on "the very great importance of keeping your interference with the tribes and your outlay of money in Waziristan within the narrowest limit;" and to my later Despatch, dated the 8th May, 1896, in which having regard to the extension of your military posts in the Tochi valley, I asked for a statement of your conclusions on "the question whether the maintenance of the Wano cantonment is so necessary as to justify the expenditure." Your Excellency was unable to supply me with this statement before the recent outburst of fanaticism occurred, but my inquiry in respect of the posts occupied in Waziristan is one which should be extended so as to apply to the whole of the affected frontier. The two main objects to be borne in mind were indicated in my telegram of the 13th October, namely, the best possible concentration of your military force so as to enable you to fulfil the several responsibilities to which I have adverted, and the limitation of your interference with the tribes so as to avoid the extension of administrative control

over independent tribal territory. I anticipate that the question of the best location of our frontier posts, and the selection of the communications through the border land which it is most necessary to maintain, will require very careful thought, but it is an essential step towards arriving, as far as it is possible to do so, at a clear and well-defined plan upon which to base local arrangements. The experience gained in the past few months has suggested the inference that certain military posts such as Saragari were not sufficiently defensible, and it is probable that, without altering or diminishing the existing lines of communication, you may wish to modify the past arrangements for their maintenance. In any such modification of existing arrangements I wish to impress upon your Excellency the advisability of establishing regular troops nowhere except in such posts or localities and under such conditions as will enable them to promptly repel any attacks upon them, and of making the local or tribal levies assume, as far as is possible, the aspect of a police rather than a military force. It will be necessary, in framing these arrangements, that an estimate of the cost of frontier defence, including charges for tribal services, should be prepared and transmitted to me, since full regard must be had to financial considerations. It is not sufficient that the measures proposed should be desirable; it is necessary that the gain should be commensurate with the expense.

19. The second principle upon which stress must be laid is the avoidance of any interference with the tribes which can be avoided with due regard to the interests already set forth. It was for this latter reason, that, after full consideration, I was unable to give my consent to the imposition of tribute upon the Afridis and Orakzais. I recognise the force of the arguments used in favour of such a visible assertion of the responsibilities which you have incurred under the Durand Convention. It is not improbable that the regular payment of even a nominal tribute might strengthen the hands of the tribal leaders, the Maliks, against the teachings of their Mullas and against fanatical outbursts. The fear of an enhancement of the tribute might at times restrain the evil disposed amongst the tribesmen. But, on the other hand, it is desirable to avoid giving any countenance to the idea that your Government means to administer the tribal country or to inclose it within your provincial limits. Moreover, I apprehend that the imposition of even a nominal tribute might rankle in the minds of the Pathan tribes, furnish disaffected persons with material for imputing to the British Government designs which it does not contemplate, and, above all, might enable the tribes to choose their own time for refusing payment, and thus for openly defying your authority. In such a case the only means of enforcing your demand, besides punitive expeditions and blockades, might be the imposition of direct administrative control, or, in the last resort, annexation of fresh tracts of country. But the extension of your direct administration across the border involves an increase of responsibilities which it has always been our policy to avoid; and annexation would imply a still larger addition to your civil and military establishments, with a very serious and growing burden upon your financial resources. On the other hand, the fear of occupation is undoubtedly a deterrent to the commission of acts of violence, and it may prove an influence on the side of order which should not be wholly thrown aside.

20. The next point to which I adverted in my telegram of the 13th of October, in connection with the subject of protection, was that of disarmament. I approve entirely of the imposition of the terms of peace which require a tribe that has resorted to arms to surrender as large a number of arms as may reasonably be demanded. But any attempt to keep the tribal country, or even one section of it, permanently disarmed, involves serious consequences. In the lawless state of society which prevails across the British administrative frontier, a tribe could not exist without the means of defence. Unless we are prepared to wholly undertake their protection against their neighbours, some limit must necessarily be put on their deprivation of the means of self-defence. At the same time, Her Majesty's Government are alive to the importance of the fact disclosed by the recent operations—that the tribes have access to large quantities of arms of precision and ammunition. To control this traffic in arms and munitions of war is an object of the first importance, and I consider that a systematic inquiry as to the sources of supply, whether from your arsenals and factories or by means of illicit importation into India, should be

instituted. I have dealt in a separate communication with one part of this subject. I have only to add here that, whenever the trade routes to Afghanistan are re-opened and the export of arms and ammunition for His Highness the Amir is resumed, special arrangements should be made to keep an account of the class of arms exported, with a view to future identification should occasion arise, and to prevent any of them passing into the hands of the tribes *en route*.

21. The maintenance of the Khaibar pass as a safe artery of communication and of trade is an essential measure, whether viewed from the standpoint of your obligations to the Amir or from that of the protection of British subjects. It may be that, as a military route, others may be preferred to this pass, but under any circumstances the retention of an effective control over the Khaibar is essential; and accordingly, in your letter of the 4th of October, addressed to General Sir William Lockhart, you desired him to announce to the Afridis your intention to re-open the pass in such manner as you might consider most desirable. I approved of this intimation, and on the 3rd of November I authorised your consideration of any scheme for improving or re-aligning the present road, provided that any changes of importance should be reported to me. I have not yet received your report, but whilst I agree that the arrangements which have hitherto subsisted with the tribesmen have been cancelled by their own violent breach of them, I trust that it may still be possible to give the Afridis some share in your new scheme and thus to enlist their good-will and assistance in the future protection of the road. But I do not consider that your Government is bound in any way by the engagements which the Afridis so deliberately broke. Whilst Her Majesty's Government, therefore, adhere to the general policy of avoiding interference with the independent tribal organisations or with the domestic affairs of the Afridis, the safety of the pass must be the paramount consideration in any reconstruction of your arrangements with the tribe.

22. The march of events in Central Asia and Afghanistan and the recent occurrences along our borders have tended to elucidate the problem to be solved. Facts have taken the place of surmise, and successive engagements or assurances have defined the legitimate spheres and responsibilities of the Governments interested. The recent outbreak of fanaticism, in response to the propaganda of the Mullas, has revealed a source of danger deeper-rooted and wider-spread than was suspected, whilst on the other hand the leniency of the terms of submission imposed upon the recalcitrant tribes, and the manifest reluctance of your Government to interfere with their independence or customs of self-government, cannot fail to gradually allay any suspicions they might previously have entertained of the intentions of the Indian Government. The immediate difficulty to be dealt with is not so much associated with apprehension of interference from without, as with that of restlessness whithin the area of our influence. Your Excellency will doubtless give full weight to this change in the situation, and devote your foremost attention to that portion of the question which has thus prominently asserted itself.

23. I desire, in conclusion, to express on the part of Her Majesty's Government their high approval of the manner in which your Excellency's Government has met an arduous crisis, and of the success which has attended the various military operations conducted on the North-West frontier under conditions of extreme difficulty, upon which a separate communication will be made to you. Not only was the rising one of unprecedented extent and violence, which, moreover, occurred at the most trying season of the year, but your resources were already taxed to the utmost by the necessity for carrying on at the same time a campaign against widespread famine in India, and for dealing with the plague which had appeared in several parts of the empire. The contingency that frontier disturbances may arise at a time when attention is being devoted to other important affairs, must always have a certain weight in balancing the considerations which should dermine your policy in that quarter. It adds weight to the conclusion that no new responsibility should be undertaken, unless absolutely required by actual strategical necessities and the protection of the Indian border.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 3.

Extract from letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 23rd June, 1898.

In your Lordship's despatch, dated the 28th January, 1898, you invite our attention to leading principles underlying our frontier policy to which Her Majesty's Government have resolved to adhere. The two main objects to be borne in mind were stated to be the best possible concentration of our military forces, so as to enable us to fulfil the several responsibilities which rest upon us, and the limitation of our interference with the tribes, so as to avoid the extension of administrative control over independent tribal territory.

Your Lordship indicates that the maintenance of the Khyber Pass as a safe artery of communication and of trade is an essential measure, whether viewed from the standpoint of our obligations to the Amir or from that of the protection of British subjects; and you inform us that, whilst Her Majesty's Government adhere to the general policy of avoiding interference with the independent tribal organisations or with the domestic affairs of the Afridis, the safety of the Pass must be the paramount consideration in any reconstruction of our arrangements with the tribe.

We have from time to time reported the course of events on the North-West Frontier of India, and the two despatches, marked on the margin, bring up to the present day the account of the situation with the Afridi tribe with which, in this despatch, we propose to deal. We have been in military occupation of the Khyber Pass since the end of December, the whole Afridi tribe have submitted to us and for some time past they have been quiet and peaceful. Even the turbulent and adventurous characters, who can seldom be relied upon in any trans-border tribe, have of late given singularly little annoyance.

Dated the 16 June, 1898; not printed.

In these circumstances, the time has come, in our opinion, to determine and make known the manner in which our relations with the Afridi tribe shall in future be carried on, and the means which shall be employed for keeping open the Khyber Pass. On this subject we have consulted His Honour the Lieutenant-Governor of the Punjab and Lieutenant-General Sir William Lockhart. We have been pressed to make an early announcement to the Afridis to the effect that the allowances which they received under the terms of our agreement with them of 1881 shall be restored to them. We do not deny that a period of suspense, between the termination of hostilities and the resumption of friendly relations, is a very trying time for those who have to deal locally with the tribesmen. The Afridis themselves are impatient. Some of them have been prevailed upon to turn to the Amir of Afghanistan in the hope of bettering their position with the British Government, and the Mullas and malcontents are too alert not to seize the opportunity for working upon their feelings. It must, however, be remembered that by their own acts the Afridis ruptured their engagements and forfeited their right to receive any allowances, that they have not made good and declare their inability to make good the loss and damage which they caused, not only to buildings in the Khyber, but by carrying off or destroying goods and chattels, and that they were told that the restoration of the latter, or the payment of their value was required of them before we could enter into any new arrangements for the future. In our opinion, therefore, a premature announcement of the restoration of their allowances would have appeared to them to be a bid for their good-will, before we had shown that their submission could be enforced. Besides this, restoration of their allowances in their entirety would anticipate our decision as to the future, while an intimation of our intention to restore them, coupled with exceptions or reservations, would have been apt to tie our own hands without satisfying the tribesmen.

Enclosures Nos. 7 and 2.

Aitchison's Treaties, Vol. IX, p. 277.

We have therefore decided to withhold for the present any indication of our intentions beyond a general expression to the effect that we would deal sympathetically with their case, and that their behaviour in the interval would not improbably influence the final decision. Of their behaviour we have little to complain. Even in turning, as some of them did, to Kabul they have strengthened rather than weakened our position; for the rebuff which their advances met at the hands of the Amir must have shown them that they have nothing to hope from not accepting our terms.

Sir William Lockhart has stated, in the memorandum embodying his views upon the best way of holding the Khyber Pass in the future, that the more important object we should have in view is to ensure a ready access into Northern Afghanistan for our army, in the event of military intervention in that country becoming necessary. The plan put forward by Sir William Lockhart for the improvement and extension of the reservoirs and water-works and for erecting a fort capable of protecting them, is one which has much to commend it, and advantage may be taken of the opportunity which is now presented for carrying out this plan.

In giving to Sir William Lockhart's scheme our support, to the above extent, we do not, however, concur in thinking that the fort at Landi Kotal should be occupied by regular troops of the Indian Army. We agree in the principle that a local tribal corps should be raised, for service in the Pass, and that it should be commanded by British officers. This distinguishes the local corps sharply from the original corps of Jezailchis dependent as it was, under the agreement of 1881, on the responsibility of the tribal council; and, further developing the "Khyber Rifles" as they came in late years to be constituted, it acknowledges the local force to be British; and the ultimate responsibility for the safety of the Pass is accepted as ours. Between a tribal levy and a local militia, there is an essential difference which is not always recognized. By a "levy" we mean a body of men who are dependent on tribal authority, and, strictly speaking, are employed, paid, and summoned for any special duty, by tribal authority. Any contribution which the British Government makes towards their support is made in order to co-operate in the assertion of the right and power of the tribe to restrain the bad characters and "young bloods" of their own and neighbouring territories. Drill and discipline are not wanted, and British officers in command or even as inspectors are out of place. When greater efficiency is desirable, the direct superintendence of British officers becomes essential, but it then equally becomes necessary to recognize the force as a British and not a tribal force. The ultimate responsibility for the actions of the force ceases to rest on the tribe. The proposal to place regular troops of the Indian army at Landi Kotal raises other questions. A battalion in such a position would be capable of no action beyond passive defence, and would constitute a standing temptation to the tribes, while, if a rising did occur, it could do nothing to make the forcing of the Khyber more easy, though it would materially add to our anxieties. Service at Landi Kotal would be unpopular, for the men would have to be practically confined to the limits of the fort, and even with the utmost precautions, there would be constant risk of men being murdered, and rifles stolen. Continual friction would thus be kept up between us and the Afridis. It is, moreover, the opinion of the Lieutenant-Governor and of the officers acquainted with the frontier, whom His Honour has consulted, that the Afridis would strongly resent the placing of troops at the further end of the Pass. We believe that we should fail to enlist the good-will of the tribe on our side, and we should certainly excite the suspicion, if not the antagonism of the Amir of Afghanistan. Everyone agrees that the good-will of the Afridi tribe is essential to the smooth working of our arrangements in the Pass, and it seems to follow that the attempt to strengthen them by stationing troops at Landi Kotal would, in fact, prove to be a source of weakness.

The alternative which we propose to adopt is to hold the position at Landi Kotal by means of the local militia to which we have already alluded,

increasing their numbers to a strength sufficient to enable the patrol and convoy work in the Pass itself, as well as the garrison duties at Landi Kotal, to be undertaken by them. The cost of building a strong fort on Suffolk Hill, at Landi Kotal, is now estimated at six and a half lakhs of rupees, and about two lakhs for water-supply; and it will take two winter seasons to complete the works. The full estimate for the works in the Pass is given in the margin.

	Rs.
1. New works at Fort Maude, Ali Masjid, etc.	4,00,000
2. New works at other places, Zintarra, etc.	2,00,000
3. Improvements to Landi Kotal Sarai	50,000
4. Suffolk Hill Fort	6,50,000
5. Water-supply	2,00,000
TOTAL	15,00,000

We have no reason to fear that a corps such as we contemplate would be untrustworthy in the hour of need. The history of our Empire in India appears to teach the contrary. The conduct of the Khyber Rifles themselves last year also points to the same conclusion. Had they been organised, officered and supported in the manner which we propose for the future, we have no reason to doubt that they would have remained true to us, as their fellow tribesmen in the regular regiments of the Indian army, with very few exceptions indeed, remained true. It must be borne in mind that it is an essential part of our plan that a moveable column of sufficient force shall be equipped with transport and ready to support the irregular force in the Khyber on the occurrence of any emergency calling for action of the kind. Your Lordship will be separately addressed regarding the details of our proposed military arrangements.

We think that the former management of trade affairs in the Pass has been satisfactory; and that, as far as can be, the future arrangements should reproduce them. The frequent kafilas went up and down the Khyber road in safety, and, if the volume of trade in late years contracted when we would have looked to it to expand, the reasons for that are not to be found in any deficiencies within the Pass, but in the fiscal policy which finds favour in Afghanistan. The Political Officer who directed the local arrangements has been a subordinate of the Commissioner of Peshawar. The control of political relations with the Afridis and their neighbours, as well as the control of the Khyber Rifles themselves, were in the same hands. The majority of us wish to continue this system. We think that it is essential to have one authority in the Pass, and that the only possible authority, under present conditions, is that of the Lieutenant-Governor of the Punjab. We therefore think that the control of the Political Officers and of the militia must be in the hands of the Lieutenant-Governor. The militia should be officered by British officers, and the conditions of service should be such as to ensure its efficiency for the purposes for which it is intended, but we think that the authority over it should be the same as that which directs the political relations of the Punjab Frontier.

Three other courses are suggested. The officer entrusted with political dealing in the Khyber Pass might, it is suggested, be directly under the Government of India in the Foreign Department, or he might remain under the Commissioner of Peshawar, but the Commissioner himself be directly under the Government of India, or the Military Officer, who commands the Khyber Militia might also be the Political Officer in the Pass. These plans oust the authority of the Lieutenant-Governor of the Punjab from the Khyber Pass, and introduce a special system in a narrow wedge of country bordered on each side by, and having intimate relations with, country with which the Lieutenant-Governor conducts the political relations. The first plan would not be practicable. The organization of the Government of India is not such as is adapted for dealing with local routine work of which the mass of business would consist. We could not afford to station in the Khyber an officer of the standing and experience to be trusted in cases of importance and emergency. The district is

too small for an expensive staff and too important for any other than a thoroughly reliable authority. The second plan would put the Commissioner of Peshawar in the position of serving two masters and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer. The third plan would put the whole direction of affairs, political and military, in the hands of the military authorities over whom the Punjab Government which controls the political relations with the rest of the border would have no power. Our Hon'ble Colleagues, His Excellency Sir Charles Nairne and Major-General Sir Edwin Collen, dissent from our views in desiring to maintain the authority of the Local Government over the militia and the political relations with Afridis of the Khyber. Their Minutes are enclosed.

One most important consideration in dealing with the future arrangements in the Khyber is that of our communications with Landi Kotal. A good road now exists through the Pass, but, in the event of our having to make a military advance in any of the circumstances discussed in the 6th paragraph, we are of opinion that it would be of the highest importance to have the use of a railway to Landi Kotal. A recent survey shows that a light railway on the two-foot gauge can be run from Peshawar to Landi Kotal independently of the present road, at an estimated cost of Rs. 36 lakhs. We think that we ought to secure, in the settlement which is about to be made with the Afridis, the right to construct and work a railway and to exercise exclusive jurisdiction upon it. We do not propose actually to lay the rails beyond Jamrud now, but we would make the railway bed ready for the laying of the permanent way when the time came for doing so. This, however, is a project for which we should desire to obtain an expression that the approval of Her Majesty's Government before we take any steps towards its inception.

In our new arrangement with the Afridis we must make adequate provision for the railway and for the exercise of jurisdiction upon railway lands, the trade road and within the militia posts, as well as for the constitution of the militia as a British force. We think, however, that our terms should be drawn, in some essentials, upon the same lines as the Agreement of 1881 followed, and this is the unanimous opinion of all who have been consulted; that is to say, first;—the Afridi clans who are connected with the Khyber should still be paid allowances for keeping the pass open and safe, and in commutation of their ancient rights in respect of tolls and otherwise; and second;—a local force should be raised from the Afridis themselves for service in the Pass in carrying out the objects with which we dominate it. The circumstances of the uprising against us, in contravention of the agreement under which the Afridis had for many years worked, constituted an absolute rupture of all relations, and the defeat and subjection of the tribe might, if we chose, be held to obliterate all rights. We decide in our own interests to enlist the good-will and the assistance of the Afridis, but we hold that we have a clear right to attain our ends in whatever way we please. We propose, then, to renew our former relations as much on the lines of the old agreement as is compatible with present aims, but where a departure from the old footing seems expedient, we think it should be made in a manner to leave us the utmost freedom in the future. The form itself of the new document may with advantage perhaps approach rather to that of a sanad than take again the appearance of a treaty. This is a matter for future decision, but, if it can be so arranged, we would rather make the document a statement of the terms which we grant to the Afridis with their acceptance recorded upon it. It may be necessary, as was done in our instructions to Sir William Lockhart, to leave a certain amount of discretion to the officer or officers to whom we entrust the duty of entering into communication with the tribe, and to be guided, as to the final form, by the reports we receive.

We have said that Sir William Lockhart required of the Afridis the payment of the value of public and private property looted by them in the

Khyber, and that they have not made good this demand. The property has been valued at Rs. 28,600. We fear it must be accepted that it is impossible to enforce these claims, unless we are prepared to use force to compel compliance. In addition to this, the damage done to buildings in the Khyber has been assessed at two and a half lakhs of rupees. We reserved the question of requiring the Afridis to make good the cost of this damage for consideration when renewing relations with them. It is in our opinion useless to make any demand on that head now. Notwithstanding the terms of Sir William Lockhart's proclamation, we know that the Afridis regards themselves as having complied with what was required of them. We know that they have been put to many shifts and contrivances to enable them to comply to the extent to which they have done so, and that they are unable to pay more now and do not admit their liability to pay more. Any renewed demand or even any deductions from their allowances spread over the future would, we believe, be thought by them to be an injustice, and it will detract much from the value of any settlement, if it is not cordially accepted by the tribe from the outset. We cannot readily agree, however, to wipe out this demand altogether, since it was deliberately made. We propose, therefore, to make the renewal of allowances date from the day on which the Afridis accept our new terms of settlement. The tribesmen might, and they probably will, ask for the allowances to be paid from the date on which we made peace with them. We shall make them understand that we made peace with them without exacting the full terms originally imposed, and that their allowances cannot, therefore, be restored until the date on which a new settlement is arrived at.

In one matter we shall have to forego our demand altogether. The Afridis were told that they must restore the arms taken from troops during the campaign. This they have not done, alleging that it is not the custom of their country to restore arms taken in war, that they told Sir William Lockhart so, and that he gave them no definite reply. As many of these arms have been sold out of their country, they cannot comply in full with this demand, and, after full consideration, we have, with regret, come to the conclusion that we cannot press it.

We propose to reserve for other despatches an expression of our plans for dealing, on the principles stated by Your Lordship in the despatch cited at the beginning of this letter, with other sections of the North-West Frontier, such as the Kohat-Samana-Kurram Frontier, Malakand, the Tochi Valley and Wano; there is, however, one consideration which we may mention here. We concur with Your Lordship in thinking that advanced posts in tribal country, held by regular troops, should be established under such conditions as will enable the garrisons to promptly repel any attacks made upon them. We think, however, that a well organized militia might be a most valuable addition to this system, especially in relieving the regular troops of most, if not all the duty on the lines of communication, and in small and unhealthy posts. Before the transference of the Punjab Frontier Force to the Commander-in-Chief, there was in existence a force which bore the name of militia and which performed duties somewhat of this character. In the Kurram Militia we have a revival of that system. If the proposed organization of the Afridi militia in the Khyber is accepted by Your Lordship, we would propose to place at the disposal of the Local Government an officer of experience of the frontier and with Pathans, who could not only act as Commandant of the Khyber Militia, but as an adviser in the matter of organising other corps of militia where required.

Enclosure 1 in No. 3.

Letter from General Sir W. Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department, dated Calcutta, the 3rd February, 1898.

With reference to the conference held yesterday at Government House, over which His Excellency the Viceroy presided, I have the honour to forward a memorandum drawn up by the Chief of the Staff, Tirah Expeditionary Force, submitting certain proposals for the holding of the Khyber pass.

2. These proposals, in which I concur, may perhaps be found to offer a reasonable solution of the question which was under discussion yesterday.

Memorandum by Brigadier-General W. G. Nicholson, Chief of the Staff, Tirah Expeditionary Force.

In deciding on the agency by which the Khyber is to be held, there are two points to be kept in view. First, the Khyber is used as the principal trade route between the Punjab and Northern Afghanistan; and, secondly, in the event of military operations having to be undertaken in Afghanistan, the most direct and easiest road to Kabul lies through the Khyber. To meet trade requirements it would, no doubt, suffice to hold the Khyber by tribal levies drawn mainly from the Afridi sections, whose custom it was in former days to exact tolls from caravans making use of this pass. But to meet military requirements such an arrangement seems hardly appropriate. We ought to have an advanced post capable of ready expansion into an advanced military depôt at the most commanding point in the pass, namely, at Landi Kotal; near that post an adequate supply of water is indispensable; and, in view of recent occurrences, it would appear to be neither prudent nor conducive to our prestige to expose the defensive works and water-supply which the Government of India may order to be constructed to the chance of being wrecked by a tribal outbreak. The importance of the military aspect of this question has, I believe, been fully recognised by the Government of India and Her Majesty's Government since the year 1885.

The following proposals are put forward as likely to meet the two requirements indicated above :—

1. The Khyber to be held for trade purposes by the Khyber Rifles, drawn proportionately from the tribal sections concerned, and organized somewhat in the same way as the Kurram Militia. The men to be armed, clothed, equipped and trained by Government. The head-quarters of the corps to be as heretofore at Jamrud, with a strong detachment at Landi Kotal, and the remainder distributed in suitable posts between Landi Kotal and Jamrud. The original Landi Kotal Serai to be remodelled so as to provide quarters for the detachment there, and the old posts along the line, including that at Ali Masjid, to be restored with such improvements as regards site and design as may seem necessary.

In the event of Government approving of the continuance of tribal allowances to the Afridi sections living in the Khyber, the pay and allowances of the Khyber Rifles to be taken into account as really constituting a tribal subsidy.

My own view is that Afridis much prefer to be commanded by British officers, and for this reason among others I am inclined to favour the appointment of one or more carefully selected British officers to the Khyber Rifles.

But on this point I hesitate to express a decided opinion, although I doubt whether, if a different policy be adopted, any Native officer well adapted for the command of the corps would be forthcoming. Aslam Khan has done well, but his qualifications are quite exceptional.

2. For military purposes a really strong work, armed with guns, should be constructed at Landi Kotal on a site which, if possible, would protect the water-supply. It is understood that such a site can be found near what is known as "the General's Camp." The normal garrison of this work might be fixed at one battalion of native infantry, with a detachment of gunners, and it may here be noted that Landi Kotal is a much more healthy station for troops than the Peshawar valley. The work should, however, be so designed as to be capable on an emergency of housing a larger garrison, while being thoroughly defensible when occupied by its normal garrison. There should be no difficulty about this, if suitable flanking arrangements are made. The work should provide storage for reserve ammunition and for at least one month's supply of food and water for the normal garrison. The type of work and the armament should be such as to enable the defenders to withstand a powerful tribal combination without needing immediate re-inforcement.

In conclusion, I would observe that the foregoing proposals do not, so far as I can see, involve the annexation or administration by us of the Khyber to any greater extent than has hitherto been the case. The political arrangements and the Khyber Rifles would remain as before under the control of the Political Officer in charge of the pass, and the military garrison of Landi Kotal would be under the orders of the General Officer Commanding the Peshawar District. The latter would act in concert with the former in all matters in which the presence of the troops might affect the management of the pass and of its inhabitants.

(Signed) W. G. NICHOLSON, *Brigr.-Genl.*,
Chief of the Staff, Tirah Expeditionary Force.

CALCUTTA,
Dated, the 3rd February, 1898.

Enclosure 2 in No. 3.

Letter from the Secretary to the Government of India, to General Sir William Lockhart, K.C.B., K.C.S.I., dated Fort William, the 1st March, 1898.

I AM directed to acknowledge the receipt of your letter, dated the 3rd February 1898, in which you forwarded a memorandum drawn up by the Chief of the Staff of the Tirah Expeditionary Force, making proposals for holding the Khyber Pass.

2. These proposals, which meet with your concurrence, involve the holding of a strong work at Landi Kotal, with a garrison of one battalion of Native Infantry and a detachment of gunners, while the Khyber Pass itself would be guarded for trade purposes by a militia recruited from the tribal sections concerned, and organized somewhat in the same way as the Kurram Militia.

3. The scheme, of which this short description does not purport to be even a sketch, has been examined by the Government of India in the light of what has hitherto been the policy of the British Government, and the instructions of the Secretary of State conveyed in his despatch of January 28th, paragraph 21, bearing particularly on the present subject. The Governor-General in Council is not prepared to accept the plan without further investigation of the whole question of the best way in which to secure the safety of the Khyber Pass. The Governor-General in Council, therefore, wishes you and Sir Richard Udny to put before him, in greater detail, the plan of holding the pass which commends

itself to you, and to discuss at the same time any alternative ways of doing so. It has, for instance, been suggested that a Militia, maintained on the analogy of the Kurram Militia, might guard the pass without the immediate presence and support, in time of peace, of any military force, if a body of troops is kept ready to move to the assistance of the tribal militia, should they be seriously menaced, and if a definite assurance be given to them that such assistance will be afforded.

4. Some time may yet elapse before the Government of India can arrive at a final decision in this matter. That decision must be influenced by other than purely military considerations, and you may now be in a position to advise the Government of India on the disposition and temper of the Afridis, showing how they would view a military occupation. Sir Richard Udny was understood, when you and he were personally consulted in Calcutta, to favour a system under which the whole responsibility for the administration, as well as the safety of the Khyber, would be taken entirely out of the hands of the Afridis. The Governor-General in Council would desire to know, if this is a correct description of Sir Richard Udny's views, how he would propose such an arrangement would be worked out in detail, and what extent of country on either side of the road through the pass would be included in such arrangement. Still another plan which has been mentioned is to fall back upon tribal responsibility and tribal methods entirely, relaxing even what amount of British supervision and superimposed authority there has always been in the Khyber arrangements since 1881. The Government of India will await the expression of your views before coming to any conclusion as regards these suggestions.

5. It is in the opinion of the Government of India inevitable that the present military occupation of the Khyber must, at least temporarily, continue, and that when all the clans submit, they must be told that the Khyber will continue to be occupied for the present. They will be warned at the same time, if they show any disposition to resent this military occupation and a desire to arrive at a state of relations under which they will have complete or considerable freedom from control, that their conduct in the interval between this and the settlement of the future will be taken into consideration in arriving at a decision as to the nature of the final arrangements which may be made for the safety of the pass. The sanction of the Secretary of State must be obtained before any announcement of this kind can be made.

6. I am to ask that your best consideration may be given to the several questions which have been put before you in this letter, and that your opinion may be expressed to the Government of India as early as you are able to reply. The points raised in paragraph 5 were referred to you by telegraph.

I have, etc.,

(Signed) W. J. CUNINGHAM,

Secretary to the Government of India.

Enclosure 3 in No. 3.

Letter from General Sir William Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department, dated Camp Peshawar, the 11th March 1898.

I HAVE the honour to acknowledge the receipt of your letter, No. 1098 F., dated 1st March 1898, calling for a report by Sir Richard Udny and myself on the method which appears to us to be the best for holding the Khyber Pass in future.

2. My views on the subject are embodied in the accompanying memorandum. In order to save time I submit this at once without waiting for the paper which Sir R. Udny is drawing up on the subject, and which I hope to forward on the 14th instant.

Memorandum by Gen. Sir W. Lockhart, K.C.B., K.C.S.I.

The Khyber Pass has to be kept open by us with two objects, and can be held in one of four ways. The objects are—first, to provide a direct and easy trade route between the Punjab and Northern Afghanistan; and, secondly, to ensure ready access into Northern Afghanistan for our army, in the event of military intervention in the country becoming necessary. The latter purpose is undoubtedly the more important of the two, both in connexion with the defence of Afghanistan and India against foreign aggression, and because the trade between those two countries is quite insignificant in amount and value. The temporary closing of such a trade route as the Khyber makes very little difference to the Government or people of India, but from the strategic standpoint it might be essential that the main road into Northern Afghanistan should be kept open in times of excitement and fanaticism on or beyond the frontier. The delay of a week or a fortnight in entering Afghan territory might involve momentous consequences in a political as well as a military sense. It will be seen, therefore, that the measures which would suffice for guarding a trade route might be quite inadequate for keeping open the line of military communication between the Punjab and Northern Afghanistan.

The ways in which the Khyber can be held are—first, by regular troops; secondly, by a force consisting partly of regular and partly of irregular troops; thirdly, by irregular troops alone; and fourthly, by tribesmen under tribal management and responsibility.

2. As regards the first method of holding the Khyber, it may be objected that in view of existing military requirements in the Punjab and elsewhere, the Khyber could not be held in adequate strength by troops alone without a proportionate addition to the Indian army; that permanently to lock up a considerable military force in a narrow pass is not the best way of guarding against the recurrence of a frontier rising; that for occupying the heights bordering the pass from Jamrud to Landi Kotal, local irregular troops or levies are more suitable and likely to be more efficient than regular troops; that during the summer the pass itself (except its highest point at Landi Kotal) is so hot and unhealthy that service therein would be intolerable for British soldiers and extremely distasteful to native soldiers; and, finally, that to exclude the Khyber Afridis from any share in the custody of the pass, and the emoluments attaching thereto, would certainly create ill-feeling among them and incite them to mischief.

With reference to the first objection, I would remark that some increase in the army to meet the needs of an expanding empire seems inevitable. As matters stand, a large proportion of the troops quartered in the Punjab have of late years been almost continually on outpost duty on or across the frontier, or on field service.

With reference to the second objection, it may be urged that it is by no means obligatory to look up in the valley of the Khyber the whole of the troops that might be required to secure the pass. The Bazar valley would furnish a strong strategical position, and, if a brigade were quartered at or near China, while a smaller force occupied a fort at Landi Kotal, the pass would be as safe as it could be made by purely military means. On the other hand, it is understood that the permanent occupation of Afridi territory in the Bazar valley would be opposed to the decision of Her Majesty's Government, and I am inclined to think that such a step might embitter our relations with some at least of the Afridi sections, and thus lead to their giving trouble whenever they imagined that our troops were fully occupied elsewhere.

However this may be, the last three objections are to my mind unanswerable, and dispose of the idea of holding the Khyber by regular troops alone. Picquet and patrol duties in the pass can best be performed by a local and irregular corps, the employment of which gives the Khyber Afridis their due interest and profit in the custody of the pass, and obviates any necessity for quartering troops between Landi Kotal and Jamrud.

3. As regards the second and third methods of holding the Khyber, which can best be discussed together, it may be said that for the past eighteen years the pass has been guarded by irregular troops alone, inasmuch as the tribal levies which were raised, trained, and paid by us under an agreement with the Afridi sections concerned have by degrees been assimilated more and more closely to an irregular frontier corps. This system has saved much trouble and expense in the past, and might, if properly controlled, have continued to work well in the future, but for the unfortunate occurrences in August last. However loyal and well-disciplined irregular native troops may be, they can hardly be expected to fight against overwhelming odds of their own kinsmen, after their British Commandant has been withdrawn, and they have been warned that no support or assistance is to be looked for. Under such trying conditions, the best mercenary troops in the world might be expected to waver, and I think it highly creditable to the Khyber Rifles that, when left to their own resources, they fought as well as they did.

The Kurram valley is held by the Kurram Militia under a British Commandant, and this force has done excellent service, even during the recent period of disturbance. But the local conditions in the Kurram and in the Khyber are wholly dissimilar. The Kurram Militia is mainly composed of Turis, a tribe of Shiahs which only flourishes under British protection, and is at continual enmity with the Sunni tribes surrounding it. Moreover, we have provided the necessary support or stiffening to the Militia by the regular garrison quartered in the Para Chinar Fort.

The holding of the Khyber was entrusted to a local force in some respects analogous in constitution to the Kurram Militia, but with these differences: First, the Khyber Riflemen were drawn from the Afridis sections which inhabited and bordered the pass, and consequently they had no traditional feeling of enmity against their neighbours to strengthen their loyalty towards us; and, secondly, the defensible serai at Landi Kotal had no garrison of regular troops like the fort at Para Chinar. It seems possible, however, had the Khyber Rifles been promptly reinforced by regular troops in August last, that with few exceptions, they would have stood to their engagements, that the various posts and the defensible serai and water-supply works at Landi Kotal would have been saved from destruction, and that the formidable tribal gathering would have melted away, as it did on a previous occasion, as soon as troops were moved up the pass in support.

It ought to be an axiom of frontier policy that, in using local levies or irregular corps to hold passes or outposts beyond the limits of British India, the one thing of essential importance is to inspire these levies or irregulars with the fullest confidence that, in time of emergency, they will be as fully and as promptly aided and reinforced by the army behind them as regular troops would be. Up to August last, I believe that the Khyber Rifles possessed that confidence, but for the time it has been weakened, if not destroyed, by their being left to themselves to hold the pass, and to defend the buildings and other public property which had been entrusted to their care. According to the strict letter of the law, it is doubtless the case that our agreement with the Afridis did not oblige us to assist with our troops the representatives of the sections concerned, or the Khyber Rifles, in carrying out the duty for which these sections received allowances, and for which the Khyber Rifles had been organized. But these wild mountaineers are unacquainted with the niceties of political jurisprudence, they had for many years fulfilled their part of the agreement, some of them had been employed by us as irregular troops in frontier warfare elsewhere, and they may reasonably have hoped for the assistance which, technically speaking, they had no right to demand. One of my two

main reasons for supporting the proposals put forward by the Chief of Staff, Tirah Expeditionary Force, is that their adoption will restore the confidence of the Khyber Rifles and the Afridis living in or near the Khyber Pass. These will know that, so long as a strong outpost at Landi Kotal is garrisoned by regular troops, there is no chance of our again leaving them to stem the wave of tribal fanaticism unaided. There is of course the objection that on military grounds it may be hazardous to hold an advanced post with regular troops, while the road between this post and the base remains in the hands of locally raised irregulars in whose fidelity we cannot place implicit reliance. I do not attach much weight to this objection, for Landi Kotal is at the top of the pass, and is therefore regarded by the Afridis as dominating the road between it and Jamrud. Moreover, as previously stated, the heights bordering the road are so inaccessible, and so devoid of water, that they could not be permanently held by regular troops, either British or Native, without involving a strain on our military resources quite out of proportion to any conceivable advantage to be derived from such a measure. The feasibility of covering the pass by means of a cantonment in the Bazar valley has already been discussed in paragraph 2 of this memorandum.

My other reason for supporting Brigadier-General Nicholson's proposals is that, without involving heavy outlay or alienating the sympathies of any section among the tribesmen, they are likely greatly to strengthen our hold over the Khyber, and to enable us to carry out such arrangements in the way of railway extension, water-works, and the like, as may be required to facilitate our access to Northern Afghanistan, should circumstances demand our intervention in that quarter.

4. As regards the fourth method, its practical effect would be that the Government of India would pay blackmail to the Khyber Afridis, instead of the latter imposing blackmail on the kafilas making use of the road. It would mean a reversion to the barbarous system which was condemned as intolerable at the beginning of the last Afghan war. Difficulties would be certain to arise regarding the repair of the road and the maintenance of the posts needed to protect it; the Landi Kotal water-supply would cease to exist; our prestige along the whole of the north-west frontier would suffer; in short, the fourth method of holding the Khyber has nothing to recommend it.

5. From the foregoing remarks it will be seen that I am in favour of the second method. The defile of the Khyber should in any case be guarded by irregular troops raised locally. As regards regular troops, it would no doubt strengthen our hold on the Khyber from a military point of view, if a strong force were permanently quartered in the Bazar valley at or near China, as well as a smaller force in a defensible post at Landi Kotal. From a political point of view, the permanent occupation of China might give rise to tribal ill-feeling, and thus cause us grave embarrassment; for it must be remembered that, in undertaking military operations in Afghanistan, the friendly attitude of the frontier tribes would be of much greater moment than the absolute safety of any single pass, however important. If the attitude were friendly, the pass would be secure in any case. If the pass were secure, while the attitude was unfriendly, we should be harassed in other directions. I am, therefore, inclined to recommend the scheme sketched out by Brigadier-General Nicholson as offering the best prospect of a satisfactory settlement.

I consider that the organization of the Khyber Rifles might advantageously be strengthened by attaching to the corps three British officers instead of one, namely, a Commandant, 2nd-in-command and Adjutant, possibly also a medical officer. While drawn from the same local sources as heretofore, the corps might gradually be assimilated to one of the infantry regiments of the Punjab Frontier Force in matters of equipment, pay and pension.

6. I see no necessity whatever for instituting a civil administration over the Khyber. What we ought to tell the tribesmen is that, so long as they fulfil their engagements to us, and so long as their attitude towards each other does not bring them into conflict with us or endanger the security of the road, we are perfectly content to leave them to manage their own affairs. The Political

Officer in charge of the Khyber would naturally exercise considerable influence over the tribesmen, but I doubt whether that influence would be increased by investing him with the functions of a civil administrator.

7. As soon as we are fully assured of the complete submission of every Afridi section, I should be disposed to renew the tribal allowances in the Khyber, subject to such re-adjustment as may seem equitable or politic—subject also to such conditions with respect to railway and road construction, and the acquisition of sites as we may think fit to impose. When the tribesmen see that their allowances are not to be forfeited and that the Khyber Rifles are not to be disbanded, I am of opinion that they will welcome the construction of a strong post at Landi Kotal, as furnishing a tangible proof that, if they do their part to keep the pass open, we shall not fail in ours.

8. There are two other points to which a brief reference is necessary: First, the advisability or otherwise of constructing an alternative road to Landi Kotal from Peshawar through the Mullagori country. Such a road would be nearly twice as long as the Khyber route, and its cost would be some 9 lakhs, but the alignment is an easy one. If, as laid down by the Secretary of State, the maintenance of the Khyber Pass as a safe artery of communication and trade is essential, it seems to me that it would be a waste of money to provide a second and much longer roadway which would never be used, unless the Khyber were closed—a condition of things which is not contemplated. Secondly, it may be convenient to mention that the cost of the defensive works, water-supply, &c., needed in the Khyber, if occupied in the manner suggested in Brigadier-General Nicholson's Memorandum, is roughly estimated by the Commanding Royal Engineer, Tirah Expeditionary Force, at 9½ lakhs, namely:—

	Lakhs.
Fort on Suffolk Hill	4
Water-supply . .	1
New post and tank at General's camp	½
Restoring defensible serai .	1
Blockhouses, Upper Khyber	1½
„ Lower „ .	1½
	9½

The cost of restoring the works which would be required if the Khyber were held by the third method., *i.e.*, without a garrison of regular troops at Landi Kotal, may be taken at about 5 lakhs.

9. In conclusion, I would refer to the supreme importance of improving the communications between our frontier outposts and the supporting stations behind them. By this means alone can the due concentration of our forces and the rapid reinforcement of any threatened point be provided for. I advocate the immediate extension of the North-Western Railway system to Kohat and Bannu on the west, and to Landi Kotal and Dargai below Malakand on the north.

(Signed) W. S. A. LOCKHART, *General,*
Commanding Tirah Expeditionary Force.

Enclosure 4 in No. 3.

Telegram from the Chief Secretary, Punjab Government, Lieutenant-Governor's Camp, to the Foreign Secretary, Calcutta, dated Banda, the 19th March, 1898.

LIEUTENANT-GOVERNOR'S views in regard to re-opening of Khyber Pass have been given in paragraph 5 of Punjab Government's letter, dated 21st September, and in two demi-official letters to the Viceroy, dated 18th October

and 6th March, the material parts of which will now be put into official form and letter sent by post. To what he has already said, Lieutenant-Governor would add as follows :—*First.* It is very undesirable that we should show anxiety to restore allowances to Afridis before our objects regarding pass are defined and fully secured; such attitude would be misinterpreted and would make final settlement extremely difficult. There is no need for haste as pass is open, and military occupation must continue till sufficient guarantee for the permanency of arrangement is secured. *Secondly.* It is desirable, in view of reckless infringement of former agreement, that, as recommended in paragraph 5 of Punjab Government letter, dated 24th September, cost of constructing buildings damaged in outbreak should be deducted by instalments from the allowances, and this question should be settled before allowances are restored. *Thirdly.* In regard to re-enlistment in Khyber Rifles, Lieutenant-Governor, as already intimated, thinks this desirable, provided Government reserve complete liberty of action in regard to constitution of force and its relation to tribal control. These are questions which, in Lieutenant-Governor's opinion, require full deliberation and discussion with the tribes, and allowances should not be granted until they are settled. Even if Government has framed its policy in regard to the Khyber, the tribes are hardly in a position to enter into definite engagements which must depend for their fulfilment on the concerted action of the several sections.

Enclosure 5 in No. 3.

Letter from General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., Commanding Tirah Expeditionary Force, to the Secretary to the Government of India, Foreign Department, dated Camp Peshawar, the 16th March, 1898.

In continuation of my letter, dated 11th March, 1898, I have the honour to forward a Memorandum, dated 15th idem, embodying Sir Richard Udny's views on the future arrangements for holding the Khyber Pass.

2. The only remarks I have to make on this Memorandum, which I am gratified to find in substantial agreement with my own, are with regard to the following points :—

Paragraph 9.—I would first observe that, although Brigadier-General Elles concurred with the Commissioner of Peshawar in thinking it inexpedient last August to send troops into the Khyber, I am not aware that he represented such a movement to be a military impossibility. But in cases of local disturbance, the responsible military adviser is not the General Officer in local command, but the Lieutenant-General of the Command concerned, and in this instance the Lieutenant-General Commanding the Forces, Punjab, strongly urged on Army Head-quarters the desirability of reinforcing the Khyber and supporting the Khyber Rifles with regular troops.

Secondly.—I am doubtful about the necessity for keeping a full equipped flying column at Peshawar in readiness to reinforce the Khyber. The correct principle to be followed in the military occupation of the frontier is to concentrate the troops needed to support the outlying garrisons in suitable and healthy positions, and to keep up the transport and equipment required to enable these troops to move at a moment's notice. Further, to perfect the means of rapid communication between the outpost and their supports by the construction of railways and the improvement of roads. To hold a long and exposed frontier with a moderate force, it is essential that the communications should be as complete as they can be made by civilized methods.

Thirdly.—I do not agree with Sir R. Udny about the Khyber Rifles being encouraged to provide their own arms. I can see no advantage in such a system, which would offer a premium on the theft of breech-loading rifles or their component parts from our troops or arsenals. I consider, too, that the Khyber Rifles should be as well armed as our Native Infantry Regiments.

Paragraph 10.—Admitting the existence last summer of a strong fanatical feeling along the north-west frontier, I doubt whether this feeling in the first instance took a firm hold on the majority of the Afridi tribesmen. They assemble, possibly in large numbers, to attack the Khyber posts, but their attitude was at first vacillating and half-hearted, and I cannot but think that, after having upheld their religious reputation among their neighbours by a skirmish with our troops, they would have been only too glad of an excuse to disperse to their homes. To me it is inconceivable that the Khyber Rifles would have attempted to hold out against their kinsmen, if the hostility of the latter towards the British Government had been as bitter and as fanatical as Sir R. Udny supposes. Apart from their Mullas, the Afridis have always been on friendly terms with us. In fact, as a tribe they like us, and many of us like them; and it is well known that the Mullas have less influence over the Afridis than over any other frontier tribe.

Memorandum by Sir R. Udny, K.C.S.I.

The management of the Khyber previous to the outbreak of last August was based upon an agreement made with us in 1881 by the Afridis,* or rather, to speak quite accurately, by the Kuki Khel, Zakka Khel, Malikdin Khel, Kambar Khel, Kamrai and Sipah clans of that tribe, for the Aka Khel, and Tirah Adam Khel clans had no more to do with the Khyber than the sections of the Adam Khel Afridis, who inhabit the Kohat Pass and the wedge of independent territory adjoining the pass to the eastward. To prevent misconceptions as to the terms of this agreement, it should be read through carefully, but for present purposes it may be sufficient to say that the arrangements under it were as follows:—On Tuesdays and Fridays in every week one caravan went up through the Khyber from Jamrud to Landi Kotal, a distance of 20 miles, while another came down from Landi Kotal to Jamrud, and these caravans were accompanied by guards of the Khyber Rifles which exchanged at the half-way post of Ali Masjid, the escort which had come down with the caravan from Landi Kotal returning therewith the upward caravan from Jamrud, while the escort from Jamrud retraced its steps with the downward caravan. On these days too the heights which command the road through the defile were picquetted by Khyber Riflemen. On other days of the week the pass was closed to traffic, though special arrangements of the same kind were occasionally made on off-days for distinguished visitors, and special guards used to be provided for parties of coolies employed on the repair of the road or on such duties as the building of the fortified serai at Landi Kotal, the construction of the water-supply works near Landi Khana, etc., etc. Officials too connected with the pass like the Political Officer in charge of the Khyber and the Commandant of the Khyber Rifles, frequently travelled through it with small escorts of the latter corps on other than caravan days, though, according to the strict letter of the agreement (clause 13), they were bound to give sufficient notice of this to the tribesmen beforehand. From this it will be seen that the Khyber cannot be said to have been "held," except in a very modified sense even for purposes of trade, and that in a military sense it was not "held at all, while the system in force was absolutely different from that prevailing in the Kohat Pass (through the country of the Adam Khel Afridis), which, in return for a comparatively very small subsidy, is open every day of the year and all day long like any road in British India, for all travellers, whether European or Native, without any precautions of guards or picquets.

* And the Shinwaris of the Lwargai plateau round Landi Kotal. R. UDNY.

2. The question that Government now have to decide is whether we should content ourselves with regaining the same measure of control over the Khyber that we possessed in the past, or whether we should seek to obtain a larger measure not only in order to secure it more effectually for military purposes as our main line of advance into Afghanistan, but also to render it impossible for the Afridis to close the road and to destroy our posts in the pass

as they did last August. I think there can be no doubt that this question must be answered in favour of the second alternative, and, as it seems to me that the objects in view under this alternative could only be completely attained by holding the pass for ourselves in a military sense and by regular troops, I said at the Conference which was held by His Excellency the Viceroy at Calcutta on the 2nd ultimo that I should like to see this done in future *if the military authorities considered it practicable*. Although too I am absolutely averse as a general rule to any occupation or quasi-annexation of territory beyond the frontiers of British India when it can possibly be avoided, and I have always been strongly of opinion that we should refrain from interference with the tribes, unless it is necessary for the security of our own subjects and border, I think that in the special case of the Khyber the objects to be attained would justify us in making an exception, and that however much the Afridis might dislike our occupation of the pass with the consequent forfeiture of their pass allowances,* the trans-border world could not fail to admit that it was a just and appropriate punishment, which they had brought upon themselves by an unprovoked outbreak and by showing us that we could place no lasting reliance on tribal agreements. But even with a military occupation of the Khyber I would have kept up the Khyber Rifles—as an auxiliary irregular corps on the model of the Kurram Milita and entirely under our own control—for two reasons—

* In this connection I may note that, *if we continued to pay them their old allowances*, the Afridis could not object to our re-occupying the Khyber with troops or regard it as any breach of the 1881 Agreement, since this was specially provided for by clause 5 of that agreement, which seems to have been made while we were still in military occupation of the Khyber.

R. UDNY.

(i) as providing an opening for the Afridis, who would still feel that they retained a considerable interest in the pass arrangements while they had a local levy to enlist in;

(ii) to escort caravans and to furnish picquets on the hills during their journey through the pass in times of peace, because such duties —particularly hill top picquets—would be harrassing for regular troops, and could be performed satisfactorily by Khyber Riflemen in ordinary times as they have been during the past.

I had no intention, however, of proposing that we should undertake any responsibility for the administration of the Khyber as well as for its safety, and I would simply uphold the existing regulation published in Government of India Notification of the 2nd July 1880 (as amended by Notification of the 15th June, 1886), which provides for the trial of criminal offences in "the Khyber Pass and the lands immediately adjoining the pass on either side of the road-way,"† without attempting to interfere with the tribesmen elsewhere. It will be observed too that this regulation in its concluding words allows a discretion to the officers empowered under it to refrain from using it unless the parties are all British subjects.

† I should prefer to read this when the new arrangements have been concluded, as "the road through the Khyber Pass and the lands immediately adjoining this road-way on either side"

R. UDNY.

3. Sir William Lockhart in his Memorandum on future Khyber arrangements is opposed to a purely military occupation of the pass by regular troops, principally on the grounds—

(*a*) that irregular troops (*i.e.*, local levies) are more suitable, and likely to be more efficient, than regulars for occupying the heights bordering the pass, which are so inaccessible and devoid of water that they could not be permanently held by regular troops, either British or Native, without an undue strain on our military resources;

(*b*) that during the summer the pass itself is so hot and unhealthy that services in it would be intolerable for British, and extremely distasteful even for native soldiers;

(*c*) that the exclusion of the Afridis from a share in the custody of the pass and the emoluments attaching thereto would create ill-feeling and incite them to predatory action;

and also more or less because—

(*d*) a military occupation would involve an increase to the Indian army; and

(*e*) to lock up a considerable military force in a narrow pass is not the best way of guarding against the recurrence of a frontier rising.

4. Some of these objections to holding the Khyber entirely by regular troops are so purely military that as a civilian I feel great diffidence in making any remarks upon them at all, but in frontier questions political and military considerations are so inseparably associated that it is impossible to refer to the former without touching upon the latter. Perhaps, therefore, I may be permitted to say that I fully recognise the force of (*a*), (*b*), (*d*) and (*e*); and as regards (*a*), even if it were safe to allow local levies to hold permanent positions upon the heights which command the pass, the difficulty of water is one which it would still be probably impossible to overcome.

As for (*c*), I have already said that in my opinion the special objects to be attained by a military occupation of the Khyber would justify us in disregarding the natural dislike of the Afridis to such a measure; but their resentment might no doubt lead to "predatory action," and, if there is any question whether such action could be adequately met by military precautions, this certainly furnishes an unanswerable argument against attempting to dispense altogether with tribal arrangements. On the whole, therefore, I am quite content to accept the conclusion that, so long as we have only the pass itself to deal with, and are debarred from taking up covering positions in the country on either side of it, a purely military occupation of the Khyber is *not* practicable.

5. The alternative methods of holding the pass are stated by Sir William Lockhart in his Memorandum to be—

(i) partly by regular and partly by irregular troops (*i.e.*, local levies);
(ii) by irregular troops alone;
(iii) by tribesmen under tribal management and responsibility;

and Sir William Lockhart thinks that the first and second of these methods can best be discussed together; but I should prefer to group (*ii*) with (*iii*) as in point of fact constituting a single method, for we may take it as certain that, if we are to use only local levies, it must be in combination, as hitherto, with tribal arrangements, while on the other hand in clause (6) of the Khyber Agreement of 1881 the tribesmen themselves said that the maintenance of some kind of Jezailchi Corps was "absolutely necessary to enable them to render the road secure." This method, however, is the system which broke down in August last, and, if we reverted to it without special precautions, although the Afridis have since been taught a lesson which they are not likely to forget in a hurry, we should have no security against the recurrence of similar events in times of excitement on the border.

6. If it be said that this objection might be met by keeping up a permanent flying column at Peshawar of sufficient strength and complete with transport and commissariat, which would always be ready in case of necessity to support the Khyber Rifles, and to assist them in guarding the pass until the excitement had died away, I would reply that the primary object of a special force is always liable to be overlooked, as the events which led to its formation are gradually forgotten, and that in a time of stress elsewhere—the very time it must be remembered when excitement is most likely to spread to the Afridis—it would probably be utilised for other purposes. If, for instance, we had had a Khyber Flying Column in Peshawar when the rising occurred on the Malakand last July, no one, I think, will deny that in all probability it would have been despatched in that direction. While, however, I desire to point out the danger of relying upon a special force of this kind, I trust I may not be misunderstood as arguing against the creation of such a force. The maintenance of a flying column at Peshawar is in fact one of the precautions I would urge upon Government in any case, whether we are to revert to the old system *pur et simple*, or whether we are to strengthen it by a post of regular troops at Landi Kotal, as

suggested by Brigadier-General Nicholson, which remains the only other alternative for discussion. All I would say is that a flying column at Peshawar is not enough alone, and that it should be supplemented by the establishment of a military fort at the further end of the pass, which might at least cover the post of Khyber Rifles at Landi Kotal, and would be able to hold out till relieved even if the flying column were not immediately available.

7. I concur, therefore, with Sir William Lockhart in supporting General Nicholson's proposal that "a really strong work armed with guns should be constructed at Landi Kotal," while the Khyber Rifles should be maintained as a local levy to guard the road, and for ordinary escort and picquet duties with caravans, etc. When the question of the Khyber was discussed many years ago (? by the Defence Committee), I believe that the idea of guarding the pass by any mixed system of this kind was summarily dismissed, because it was thought that military principles forbade the location of troops in an advanced position if the line of communication with their base could only be held by levies. Prior, therefore, to the Conference at Calcutta on the 2nd ultimo I had put this alternative aside as out of the question, under the impression that it would never be accepted by the military authorities; and when I was asked my opinion about it at the Conference, I rejected it on this account as impracticable. But when General Nicholson propounded the present scheme, and I found that military opinion was not so opposed to it as I had imagined, the case assumed a different aspect, and I now entirely agree in the proposal for a fort at Landi Kotal as a considerable step towards the complete security of theKhyber, which would be obtained by a purely military occupation if that were practicable, while in some respects General Nicholson's solution of the difficulty is preferable as advoiding the danger of Afridi discontent, which would arise if we held the pass for ourselves and deprived the tribesmen of their allowances. At the same time I doubt whether the Afridis would consider a military fort at Landi Kotal to "dominate" the pass, *i.e.*, the twenty miles of road between Landi Kotal and Jamrud, which it is in contemplation to hold as before by posts of local levies, or whether, in other words, such a fort would effectually restrain them from attacking these posts and stopping the road as they did in August, unless its military garrison were large enough to send out a really strong column for operations in the pass itself; and, as I presume that Government would scarcely be prepared to keep up a *permanent* garrison of this size at Landi Kotal, I would insist upon the necessity for maintaining a flying column at Peshawar (which might be called the "Khyber Flying Column"), with every possible precaution to keep in memory the primary object for which it is intended, and to provide against it or its equipment being diverted to other purposes.

8. If the old system of guarding the road between Jamrud and Landi Kotal by a local levy is to be continued, it follows that tribal allowances for the pass must also be renewed, and I observe that Sir William Lockhart is disposed to hold the same view. The only question is whether they should be restored at the old rates, and at first I was inclined to think that, if the Afridis by their unprovoked outbreak compelled us to go to the expense of building a strong fort and maintaining a military garrison at Landi Kotal, it was only equitable that they should suffer some reduction in the amount they received, which, though to some extent a compensation for the tolls they used to realise on the Khyber road when they held it themselves, had originally been fixed on the understanding that they were responsible for guarding the pass without our assistance. On the other hand, though the site of the proposed fort would, as I understand, be in the limits of the Lwargi Shinwari, like the old Landi Kotal fortified serai, I cannot think that the Afridis would welcome its construction. It is more probable that they would regard it as a threat to their independence,* and, if at the same time we reduced their allowances this would be an additional grievance which might greatly delay their settling down to the new régime. On the whole therefore I think that, if we are to restore the allowances at all, we should do so without

*Put as pointed out in my marginal note to paragraph 2 *supra*, the Afridis could not regard occupation of a fort at Landi Kotal by regular troops, as any breach of our old agreement with them so long as we paid them their old allowances under that agreement. R. UDNY.

altering them; but it should be made a condition of their restoration that we reserve to ourselves the right of running a railway through the pass, and of taking up the necessary sites for this purpose, without paying anything for the ground required (unless culturable) or increasing the allowances.

9. As to the Khyber Rifles, it seems advisable for me to note that they are the present form of the Jezailchi Corps, which originally consisted for the most part of men provided by the Maliks under clause (6) of the 1881 Agreement and subject to their control, who were paid ₹7 a month if they carried matchlocks or ₹8 if they brought rifles. Gradually this corps became more and more "regularised," the men were supplied with Sniders, the property of Government, while they were withdrawn by degrees from the control of the Maliks, and a very material addition was made to the Government posts in their charge by the erection in 1888-89 of the fortified serai at Landi Kotal. From time to time the tribal Maliks still continued to assert their right of control, but these claims were steadily resisted by the Political Officer in charge of the Khyber, and before the Afridi rising occurred last summer this control had practically disappeared, so that the Khyber Rifles were very similar in organisation to a regiment of the Native army, though until Captain Barton was appointed in 1896 the important element of British officers was entirely wanting. Whether this was a wise policy is, I think, very questionable, as it certainly tended to obscure the real footing upon which the corps subsisted, and if, as Sir William Lockhart believes, but I venture to doubt, it inspired the men with confidence that we should support them by regular troops in case of attack by their own tribesmen, I can only say that it was a great mistake to introduce such a policy without simultaneous arrangements to ensure this support being given, which, as I have explained in my letter of the 3rd October 1897 to the Punjab Government, was judged by the General Officer Commanding at Peshawar on the occasion of the outbreak in August to be a military impossibility. For the future, however, I agree that the Khyber Rifles should be maintained under our own control on the same system as the Kurrum Militia, provided always that we have a properly equipped flying column in Peshawar ready to support them, and that we are holding the Landi Kotal end of the pass with regular troops in a fortified position. In order also, if possible, to reduce the number of Government rifles in their hands, I think a handsome increase of pay (say, ₹12 a month instead of ₹9) might be offered to men who brought their own Sniders. I made a similar suggestion in the Conference at Calcutta, but I observe that, in the Notes of that Conference, I am represented by mistake to have said "buy" instead of "bring."

10. There is one passage in paragraph 3 of Sir William Lockhart's memorandum about which I must say a word in conclusion, as I am glad to have this opportunity of clearing up a matter regarding which it would appear that a good deal of misconception exists. The passage I referred to is as follows:—"It seems possible, however, had the Khyber Rifles been promptly reinforced by regular troops in August last, that * * * *, and that the formidable tribal gathering would have melted away, *as it did on a previous occasion, as soon as troops were moved up the pass in support.*" The italics in this passage are my own, and as the words thus italicised seem to allude to the attack made upon the Khyber by Malik Amin Khan, Kuki Khel, in July 1892, I desire to point out the important features in which that attack differed from the outbreak of last August. On the first occasion Amir Khan's "lashkar" probably numbered "four or six hundred men," and did not, I believe, include even the whole clan of the Rajgal Kuki Khels, but was only a gathering of the men of that clan who belonged to Amin Khan's own faction. The Mullas in Tirah combined to try and persuade other Afridi clans to join, but without success, and the direct motive of the attack was Amin Khan's personal resentment at having been deprived of half his "maliki" allowance for previous misconduct. On the last occasion, on the other hand, the strength of the Afridi gathering, when it came down upon the Khyber, was estimated at ten or twelve thousand men, collected from all clans except, curiously enough, the Rajgal Kuki Khels who had supplied the "lashkar" in 1892; and the motive swaying this army was the irresistible wave of fanaticism which had spread throughout the tribe. On the first occasion, again, Amin Khan's "lashkar" occupied a hill above

Shadi Bagiyar to the south of the entrance of the Khyber on the evening of the 4th July 1892, and during the ensuing night made attacks on the posts of Shadi Bagiyar, Jahangira and Fort Maude just inside the pass; but the gathering retired and dispersed early on the morning of the 5th July, because (it was thought) they had heard of the arrival at Jamrud of reinforcements from Peshawar, *viz.*, 200 men of the 14th Sikhs, who reached Jamrud on the evening of the 4th July, and 100 of the Royal Scots Fusiliers with 2 field guns, who marched into Jamrud at 2 A.M. on the 5th. Not a man, however, of these reinforcements ever advanced a yard beyond Jamrud. In August last, on the other hand, the Afridi gathering attacked and took the same three forts on the 23rd of that month in spite of a British force of 1,400 infantry and a mountain battery (besides a regiment of British Cavalry and a battery of Horse Artillery), which had been sent out to Jamrud five days previously in the hope that it might act as a demonstration to overawe the tribesmen. I will not enter into the question whether or not such a "lashkar" of the whole Afridi tribe would possibly have melted away if the troops at Jamrud (all that were considered to be available from Peshawar) had been pushed forward into the pass; but I may remark that four months later, after we had overrun Tirah and when we had no one but the Zakka Khel left to oppose us in the Khyber, one brigade at Landi Kotal was found insufficient to hold that pass and the line of communication from Jamrud, and a second brigade had to be moved up from Jamrud to Ali Masjid, as stated in paragraph 36 of Sir William Lockhart's Political despatch of the 3rd ultimo.

(Signed) R. UDNY,
Chief Political Officer,
Tirah Expeditionary Force.

PESHAWAR;
The 15th March 1898.

Enclosure 6 in No. 3.

Letter from Sir William Cuningham, K.C.S.I., Secretary to the Government of India, Foreign Department, to General Sir William Lockhart, K.C.B., K.C.S.I., dated Fort William, the 25th March 1898.

I am directed to address you with reference to the 7th paragraph of the memorandum on future arrangements for holding the Khyber Pass which you forwarded with your letter dated the 11th March 1898. For convenience of reference the paragraph in question is here quoted in full:

"As soon as we are fully assured of the complete submission of every Afridi section, I should be disposed to renew the tribal allowances in the Khyber, subject to such re-adjustment as may seem equitable or politic—subject also to such conditions with respect to railway and road construction, and the acquisition of sites, as we may think fit to impose. When the tribesmen see that their allowances are not to be forfeited and that the Khyber Rifles are not to be disbanded, I am of opinion that they will welcome the construction of a strong post at Landi Kotal, as furnishing a tangible proof that, if they do their part to keep the pass open, we shall not fail in ours."

2. The Government of India have consulted His Honour the Lieutenant-Governor of the Punjab on this point in advance of inviting His Honour's opinion upon the whole question of the management of the Khyber, as it is put before them by your letter above cited and by your further letter dated the 16th March, and I am to inform you that the Governor-General in Council is of opinion that, while the Khyber Rifles may be continued on a temporary footing, the whole question of the restoration of tribal allowances to the Afridis must be reserved at present, as it is inexpedient to renew payment of them until at any rate the permanent arrangements for the Khyber have been discussed and settled. It is necessary, in order to arrive at a decision upon this matter of the permanent arrangements, to institute enquiries which will be taken up at once.

Enclosure 7 in No. 3.

Letter from Sir William Cuningham, K.C.S.I., Secretary to the Government of India, to the Chief Secretary to the Government of the Punjab, dated Fort William, the 28th March 1898.

I am directed to forward, for the favour of the opinion of the Lieutenant-Governor, a copy of the correspondence cited in the margin, on the subject of the future arrangements for the control of the Khyber Pass.

From the General Officer Commanding, Tirah Expeditonary Force, dated the 11th March 1898.
From do., dated the 16th March 1898.
To do., dated the 25th March 1898.

2. I am further to enclose a copy of a telegram, confidential, dated the 24th March 1898, from General Sir William Lockhart, suggesting certain reductions in the Tirah Expeditionary Force, in the probable event of a settlement with the Afridis being effected by the end of March. Conditional on the realization of Sir William Lockhart's anticipations, his proposals have been accepted; the force will be reduced to three brigades, and the distribution proposed is approved, subject to the General Officer Commanding explaining the necessity or advantage of retaining a brigade at Mamani. The further reduction of the force to one brigade will be made when practicable.

3. The Government of India have not yet received the official expression of His Honour's opinion, the despatch of which is referred to in your telegram dated the 19th March. If that has been sent before the receipt of these papers, it is possible that a perusal of them may suggest further expression of the Lieutenant-Governor's view.

4. His Honour will see that both Sir William Lockhart and Sir Richard Udny favour the plan of holding the actual pass by irregular troops or militia raised from the Afridi and other neighbouring tribes, while the western outlet is garrisoned by troops. Sir Mackworth Young's opinion already given on this question is in favour of holding the pass by tribal agreement and by a tribal force maintained on tribal responsibility. The primary difficulty, however, which has arisen is to find a Native officer to take the place long filled by Colonel Muhammad Aslam Khan. It is essential that a tribal levy in the proper sense of the term should not be commanded by a British officer, and the fact that Captain Barton was in command of the Khyber Rifles last year has done much to complicate the questions involved. The Governor-General in Council is of opinion that, where it is thought expedient to introduce British officers, it must be recognised that the force ceases to be a mere tribal levy and becomes an irregular force or militia. The distinction is one with which His Honour is well acquainted from the case of the Kurram Militia. Whether the Khyber Rifles will be more acceptable to the Afridis as irregular troops or militia than as a mere tribal force looking for support exclusively to their own tribal headmen is a point on which there is room for difference of opinion, and cannot be settled without careful enquiry into the feeling of the tribesmen themselves. It will be noticed that Sir W. Lockhart is of opinion (paragraph 7) that the establishment of a military post at Landi Kotal and the consciousness that this means our supporting the Khyber Rifles themselves against hostile attack will do much to obviate opposition. Sir R. Udny does not concur in this anticipation, and I am instructed to point out that the establishment of the military post at Landi Kotal in the manner proposed by Sir W. Lockhart is itself still under consideration, and the Government of India have arrived at no conclusion in regard to it. But unless the pass is to be held throughout by regular troops, the Khyber Rifles must be continued in some form, and I am to invite His Honour to consider whether the difficulties of a purely tribal organisation are not so serious that the time has come for the constitution of the force as a militia under British officers.

If the Afridi Rifles are to be maintained on the footing of irregular troops, the constitution of the corps as regards the proportion to be enlisted from the different clans may nevertheless be subject of tribal agreement.

5. My letter, dated the 25th March, to General Sir William Lockhart, communicates the decision of the Government of India to the effect that the Afridi tribal allowances cannot at present be restored. They cannot be settled until the plan of holding the Khyber is determined. On this must depend not only the amount to be paid, but the purposes for which payment is to be made. The enlistment in the meanwhile of tribesmen in the Khyber Rifles, under temporary conditions, which has been already permitted, puts a considerable sum of money into the hands of the tribe. The Government of India do not think there is any necessity to go further and to restore at the present time payment of any of the Afridi Maliki allowances. The Government of India had formed an intention not only to hold the allowances in reserve until the Afridis accept whatever conditions they are ready to grant, but to confiscate them, in whole or in part, until the cost of repairing the forts and posts in the pass has been made good. This intention has not been abandoned. Even, however, if this reason did not exist, the Government of India, as a matter of expediency, would prefer not to display undue readiness to restore the allowances.

I have, etc.,

(Signed) W. J. CUNINGHAM,
Secretary to the Government of India.

Enclosure 8 in No. 3.

Letter from the Honourable Mr. L. W. Dane, Officiating Chief Secretary to the Government of the Punjab, to the Secretary to the Government of India, Foreign Department, dated Lahore, the 1st April 1898.

In continuation of my telegram dated 18th March 1898, I am directed to communicate in some detail the views of His Honour the Lieutenant-Governor so far as they are formed up to date in regard to the future policy to be adopted in the Khyber.

2. It has already been decided that, pending a complete settlement with the Afridis, the Khyber Pass will continue to be occupied by our troops, and orders have also been recently issued for the re-opening of the pass to trade; but it is understood that, as soon as we are assured of their complete submission, the Government of India are anxious to determine the details of the permanent settlement to be effected with the tribes and the manner in which the future arrangements should be carried out and our political relations with the tribes conducted.

In the first place, Sir Mackworth Young would strongly deprecate the hasty acceptance of any cut-and-dried scheme for keeping open the Khyber route, however feasible or simple the proposals might at first sight appear. The measures to be adopted must be carefully thought out and fully discussed by and with the tribes themselves, for the best guarantee for permanence in the new arrangements will be a deliberate estimate of what they are able and willing both to promise and to perform. In a matter of this kind there is the greatest danger in hurrying or patching a settlement, and His Honour thinks we should guard against doing this. Moreover, as the pass is open and it is clear that a military occupation must continue till a sufficient guarantee for the permanence of the arrangements to be made is secured, there does not appear to be any necessity for haste in the matter.

3. In view of these considerations Sir Mackworth Young cannot propound, at the present moment, any matured scheme for the future maintenance of the Khyber route, but he has always considered, as intimated in paragraph 5 of Punjab Government letter, dated 21st September 1897, that the re-opening of this route must, for the present at any rate, form one of the main objects of our future policy, and, if possible, that it should be re-opened under

arrangements for which, in the first instance, the tribes themselves should be responsible. He sees no reason for supposing that there will be another break-down in the arrangements if properly worked out, and he is of opinion that the restoration of the old order will in one respect have a better effect than anything new, in that it will clearly illustrate the hopelessness of attempting to upset our arrangements. He is not in favour of any change in the conditions which would impose the duty of maintaining the peace of the Khyber in times of disturbance on the British Government. It is better that the tribesmen should bind themselves to keep the route open and safe, only looking to us to supply the supervising agency, without which it is impossible for them, owing to their feuds, to co-operate for the common object.

The Lieutenant-Governor thinks it will be desirable that the corps to be raised for watch and ward in the pass should be officered, as far as possible, by members of the tribes responsible for the pass, though one or more British officers will certainly be required to hold command, and to organise and supervise their discipline and distribution much in the same way as British inspecting Officers do in respect of Imperial Service Troops. At the same time the Lieutenant-Governor thinks that we should again provide (as in clause 5 of the Khyber Agreement) that we may at any time send troops into the Khyber and occupy positions there without further payment, and that, having made this provision, we should ensure that a sufficient force is always kept ready mobilised at Peshawar or Nowshera to move into the Khyber on the orders of the responsible political authorities, and that suitable positions for such a force to occupy are worked out and kept in readiness.

4. With reference to the question as to how the future settlement is to be made and who is to be primarily responsible for the conclusion of the agreement with the Afridis, the Lieutenant-Governor believes that the Government of India are in favour of retaining the political work in the Khyber for the present under the direct control of the Foreign Department, and of entrusting the reconstruction of the arrangements to the Brigadier-General in Command assisted by a civil officer of a standing that would give weight to his advice. Sir Mackworth Young feels bound to say plainly that he does not think this plan would prove a good one. If the Khyber is again to come under the political control of the Punjab Government, His Honour thinks it is very desirable that the Lieutenant-Governor of the Punjab should be in a position to regulate from the first and in detail the scheme which is laid before the Government of India for orders. To leave the Local Government out during the formation of proposals is to deprive the Government of India of the best experience available just at the time when it is most required. It is not the same thing to refer the proposals after they have been worked out to the Punjab Government for opinion. It may be too late then to give a turn to the proceedings. The same reasons apply against excluding the Commissioner, Peshawar Division, from the negotiations during the early stages. Sir Mackworth Young would therefore recommend that, as contemplated apparently in paragraph 4 of Foreign Department letter dated 15th September 1897, the reconstruction of the arrangements when the tribes have made submission be made over to the Punjab Government, and that the settlement be carried out by the Commissioner for the time being of the Peshawar Division under its direction. A civil officer would also be required in the Khyber to work out the arrangements under the orders of the Commissioner. In fact, His Honour would employ the same machinery as was employed with marked success when the Khyber Agreement of 1880 was effected, and he foresees serious difficulties if the Punjab officers are called upon to work any scheme for the maintenance of the Khyber route with which they have not been closely associated from the beginning, though he can assure the Government of India of the most loyal co-operation on the part of all officers concerned in any policy which they may decide to adopt.

5. This brings His Honour to the consideration of certain proposals which have apparently been made with the object of re-assuring the tribes and making them more willing to accept any arrangement we may hereafter adopt. Sir William Lockhart proposes in the memorandum forwarded with Foreign Department endorsement dated 3rd March 1898 that, as soon as the tribes

have assured us of their complete submission, the tribal allowances should be restored, "subject to such re-adjustment as may seem equitable or politic, and subject also to such conditions with respect to railway and road construction and the acquisition of sites as we may think fit to impose." He also favours the re-enlistment of the Khyber Rifles. As regards the latter, the Lieutenant-Governor has already intimated in my letter dated 11th September 1897 that he considers the re-enlistment of the Khyber Rifles desirable as a means of giving the men employment and keeping them out of mischief, provided this is expressly done subject to whatever measures are ultimately found necessary in regard to the Khyber, when, if the former constitution of the corps is to be altered, the men could be given the option of leaving or re-engaging. But as regards the renewal of the allowances, Sir Mackworth Young is of opinion that it is very undesirable that we should show anxiety to restore allowances to the Afridis of the Khyber Pass before our objects regarding the pass are defined and fully secured. Such an attitude would be misinterpreted and would make the final settlement extremely difficult. We have other means of inducing the tribe to make complete submission and to set about a future settlement in a reasonable frame of mind. Though the Lieutenant-Governor trusts no further advance of our troops will be necessary, it is still open to us to re-impose the blockade if the tribe is obstructive about the pass question, and it seems neither necessary nor desirable to hold out the prospect of an immediate regrant of their old allowances as an inducement to them to comply with our wishes in this respect. Moreover, in view of the reckless infringement of their former agreement, it seems desirable that, as recommended in paragraph 5 of my letter dated 24th September 1897, and contemplated in paragraph 11 of Government of India letter dated 4th October 1897, to the address of Sir William Lockhart, the cost of reconstructing the buildings damaged in the outbreak should be deducted by instalments from the allowances, and this question should, the Lieutenant-Governor thinks, be settled before the tribal allowances are restored. The Government of India have just called upon this Government for a report as to the value of these buildings, and the Commissioner, Peshawar Division, has been asked to supply the information, but it will necessarily take some time before the information can be furnished.

6. If the views of the Lieutenant-Governor expressed in this letter meet with the approval of the Government of India, His Honour will endeavour to have a scheme for the future maintenance of the Khyber worked out under his personal direction by the Commissioner; and will submit this for their orders at as early a date as is possible under the circumstances of the case.

Enclosure 9 in No. 3.

Letter from L. W. Dane, Esq., Officiating Chief Secretary to Government, Punjab and its Dependencies, to the Secretary to the Government of India, Foreign Department, dated Lahore, the 16th April 1898.

With reference to the request contained in Foreign Department letter dated 28th ultimo, that His Honour the Lieutenant-Governor will favour the Government of India with his opinion on the subject of the future arrangements for the control of the Khyber Pass, I am desired, in continuation of my letter dated 2nd instant, to forward a copy of a letter from the Commissioner of Peshawar, dated 2nd instant, and a memorandum in which Sir Mackworth Young has recorded his views on the general question of the control of the pass, so far as he has been able to arrive at any definite conclusions on the subject.

I have, etc.,

(Signed) L. W. DANE,
Officiating Chief Secretary to Government, Punjab.

Annex I.

Letter from W. R. H. Merk, Esq., C.S., C.S.I., Commissioner and Superintendent, Peshawar Division, to the Officiating Chief Secretary to Government Punjab, dated Peshawar, the 2nd April 1898.

I have the honour to acknowledge the receipt of your endorsement dated the 18th instant, enclosing for remarks a copy of correspondence on the subject of future arrrangements in the Khyber.

2. So far as I am able to judge, there appear to be three distinct systems for consideration, and no more than three, and I will deal with each in succession.

The first plan would be to ourselves accept the whole responsibility for the administration as well as for the safety of the pass, and to take it entirely out of the hands of the Afridis. This is annexation. Declared or virtual annexation will not matter; the tribes concerned will perfectly understand the drift of the measure. If we annex, whether expressly or by implication, the special consideration, *viz.*, tribal responsibility for the safety of the Khyber, in return for which we have been paying a part of the late handsome allowances to the Khyber clans (the other part represents the tolls), disappears, and with it must go the allowances, unless indeed we consented to continue to pay what will then be naked blackmail; such a course would, however, be out of the question. Under these circumstances it is only too probable that we shall be compelled to hold the road with a strong military garrison, and that sooner or later we shall come again into collision with the Afridis. They look upon the Khyber as their country, which it is, and upon the levy of tolls as their ancient and indefeasible right. It is unlikely that they will surrender either without a further determined struggle.

I have not a copy of the Secretary of State's despatch of the 28th January with me, but I think I am not mistaken in believing that anything like annexation will be directly opposed to the policy therein indicated.

3. At the other end of the scale of systems is the plan of falling back upon tribal responsibility and tribal methods entirely, and of relaxing even that amount of British supervision which there has been in the Khyber arrangements from 1881 to 1897. This plan will assuredly fail. It postulates a power of combination, of self-government, and of self-restraint which is utterly wanting among the Afridis. Such a po[illegible]exists among some other clans and tribes, but (and this is a most important factor in border management) no two tribes are alike in individual character, and it does not follow that because one tribe can do a thing or bear a particular treatment the same will be the case with its neighbour or with another tribe further off. For instance, during all the time that the Khyber has been shut, from the days of the Emperor Akbar down to 1878-79, the Mohmands were able to keep open the routes through their territory and to make a large income from the tolls that they imposed; but the Afridis, though anxious enough to secure the tolls, were incapable of uniting for the purpose of keeping the Khyber open and safe, and consequently it remained closed for centuries. The Afridis have not changed their character, their unreflecting cupidity and their reckless greed; the intestine feuds and jealousies among them are as virulent as ever; cohesion is entirely wanting; and if purely tribal management ever does get a start, it will break down in six months. That is a just deduction from the history of centuries.

4. Neither of the above systems being possible, it seems to me that a partnership of Government and of the Afridis, a mixture of tribal management with such a quantity of outside authority as will be sufficient, and not more than sufficient, to correct the inherent weakness of a tribal system, is the course plainly marked out to us, by the conditions of the case, as the only prudent and economical line to take. There are two phases in this partnership, which completes the list of three systems. The two phases are: one with troops permanently stationed somewhere in the Khyber, preferably at Landi Kotal,

and the other without troops quartered in the pass, but held ready in the background at Peshawar, always prepared to be slipped upon the Afridis. In one case the corrective authority, requisite for the purpose of steadying the tribal machinery, is, or is supposed to be, on the spot; in the other case it exists also, but is kept in reserve.

5. Before discussing the two classes of the system of joint management of the Khyber, I would point out that, first, a local corps to work details which cannot admittedly so well be undertaken by any one else, and, secondly, the grant of allowances, are of the essence of the partnership. Unless the tribes receive allowances they cannot well be asked to assume responsibility for the road. Both these matters, the local corps and their allowances, I will discuss below; it is enough here to say that they are, I think, indispensable adjuncts to any system of joint management.

6. Reverting now to the question of partnership, I propose to consider it on purely political and administrative grounds, leaving aside military considerations on which I am not competent to submit an opinion except in so far as they are based upon matters which are within the scope of judgment of civil officers or of any man with ordinary common sense.

The *crux* of the whole position is this: Shall troops be permanently stationed at Landi Kotal or not? If they are so stationed, then with every intention and the most honest desire to maintain the political independence of the Khyber (as distinguished from its municipal independence), it is quite certain that this political independence will shortly disappear, and subsequently also (more or less as the case may be) the municipal independence of the Khyber. I do not mean the independence of Tirah, or of the Bara Valley, but of the Khyber proper. That is the perfectly inevitable sequence of events trans-frontier, for wherever we plant power, in the shape of British bayonets, across the border among the tribes, one of two things must happen,—either we must withdraw that power or it must be supreme and must increase and widen as it remains. In connection with this most important consideration I venture to quote an extract from a note which I wrote for Sir Dennis Fitzpatrick in 1893: "It is quite impossible for ourselves or for the tribes to divest British officers of their attributes as the officers of an all-powerful State. All their acts and all their utterances have at their back this power. Unless this power is to be flaunted, what its agents wish and desire must be done; however platonic that wish or desire may be, once that it is expressed it becomes a clear or veiled command, because it emanates from the source of authority; if it is disregarded, then that authority is condemned. A British officer cannot among the tribes act as *amicus curiæ*, being [redacted] truth the *curia* himself." The presence or absence of troops at Landi Kotal will have a most profound effect upon the political situation in the Khyber hereafter, for with the best will in the world, if there are troops permanently in the country, the situation will from the first day radically differ from what it will be if there are no troops in the pass; and whatever we may say or wish the facts will be too strong for us, and we shall drift into a position which will, all but in name, be annexation with its attendant difficulties. Take a concrete case: supposing two hostile sub-sections are fighting between Ali Masjid and Landi Kotal; if there are no troops at Landi Kotal, it does not matter to us what the belligerents do; it is easy to arrange that on the days the pass is open they abstain from interference with the road and caravans on it, and for the rest they can do what they like for all we care. But if there are troops at Landi Kotal, it is intolerable that there should be fighting and the risk of interruption on our line of communications; we must forbid it. If we prohibit an appeal to arms, if we intervene as the supreme authority, it follows that the parties must, when they are not allowed to fight it out, appeal to us to settle their quarrel. We cannot refuse to interfere; if you deprive the people of one tribunal, *viz.*, that of arms, you must substitute another; and we shall find ourselves called upon to undertake the administration of justice. Between that, between administering justice and virtual annexation, the distinction is fine, it is a hair's breadth. This is the difficulty that confronts us everywhere across the border—in Chitral, in Swat, in Waziristan. If we put the magnet among the iron filings, how are we to prevent the

filings from crowding to it? We cannot possibly canton troops beyond the border without sooner or later having to assume the civil administration of the country around them. Whenever we go over the border in force, we must, I think, be prepared to assume an authoritative position; it must, by the nature of things, be authoritative; if not, it will be thrust upon us, not without the penalty which we must always pay for the neglect or disregard of natural laws.

7. Apart from military considerations, the question therefore is this: is this authoritative position necessary and expedient in the Khyber or not? I venture to consider that it is neither necessary nor expedient. It is not necessary, for the system on which the Khyber was managed for 17 years without such a position worked admirably, as has been repeatedly and publicly acknowledged in every possible quarter. It broke down, but under circumstances which would have smashed any plan except that of holding the pass with troops. The authoritative position is not expedient, because we have to adopt an arrangement which shall enlist the Afridis on our side and shall induce them to remain willingly in the partnership. That being so, anything that is likely to lead to virtual annexation is certain sooner or later to meet with the opposition of the Afridis and to terminate in a rupture of the partnership. An authoritative position in the Khyber will assuredly lead to complications, for some day or other it will be resisted and then at all costs it must be asserted. And where are its limits to be drawn? It may be argued that the presence of troops at Landi Kotal does not at all mean the assumption of this authoritative position, but I venture to repeat that it does; that we cannot go there and then decline to be bound by the conditions of the case. Events will be too strong for us.

8. If we are to enter into partnership with the Afridis at all, any basis of the partnership which must end in the eventual absorption of the weaker partner will lead to the violent disruption of the bond. There are no two ways in the matter, for the Afridis will not consent to a peaceful absorption. That is their nature, we cannot change it, and we must reckon with it in our calculations. I therefore strongly recommend the second phase of the partnership, *viz.*, management of the pass without a permanent garrison of regular troops at Landi Kotal. For 17 years a system without troops in the Khyber worked admirably as I have said. It broke down under unusual stress, but the ship has not been built that will weather every storm. For 17 years the Khyber road was as safe as any highway in India; for 17 years the Afridis were amenable to our wishes and we were at peace with them. It is not to be supposed that the tremendous punishment they have just received will be without lasting effect, or, if they are not touched in what they prize perhaps more highly than anything on earth, their independence, that they will not be content to remain good friends with us, and to co-operate with us in the task of keeping open the Khyber. They were content to do so from 1881 to 1897 without any previous punishment to speak of, without our power having been brought home to their very doors, and it is not likely that the case will be different now. If a storm were again to rage such as has recently swept along the frontier, then not even the proposed military garrison at Landi Kotal will avail, for a far stronger garrison on the Malakand did not avail, to keep the country quiet; and if so, because the presence of troops in the Khyber will assuredly lead to a virtual annexation and to consequent complications, therefore, I say, better avoid these and have no troops which will be there only for the one eventually when, troops or no troops, we shall have to fight it out.

I consider that all that is wanted for political and trade purposes can be attained by the employment of a local force, coupled with tribal allowances, and without a military garrison at Landi Kotal, provided that this local force is backed up by the presence at Peshawar of a moveable column ever fully equipped to go out at the shortest notice, and provided that the local force and that the Afridis know this.

These provisos are absolutely essential.

With these conditions maintained, it is possible to guarantee, as much as one can guarantee anything, that the Khyber will not again be disturbed to any appreciable extent.

9. Whether on grounds of Imperial policy it is necessary to have troops in the pass it is not for me to say. But I venture to urge that, if it is decided to keep troops in the Khyber, we be very careful of what we say now, or, since in the course of years the position of the major and of the minor partner in the Khyber arrangements will have, perhaps imperceptibly but none the less inevitably, altered, an agreement now made may not faithfully reflect the changed conditions of the time, and this will give a handle five or ten years hence to agitators. Nor with Afridis will it be possible to modify agreements from time to time except at the risk of misunderstandings and a rupture. A definition of the relations of the partners was made in the agreement of 1881. That agreement is abrogated by the recent hostilities, and we ought, I think, to take advantage of this fact in order to make a fresh start. The Afridis will no doubt clamour for some kind of writing, for without a tangible deed of partnership they will feel themselves insecure in the Khyber business with so powerful a partneras Government. As His Honour is aware, these men are great lawyers, and sea lawyers to boot, and whatever we record now ought, if troops remain in the pass, to be very carefully framed so as to be in accord not only with the present situation, but also with the situation as it will have developed in the future out of the beginning that is now made.

10. Assuming that troops are to be permanently stationed at Landi Kotal for military reasons (although with deference I would note that the absence of an advanced post at Landi Kotal, capable of ready expansion into an advanced military depot, did not apparently hamper our advance in November 1878), on general grounds I would strongly suggest a larger garrison than one Native regiment with a detachment of gunners. The chances of attack by Afghan troops are very remote. But where troops are permanently located a bazar and habitations invariably spring up; as the recent disturbances fade with the past and a sense of security revives, houses will be built, works undertaken, and gradually a position will be created which will become exceedingly embarrasing when danger threatens. And danger is much less likely to threaten if the visible force on the spot is strong enough to move out instantly on the offensive. Nothing encourages these clansmen more than the sight of troops cooped up in a fort and beseiged. Weak outposts unable to hit out mean frontier risings. I am therefore greatly in favour, if an advanced post at Landi Kotal has to be held at all, to hold it in considerable strength. For these reasons I recommend that, if the water-supply permits, a British regiment, two Native regiments and a mountain battery be placed at Landi Kotal, if troops are to be stationed there. The climate, moreover, is healthy there, although Ali Masjid is a fever hole, and a force at Landi Kotal may enable us to reduce the garrison of Peshawar.

11. But if, as I consider, it is neither necessary nor expedient to retain a permanent military garrison at Ladi Kotal, and if it is best to rely upon a moveable column at Peshawar which will give the requisite stiffening to the Khyber management, and will not commit us eventually to a virtual annexation of the Khyber and to the risk of complications and collisions of the Afridis, in that case I recommend for consideration the suggestion to keep, all the year round, a brigade of troops and a mountain battery at Cherat. No better site can be found for climate, for opportunities to exercise the troops in hill work, and for proximity to the Khyber.

12. Whatever system we take, short of annexation or purely tribal management, a local force is required, which I venture entirely to agree should be on the lines of the Kurram Militia, raised, paid, equipped, controlled and commanded completely by Government, but with this concession that, subject to the conditions of loyalty, good discipline, sufficiency of recruits and the pleasure of Government, a fixed proportion of the force (say $\frac{3}{4}$ or $\frac{4}{5}$) shall consist of Khyber Afridis drawn from the six clans, in numbers to be determined hereafter. This is practically the system of the Kurram Militia, where we have as nearly as possible a fixed number of Turis in the corps, with their complement of Native

officers, enlisted from both factions of the Turis, the Drewandis and the Mian Murids. Owing to the existence of these factions we have not yet been able to appoint a Turi to be a Subedar-Major, but this will come in time. With Afridis most probably a good Subedar-Major could be found as Afridi society is not split into two great camps like the Turis. The Khyber Militia ought, I think, to have a British Commandant and a British Adjutant. I would not recommend the revival of the *de jure* tribal, *de facto* Government, corps which began in 1881 as Jezailchis and ended in 1897 as Khyber Rifles.

13. Coming now to the question of tribal allowances, I have, after much thought, arrived at the conclusion that on the whole it will be best to restore them *en bloc*. To begin, a considerable part of them represents the tolls of which the Afridis in 1881 surrendered the collection to us. No doubt, as an act of State and by way of punishment, we could appropriate the tolls. But compliance with the terms imposed upon the Afridis is intended to wipe out their guilt; they look upon the tolls as their private property; and the appropriation of the tolls would to them be an additional punishment for their past misconduct and be in their eyes tantamount to the annexation of the Khyber. Of course we can say: "Without us there would be no tolls at all; you Afridis would never be able to levy them,"—to which the retort would naturally be that without Afridi co-operation we should find it an uncommonly expensive business to keep the Khyber open and collect the tolls.

With respect to that portion of the allowances which represents the tribal subsidies, apart from the tolls, we shall have and shall enforce tribal responsibility, and shall get our *quid pro quo*. If any permanent reduction is made in the allowances, then it should be made rateably all round, and favour shown, or any difference made, will probably lead to infinite trouble. But, on the whole, I think it will be best to restore things to their former footing; no particular principle is involved in reduction; we are precluded from adopting the reduction as a punishment; and a reversion to the old order of things in the matter of allowances will go far towards re-assuring the Afridis that we mean bygones to be bygones, and that we have no ulterior designs. But I recommend that one condition to the grant of the allowances be that we may, within defined limits, make and keep in repair roads or railways as we please, and that the allowances are not to be increased on account of these roads or railways.

14. To sum up my suggestions: annexation or purely tribal management seems to be out of the case; a mixed system appears to be the only feasible course; whether we have troops at Landi Kotal or not, a local force like the Kurram Militia and the grant of allowances are essential conditions.

We ought, I think, to be most careful to what agreement or agreements we commit ourselves.

Lastly, I am bound to represent that we are much less likely to be entangled in complications if there are no troops at Landi Kotal. The point, therefore, is whether the military considerations outweigh the risk of complications and the certainty, if Landi Kotal has a permanent military garrison, of the absorption of the Khyber with its attendant consequences. Since this absorption would be opposed to the policy of the Secretary of State's despatch and liable to lead to trouble, and since we get what we want, without risk, by means of a force held in reserve at Peshawar, I recommend a management of the Khyber without troops in the pass.

Annex II.

Extract from memorandum, dated 11th April, by Sir Mackworth Young on the subject of the re-opening of the Khyber.

General Sir W. Lockhart and Sir R. Udny are in favour of an advanced military post at Landi Kotal, the pass being guarded by tribal levies. Mr. Merk, who has not seen their opinions, but to whom I sent confidentially a copy

of General Nicholson's memorandum of 3rd February 1898, with which Sir W. Lockhart's recommendations are in accord, is against any military occupation of the pass, which he thinks should be held by a tribal militia backed up by the presence of a moveable column at Peshawar.

I have already on more than one occasion expressed my opinion against a military occupation of the pass, but I have now to reconsider the subject in the light of the weighty opinions which are now before me.

It seems reasonable that after having quelled the disturbances raised almost simultaneously by nearly every frontier tribe on the Peshawar and Kohat borders from the Indus to the Kurram we should strengthen our position by occupying any military vantage ground in the tribal territory overrun by our troops, which is desirable for Imperial defence, or for pacification of the tribes. But the immediate cause for occupation will soon be forgotten, and in judging of its effect we should look forward some years and endeavour to gauge the ultimate position.

Now I have no hesitation in saying that the permanent occupation of Landi Kotal by a military force will never be accepted by the Afridis with complacency. It is true, as pointed out by Sir R. Udny, that in the agreement of 1881 there was a clause [5] which ran as follows: "It lies with the discretion of Government to retain its troops within the pass or to withdraw them and re-occupy at pleasure." But this must be read with the following passage from the Foreign Department letter dated 31st August 1880: "It may be explained to the tribes that, although our troops will remain for the present at their stations in the pass, they will in all probability be soon withdrawn; and it may also be of advantage to intimate that the British Government has no desire to station troops in the Khyber so long as the pass is kept open under the independent and exclusive charge of the tribes, and so long as it is managed in accordance with the agreements that may be made with the British Government." This interpretation of the intentions of Government shows that what was reserved was the right to re-occupy the pass with troops for the purpose of restoring order and enforcing the agreement, and also no doubt for an advance to Kabul if necessary; but the tribes distinctly understood that the terms of the agreement involved no permanent military occupation, and notwithstanding that they appear to have been desirous of some assistance in formulating their scheme of watch and ward for the pass (see paragraphs 7 and 8 of Major Conolly's letter dated 23rd September 1880), there is nothing to show that they contemplated asking for a permanent garrison of British troops. On the contrary, I believe that they were then, as I feel sure they would be now, totally averse to such a garrison. It may be urged that, as Landi Kotal belongs to the Luargi Shinwaris and does not lie within Afridi territory, what reason can the Afridis have for objection to a military force being stationed at that point? To this I would reply that the occupation of Landi Kotal to a great extent dominates the pass and is a standing menace to the integrity of the Afridi territory, and that I believe that the tribe would object as strongly to a military occupation of that point as they would to the location of a force at Ali Masjid or any other similar place within their own limits. They regard the pass as their property. Occupation to them would mean annexation, and with reference to the remarks contained in paragraph 6 of Mr. Merk's letter to which I draw special attention, I doubt if it could result in anything else. It would constitute, as I said in paragraph 5 of this office letter dated 21st September 1897, a continuing disgrace which might at any future time supply the motive for hostilities. Sir W. Lockhart assumes that whereas the quartering of a strong force in the Bazar Valley would give rise to tribal ill-feeling, the occupation of Landi Kotal would not have this effect. In this I cannot agree. The tribal honour would be seriously affected and a deep-seated resentment would be engendered instead of the friendly attitude which Sir W. Lockhart considers of much greater moment than the absolute safety of the pass.

In support of this view I might appeal to numerous documents in the literature of the frontier from 1876 down to the present time. There can be no doubt whatever that the tribes have the strongest objection to any extension of British authority over their territory. The advances which we have made

during recent years, coupled with the demarcation of a sphere of influence which to the tribal mind means ultimate annexation, must be placed in the forefront of the causes which have contributed to the rising of 1897. This opinion I have arrived at after full consideration, and I may have to enlarge upon it in another connection. My immediate predecessor, Sir Dennis Fitzpatrick, alluded, in paragraph 46 of his confidential memorandum of the 26th October 1896, to the effect on the Orakzais and Afridis of our taking up a position on the Samana. It is significant that in the somewhat insolent communication made by the Afridis just before they pillaged the Khyber they referred to the occupation of Samana and the Malakand, though both outside their territory, as an offence against the amicable relation of the British Government with the tribes. In their petition to the Amir, which was reported on in this office letter dated 20th January 1898, the Afridis dropped this grievance, but this was no doubt because it pertained more to the Orakzais than to themselves. The Orakzais referred to the occupation of the Samana in their petition. If the occupation of the Samana and the Malakand was an offence to the Afridis, it will readily be believed that the occupation of Landi Kotal will be bitterly resented by them.

Similarly, I may appeal to previous communications from the Punjab Government in support of the view that an advanced post on the borders of the Amir's territory will greatly irritate and annoy His Highness. It was said in the letter of the Foreign Department, dated 14th August 1896, that the definition in 1893 by the Durand Convention of the boundary of the spheres of influence of the Government of India and the Amir had removed the danger of rousing the jealousy of the Amir of Afganistan. But I think it must be admitted that recent events have shown that the Amir's jealousy is not removed.

Thirdly, the effect of an advance in the Khyber on other tribes must not be lost sight of. The demarcation of the spheres of British and Afghan influence has without doubt led to an impression that it is our object ultimately to secure complete control of the trans-border territory up to the Durand line, and this impression will be strengthened by the occupation of Landi Kotal.

I do not say that all this should not be faced in order to secure a substantial advantage, but it is my duty to represent the political drawbacks to the present proposal. And what is of primary importance is this, that the advance, which would possibly not be met by any overt opposition at the outset, would nevertheless constitute a grievance which would be nursed till the season of opportunity. If it is important that we should have the tribes friendly when we may have to march into Kabul, then we should avoid, if possible, doing that which will inevitably set them all against us.

Of the military aspect of the question I am not competent to speak. But I would venture to make the following remarks. If Sir R. Udny is right in thinking that the idea of guarding the pass by a mixed system, partly military and partly tribal, was rejected by the Defence Committee, no doubt the causes for such rejection will be examined before the proposal is revived. I incline to Mr. Merk's view that a single regiment stationed at Landi Kotal would be a source of anxiety, not of strength, and that a larger force would have to be maintained. Landi Kotal would not, I believe, be of much use as a base of operations in case of an advance in force to Kabul; there is neither room nor water for a large force. With the tribes friendly we should have no difficulty in pushing troops through the Khyber at any time. If they are unfriendly, we should have to move up in overwhelming force, and I question if a fortified post at Landi Kotal on the line of advance will contribute much to our operations. In times of peace we should have a force locked up, 19 miles from Jamrud, in a place where service would be unpalatable to our troops. The expense which will be incurred apart from the 9½ lakhs for buildings would be very considerable, especially if a whole brigade were retained there. Whether any military advantage would be secured by occupying the post with troops appears to me very doubtful, unless a satisfactory reply can be given to the above remarks.

Further, I question whether the proposal harmonizes with the policy of the Secretary of State as enunciated in his Despatch No. 1, dated 28th January

1898. One of the leading principles given in paragraph 18 of that despatch is the following: "The extent and difficulty of this mountainous border render it expedient that posts and cantonments should be limited to those positions only which are indispensable to the policy just indicated." The paragragh goes on to deprecate any new responsibilities not absolutely required by actual strategical necessities and the protection of the British Indian border. The limitation of our interference with the tribes so as to avoid the extension of administrative control over independent tribal territory is also enjoined. The military occupation of Landi Kotal means practically the annexation of the whole of the Khyber Pass with all the administrative responsibilities attaching thereto. I need not enlarge upon this question. I feel that the proposal can hardly be brought within the four corners of the Secretary of State's despatch, paragraphs 18 and 21, unless for military reasons it is indispensable.

Whether the presence of a military force in the Khyber is necessary in order to give stability to tribal arrangements is a question which, I submit, should not be judged by the fact that when in August last it was decided not to send a force up the pass to relieve the Khyber Rifles the latter only afforded a slight resistance to the tribal *lashkar*. I do not see that anything else could be expected, especially when the European officer in command was withdrawn. I agree with Sir W. Lockhart in laying stress on the fact that the corps without its commandant made some stand, and I should conclude from this that it would be quite possible to make more of their agency in the future by affording them the necessary support. If, however, the experiment is repeated, it must be done on a definite plan, and the true character of the arrangement must not be lost sight of. Moreover, I think that it will be necessary for some little time to keep a military force in the Khyber until the tribal arrangements are fairly started.

As to what those arrangements should be, the choice lies, if it is decided to abandon the idea of a military occupation, between tribal levies constituted and maintained on the basis of the old agreement and a militia recruited from the tribes and commanded by British officers. I should prefer not to give a final opinion at this stage between these two alternatives. Under sufficient safeguards I should be willing to accept either, and should wish to know what the tribes themselves propose, how effect could be given to their wishes, and what prospect there was of such an arrangement being permanent and satisfactory, before deciding to insist on an arrangement according to our own ideas of what is best. The corps should, I think, in any case be recruited, as before, mainly from the tribes which own the pass, and the Native officers might usually be similarly selected. If the force consisted of tribal levies as distinguished from a militia, some special agreement would be required as regards the position of the British officers attached to it, for I do not think it would be possible to do without British officers for the reasons given by Mr. Merk in paragraph 3 of his letter. Upon the whole I am inclined to prefer the idea of a militia commanded by European officers, but I would direct the General Officer Commanding and Political Officer to report on this subject after discussing the question with the tribal jirgas, and would await their report before finally deciding. It is above all things desirable that we should carry the tribes with us in any arrangement that is to be made.

If a corps for safeguarding the Khyber is established on either basis as above sketched, I have no doubt that for some time at all events it will be necessary to hold troops in reserve at Peshawar or Cherat ready to support it, or even possibly to overawe it before it has acquired a status and proved satisfactory. I believe myself that the Afridis will avoid hostilities for at all events a generation, but this cannot be reckoned upon. A force should be kept ready mobilised for some time to come, and Mr. Merk's suggestion that such a force should be stationed at Cherat in preference to Peshawar deserves consideration. The elevation is 4,500 feet and the climate is good; the conditions are similar to those under which the force would operate, if called upon to do so, in the hills. It is 23 miles by cart road and 19 by bridle road from the Pabbi Railway Station, and the troops could be in the Khyber at two days' notice. There is a good and permanent water-supply at Chapri about 800 feet below the ridge, and the water could easily be pumped up into a service reservoir on the ridge.

In regard to the details of any agreement which may now be made with the tribes, the correspondence which preceded the agreement of 1881 and that agreement itself will doubtless be consulted. The position is different in this respect that we now have to deal with a tribe which has just felt the weight of our hand and submitted to our demands. With those who minimize the result of our recent operations I am unable to agree. I consider that the compliance with our demand, especially in the matter of surrendering breech-loaders, shows conclusively how hard-pressed the different sections have been. But for their internal feuds and the difficulty they have in combining for any purpose except fanatical warfare, they would have satisfied our demands at a much earlier date. The lesson they have had will, I believe, last them for some time, and if they are properly managed they will enter into fresh negotiations with the British Government and be prepared to act up to their engagements at least as readily as in 1881. I would not agree to abandon a single provision of the agreement of that year which can in any way be serviceable. I would make such further demands founded upon our recent experience as may be deemed necessary for maintaining the new arrangements, but I do not think these need include the permanent occupation of Landi Kotal with troops, and I should expect that an arrangement founded on the consent of the tribes, without such occupation, would, if duly safeguarded and carefully worked out, prove efficient and lasting. Mr. A. F. D. Cunningham, C.I.E., who has been appointed by the Government of India to advise the General Officer Commanding in his negotiations, has complete knowledge of the Khyber Afridis and was associated in the previous negotiations of 1881, and, subject to such general instructions as the Government of India may issue, is quite capable of working out the details of a satisfactory scheme.

I would suggest that when the allowances to the Khyber Afridis are regranted, a condition should be attached to their renewal, *viz.*, that in the event of the British Government making arrangements for opening any other route to Kabul they shall be subject to reconsideration. This would be in addition to the condition already agreed to by the Government of India that the allowances shall be liable to deductions on account of repairs to the forts and posts damaged in the recent outbreak. If the further condition I have now suggested is adopted, it might be well at the same time to give the Afridis the opportunity of engaging that they will improve the road or agree to the opening of a railway, should Government desire this at any time, through the Khyber. It will be to their interest to do so, if they can thereby postpone the opening of an alternative route and the consequent reduction of their allowances.

Enclosure 10 in No. 3.

Letter from Sir R. Udny, K.C.S.I., Commissioner, Peshawar Division, to the Secretary to the Government of India, Foreign Department, dated Peshawar, the 20th April 1898.

1. Sir W. Lockhart was good enough to give me a copy of his letter with which he forwarded my Khyber Memorandum to you on the 16th March. The only point on which I should like to say another word is his remark "Thirdly" with reference to my paragraph 9. The advantage of the system I suggested is, as I said, that it would tend to reduce the number of Government Sniders in possession of the Khyber Rifles, and therefore the number of breech-loaders that would be liable to fall into the hands of the Afridis in the case of another outbreak like that of August last, for, as I have explained in my memorandum, I do not believe that a fort with a military garrison at Landi Kotal could be relied upon to effectually prevent such an outbreak, unless the garrison were large enough to move out a force for the defence of the whole line of the pass, though I quite admit that, after the lesson the Afridis have now received, it would be very difficult for the Mullas to induce them to break out again.

2. My suggestion, it will be seen, does not include any proposal for *taking away* Sniders from the Afridis, and if the offer of higher pay to men who, when they enlisted in the Khyber Rifles, brought their own Sniders with them, had any practical effect as "a premium on the theft of breech-loading rifles or their component parts from our troops or arsenals," our troops and arsenals must indeed be in a parlous state! If this argument has any force at all against my proposals, surely it applies with ten-fold force to our present demands upon the Afridis and Orakzais for the *surrender* of breech-loaders, and in fact to any attempt to disarm a trans-border tribe. Moreover, it must be remembered that our troops are armed either with the Lee-Metfords or Henry-Martinis. If, therefore, my proposal had the effect supposed, the Sniders that Afridis sought to obtain for the purpose of receiving higher pay with the Khyber Rifles would have to be acquired either from the Border Military Police (who, I am glad to say, scarcely ever lose a rifle) or from private sources, Cis-Indus, which it should be easy to guard, as the ordinary Police, both Trans and Cis-Indus, have only *short* smooth-bore Sniders which would not be accepted for the Khyber Rifles. As for Sir William Lockhart's view that "the Khyber Rifles should be as well armed as our Native Infantry Regiments," which means, I presume, that they should be given Henry-Martinis, I can only say that to my mind such a policy would be simply suicidal. The Khyber Rifles have always performed their escort and picquet duties with caravans, etc., quite satisfactorily, no cause has ever been shown why they should require more perfect arms than Sniders for such duties which are their only legitimate ones, and at present I cannot conceive any possible reason why they should be given better weapons at the risk of these weapons falling on some future occasion into the hands of their fellow-tribesmen. If the Afridis have had their lesson, surely we have had ours too!

3. As regards the expression "military impossibility," to which Sir W. Lockhart takes exception in his first remark on my paragraph 9, perhaps the phrase was a little too strong; but at the same time I referred to my letter No. 3028 of the 3rd October and I used it as practically summing up in two words what I had explained in full detail in that letter.

I am at a loss to understand what grounds Sir William Lockhart (who was in Europe at the time) has for asserting (*vide* his remarks on my paragraph 10) that the attitude of the Afridis when they attacked the Khyber last August "was at first vacillating and half-hearted." As I myself was on the spot at Peshawar and in receipt of the best information available, I think I am justified in asserting most emphatically that it was neither one nor the other. Again, no one ever doubted the "*desirability* of reinforcing the Khyber and supporting the Khyber Rifles with regular troops" (*vide* Sir W. Lockhart's first remark on my paragraph 9). The point is that, in the opinion of the military authorities, a sufficient force for this purpose was not available in Peshawar.

Enclosure 11 in No. 3.

Letter from Major-General W. P. Symons, C.B., Commanding the Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Camp Landi Kotal, the 29th April 1898.

I have the honour to forward to you a note by Mr. F. D. Cunningham, Chief Political Officer, Khyber Force, on the present state of our demands against the Afridis, and a suggestion for their settlement.

2. In all that Mr. Cunningham has written I thoroughly concur. He has stated the position, so far as I know it, clearly and exactly.

I also agree with his proposals for a final settlement.

3. I have made and signed one or two remarks in the margin of the note.

4. There is one other point which I think it well to mention.

On page 2 of his note Mr. Cunningham writes that "the other clans deposited 78 rifles on their (Zakka Khel) account, to be redeemed as they could get others out of that section."

All these 78 rifles are good and serviceable weapons. My latest information from Mr. D. Donald at Jamrud is that only 11 rifles out of 51 so far brought in to redeem deposited rifles have been passed by an Armourer Sergeant as serviceable arms.

The remaining 40, some of which I saw, have been returned to the tribesmen as unserviceable weapons, and therefore unacceptable.

I have given strict orders that none but really serviceable arms are to be accepted in place of those pledged.

I think that we shall get all these rifles from the Zakka Khel in time. Mr. Cunningham and I consider it undesirable to fix any near date just now as the latest for the redemption of deposited rifles, but to leave it to the tribes to get the rifles out of the Zakkas when they can.

In the meantime we have good rifles in our possession.

5. I am sending to-day a copy of Mr. Cunningham's note, and of this letter, to the Chief Secretary, Punjab Government.

NOTE ON THE PRESENT STATE OF OUR DEMANDS AGAINST THE AFRIDIS, AND SUGGESTION FOR THEIR SETTLEMENT.

The object of this note is to show—

(i) the present state of our account with the Afridis based on the demands made in the Proclamation dated 21st November 1897;

(ii) in respect of unfulfilled demands, what we are likely to realise without a renewal of war;

(iii) the present attitude of the clans;

and to suggest—

(iv) what in my opinion seem the best means of settling outstanding claims.

Up to the date of General Sir W. Lockhart's final report, No. 113 P. of 5th April 1898, the terms complied with were:—

I.—Payment of a fine of ₹47,800.

II.—Surrender of 765 rifles.

The fine in money and arms originally notified was ₹50,000 and 800 rifles, but ₹2,200 and 35 rifles set down as the share of a section of the Kuki Khel were remitted and the amount realised was as stated above.

Further, at the date mentioned, a small balance was outstanding against the Aka Khel, *viz.*, ₹1,011* and 11 rifles, of which up to 25th April they have paid in ₹550† and 5 rifles. There is some hope of the balance being given in ere long.

* The figure 900 given in General Officer Commanding's letter to Foreign Department, dated 5th April, needs correction.

A mistake was made in converting Kabuli to British rupees: this was corrected by Mr. Hastings after the date of that letter, and the sum ₹1,011 is admitted by the Aka Khel.

† Two rifles taken at this value—

	₹
Martini	350
Snider	200

2. These two terms have been practically fulfilled, but we must not assume that compliance to this extent denotes such complete submission as will ensure early or even deferred fulfilment of the remaining conditions, and it must be remembered that, since the breaking up of the Tirah Expeditionary Force, the imminent threat of renewed invasion is no longer present to induce further obedience.

Terms fulfilled.

The fine has been paid, but in such a way that only part, and probably the smaller part, has been actually collected from the clansmen at large. The Zakka Khel, the most turbulent and troublesome clan, paid nothing; their share, R9,600, had to be recovered from the sale-proceeds of confiscated property belonging to two individual Maliks in British territory.*

A large sum, generally believed to be R4,000, portion of the share of the Kambar Khel, was paid by Rahim Shah, Kaka Khel, a man unconnected with the Afridis.

Then when, in spite of the repeated threat of a second advance into Tirah, a large balance remained to be collected, at the last moment as it were, some Afridi Native officers, servants of Government, paid in what was wanted partly from their own pockets and partly by borrowing (R15,000) from a Hindu Treasurer.† Though the fine was thus completed, the matter is not yet settled, even so far as we are concerned, for to procure this payment the authorities had to give written undertakings, which bind us hereafter to arrest any Afridis whom the guarantors may point out as defaulters.

If or when the tribes learn that these individual Native officers have received the rewards for which they have been recommended, aggregating R5,000, it is not improbable the clansmen will to that extent refuse to recoup them, and we may be left to aid them in recovering what they advanced by arrest and detention of individuals, which will keep alive a certain amount of friction on the Peshawar border.

As to the rifles surrendered only half their share was got out of the Zakka Khel, the other clans deposited 78 on their account to be redeemed as they could get others out of that section.

Similarly, Maliks of the other clans deposited their own private family arms to complete the tale due from the men of their sections, to be redeemed as they collect others.

I did not know this. I will enquire and get particulars.
W. P. SYMONS, *Major-Genl.*

The process of redemption goes on slowly and keeps up a certain friction inside the clans, which impedes their working in harmony to do anything *for* us, though it would not, if occasion arose, prevent their uniting against Government.

These facts are merely stated as a warning against a hasty conclusion, that because terms II and III of the Proclamation of 21st November have been fulfilled, compliance with the others, notably No. I, may be expected to follow automatically, or in a reasonable time in accordance with arrangements made when the Tirah Expeditionary Force broke up.

If while that force remained in the field intact, and the season for a further movement had not yet passed, if while the threat of a hostile advance and the re-occupation of Tirah was imminent, such difficulties were felt that vicarious

---

* Paragraph 6 of letter P., dated 5th April 1898, from General Officer Commanding, Tirah Expeditionary Force, to Foreign Secretary.

Note.—One section of the Zakka Khel, resident in the Khyber Pass, paid in R2,000 odd to save their spring crops near Lakka di Kotal, but the money was refunded to them. See Chief Political Officer's telegram, dated 4th April 1898, to Political Officer, Khyber, and the Political Officer, Khyber's telegram, dated 6th April 1898, to Chief Political Officer, Tirah Expeditionary Force.

† See paragraph 12 of Colonel Warburton's report, dated 2nd April, and No. 11 of the list of proposed rewards.

payment of fines was accepted for good reasons, how much greater are difficulties likely to be now when the fear of renewed measures of coercion is removed to a distance.

Demands outstanding.

3. The demands wholly or partly unsatisfied fall under the first head of the Proclamation of 21st November 1897. For clearness' sake they may be divided in detail as below :—

I.—Restoration of arms taken from the Khyber Rifles, or taken by deserters of that corps.

II.—Restoration of rifles taken by military deserters.

III.—Restoration of rifles taken before the advance of the Tirah Expeditionary Force.

IV.—Restoration of rifles captured in fighting.

V.—Compensation for—

(*a*) Government property looted, and for—

And at Ali Masjid.

(*b*) private property looted at Landi Kotal.

W. P. SYMONS, *Maj.-Genl.*

I propose to deal with these seriatim, but, as there is a great difference between the feeling of the clans in respect of demands I, II and III, and their attitude towards the others, in considering prospects of a settlement, the first three claims should be discussed separately from the remainder.

I.—ARMS OF "KHYBER RIFLES."

Demands which the clans admit and of which they promise satisfaction

Up to the date of Sir W. Lockhart's final report, No. 113P. of 5th April, 157 had been surrendered out of 234 outstanding. Since then 12 have come in, and the balance now (25th April) is 65.

II.—RIFLES OF MILITARY DESERTERS.

From a letter from Sir Richard Udny, Chief Political Officer, dated 2nd March 1898, to Colonel Warburton, it appears that 51* rifles were then out, 2 were brought in on 1st April. The number due on Sir William Lockhart's departure was 49. Since then 4 have come in, leaving up to date a balance of 45.

III.—RIFLES TAKEN OR STOLEN BEFORE THE ADVANCE OF THE TIRAH EXPEDITIONARY FORCE.

In the letter from the Chief Political Officer to Colonel Warburton, quoted above, No. 69, dated 2nd March, these are given as follows :—

(*a*) Taken at Saragarhi on 12th September, 21, out of which 8 were recovered from Orakzais. The balance of 13 is debited to Afridis — one has lately been recovered at Kohat, leaving due 12.

(*b*) Stolen from a Native Field Hospital, Peshawar, on 13th October from 28th Bombay Pioneers, 2.

(Airidi section not known, and this is a doubtful case.)

(*c*) Robbed from 8th Bombay Infantry at Burj Hari Singh on 26th October, 4.

(*d*) Taken from a patrol of 9th Bengal Lancers near Mamani 8 carbines - 4 recovered from the Sturi Khel Orakzais, balance due, 4.

In regard to these (Head III), I note here that there has been no regular enquiry and there is no proof that case (*b*) should be charged to the Afridis.

It is said that the thieves were Mohmands.

* Exact figures are difficult to get as it is not clear whether one or two rifles brought in at Kohat in February excluded from the 51. But this will be cleared up.

Also some deserters were Orakzais and are not included in the demand against Afridis

And as to case (*d*) I put it under this head following Sir R. Udny's classification, but it appears to me that this case might fairly come under the head of rifles captured in war.

They were taken from a patrol of our cavalry within foreign (Orakzai) territory, and are distinctly regarded by the Afridis as taken in fighting.

Reasons why the clans admit these claims I, II and III.

4. A jirga which was interviewed by General Symons, Commanding Khyber Field Force, at Jamrud on 18th April, admitted tribal responsibility for the restoration of rifles under Heads I and II, and for the rifles taken on the Samana (Saragarhi), Head III; and there is reason to hope that these will gradually be brought in.

Again it is necessary to be on our guard lest we assume from their attitude towards these claims a willingness to fulfil the remaining demands.

There are special reasons why the tribes are content to restore these rifles. In the first place, the deserters of the "Khyber Rifles" want employment, and can only secure it by returning with their arms.

Secondly, the military deserters wish to be free of British territory, free to come and go and seek service; for, though not to be re-enlisted in the army, they may get other employment, and, finally, they have been promised that for every rifle restored a sum of R150 will be placed to their credit against other demands.*

Thirdly, in respect of these and of rifles taken at Saragarhi, the tribesmen draw a distinction between them and arms captured in the war. They admit these to be "stolen property," and allege that they feel it right they should be surrendered.

Lastly, more potent than this conscientious scruple is the desire of the clans of the Khyber to see the restoration of their allowances, and I have no doubt that they feel rifles carried off by deserters must be brought in before even by their own standard they can ask for their confiscated subsidies.

Other demands not admited by the clans.

5. I come now to the greater unsatisfied demands which lie between us and a final settlement; these are —

IV.—Restoration of Rifles Captured in the War.

V.—Compensation for (*a*) Government, (*b*) Private Property Plundered.

The captured rifles † consist of 70 Lee-Metfords and 20 Martinis. The jirga of Maliks and the so-called hostages left at Jamrud, when Colonel Warburton departed, at their interview with General Symons, Commanding, Khyber Field Force, on 18th April, distinctly said they could not restore these rifles nor pay their value.

Restoration in kind must be admitted to be impossible, because a large number have been sold ;‡ and sold at a cheaper rate than the price they now command, because until the Afridis had captured also some boxes of Dum-Dum Ammunition, they did not prize the Lee-Metford as highly as they do now.

At the accepted rates the value is—

	R
70 Lee-Metfords, at R360§	25,200
20 Martinis, at R350	7,000
	32,200

* Telegram from Chief of the Staff, Tirah Expeditionary Force, to Colonel Warburton, No. 6251 T., dated 31st March 1898.

† Letter from Sir R. Udny, Chief Political Officer, to Colonel Warburton, No 69, dated 2nd March 1898, as corrected by his No. 76 P., dated 5th March 1898.

‡ Note—At first in Afghanistan, later to Mohmands.

§ 450 to 500 rupees, Kabuli.

The demand for compensation under Head V comes in all to nearly ₹28,600; details will be found in the enclosures to a letter from Commissioner, Peshawar, to Punjab Government, dated 9th November 1897, and in paragraph 38 of Sir W. Lockhart's despatch dated 3rd February 1898.

The estimate of Government property* was ₹13,976. The principal item in private compensation is Captain Barton's property, ₹12,391; there was also a bill for losses of Khyber Rifles, put at ₹10,134, cut down by Sir R. Udny to ₹2,000, and it seems clear that only losses of British subjects among the Khyber Rifles need be considered.

Even so, however, the claim comes to ₹28,589, and with the value of the captured rifles, the demand under Heads IV and V amounts to ₹60,789.

These terms—restoration of rifles and compensation for property plundered—are in the Proclamation, and have been mentioned in jirgas held since then. But there can be no doubt that the tribe will feel or affect surprise if *present* payment in kind and cash is insisted on, and they are not likely (save under stress of further coercive measures) to attempt fulfilment, partly because they cannot pay, and partly perhaps because they assume that Government has made peace with them.

This is clear from the attitude of the jirga and so-called hostages till lately at Jamrud, and it is the unanimous opinion of the officers† best able to judge who were on the spot when I came to the Khyber.

It is well known that during the proceedings with jirgas at Jamrud from January to April stress was specially laid upon the second and third terms of the Proclamation, and efforts were exclusively directed to securing payment of fine and surrender of the rifles taken as a fine.

For the quicker realisation of these, hostages were taken and were sent to Attock and a blockade was maintained. As each section or clan complied with these two terms their hostages were released, and the blockade removed. The other principal terms, for reasons no doubt sufficient, and with which I am not concerned, fell somehow or other into the background.

The tribe say, and from *their* point of view say, with some show of reason "there is peace now between us and Government, and save for rifles of deserters etc., which we admit are not lawfully ours, we do not understand more demands.

"Government told us to pay a fine to surrender 800 rifles, and we gave hostages for compliance with those orders; we paid up, Government released our hostages from detention at Attock, made us free of British territory, and removed the blockade; we understood peace was restored."

On the other hand, no doubt we know from Sir R. Udny's telegram of 8th April, to the Foreign Secretary, that he had reminded them of their liability to make good property plundered. On this point I can say no more than this, that these two large unsatisfied conditions seem to have been less constantly, less strongly, and less insistently before the clansmen, than the question of payment of fine in money and arms. Since the 30th December, the actual daily proceedings or negotiations with jirgas were in other hands; and it will be observed that Colonel Warburton's report‡ of 2nd April is practically silent as to the large demands outstanding, ₹28,600 compensation, and restoration of captured rifles, the *money* value of which is ₹32,200.

His report covers his proceedings or negotiations; it contains no mention of these demands, it refers only to the fine, to the rifles taken as fine, and to the arms of deserters of the Khyber Corps.

---

* Excluding buildings.
† Mr. Hastings, Mr. Donald and Native officers.
‡ Enclosure to General Sir W. Lockhart's letter to Government of India, Foreign Department, No. 113P., dated 5th April.

He describes how these were recovered, and then, in conclusion, in paragraph 12 speaks of "the men who have assisted me to carry out *the present settlement with the Afridis* * of the Khyber Range."

* The italics are mine.

This being the official report of the officer who at Jamrud had all direct dealings in his hands, it is not altogether surprising if the Afridi assumes, or perhaps I should say, hopes that the other † demands have fallen into the background, if not into abeyance.

† Excluding, of course, rifles of deserters, etc., for which the tribe admit responsibility.

Another fact points to the same conclusion, that is, that though the term as to compensation for property looted was mentioned by Sir R. Udny when he saw a jirga, as he notes, in February, yet it seems that the amount of the claim was never stated, its details were never discussed with any deputation, and no proposals were ever made to allot or distribute it among the seven or eight clans concerned.

Difficulty of realising these demands

6. However this may be, I am convinced that the Afridi partly cannot and partly will not pay more money down in cash, and that no measure short of another armed invasion and occupation of Tirah will induce him to surrender the rifles captured, his spoils of war.

As to his ability to pay, I observe Colonel Warburton, who should know, in paragraph 10 of his report, doubted whether the Zakka Khel "have the means of paying up their share, ₹9,094, for some time to come."

Paragraph 6 of General Sir W. Lockhart's letter to Government of India, Foreign Dept., No. 113 P. of 5th April.

As a matter of fact, they did not pay; the money was recovered from property of two individual Maliks.

Still the point remains if they were too poor to pay their share of ₹50,000, while the Tirah Expeditionary Force remained at their doors and threatened to enter, shall we get their share of other demands aggregating ₹60,000 when there is no such threat?

It was said by some of the tribesmen at Jamrud, and I believe with truth, that a good deal, if not all, of the money realised by the sale of these rifles was expended in the purchase of other rifles to make up the number 800 demanded by Government in Term 11 of the Proclamation issued in Tirah on the 21st November last.

W. P. SYMONS, *Maj.-Genl.*

As to the captured rifles Some, as I have said, have been sold in Jalalabad and the Mohmand hills; the remarks above made apply to recovery of their money value, the arms having left the country.

Some remain, and I am convinced from all I have seen and heard that nothing short of a renewal of war will secure their restoration. If we went to war to enforce the surrender of the remaining portion of those 70 Lee-Metfords, even in a campaign as successful as the last, we should not be sure of not losing 70 more.

Present attitude of the clans.

7. The conclusion I have come to is that the clansmen may gradually bring in the balance—

(1) of the Sniders of the Khyber Rifle Corps,

(2) of the arms of military deserters, and

(3) the rifles taken at Saragarhi, but that we shall get no more, and that they will not pay up any part of the compensation for property looted, ₹28,600, nor arms captured or their value ₹32,200, without being coerced anew.

I might go further and say that the present attitude of the Afridi is rather one of expectation of fresh concessions or favours. It is unnecessary to dwell on this, but it must be mentioned as a right appreciation of their present feeling is necessary to enable Government to judge how much more the tribes are likely to yield under present conditions.

The view here stated was the deliberate opinion of Mr. Hastings and others on the spot, and it is corroborated by the tribesmen's petitions to General Sir W. Lockhart on his departure. They petitioned that the salt-tax be reduced, that their runaway women should be surrendred to them, that a British subject kept as a political detenu in Lahore should be released. These petitions were repeated by the jirga whom General Symons saw on 18th April, and any one accustomed to deal with the clans on this border will recognise at once that these requests go beyond what these or other clans would have put forward before the war. Whatever be the explanation, it is a fact that the Afridi is more interested in and keener to press petitions of this kind than to discuss how he is to fulfil the demands which are still unsatisfied.

As to the salt-tax, they seem to expect some concession, though of course without reason. A report recently sent to the Commissioner, Peshawar, from Kohat showed that purchases of salt had stopped, because it was everywhere declared the duty was to be lessened; there is the same expectation in the Kohat Pass and among the Adam Khels, and it can be traced back to an origin in the Khyber.

Mr. Donald writing on the 25th April says of the Aka Khel—

"Their attitude does not seem very submissive, for they actually had the impertinence to tell Sikaldar Shah that, unless they were in the future to receive a handsome subsidy, they would start hostilities again with Government."

Question of "hostages" as security.

8. Before leaving the subject of the outstanding demands, it is necessary to advert to the hostages mentioned in paragraph 7 of General Sir W. Lockhart's final report*(*a*) as being given as security "for the restoration of all other Government property."

There seems to have been some misapprehension as to the understanding upon which these men, 144, from all sections † (*b*) of the Khyber Afridis came in. They and the Afridi Maliks present at the jirga seen by General Symons, Commanding Khyber Field Force, on 18th April, positively denied that they were hostages in the ordinary sense, that they were personally liable to arrest, detention or to any form of coercion in default of compliance with the terms unfulfilled. They asserted they were a "hazir jirga," a friendly deputation present to assist to secure compliance with those conditions which the clansmen at large appear to admit, *i.e.*, restoration of rifles of deserters of the Khyber Rifle Corps, etc. They denied personal liability even for these, but were ready to help and probably will help in the matter, and they totally repudiated any responsibility for "compensation" and for surrender of rifles captured in war.

They say with some force "you had hostages in detention at Attock. You took those for the fine in money and arms; when we paid up those you set free those men who were hostages—if hostages were still needed for other demands, those men would have been detained. We are under different conditions."

It is not easy to explain here how a misapprehension, if any, arose, but I can refer to telegrams‡ between Sir R. Udny, late Chief Political Officer, Tirah Expeditionary Force, and Colonel Warburton, which corroborate my view, and show that the former had great doubts whether these men were true hostages.

Telegraphing on the 4th April, the day before the date of the final political report, the Chief Political Officer said—"You must remember that the term

* (*a*) Dated 5th April, to Government of India, Foreign Department.

† (*b*) The Shan Khel, one sub-section of the Zakka Khel, are still unrepresented.

‡ (1) Telegram from Colonel Warburton, Jamrud, to Chief Political Officer, Tirah Expeditionary Force, Peshawar, dated 4th April.

(2) Telegram, dated 4th April, from Chief Political Officer, Tirah Expeditionary Force, to Colonel Warburton at Jamrud.

(3) Telegram, dated 4th April 1898, from Colonel Warburton, Jamrud, to Chief Political Officer, Tirah Expeditionary Force, Peshawar.

hostages can only be applied to men who remain under our control if not under actual detention, and that men sent into independent territory to fetch rifles cannot be called hostages at all, while they are absent across the border.

No distinct reply was given to this.

While at Jamrud these men were free to come and go, and exchanged themselves with fellow-clansmen at their own pleasure.

The hostages who were in detention at Attock for payment of the fine in money and arms were clearly on a very different footing, but they were all released when the fine was made good, except a few, 12 men, of the Aka Khel still detained till the fine on that clan is paid up.

So far then as regards the unfulfilled terms which the clan do not admit, these men (144) are not satisfactory hostages, and their presence at Jamrud is no security.

In fact, we have no "security" save this—

(1) the hope of the Khyber Afridis to get their allowances restored,* and

(2) the desire of all Afridis to avoid another war and the re-occupation of Tirah.

This inducement is probably sufficient to bring about compliance with the demands which the tribesmen admit, that is, restoration of the balance of the Sniders of the Khyber Rifle Corps, and of rifles carried off by deserters from regiments,† but I am convinced it is not sufficient to ensure satisfaction of the other outstanding claims.

Suggestions to mean as of arriving at a settlement.

9. The great question then remains how we can secure fulfilment of the balance of our demands. I offer an opinion on this point with diffidence, but I do so now because it may be presumed that Government are anxious, if possible, to avoid a renewal of war, and the necessity of sending another expedition to Tirah, because it is desirable to reduce the large force now maintained in the Khyber and at Bara, because with the height of the hot weather rapidly coming on time is short, because the prolongation of a period of what may be called an interruption of peaceful relations is inexpedient, and while it lasts there is more chance of the tribe or some section doing some new act of folly, which may commit them and Government to more active measures, and, lastly, because it is possible now to adopt a means by which Government may settle the whole matter satisfactorily.

The ultimate object is the restoration of permanent friendly relations with the Afridis, and a settlement of the mode in which the Khyber Pass is to be held or kept open in the future. Without anticipating the decision of Government on that point, I observe that the proposals before the Government of India range from a mixed system of tribal responsibility for the police work guarded or secured by a regular military garrison at Landi Kotal on the one hand, to a system of purely tribal management on the other. In all the proposals there is the common factor of tribal responsibility, whether in presence of a military force in the pass or not. This implies and necessitates tribal allowances. The question of allowances has not yet been officially mentioned to the clans, but they certainly expect them, and are always petitioning about them; the hope of their restoration is a principal motive for the present good behaviour of the *Khyber* sections.

If it be granted, as I think it must, that in the end the allowances will have to be restored, I venture to suggest that we should now, without further delay, summon the clansmen, and tell them that the subsidies will be restored hereafter, that Government is meanwhile considering details of the question of the further management of the pass; I would say to them—

"Government has certain demands against you still unsatisfied, demands made in the Proclamation of 21st November, and never authoritatively waived.

* *Note.*—This operates only on Khyber Afridis, not on Aka Khel or others.

† And of rifles taken at Saragarhi.

W. P. SYMONS, *Maj.-Genl.*

"Government accepts your petition that you have suffered heavy loss in the war, by the destruction of your houses and property, and as an act of grace it is content to make a settlement with you without demanding payment of those claims now *in cash*.

"These claims are—

"(1) Compensation for property looted in the Khyber, R28,600.

"(2) A sum on account of Government buildings burnt or destroyed, say R21,400.

"These make up a total of R50,000.

"This Government will recover from you by deducting 10 per cent. from your tribal allowance, so that for a few years you will receive R9 instead of R10."

About five years probably.

I should advise waiving the demand for surrender of rifles captured in war. Many have been sold, and I do not believe the tribe can compel the fortunate possessors of the remainder to give up what they consider spoils of war; I doubt whether the tribe would even attempt the task; it is so difficult they might prefer the risk of another war; and on our part though we should punish them heavily in a second campaign, it seems hardly worthwhile to undertake it for this object, seeing that in pursuit of these 70 Lee-Metfords we might lose as many more.

Moreover, the clansmen feel they have in this matter the sympathy of most people, whether inside or outside British territory; and I believe this condition might be waived as an act of grace without giving rise to any suspicion of undue weakness on our part.

10. I would, as suggested above, *now* make the claim (if Government still desire it) on account of Government buildings burnt or destroyed. To put it off until a settlement shall be made, adds to the difficulties of coming to any final understanding.

The reserved claim or liability for damage to Government buildings I strongly support this.
W. P. SYMONS, *Maj.-Genl.*

The tribe as a whole probably do not thoroughly understand the exact meaning of the last clause of the Proclamation under which, after compliance by them with all other terms, Government reserved to itself discretion to enforce on them liability "to make good all damage done by them to Government buildings."

This damage, I am told, has been estimated as R3,60,000.

Under present conditions, if they understood this, they would certainly be even less amenable than they are, and would ask what was the use of their attempting to meet other claims if Government had in reserve an undefined and possibly very large demand to be brought forward hereafter.

11. In conclusion, I may sum up by saying that my suggestion for a final settlement is based on these premises, *viz.*:—

Conclusion.

(1) That it is vain to expect the Afridis will or perhaps can satisfy in cash and kind the large demands outstanding.

(2) That any scheme of "management of the pass" which is likely to be accepted by Government includes tribal responsibility, whether associated with troops or not, and that as a consequence in the end the tribal allowances will have to be restored.

If the suggestion is accepted, I think the Khyber Force could soon be reduced and a satisfactory permanent settlement arrived at within a few weeks.

Time is of value, because the longer matters remain unsettled the more chance there is of some misguided section giving trouble and committing both the clans and the Government; and, as the hot weather already begun to be felt, advances, picquet duty and what may be called the police work of the pass will be found a heavy burden upon regular troops.

F. D. CUNNINGHAM,

Chief Political Officer, Khyber Force.

The 26th April 1898.

Enclosure 12 in No. 3.

Letter from the General Officer Commanding Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Camp Landi Kotal, the 1st May 1898.

I have the honour to forward to you a copy of a portion of a telegram received by me from Mr. Cunningham, Chief Political Officer, Khyber Force.

2. I forward the telegram, but feel confident that the Government of India is fully alive to this important question in the settlement with the Afridis.

Telegram from F. D. Cunningham, Esq., Chief Political Officer, Khyber Force, to the General Officer Commanding Khyber Force, Landi Kotal, dated Peshawar, the 29th April 1898.

With reference to paragraphs 9 and 10 of my note dated 26th, I suggest your pressing on Government the desirability of an early decision on the question of tribal allowances to Khyber Afridis. If they are to be restored, as I believe is inevitable, the sooner we let clans know the better. Reasons are—first, disaffected men are encouraging them against compliance with even those demands which clans admit, by warning them they will not get their old subsidies. Second, although reports in Colonel Aslam Khan's telegrams of 25th and 26th are exaggerated and misleading, yet no doubt Amir's officials have interviewed deputations of Zakka Khel, and it would not be surprising if such officials did not discourage compliance with wishes of Government, and suggest honours and rewards from Afghan side. If clans lose hope of subsidies from us, they will look elsewhere. Third, at present hope of allowances tends to keep things quiet, but delay in announcement is creating distrust or suspicion. If clans once begin to believe they will not be restored, turbulent spirits among them would be ready to give trouble, and we could not then trust the tribal arrangement, which now holds the pass for some five miles from Gurgarra to Landi Kotal, and to that extent saves troops from burdensome picquet duty. While crops are standing uncut, we have some hold over the Zakka section, who have undertaken to guard that part, but, once crops are cut, that security will be gone. Fourth, if tribe begin to believe subsidies will not be restored, I doubt whether the Khyber Rifles, so far as they are recruited from Afridis, could be trusted. They now guard pass from Jamrud to Fort Maude, and I understand it is desired to make over a further length of road up to Ali Masjid to them. If tribe learn, or begin to believe, subsidies will not be restored, we should have to guard entire pass with troops alone. For reason given in paragraph 9 of my note, I believe in the end restoration of subsidies is inevitable, and, if Government decide on this, early announcement is most desirable. Actual payment could of course begin later when settlement is made, but delay in announcement prolongs period of uncertainty and creates risk of trouble. Sir Richard Udny has authorised me to say that he is strongly of opinion that an early announcement on the question of the subsidies is most desirable.

The remainder of the telegram refers to other and irrelevant matter.

Enclosure 13 in No. 3.

Letter from Major-General W. P. Symons, C.B., General Officer Commanding the Khyber Force, to the Secretary to the Government of India, Foreign Department, dated Peshawar, the 7th May 1898.

I have the honour to submit, for the consideration of the Government of India, a proposal connected with the future arrangements for holding the Khyber Pass, which may be deemed worthy of acceptation.

2. I have already forwarded to His Excellency the Commander-in-Chief in India a memorandum, in which I have given my views regarding the reconstruction of the Khyber Rifles. In this memorandum I stated that I thought that it would be desirable to attach two more British officers, and four selected Native officers, to this corps.

3. My proposal now is that the Commandant of the Khyber Rifles should also be Political Officer in the Khyber.

4. This arrangement would centralise the control of the pass, and give the Commandant that influence and authority which, in my opinion, he does not at present sufficiently possess.

5. This proposal should not be entertained, unless two other British military officers are sent to do duty with the Khyber Rifles.

6. The present Commandant, Captain Barton of the Guides, might do well, but, from all that I have heard, Captain Roos-Keppel, on special duty, Kusram, would appear to be an officer peculiarly qualified for this new appointment.

7. I have spoken to Mr. Cunningham on this matter. He concurs in my proposal.

Enclosure 14 in No. 3.

Minute of dissent by His Excellency Sir Charles Nairne, K.C.B., dated the 16th June 1898.

The Secretary of State, in his despatch of 28th January 1898, laid down that the maintenance of the Khyber Pass as a safe artery of communication and trade was an essential measure, whether viewed from the standpoint of our obligations to the Amir or from that of the protection of British subjects. How such safety is to be achieved appears to me much more a military than a political question, for not only must the protection of the pass be based fundamentally on adequate military precautions, but one of the principal ends to be thereby attained, the power of fulfilling our obligations to the Amir, is essentially military.

Sir William Lockhart has proposed that a fortified post should be built at Landi Kotal, to be garrisoned by a regular regiment of Native Infantry and to be armed with guns, while the rest of the pass should be held by a local militia. While I concur in the construction of a fort, I am opposed to its occupation by regular troops, which I believe would be a source of irritation both to the Afridis and to the Amir, would not overawe the surrounding tribes, but would be a constant source of friction. The expense of maintaining troops in such a locality would be great, and the service would be unpopular with our soldiers, while, in the event of serious friction with the Afridis, their communications would be insecure.

My view is that by suitable measures we can identify the Afridis with ourselves and with our military force to a much greater extent than has yet been attained, and that by so doing we can safely utilise them to hold both

the fort at Landi Kotal and the pass itself, thus not only attaining the end aimed at by the Secretary of State, but arriving at it by the very means on which he lay stress, *viz.*, by giving the Afridis the largest possible share in the scheme, and enlisting their good-will and assistance in the future protection of the road. I lay great stress on the Khyber Rifles (whether they retain that title or are termed militia is immaterial) being kept under the military authorities and being regarded as an essentially military body, the responsibility for their military control, discipline and efficiency being vested in the General Officer Commanding the Peshawar District, for not only will their efficiency be thereby greatly increased, but such a step will be highly popular with the men themselves who will feel themselves much more bound to, and identified with, our interests, while their self-esteem and military pride will be gratified and enlisted on our side when considering themselves soldiers of the Queen, as it can never be, while their status is but that of mere civil levies or local police. Nor can we by any other means instil into their minds that full assurance of unfailing support in the event of disturbances which has been rendered necessary by the events of last August.

In the pass itself we cannot have two independent powers, one Civil and the other Military, for such a division of local authority would be fatal to our complete control. It seems to me therefore essential to the completeness of my proposal to make the Commandant of the Khyber Rifles *ex officio* the Political Officer also. In this capacity he would report to, and act under, the Commissioner of Peshawar. There are many precedents for such a course. For instance, the Commandant of the Guides had always much political work entrusted to him, and also the Commandants of nearly all the Local Corps in Rajputana and Central India.

It is because I feel that the part of this scheme which has not been adopted is essential to its efficacy, that I am reluctantly obliged to dissent from the proposals of my Honourable Colleagues.

Closely connected with the safety of the pass is the much discussed subject of the policy for many years past of the Punjab Government in its dealings with the frontier tribes. Events of the past year add another proof of the failure of that policy, and I venture to record my dissent from reverting to it.

I carry back my memory to the days of Mackeson, Edwardes, Nicholson, James, and other distinguished soldier civilians under Sir John Lawrence. Their vigorous and severe but sympathetic methods were well suited to the turbulent natures of the highland caterans with whom they had to deal, and I venture to think it is to a reversion to these methods we must look for success in our future dealings with the tribes. In conversations I have had with Afridis in the past they have always expressed the utmost contempt for the fine and blockade system of the past 20 years. If we go among them and let our rule be felt, these frontier tribesmen will soon become, as all the military nations of India have become, our faithful friends, soldiers, and allies; but with such people half-hearted and tender methods of repression lead to nothing but failure and loss of prestige. I therefore deprecate allowing the management of the Afridis and of the Khyber Pass to be assumed by an agency which has failed in the past, as under such a system it was bound to fail, and which will fail again in the future.

In agreeing to the decision that the road-bed of the railway only should be laid through the pass, the rails being laid to Jamrud only, I wish to say that I consider this only permissible if the pass and Landi Kotal Fort is held by the Khyber Rifles. Should it be decided at any time to garrison Landi Kotal by regular troops, I consider it will be essential to complete the railway to that place at the same time.

(Signed) C. E. NAPIER.

Enclosure 15 in No. 3.

Extract from Minute by Major-General the Honourable Sir E. H. H. Collen, K.C.I.E., C.B., dated the 17th June 1898.

I am constrained to record my dissent from the proposal that the local corps of Afridis, to be entitled the Khyber Militia, should be under the control of the Commissioner of Peshawar and of the Government of the Punjab, and not under the orders of the General Officer Commanding the Peshawar District. While I concur in the proposal to investigate the question whether we cannot raise similar militia on other parts of the frontier, I consider these corps should be under the frontier military authorities. I am also opposed to the political control of the Khyber Pass remaining in the hands of the Punjab Government.

We have decided that we must provide for the possibility of an advance into Afghanistan to defend that country, and, consequently, we have approved generally of the plan described in Sir William Lockhart's memorandum of the 11th March 1898, with the modification that irregular troops shall form the garrison of Landi Kotal instead of that garrison being composed of an ordinary regiment of the native army of India. Under Sir William Lockhart's plan the Khyber defile itself would be held by the Khyber Rifles. Both Sir William Lockhart and Sir Richard Udny are in favour of the military occupation of Landi Kotal.

For many reasons I should prefer that two local battalions, instead of militia, should be enlisted from the Afridis, Shinwaris, etc., and should, though officered under the irregular system, form a part of the native army of India, and preferably of the Punjab Frontier Force. One battalion would hold Landi Kotal, and the other would garrison the Khyber itself. I believe that we should in this way utilise more fully the military strength of the Afridis; that they would prefer enlistment in these regiments to enlistment in any corps of inferior status; that we should bind the Afridis to ourselves; that their honour and loyalty would be more fully pledged; that, while making it plain that we intend to hold the Khyber against all comers, we should enlist their good-will and services for its protection; that this would be a great advance in the policy of making the tribe our friends; and that, lastly, by the employment of battalions belonging to the army we should have a guarantee that the safety of the pass would be regarded as a paramount consideration.

It is a significant fact that the Malikdin Khel, who were the first of the sections to come in, had the greatest number of pensioners. The invasion of Tirah tried the loyalty and devotion to our service of the Afridi soldiers in an extraordinary degree, but they stood the strain in a remarkable manner.

There are objections to the employment of regiments of Sikhs or Gurkhas at Landi Kotal, but by the plan I proposed we should have regular troops there, recruited from the tribe we have defeated—as has happened over and over again in the history of India—men who would become soldiers in our army, just as loyal, just as devoted, as those we have already in our ranks.

The two battalions would perform all the garrison, convoy, and picquet duties of the pass in precisely the same way as that in which the militia would carry them out; but other considerations, such as the difficulty of adding to the strength of the Native Army at the present time, the possibility of opening up questions connected with the proportion of British to Native troops, etc., would cause me to waive my views in respect to the raising of two Afridi battalions of the army and to agree that these should be irregular troops raised as militia. I would agree to this on the distinct understanding that these corps should be under the orders of the General Officer Commanding the Peshawar District.

The whole of the proposals in Sir William Lockhart's memorandum are based on the military importance of maintaining the security of the Khyber Pass and of the military occupation of Landi Kotal. The construction of a strong fort, the improvement of the water-supply, the construction of block-houses in the upper and lower Khyber, are all integral parts of that plan, and I

cannot see how we can approve generally of the proposals in his memorandum if we take away the essence of the plan—the military control of Landi Kotal and the Khyber.

In my opinion the military question is of higher importance in this case than any question of civil and political policy. There are only two great military highways to Afghanistan—the Khyber and the Bolan. All others are subsidiary and secondary. These two great routes we must have under our effective control. We have secured the Bolan by a military occupation of that route; and if we are to ensure military predominance, in the case of our being forced to advance to the strategic front Kabul-Kandahar; if we are to fulfil the guarantee we have given for the integrity of Afghanistan; if we are to be ready to help the Amir or his successor in the way which has been indicated to us by Her Majesty's Government, we must have the Khyber route under effective control, and that cannot be obtained, in my opinion, by placing that great military highway under civil management.

In 1885-86 the whole question of the defence of the north-west frontier of India was discussed by the Government of India and by Her Majesty's Government. Field Marshall Sir Donald Stewart had pointed out in 1880 that Landi Kotal perfectly commanded the western entrance of the Khyber. Lord Roberts also considered that the main defence must be at the western end, *i.e.*, at Landi Kotal, and at the conclusion of the discussion the Government of India, in their despatch to the Secretary of State, dated 4th October 1886, admitted the great importance of including the Khyber in the scheme of defence of the north-west frontier. They proposed that an enclosed "serai" should be built at Landi Kotal capable of conversion into a redoubt, and they considered that steps should be taken gradually to familiarise the neighbouring tribes with the idea of an eventual occupation of the western outlet of the Khyber, and that the earliest favourable opportunity should be taken for carrying out this defensive measure in its integrity.

The Secretary of State concurred with the Government of India that a large "serai," capable of defence, would, under the circumstances, suffice "for the present." The favourable opportunity contemplated by the Government of Lord Dufferin has now presented itself, and I am strongly of opinion that a work should be built at Landi Kotal to fulfil the double purpose of resistance against tribal attack, and capable of being heavily armed when necessary, and of forming the centre of larger entrenchments should these eventually be required.

The Khyber route must be occupied and controlled as far as the Durand line, and Landi Kotal is the strategic point which it is essential to occupy. We require it as a depôt in case of an advance into Afghanistan; we must protect the water-supply and reservoirs already constructed; the position is a part of the scheme of defence of the north-west frontier as commanding the western entrance of the Khyber; and, bad as it is, the Bori-Kandao route gives us a short line into the Bazar Valley from Landi Kotal; our hold on the Khyber would be immensely strengthened; and, lastly, the position controls the Afridis, and would demonstrate to them and to all the frontier tribes that their outbreak had led to this strengthening of our position.

It is essential, in my opinion, that the irregular troops maintained at Landi Kotal and in the Khyber should be placed under military control, and that the General Officer Commanding at Peshawar should be held absolutely responsible for the security of the pass. If battalions of militia be formed from the Khyber Rifles and officered by British officers as proposed, there is not, I submit, any practical difficulty in placing the force under the military authorities. Up to 1890 the Derajat frontier militia were under the orders of the Officers Commanding the outposts of the Punjab Frontier Force. In 1892 the militia were turned into border military police.

It is quite true that these militia, practically only horse and foot levies, and not organised in battalions, were under the frontier military officers at a time when the frontier force itself was under the Punjab Government, but there are two special points of difference between that time and the present. In the first

place we were dealing then with the old frontier of British India running along at the foot of the hills, and with the "close border" system. Secondly, the militia of those days were always police rather than a military body. At the present time we are dealing with the tribes between our old frontier and the Durand line or frontier of British influence, and we are contemplating the formation of militia so organised as to be military bodies in every essential, with the exception that it is proposed to place them under civil and not under military control, while their officers would be British officers drawn from the army, but would be in "civil employ," and, by regulation, unfit to hold military command. Undoubtedly, in the days of the frontier militia as they were before 1890, the civil officer of the frontier district had a good deal to say to the militia although they were not under his control. But in the Khyber we have no revenue to collect nor any civil district to administer, and we have been expressly told by Her Majesty's Government that interference in the domestic affairs of the Afridis is not desired. The civil power, represented by the Commissioner of Peshawar, could at all times call upon their services, and I cannot think that there are adequate civil or political reasons which would render it necessary to place this corps under civil and not under military control. In my opinion there would be no guarantee for the safety of the pass unless the proper officer, the General Officer Commanding at Peshawar, whose head-quarters are only ten miles from the mouth of the pass - Jamrud Fort being actually in his command — is placed in a position of full responsibility.

I am also compelled to differ from the majority of my colleagues in the proposal that the political relations in the Khyber should remain under the Punjab Government. I do not desire, at this moment, to raise the whole question of the management of frontier politics, although I have long held that an improvement in the agency could and should be effected, and have expressed that opinion on various occasions. I would, therefore, simply say that I consider the management of Khyber affairs should be removed from the authority of the Punjab Government, and that they should be controlled by the Commissioner of Peshawar in direct communication with the Foreign Department of the Government of India.

In paragraph 19 of the Secretary of State's despatch of the 28th January 1898, the avoidance of interference with the tribes is impressed on us, and we are told, especially as regards the Khyber, that we should avoid interference with the independent tribal organisations or the domestic affairs of the Afridis. If this policy be strictly followed, our political relations with the Afridis should be very simple. They will be in receipt of allowances which were formerly granted to them from Kabul and of those in commutation of the tolls formerly exacted by them from caravans passing through the Khyber. The trade arrangements of the Khyber can be managed as they always have been, and I do not think there is the slightest fear that were the Khyber under military instead of political or civil control the arrangements could not be carried out precisely as before. The expansion of trade with Afghanistan *viâ* the Khyber depends mainly on the fiscal policy of the Amir.

I venture to think, therefore, that when once we have come to an agreement with them, we ought to have no political dealings with the Afridis which cannot be managed by the Political Officer in the pass, unless occasional questions of importance should need a reference to the Foreign Department of the Government of India. The direct system is one which I should prefer, because I believe that any unnecessary link in the administrative chain is a source of weakness, more especially in our relations with the frontier tribes. But in order to meet any objection that the Foreign Department might be overburdened with Khyber political business, I would place the Political Officer in the Khyber under the Commissioner of Peshawar, who for these purposes would be in direct communication with the Government of India, just as he is now in respect to dealings with the Amir.

My proposal, which is also that of General Symons and Mr. Cunningham, lately Political Officer in the Khyber Pass, is that the commandant of the Khyber irregular troops or militia should be the Political Officer of the Khyber.

This arrangement would be exactly that which we adopt during a state of war, when the military and political functions are combined in the General Officer in command, but with this advantage, that the commandant of the Khyber troops would be a selected officer, selected for his knowledge of Pathans in general and of Afridis in particular, selected for his ability to manage Afridis with that firm but sympathetic treatment to which they are susceptible. The control of, and responsibility for, civil and military arrangements would be vested in one man; there would be no artificial distinctions between "military" and "political," no divided counsels and divided responsibility. I am convinced that the Afridis or any other frontier tribe would understand and prefer such a system; every one who knows the frontier knows how easily friendly relations are created and maintained with the tribes by a Commanding Officer of a regiment aided by his officers and native officers; the Afridis would look to one authority with force at his command, for they cannot recognise the nice distinction between civil and military control; they cannot serve two masters, but they can play off one against the other; but if that one authority is a man who likes them, a man of tact as well as strength, no better plan could be created either to fulfil the policy of Her Majesty's Government or to provide for the military security of the pass. I fully recognise the ability, courage, and honesty of purpose of those statesmen who have been at the head of the Punjab Government, but it cannot be denied that the policy of the Punjab Government has not been the policy of the Government of India. Those who have studied frontier politics know very well how wide the differences of opinion have been as to what was the proper line to take.

Regarding this very question of the Khyber, a writer,* supposed by popular report to be a civilian of the highest political ability, experience, and standing, formerly under the Government of India, says:—

"The Afridis and other tribes are said to have been treated by the Punjab Government with such exaggerated deference that they believed we were afraid of them and became intolerably aggressive and defiant. It is to this timidity of action that many attribute the recent risings, and certainly nothing could have been better calculated to foster the conceit of the ever-conceited Pathan than the condition in which the Kohat Pass, between two important military stations, has been allowed to remain for so many years. We did not even remove the stones and boulders which covered the track, and the tribesmen openly jeered about it. The system in the Khyber could hardly fail to have the same effect. 'That immortal demon, the Khyberee,' as Alexander Burnes quaintly calls him, was paid a large yearly sum for keeping open the pass, but we had no control over the tribe, our officers being forbidden to go off the road: and the arrangements, though kept from breaking down for some years by the exertions of Colonel Warburton, loyally working on a system he knew to be wrong, ended at last in a sudden collapse under the circumstances described by Sir Lepel Griffin. In connexion with this point we would again draw attention to the agreement of 1881 with the Afridis, and to the correspondence which preceded it. It will be seen that the Afridi headmen then pressed us to exercise a larger measure of interference than we were disposed to exercise, and that the local officers were inclined to some extent to meet their wishes. The Afridis were, in fact, ripe for the application of the Sandeman system, and if it had been applied our hold on the pass would, no doubt, have been much stronger than it was. There is, therefore, some ground for thinking that the loss and expense which we have lately incurred were due rather to a want of boldness in our treatment of the tribes than to the Forward Policy."

In 1896 the Government of India desired to give a wider discretion to the Political Officer of the Khyber. This view was combated by the Lieutenant-Governor of the day, who considered that the officer had already the fullest discretion, and that it would be unwise to extend it; and the opinions held by the present Lieutenant-Governor are well known. He was in favour of holding the pass by tribal agreement, and by a tribal force maintained on tribal responsibility (Foreign Department letter, dated 28th March 1898, paragraph 4). He was not in favour of any change in the conditions, which would impose the duty of maintaining the peace of the Khyber in times of disturbance on the British Government (Punjab Government letter, dated 1st April 1898, paragraph 3).

The present and proposed system is fraught with embarrassment and delay; the officers chosen for the work are not, and would not be, the officers of the Government of India, but of the Punjab Government; the procedure is

* "Edinburgh Review," January 1898.

circumlocutory; while the fact that a moveable or flying column is to be maintained under the orders of the *military* authorities ready to advance up the Khyber, is no guarantee that the local *civil* authorities would ask for its services until too late; they would refer to the Government of the Punjab at Lahore or Simla, and the latter would refer to the Government of India in the Foreign Department at Simla or Calcutta; and that Department would refer to the Military Department; and the Military Department would refer to the Commander-in-Chief. If the military security of the pass were to be entrusted to the proper authority, the commandant of the troops, under the General Officer Commanding at Peshawar, the responsibility would be fixed and absolute. "Time is everything in military operations," and prompt action would in the future, as has been the case repeatedly in the military history of India, nip any disturbance in the bud, where "fearful commenting, the leaden servitor of dull delay" would but lead to the worst and most disastrous results, however we might subsequently exact retribution or achieve victory. What may have been quite right when Jamrud was the frontier post, when the Khyber was sealed to us, when no officer dared to advance beyond that post, is not applicable now, when the Khyber route is recognised as the great highway to Afghanistan which should at all times be kept open.

The whole object of our frontier policy is to give us peace on the border and military predominance over Russia if a conflict should unhappily occur with that power. As Sir Dennis Fitzpatrick said: "All peace and order on the frontier must rest on force;" and I submit, therefore, that Landi Kotal and the Khyber should be occupied in a military sense, that the military duties should be controlled by the commandant, that the General Officer Commanding at Peshawar should be responsible for the pass, and that the political work should be in the hands of the commandant, with such assistance as may be necessary.

No. 4.

Extract from Letter from Government of India, Military Department, to the Right Hon'ble Lord George Francis Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 23rd June 1898.

With reference to our despatch in the Foreign Department of this day's date, we desire to lay before Your Lordship our proposals for the future military arrangements necessary for keeping open the road *viâ* the Malakand to Dir and Chitral.

In Your Lordship's despatch, dated 16th August 1895, we received the approval of Her Majesty's Government to the proposals which we had put forward for placing a garrison in Chitral, and maintaining communication with it by a direct road from the Peshawar Valley. In that despatch a reference was made to our expectation of being able to keep open the road by peaceful arrangements with the Khan of Dir and the Swat Khans, so that the only garrisons necessary would be on the Malakand Pass, and at the crossing of the river at Chakdara. Except for a comparatively brief period last year when an unexpected outburst of fanaticism brought together a great gathering from all the tribes to attack our garrisons, the road has been kept open, and we have lately had the satisfaction of seeing the relief of the troops at Chitral pass off, for the third time, in perfect quiet and without a shot being fired.

We do not now desire to enter on the general question of our policy with regard to Chitral. We are of opinion that the reasons which induced us in 1895 to recommend its occupation by a force of regular troops still hold good, and that its occupation must be continued for at least some considerable time to come in the same manner as hitherto. We also consider that our arrangements for maintaining communication with the garrison have been successful, and do not

call for any change in principle. An essential point in those arrangements is the retention of garrisons on the Malakand Pass and at Chakdara. In considering, in the light of recent events, what alterations are desirable with respect to the strength of the garrisons, and in the conditions under which they are maintained, we have been guided by certain principles which we propose to apply generally to all plans of local frontier defence.

Your Lordship has recently drawn our attention to the probable necessity for modifying existing arrangements on the North-West frontier, especially with a view to the concentration of forces, and to the retention of troops only on such communications through the borderland as are most necessary to maintain. It was at the same time pointed out that, from what had occurred during the past year, some of the frontier posts did not appear to have been sufficiently defensible; that regular troops should only be placed in such posts or localities, and under such conditions, as will enable them to promptly repel any attacks made upon them; and that local and tribal levies should be made to assume the aspect of a police rather than a military force. We fully appreciate the value of these observations. We propose that in future the strength of the more advanced garrisons on the North-West frontier shall be kept as low as may be practicable, the troops being placed in strong works which cannot be captured by a tribal enemy so long as the garrisons have food, water, and ammunition; that outposts of regular troops shall be as few and strong as possible; that minor posts, and posts on the line of communications, shall generally be held by levies, when the duties to be performed are those devolving on a police force, or by regular troops, which we should prefer to see organised as a militia; and that risings among the frontier tribes shall be met by moveable columns of sufficient strength, placed where they can readily support and assist the stationary garrisons. Further that, in event of serious attacks on the frontier being made or threatened, as in the case of the attacks by the Orakzais and Afridis on the Samana and other posts in August and September last, the garrisons of the weaker posts shall either be reinforced or withdrawn, according to a pre-arranged plan.

[Enclosures not printed.]

No. 5.

Extract from Letter from Government of India, Military Department, to the Right Hon'ble Lord George Francis Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 4th August 1898.

In continuation of our despatches in the Military Department, dated the 23rd June 1898, and dated the 7th July 1898, with which we submitted our proposals for the maintenance of the road *vid* the Malakand to Dir and Chitral, and for the future holding of the Khyber, we now desire to lay before Your Lordship our views as to the military position to be maintained on the Miranzai border, in the Tochi Valley, and at Wana and the adjacent portion of the frontier.

The general principles which we propose should govern our arrangements for the future defence of the Punjab frontier are stated in paragraph 4 of our military despatch, dated the 23rd June 1898, and these principles have been adhered to in the proposals now submitted.

The most difficult portion of the frontier to deal with, after the Khyber, is the Miranzai border extending from Kohat to the Kurram, and comprising the Samana range, the posts on which were attacked in great strength by the Orakzai and Afridi tribes in September last. The position of the Samana has a local military importance in that it protects the Miranzai Valley through which the road runs connecting Thal and the cantonment of Parachinar in the Kurram Valley, with Kohat, *vid* Hangu. The security of this road and of the inhabitants of the Miranzai Valley must be assured, and we are therefore of opinion that the retention of some force of regular troops on the Samana is at present essential

for the protection of this portion of the frontier, and although there is considerable force in the opinion of the Lieutenant-Governor of the Punjab expressed in the letter which forms one of the enclosures of this despatch, that it would be desirable to withdraw the troops from the Samana if this could be effected without loss of prestige, and without danger to our subjects in Miranzai, there is a general agreement that the time has not yet arrived when this course can be contemplated.

We decided that the question of the defence of the Samana should be considered on the spot by a Committee of experienced officers, including a political officer. A Committee was accordingly assembled in April last under the presidency of Brigadier-General E. R. Elles, C.B., to report generally on this question. In our instructions to the Committee, we stated that the object with which the Samana is to be held is to protect Miranzai against tribal incursions, to afford support to the police posts in resisting such incursions, and to dominate the road from Shinawari to Karappa; and the Committee were desired to consider whether the force of regular troops should be located on the Samana itself, or whether it was desirable that the posts on the crest should be limited to the smallest possible number, and the main defence entrusted to a force posted in rear of the range the greater portion of which would be equipped as a moveable column.

The report of the Committee, which we enclose, shows that they framed two alternative schemes—

A. To hold the Samana range in such strength as would admit of a small moveable column being immediately available to support the police posts; the force being depended on Kohat for its main support.

B. To hold the Samana range with purely defensive posts, supported by a moveable column located near at hand in Miranzai.

After carefully considering the views of the Committee, and of the Commander-in-Chief, we have decided to accept scheme A, which avoids the formation of a new cantonment on the frontier, a measure to which there are undoubtedly strong objections, and which would probably prove expensive. This scheme also affords a readier means of resisting an incursion by the Ublan Pass, and of securing communication with Peshawar by the Kohat Pass. We have consulted the Lieutenant-Governor of the Punjab, who without being very strongly in favour of the scheme, considers it amply provides for the protection of the frontier, and preferable to scheme B. We recommend the proposals generally for Your Lordship's approval and would add that we do not propose to make any material change in existing arrangements in the Kurram Valley. The fort at Parachinar will require improvement, and a project for a new post at Sadda is being prepared by the Punjab Government, but no definite proposals are as yet before us.

Turning to the Tochi Valley, we have considered whether, and to what extent, the withdrawal of the troops now in the Tochi can be effected. In view of the fact that the inhabitants of Daur have been assured of our protection, we are of opinion that the entire withdrawal of troops from the valley would be impracticable under the circumstances now existing. We believe, however, that it may be possible before long to diminish the former garrisons,* and to concentrate the regular troops, placing the principal garrison in a strong post at Miranshah. The question of holding the minor posts by levies, or by militia, should any be organised hereafter, is engaging our attention, and if Your Lordship accepts the general principle on the subject, stated in our despatch regarding the Khyber arrangements (Foreign Department, dated the 23rd June 1898), definite proposals will be submitted. As we cannot now abandon the occupation of the Tochi Valley, it appears to us necessary that the construction of the main post should be proceeded with, and if Your Lordship approves our proposal that it should be located at Miranshah, we should be glad to be favoured with a reply on this point by telegram. The garrison has not yet been

* Two battalions of native infantry.
One squadron of native cavalry.
Four guns, native mountain battery.
Four maxims.

finally decided, but it is probable that one, or one and a half battalions of native infantry, with a squadron, and two mountain guns would suffice. Any troops which can be set free from the Tochi would be stationed at Edwardesabad, where a moveable column would be maintained.

With regard to Wana, Your Lordship asked in your despatch, dated 8th May 1896 for a statement of our conclusions on the question whether the maintenance of the Wana cantonment was so necessary as to justify the expenditure incurred on it. In our despatch in the Foreign Department, dated the 1st September 1897, we informed Your Lordship that owing to the existing position of affairs in Waziristan, it was desirable to postpone our recommendations on the subject. We are of opinion that the presence of troops at Wana, together with that of the force in the Tochi Valley, materially contributed to prevent a rising on the part of the Waziris during the recent disturbances on the frontier.

Wana has also considerable local importance as it protects the trade route by which caravans reach the Gumal, and since the cantonment was established Waziri raids into Zhob have been greatly checked. Having regard therefore to the general peace of the country, we think that the withdrawal of the troops from Wana should not at present be undertaken. But here again we would desire to follow out the principle above mentioned, *viz.*, the concentration of regular troops, if, and when, we are able to provide an efficient substitute for holding the subsidiary posts.

We would add that the construction and improvement of roads on the North-West Frontier, also the possible construction of frontier railways, are being considered by us with reference to our requirements as a whole, and we shall, if necessary, address Your Lordship hereafter on these subjects.

[Enclosures no printed.]

No. 6.

Despatch from the Secretary of State for India, to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 5th August 1898.

I have given my most attentive consideration to the various proposals for restoring and maintaining British control over the Khaibar Pass which are contained in Your Excellency's letter (Foreign), dated the 23rd of June 1898.

2. The scheme which you recommend for the future management of affairs in this important artery of communication and commerce between Peshawar and Afghanistan consists of three main proposals. At Landi Kotal, the further end of the Pass, you contemplate the construction of a fort to be built with emplacements for guns, but not armed with guns, to be supplied with reservoirs and water channels, and to be occupied by a local militia recruited from the Afridi tribes and placed under British officers. The militia will have charge of the Pass as well as of the Fort. The second proposal is the organisation, at the British end of the Pass or in its neighbourhood, of a moveable column of sufficient force, and equipped with transport for the express purpose of supporting the militia. Various posts at Ali Masjid, Fort Maude and elsewhere are to be strengthened, and preparations are to be made for extending to Landi Kotal, when necessary, a line of rail, which will be laid as far as Jamrud. Thirdly, you desire to leave with the Government of the Punjab its control over the Pass and the new militia. Besides these three proposals, there are other matters treated of in your letter, namely, the conclusion of a new agreement with the tribes, and the settlement of outstanding claims against them, to which I shall revert presently.

3. As to the first proposal of Your Excellency's Government, namely, the construction of a strong defensible post at Landi Kotal, with an adequate water-

supply, I observe that military opinions generally concur in its necessity. It must be remembered that the Afridis, in the course of the late disturbances, wrought much havoc in the forts and posts entrusted to their charge, and the reconstruction of these works has been forced upon you. The work, in short, is one of restoration rather than one of fresh construction or advance. There is, however, a difference of opinion as to whether the fort when built should be occupied by regular troops, or left to the care of the Afridi militia supported by a moveable column at Peshawar and officered by British officers. That question is not exclusively a military one, it involves also important political issues.

4. It is convenient here to refer to two considerations which must be borne in mind in dealing with this and all other questions connected with the Khaibar Pass. The Afridis have, as you observe, "by their own acts ruptured their engagements," and in the proclamation addressed to them, and on subsequent occasions, they have been given to understand that the Pass will be re-opened under such terms as the British Government may consider necessary. No considerations of past agreements or of tribal rights stand in the way of the adoption by Your Excellency's Government of any military measures necessary for ensuring the permanent safety of the Pass, and for preventing a repetition of the late disturbances. At the same time, while your hands are perfectly free, and should be kept so in any negotiations or communications that you may have to conduct with the Afridis, it has always been an axiom that the good will of the tribesmen affords the best guarantee for the success of a frontier policy. In his memorandum, dated 11th March 1898, General Sir William Lockhart remarked with equal force and truth: "from a political point of view, the permanent occupation of China might give rise to tribal ill-feeling and thus cause us grave embarrassment; for it must be remembered that in undertaking military operations in Afghanistan, the friendly attitude of the frontier tribes would be of much greater moment than the absolute safety of any single pass, however important. If the attitude were friendly, the Pass would be secure in any case. If the Pass were secure, while the attitude was unfriendly, we should be harassed in other directions."

5. These observations apply equally to the immediate question of the occupation of the fort at Landi Kotal by regular troops. In the opinion of Your Excellency's Government, such a measure will necessarily strain the good will of the Afridis. Her Majesty's Government is, therefore, prepared to accept your view subject to such further consideration as may be needed after fuller experience. At the same time there is no necessity, in communicating to the tribes your intentions, to bind your Government as to its action hereafter. The reconstruction of the works destroyed by the Afridis in breach of their agreements will take some months, and the arguments both for, and against, the occupation of the fort by regular troops will receive additional weight according to the behaviour of the Afridis during the course of the next year. It is sufficient for me at present to convey to Your Excellency my general sanction to any expenditure that may be found necessary for the proper accommodation and defence of the garrison which you may eventually determine to place in the Khaibar Pass.

6. I accept also your proposals for establishing a moveable column, and I shall await the detailed report referred to at the end of paragraph 9 of Your Excellency's letter. I approve, further, of your measures set forth in paragraph 12 for extending railway communication, but I do not think that it is necessary for you to secure the right of working it and of exercising jurisdiction by means of any agreement with the several sections of the Afridi tribes. The Pass is now in the occupation of your Government, and it will be sufficient to intimate to the tribes your intentions for the future, and to retain the power now actually in your hands of carrying out your intentions.

7. Your third proposal, under which the Government of the Punjab is to retain its control over the Afridi militia and over the Khaibar Pass, raises an important and more difficult question. Under the altered circumstances which have arisen, it is not desirable merely to restore the arrangements which were in force before the recent outbreak. On the other hand, you are evidently impressed with the difficulty of withdrawing entirely the existing jurisdiction

of the Punjab Government on the British side of the frontier. Schemes have at various times been put forward for creating a Frontier Commissionership to hold separate charge of the Trans-Indus districts as well as of our relations with the tribes beyond. They are open to the objection that they would have the effect of breaking up the established administrative units of British India, disturbing the revenue system already introduced, and entailing a succession of territorial rectifications and compensations. There is no part of India where the need of a strong administration, equipped with all the resources of Government and capable of resisting aggressions, is more likely to be felt than on the North-Western Frontier. It may also be inexpedient to deprive the Government of the Punjab, and thus also of the Government of India, of a valuable opportunity of training officers for frontier service, and of gaining a knowledge of the feelings and habits of tribes which are constantly sending settlers into British districts. It is open to question whether it is altogether advisable to place in the hands of a single Commissioner the whole executive power on both sides of this most important section of the Empire's external frontier, without the restraint which a trained experience of financial and administrative responsibilities on a large scale imposes upon an authority charged with the government of a first-class province.

8. It is not, however, clear to me that the objections which you raise to the alternative courses indicated in paragraph 11 of your despatch are entirely unsurmountable. I desire in particular to invite your further consideration to the second of these alternatives :—that, namely, in which it is assumed that the officer entrusted with political matters in the Khaibar Pass might remain under the Commissioner of Peshawar, the Commissioner himself being placed under the Government of India. This plan, you observe, "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer." I confess that these objections appear to me to be rather formal than substantial. Your Excellency's Government already exercises direct control over the conduct of relations with Afghanistan, and in the management of the independent tribes upon the Punjab frontier there has always been a certain distribution of powers between the Local and Imperial Governments, with a more immediate supervision than is exercised over the internal administration of the Province. The Commissioner of Peshawar is, in fact, accustomed to this difference and its consequences, and in a large measure he even now serves two masters in times of peace, while on various occasions of frontier disturbances he has corresponded direct with the Government of India. The policy, therefore, of directing the affairs of the Khaibar Pass from the headquarters of the Government of India, through the Commissioner of Peshawar, is not altogether an untried policy ; and it must be borne in mind that the objects which You set forth in paragraph 6 of your letter are, all of them, matters for which your Excellency's Government is primarily responsible, subject to a reference to Her Majesty's Government. In view, then, of these several considerations, I am inclined to hold that it would be better that the Commissioner of Peshawar, and, through him, his several subordinates, who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, in respect of such matters, act directly under the Government of India. In such a case it would, in my opinion, be necessary that the Commissioner should be appointed by the Government of India, with special reference to the responsibility in respect of affairs on the frontier which will be placed upon him under the scheme now proposed. In respect of affairs beyond the frontier, it would suffice that he should send copies of his repoits for the information of the Lieutenant-Governor of the Punjab.

9. I am aware that any such alteration of system may require additional expenditure and some relaxation of the ordinary service regulations, and also that it will involve a change in the status of the office of Commissioner. There is one point, however, which I commend to your particular attention. It seems to me to be of the first importance that the officers who are entrusted with the

delicate and difficult duties of maintaining friendly relations with, and control over, the trans-frontier tribes, should have large liberty of action and leisure for personal intercourse with them, and should be able to devote much time and patience to these special objects. They can hardly combine such duties with the regular work of district officials ; nor will it, I think, be found convenient that they should be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion. I shall not object to the exercise by your Government of a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to these considerations, which appear to me to be very material to the success of any system introduced for the removal of the disadvantages indicated above.

10. Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India. I have indicated, in the two foregoing paragraphs, some of the considerations which should be borne in mind in dealing with this question. But the matter is too important for me to arrive at any final decision in respect to them without giving to them the fullest possible consideration. I shall receive with interest any further observations which Your Excellency may desire to make on the suggestions of this despatch.

11. The remaining portions of Your Excellency's letter deal with two subjects which are closely connected with each other, namely, the exaction of the terms of submission already announced to the Afridis, and the grant to them of a sanad declaring their future relations. I accept the conclusion stated in the 15th paragraph of Your Excellency's letter, that no future steps should be taken to enforce the restitution of arms captured by the tribes during the campaign. In regard, however, to the abandonment of the demand for payment by the tribe of the value of property looted by them in the Khaibar, I consider that it would be well to make some further attempt to bring home to the Afridis their responsibility for the consequences of their flagrant breach of engagement in this respect. I desire to be informed whether a portion of the liability could not be realized from the property of Maliks Wali Mahomed and Khwas Khan in British India, and how far it might be possible by other means, such as the threat of a blockade, to enforce the pecuniary satisfaction which was formally demanded by Your Excellency's Government from the tribe.

12. I presume that the allowances payable to the clans will not be renewed until you have settled the terms upon which your future relations will be conducted with them. The acceptance of these allowances might suffice as a formal adhesion on their part to the terms which may be arranged. I do not consider that it is necessary to stipulate for their "acceptance recorded upon" a sanad, or to base your reservation of the right to construct and work a railway upon their consent. The conduct of the Afridis has, as you observe, "constituted an absolute rupture of all relations." You have obtained actual and undisputed possession of the Pass, and it is sufficient to announce in clear terms to the tribes the rights which you reserve, and the relations which for the future you intend to maintain. Whether you should include in the announcement a formal declaration of your intention to make a railway and to assume jurisdiction within its limits, appears to me doubtful ; at least until your survey is complete and you are prepared to begin the work. At any rate, I presume that great care will be taken to avoid the use of any language which may limit your powers or give rise to misunderstanding in the future ; and I request that Your Excellency will be so good as to send me a summary of the new settlement before you communicate it to the tribes for their guidance.

I have, etc.,

(Sd.) GEORGE HAMILTON.

No. 7.

Extract from Military Despatch from the Secretary of State for India in Council, to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 25th August 1898.

I have considered in Council Your Excellency's despatch M 6636 of 23rd June 1898, submitting your proposals for the military arrangements necessary for keeping open the road *vid* the Malakand to Dir and Chitral.

Dealing first with the principles to be adopted generally for defences on the North-West Frontier, you propose that in future the strength of the more advanced garrisons shall be kept as low as may be practicable, being placed in strong works which cannot be captured by a tribal enemy so long as the garrisons have food, water, and ammunition; that outposts of regular troops shall be as few and strong as possible; that minor posts, and posts on the line of communications, shall generally be held by levies, when the duties to be performed are those devolving on a police force, or by irregular troops, which you would prefer to see organised as a militia; and that risings among the frontier tribes shall be met by moveable columns of sufficient strength, placed where they can readily support and assist the stationary garrisons. You consider that in event of serious attacks on the frontier being made or threatened, as in the case of the attacks by the Orakzais and Afridis on the Samana and other posts in August and September 1897, the garrisons of the weaker posts shall either be reinforced or withdrawn according to a pre-arranged plan.

I approve of these general principles, which are in accordance with the views expressed in my despatch of the 28th January 1898. I will merely add that in all cases the garrisons should be amply sufficient not only with regard to the perimeter of the works to be defended, but also to provide some relief for the troops in the contingency of continuous attacks for several nights running, such as occurred during the outbreak of last year.

No. 8.

Letter from Government of India, Foreign Department, to the Right Hon'ble Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 10th November 1898.

As soon as we received Your Lordship's despatch as marked in the margin, we referred to the Local Government the question of the conduct of external relations with the tribes on the Peshawar border. We have now received the reply of the Lieutenant-Governor, but, for reasons stated by His Excellency the Viceroy in a Minute which we enclose, we have been unable to give to the Lieutenant-Governor's memorandum sufficient consideration to enable us to state our views on the question at issue.

Dated the 5th August 1898.

2. In the meantime we have the honour to forward, for information, the correspondence alluded to and the Minute by His Excellency the Viceroy.

We have, etc.,

(Sd.) ELGIN.

„ C. M. RIVAZ.

Enclosure 1 in No. 8.

Letter from Sir William Cuningham, K.C.S.I., Secretary to the Government of India, Foreign Department, to the Chief Secretary to the Government of the Punjab, dated Simla, the 19th September 1898.

In my letter dated the 12th September, you were informed that a further communication would be made to you upon the question of the future position of the Commissioner of the Peshawar Division and other matters dealt with in the despatch which that letter forwarded.

2. In the 7th and 8th paragraphs Lord George Hamilton discusses alternative ways in which it has been proposed to carry on relations with the tribes on the Punjab border, and His Lordship states the decision at which Her Majesty's Government have arrived in these words—" Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India."

3. Of the two plans, one is the creation of a Frontier Commissionership. Any discussion of this scheme could only be undertaken after careful consideration by the Government of India of the various objections indicated by the Secretary of State himself. The Governor-General in Council accordingly in this letter would primarily invite His Honour's attention to the alternative of making the Commissioner of Peshawar and, through him, his several subordinates who are employed in conducting external relations with the tribes, directly subordinate, in respect of such matters, to the Government of India. The practicability of an arrangement of this nature must largely depend on local circumstances and conditions; and it cannot usefully be discussed without information which the Local Government alone can supply. The Governor-General in Council, therefore, desires to be favoured with the opinion of his Honour the Lieutenant-Governor as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, and as to the changes in system which would be entailed by giving effect to the scheme above indicated.

4. The conclusion to which Her Majesty's Government have come may contemplate the extension of this system of controlling tribal relations to the whole Punjab frontier, but as all the remainder of the paragraph from which the passage above is quoted deals exclusively with the Commissioner of Peshawar and his subordinates, it would, in the opinion of the Government of India, be convenient to consider this matter first from the point of view of the Peshawar Commissionership only, and not to provide for re-arrangement of the duties and position of the frontier officers of the Punjab Commission on other parts of the border, further than alterations proposed in the Peshawar Commissionership rendered a reference to others necessary.

I have, etc.,

(Sd.) W. J. CUNINGHAM,
Secretary to the Government of India.

Enclosure 2 in No. 8.

Letter from the Hon'ble Mr. L. W. Dane, Officiating Chief Secretary to the Government of the Punjab, to the Secretary to the Government of India, Foreign Department, dated Camp, the 23rd October 1898.

I am desired to acknowledge the receipt of your letter, dated 19th ultimo, in which it is intimated that the Governor-General in Council desires to be favoured with the opinion of His Honour the Lieutenant-Governor as to the

way in which the external relations with the tribes on the Peshawar border can be regulated under the conditions desired by Her Majesty's Government as set forth in the despatch from the Secretary of State, No. 18, dated 5th August 1898.

Punjab Government endorsements, dated the 29th September 1898, forwarding the papers to the Commissioners of the Peshawar and Derajat Divisions and to Mr. H. A. Anderson.
Letter from the Commissioner, Derajat, dated the 7th October 1898
Letter from Mr. H. A. Anderson, dated the 17th October 1898.
Note by his Honour the Lieutenant-Governor, dated the 19th October 1898.

2. In compliance with these orders, I am now to submit copies of the documents noted on the margin, and to intimate that the opinions of Sir Richard Udny and Mr. F. D. Cunningham, who was consulted unofficially, will be forwarded on receipt.

Annex. I.

Government of India letter, dated the 19th September 1898. Endorsed by Punjab Government.

Copy forwarded to the Commissioner and Superintendent, Peshawar Division, for favour of his very early opinion on the measures discussed in paragraphs 7 and 8 of the Secretary of State's despatch, Secret, dated 5th August 1898, with special reference to the arrangement mentioned by the Government of India in this letter of making the Commissioner of the Peshawar Division directly subordinate to Government of India in regard to his political dealings with the trans-border tribes.

Copy, with copy of Secretary of State's despatch, dated 5th August 1898, forwarded to the Commissioner and Superintendent, Derajat Division, H. A. Anderson, Esq., for favour of his opinion on the suggestions for the future management of the Punjab frontier contained in paragraphs 7 and 8 of the despatch from Secretary of State, Secret, dated 5th August 1898.

Annex. II.

Letter from W. R. H. Merk, Esq., C.S.,C.S.I., Commissioner and Superintendent, Derajat Division, to the Officiating Chief Secretary to Government, Punjab, dated Dera Ismail Khan, 7th October 1898.

I have the honour to acknowledge the receipt of your endorsement dated the 29th ultimo, forwarding for opinion a copy of the Government of India, Foreign Department, letter noted in the margin, with its enclosure, on the subject of the future management of the Punjab frontier.

Dated 19th ultimo.

2. The matters discussed in paragraphs 7 and 8 of the Secretary of State's despatch, dated the 5th August 1898, relate primarily to the frontier management of the Peshawar Division and not to that of the Derajat Division. My excuse for submitting an opinion regarding another Division than the one in which I am just at present holding office is, that my connection with the Peshawar Division commenced 21 years ago, that in the course of that connection I have served in every district of the Division, in the Khaibar and in Kurram, and have occupied every post, from that of Junior Assistant Commissioner in the Division to that of Commissioner.

3. It may serve to explain the position as it at present stands, and help towards appreciating the probable effect of a change in the existing arrangements, if, even at the risk of unduly lengthening this letter, I proceed to give as brief an account as possible of the state of affairs that, with slight and unimportant local

modifications which do not affect the question, obtains along the whole line of the Punjab frontier, from Hazara to the Quetta Agency. It is realized that the populations on either side of the boundary line are as closely interwoven and intermingled, socially, commercially and in all the matters of everyday life, as are the inhabitants of Nancy and Metz or for the matter of that the people of Berwickshire and Northumberland. Thousands of our subjects are constantly visiting independent territory, many thousands of the hillmen regularly migrate to our districts, whole clans live for half the year on this and for the other half of the year on that side of the border; where the residents within and without the frontier are not men of the same clan or of the same tribe, they are connected by the intimate ties of common race, of marriage, neighbourhood and of an association, territorial and social, which has endured for many generations. In short, there is no impassable gap or gulf, difficult to cross, between British and independent territory; the frontier is in reality only an arbitrary line drawn through the limits of a more or less homogeneous population. That being so, it will be readily understood what an infinity of questions, of disputes and disagreements, of business, arises from the daily intercourse of these people. This business must be settled promptly and with justice, or the peace of the border is endangered; it is business which is quite distinct from the Imperial questions in which British and independent interests, as such, are arrayed against each other. And upon the successful administration of the daily business of the frontier it chiefly depends whether, under ordinary circumstances, the border is heard of or not.

But the discharge of local or Imperial business on the border is not the sole duty that falls upon frontier officers by whom I mean Deputy Commissioners and Commissioners. The internal government of the frontier districts is a matter of great moment, and in some districts of exceptional difficulty. I say it is a matter of moment, because I believe that the prosperity and satisfaction of our trans-Indus subjects reacts strongly upon the men beyond the border, and that discontent within the frontier enhances the dislike of the clans to come under our control and influence and gives a handle to those who preach fanaticism and inculcate hostility. Of the six frontier districts in the Punjab—Hazara, Peshawar, Kohat, Bannu, Dera Ismail Khan, Dera Ghazi Khan—the district of Peshawar is in some respects pre-eminently the most difficult to manage of all in the Province; the revenue and irrigation systems are exceedingly complex and intricate; crime is of the gravest nature; and the population is exceptionally headstrong, fanatical, excitable and intractable. Next in degree with similar general features, comes Bannu. And, excluding Kohat, I think that the five frontier districts, leaving border matters for the moment out of consideration, call for administrative qualifications and capacity above the average which is requisite for Cis-Indus districts. This is undoubtedly so in the cases of Peshawar, Bannu, Hazara; and I think of Dera Ismail Khan and Dera Ghazi Khan also.

4. Turning now to the machinery which works the external and internal business of the frontier divisions and districts, it will be seen that the whole of the Punjab border tribes are already in the immediate and direct charge of officers who have large liberty of action and perfect leisure for personal intercourse with them, who can devote all their time and energy to the specific end of tribal management. To look after one-half of the border clans, special officers exist, appointed *ad hoc*. The tribes of Swat and the Utman Khel are in charge of the Political Agent, Dir and Swat; the Political Officer in the Khaibar attends to nearly the whole of the Afridi tribe, to the Mullagoris and some Mohmands; the Officer on Special Duty in Kurram deals with the Zaimusht tribe, with several clans of the Orakzais and with the Chamkannis; the Political Officers of Northern and Southern Waziristan between them administer the whole trans-frontier population from the Kohat to the Dera Ghazi Khan District. The fact is if we exclude the Biluch tribes of the Dera Ghazi Khan frontier who are, as regards border management, in another category altogether from the Pathan tribes, two-thirds to three-fourths of the frontier is already in the hands of special officers who have no other functions, except perhaps the Officer on Special Duty in Kurram, than those of tribal management. These officers, excluding the Political Agent on the Malakand who reports direct to the Government of India, are directly subordinate to the Commissioners of their respective Divisions. In matters affecting districts they

correspond with the Deputy Commissioners or with the Commandants of Border Military Police, as may be most convenient in each case. Where we have not crossed the boundary of British India, and consequently have not been obliged to create political charges that are independent of Deputy Commissioners, the maintenance of friendly relations with the border tribes, the exercise of such control over them is feasible and expedient, and the settlement of the business, which I have sketched above, arising out of the daily intercourse and transactions of the people within and without the frontier line, is entrusted to the Commandants of Border Military Police, under the general control and supervision of Deputy Commissioners. These Commandants, one of whom is appointed to each one of the six frontier districts, who are European or Native officers, as the case may be (generally European in the more important districts), have the fullest leisure and opportunity for cultivating relations with the clans and for managing the hill men. That is their *métier*. In the discharge of their duties they are served by, and make every use of, the large establishments of Border Military Police in each district whose work consists quite as much of intercourse with the tribes as of watch and ward on the border.

Important matters and questions which the Commandants cannot dispose of are referred to the Deputy Commissioners, under whose general orders, supervision and control are also the Border Military Police establishments; and similarly, whenever necessary by Deputy Commissioners and by the special Political Officers whom I have mentioned above, to Commissioners. And this is as it should be. I have explained how and why in the districts external cannot be dissociated from internal management, the people are much too closely connected for that; there must be one administrative head for both branches of management; in places where we have crossed the boundary and have undertaken the political or other administration of large trans-frontier tracts the circumstances are entirely different, and there we have officers co-ordinate with and not subordinate to Deputy Commissioners, but within a district there can only be one king in Brenford, *viz.*, the Deputy Commissioner. In other ways also this system is right; it is essential that the officers who are in direct and immediate charge and control of tribes should enjoy the fullest and most unrestrained intercourse with them; but for senior officers it is in my opinion a mistake to see too much of the tribesmen. By the time an officer has reached the rank of Commissioner he is well known to, and has a thorough personal knowledge and acquaintance with, the jirgas and clansmen, acquired during the period when as Assistant Commissioner, or Political Officer, or in charge of the Border Military Police, and as Deputy Commissioner, he has had constant and daily dealings with them. To my mind, the present system ensures the requisite amount of touch between the senior officers and the clans, without sacrificing any of the respect and awe which the hillmen should entertain for relatively high office. On the other hand, the officers actually in charge of them have nothing else to do than to deal with them. I cannot help thinking that the feeling that officers are not now in touch with the clans as they were formerly is based on a misconception. The officers in charge of the tribesmen are very much more in touch with them than they were before or after the Mutiny. It will be remembered that in the early days of the Punjab there were neither special Political Officers nor Commandants of Border Military Police; the Deputy Commissioners had to do everything themselves, and I find as early as 1850 Reynell Taylor, in a note regarding the Derajat frontier which he wrote for the benefit of his successor, Nicholson, lamenting the loss of opportunities for mixing with the tribesmen, owing to increased work. Great as was the task accomplished by those men, they tolerated and perforce had to tolerate a condition of things, insecurity within the border and trouble upon it, at which we, of the present day, would be horrified. This defect in the earlier administration has been recognised and remedied by the appointment of special tribal officers in every district of the two frontier divisions and at five trans-frontier localities (Malakand, Khaibar, Kurram, Tochi, and Wana); that is to say of eleven officers whose sole duty is frontier management.

5. Before considering the effect of the changes contemplated in the system of frontier management, I would venture to point out, first, that all and every matter, I think I am correct in saying, of Imperial interest on the border, however

small it may be, is instantly referred by the Punjab Government for the information and orders of the Government of India; and that no measure or step whatever which is of general bearing or of any importance in border policy, no organic change of any kind, is undertaken by the Local Government without the previous sanction and concurrence of the Supreme Government. This has been so since 1882, if not from an earlier time. To all intents and purposes, therefore, the Punjab frontier is as already as much under the Government of India as if Commissioners reported on frontier matters direct to that Government. The elimination of the Punjab Government will, however, have a profound effect in other ways, which I will submit further on.

The other point to which I would invite attention is that, save in matters of the purest routine, the Commissioner of Peshawar can hardly be said to correspond direct with the Government of India. So far as I know the affairs of the Khaibar Pass have never been directed by the Government of India through the Commissioner omitting the Punjab Government. Since 1881, and I think practically for the past 20 years, the duties of the Commissioner in connection with the Government of India have consisted of reporting to that Government (generally by the same telegram in which the Commissioner reports to the Punjab Government) the occurrence of any serious border event; and of transmitting to Kabul urgent communications intended for the Amir and telegraphed to Peshawar, and similarly of telegraphing to the Government of India the contents of urgent letters from the Amir. He also occasionally arranges for the transit of employés or goods belonging to the Amir. In fact, so purely ministerial is this branch of his duties that during his absence from Peshawar the Duputy Commissioner performs them. His present position therefore in respect of serving two masters, if it can be so described, is utterly different from that which is contemplated for the future. I do not think he can be said ever to have been under two masters. In the early days of the Punjab, the medium for the execution of the Imperial policy in regard to Afghanistan was the Lieutenant-Governor of the Punjab, who naturally employed the Commissioner of Peshawar, *e.g.*, in the negotiations and correspondence which preceded the Afghan treaty of 1856, concluded by Sir J. Lawrence. Subsequently, the work of the Commissioner in connection with the Government of India was confined to translating and transmitting the Kabul correspondence and supplying news; I remember just before the Afghan war that this work devolved upon Sir L. Cavagnari, then Deputy Commissioner of Peshawar; and since then the Commissioner's duty direct under the Supreme Government has been always purely ministerial it appears, and in no way administrative.

6. At first sight the proposed alterations in the system of frontier management seem to effect no appreciable change in the present arrangements; there are the special tribal officers already at hand: the frontier is already practically under the Government of India, the elimination of the Punjab Government will accelerate the transit of orders and the receipt of reports, and the whole difference in the conduct of affairs apparently will be almost nominal. But if we go into the matter, it seems to me that there are very great difficulties in the way; in practice if not in theory. These I will now submit:

7. It is not a question on which I can venture to offer an opinion, whether the Government of India ought or ought not to deprive itself of the weight, the experience, the knowledge, the long training, of the Punjab Government in matters concerning the border tribes. It is suggested that the Commissioner of Peshawar will send copies of his reports to the Local Government, and no doubt copies of letters from the Government of India to the Commissioner would similarly be communicated to the Local Government. But this is a very different thing from what obtains now; from the beginning the Lieutenant-Governor has personal knowledge of a case, if it is of any importance he has probably discussed it with the local officers, he has gathered information on all points which are obscure or have been neglected, in short he is in a position to form a full and carefully-weighed judgment. Precluded from personal discussion with officers on the spot and from eliciting information and confined to an opinion upon papers drawn up without the Lieutenant-Governor's intervention, it is inevitable that the views of the Local Government will not possibly

have the great intrinsic value that they now possess, and that the Lieutenant-Governor will drift farther and farther from touch with the border. Yet, seeing that local officers cannot avoid as a rule dealing with matters solely from a local point of view, that they are in the heat and dust of the battle so to speak, the opinion and judgment of a high officer of State who approaches the consideration of a question with a dispassionate mind and yet with local knowledge, who looks at it from a broad standpoint that embraces the whole frontier and yet is not wholly centred in the frontier, and who moreover has full leisure and opportunity for going into these matters, on the spot, must be of inestimable value to the Supreme Government. Moreover, it is unavoidable that the local officers will be deprived of the benefit of personal communications with their Government. To this benefit I think due weight is not always given, it is a factor of great importance in administration. It is of course practicable for a Commissioner to visit Simla or Calcutta, but of necessity the occasions for doing so must be far more rare, and the meetings will be of a different character from those that take place when the Lieutenant-Governor marches along the frontier or officers go to Lahore. The element of personal supervision on the spot and of personal influence on part of the governing authority must disappear, unless the Commissioner is raised to, or almost to, the position of the Lieutenant-Governor. But even then the Commissioner's views will necessarily be narrower and more circumscribed than those of the Local Government, possibly also less prudent and circumspect.

8. If the Commissioner of Peshawar is appointed by the Government of India, it is almost impossible that there should not be difficulty arising from the then divergent interests of the Supreme and of the Local Government. The Government of India will then want the best frontier officer it can get; on the other hand the Lieutenant-Governor must think of the internal administration of the frontier divisions of revenue, police, crime, etc., etc.; it does not follow that a good Political Officer has good administrative abilities, or *vice versâ*; and it will not be easy for both Governments to unite upon the same choice. Moreover, the Commissioner is only one man, he cannot work without his subordinate staff in each district, and the dual control will and must run through the whole administrative establishment. The Commissioner will emphatically serve two masters (which he does not do now) and where the head of the administration is under dual control, the body must necessarily follow. I do not see how under those circumstances, men being what they are, a break down can be escaped.

9. I have explained that there is a mass of daily business transacted in connection with the border management of districts, with the political charges and their administrations, with the border establishments, etc., this is all disposed of by the local officers under the orders of the Local Government. What that amounts to, a glance at the printed and manuscript Foreign Proceedings of the Punjab Government will show. The whole, or very nearly the whole of this, never reaches the Government of India. If the Punjab Government is dissociated from frontier management, it is plain that the Commissioner must be raised to the position and powers of a Local Government, on the analogy of the Agent Governor-General at Quetta, otherwise this burden of detail will devolve upon the Supreme Government, which would obviously be undesirable.

10. This brings me to the last difficulty. It is suggested that the tribal officers should not be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion, it is evidently anticipated that the rank and pay of the Commissioner may have to be raised (and if my conclusions in the preceding paragraph are correct, they will have to be raised very considerably), and concessions made to his subordinates. As a frontier officer myself, I should welcome anything that adds to the inducements and attractions of service on the frontier. Compared with what I remember 20 years ago, there is a reluctance to cross the Indus among the junior officers. The reasons are not far to seek. In former days rapid promotion compensated for the responsibilities, hardships, discomfort, unhealthiness, solitude and actual danger of frontier service, which conditions still remain; but Mackeson, Ross, Edwardes, Reynell Taylor James, Becher, Pollock, Macnab, Monro were all substantive

Commissioners within 20 years of entering the Punjab Commission and often in advance of their contemporaries Cis-Indus. Of later years, however, promotion has gone in due course, and men weighing their future, naturally, prefer to remain where life is easier and where their chances of a Commissionership are equal, and some of them may moreover rise to the higher appointments from which frontier officers are in practice debarred ; at any rate to which only two officers from the frontier have obtained in 50 years. But I am afraid nothing will reconcile officers to spending their whole service at Wana, in the Tochi, in several of the worst districts trans-Indus, or even in Kurram and on the Malakand, if that is what is meant by men not being subjected to removal. They are willing enough to spend some years under arduous and trying conditions, but I do not think any prospects we could hold out would tempt the stamp of man we want, to serve permanently in some of these frontier charges. In the interests of Government, it is not advisable to keep men too long in any particular post. The majority of the frontier stations are far too unhealthy for prolonged residence, save in cases of exceptional physique or adaptability to the climate. A change from time to time is healthy to all concerned.

With a minute service, such as the proposed class of officers will be, it is difficult to understand how it will be feasible to arrange for proper promotion. If the Commissioner of Peshawar in future has higher pay and rank than other Commissioners, say than the Financial Commissioner also, where is he to go to? Unless the Government of India are prepared to open high political appointments for him, he must remain where he is till he retires, since there is no further place for him in the Punjab and a transfer to another Division will operate as a penalty. It may so happen that an officer obtains the post at a comparatively early stage in his career; if so, his juniors will be hopelessly blocked. Or the man next to him may be a relatively young officer, in that case all below him must stagnate. Each in regulating promotion varies in proportion to the size of a service, and with the dozen or at the most two dozen officers who will compose this special frontier service, it is certain that very soon insuperable difficulties of promotion will arise. Additions to pay will not suffice, for men want variety of work after a time. Nor will it be possible to utilize them elsewhere, since after a man has spent 10 to 15 of the best years of his life on special work, he becomes an expert in that particular line, and experts are rarely fit for other duty than in their own sphere. Altogether, however desirable it is to attract and to retain the best type of officer for the difficult task of tribal management, on the principle that the best system of administration that can be devised is made or marred by its *personnel*, I fear the specialization of the frontier service will result in grave difficulties, unless indeed all frontier officers are included in the political service, but this is apparently not intended and would be going far beyond the scope of the present scheme which is to place officers of the Punjab Commission jointly under the Supreme and Punjab Government.

11. On the whole, I venture to conclude that the scheme discussed in the Secretary of State's despatch virtually is already in existence, but without those obstacles to the successful working of the frontier administration which I apprehend from the modifications suggested. The frontier tribes are already under the Government of India and eleven special tribal officers are already at work everywhere. The recent frontier troubles were not, I submit, the consequence of the present arrangements. One might otherwise argue with equal justice that because they started in the Tochi and culminated on the Malakand and in the Khaibar, all of which are distinct political units under special officers, therefore it is a mistake to place officers in exclusive political charge of trans-frontier tribes, whereas the contrary is the case.

Annex. III.

Letter from H. A. Anderson, Esq., Officiating Commissioner, Derajat Division, to the Chief Secretary to the Government of the Punjab, dated the 17th October 1898.

I have the honour to submit the opinion on the suggestions for the future management of the Punjab frontier contained in paragraphs 7 and 8

of the despatch of the Secretary of State, Secret, dated August 5th, 1898, called for in your endorsement, dated September 29th, 1898. The proposal contained in paragraph 8 of the Secretary of State's despatch is that the Commissioner, Peshawar, and through him his several subordinates who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, in respect of such matters, act directly under the Government of India. The Government of India in forwarding the despatch ask for information as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, and as to the changes in system which would be entailed by giving effect to the scheme proposed by the Secretary of State.

2. I apprehend that practical suggestions for carrying the Secretary of State's proposal into effect are what is asked for in this reference. At the same time as the question is admittedly one of considerable practical difficulty, and as it is not easy to make suggestions for carrying the new scheme into effect without pointing out and considering the difficulties which are involved in the change in system, I consider myself justified in briefly indicating some of these difficulties. As a Punjab frontier officer who has spent his service under the old system, it is difficult to approach the question without prejudice, but I shall attempt to examine the question with impartiality.

3. The first point calling for remark in the Secretary of State's statement of the scheme contained in paragraph 8 of his despatch is the assumption that something similar to what is now proposed is already in existence, namely, that the Commissioner of Peshawar in a large measure serves two masters in times of peace. That the Commissioner of Peshawar discharges any administrative functions under the orders of the Government of India direct, is, I believe, not the fact. He is the servant exclusively of the Punjab Government, through whom he receives the orders of the Government of India. He is the medium no doubt through whom a certain amount of urgent communications between the Government of India and the Amir of Kabul passes, but in this connection he is a translator and conveyor of letters only. The system which it is now proposed to introduce is an entirely new one. It has not been tried before, and it is not correct to claim for it the prestige of a tried and proved success.

4. The Lieutenant-Governor of the Punjab, as things now are, frequently visits and tours along the frontier. He is in close contact with frontier affairs and frontier officers. He is able to acquaint himself personally on the spot with what is passing on the frontier. At the same time he is by his experience, training and position as the head of the Punjab administration, able to form dispassionate judgments on difficult questions, and give invaluable advice on all questions of policy. There can be no doubt, I think, that one effect of the proposed change of system will be that the matured judgment and advice of the Lieutenant-Governor will not be so available on trans-frontier questions as it now is. This, I should think, will be a loss to the Government of India: it will certainly be a severe loss to the Commissioner of Peshawar.

5. A strong objection has been taken to the scheme under discussion on the ground that the Commissioner of Peshawar would be in the position of serving two masters, and the control of affairs on the British side of the border would be divorced from the control of affairs on the further side. No doubt it is difficult for one man to serve two masters of equal status and authority, and the difficulty would be enormously enhanced if these two masters followed opposite or divergent policies. In the present case, however, the two masters stand in the relation of supreme and subordinate, and the policy of the latter must subordinate itself to the policy of the former. The proposed arrangement would no doubt give rise to difficulties, but it does not appear to me to be impracticable. As regards the divorce of control mentioned above, it is no doubt true that the population in parts of the border is homogeneous within and without, relations between cis-border and trans-border tribes are intimate and the spheres of control must cross at points. It is practicable, however, in most matters to draw a fixed line between trans-border and cis-

border affairs and cases, and as one officer will have direct control of both, it is my opinion, though I state it with all deference, that the Commissioner of Peshawar being an officer of the Punjab Commission could, without serious difficulty, exercise his control over trans-border tribes under the direct orders of the Government of India, while at the same time administering cis-border tribes and districts under the direct orders of the Punjab Government.

6. It is suggested in connection with the new scheme that arrangements should be made, whereby officers who are entrusted with the duties of maintaining friendly relations with, and control over, the trans-frontier tribes should have ample leisure for personal intercourse with them. This is no doubt most desirable, but there are now special Political Officers along the whole frontier who have the desired leisure for full and free intercourse with the tribes, and who are little encumbered with the regular work of district officials. So far as my experience goes, there is little left to be done now in this direction.

7. It is also suggested that the political staff which has to deal with trans-border tribes should not be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution. It has been the practice of the Punjab Government of recent years to keep its frontier staff on or across the frontier, to restrict the frontier Commissionerships to frontier officers, and to discourage transfers to non-frontier districts. Service, however, on and across the frontier is not generally popular for various reasons. It is difficult now to induce officers to serve for any length of time across the border. They will be still less willing to so serve if they experience stagnation in promotion which will surely follow the introduction of the proposal now suggested. I do not think that the Government could go much further in this direction than the Punjab Government have gone in the past.

8. I pass now to the consideration of the advantages of the new scheme. The Commissioner of Peshawar in the first place as the only intermediate authority between the tribesmen and the Supreme Government will under the scheme gain a greatly enhanced status in the eyes of the former, and this will increase his power and influence with them and will render them more amenable to his control. The Pathans have an intimate acquaintance with our administrative grades, and will fully understand the difference between an officer who is in direct communication with and who acts directly under the orders of the Government of India, and an officer of the Provincial Government. They will have more respect for the former in virtue of his superior authority and more independent position. This seems to me a very important consideration when weighing the merits and demerits of the new scheme.

9. There can be no doubt, I think, that the new system will save much correspondence as the Commissioner of Peshawar will correspond direct with the Government of India. It will also reduce discussion in the disposal of questions which are not of first rate importance and accelerate the introduction of any changes which the Government of India may consider it desirable to introduce in prosecution of its present policy of extending our influence over the trans-border tribes. Moreover, it is obvious that under the proposed arrangement the Government of India will exercise a more direct control over the external relations of the trans-frontier tribes than it has hitherto exercised. On the Peshawar border these relations are intimately involved with our relations with the Amir of Kabul and other Chiefs; it is an argument in favour of the new scheme that it will bring all these relations more directly under one Imperial control.

10. It will also be an advantage, I think, for the Commissioner to be directly under the Supreme Government in connection with other departments such, for example, as the Military Department. It will strengthen his hands in dealing with matters, such as the employment of the military forces in support of the Political Officers in checking raids and promoting peace and order. At present all such matters have to follow a very circuitous channel before anything is done, and it is desirable to shorten this channel.

11. It will be seen from the views expressed above that while the new scheme seems to me open to serious objections, it at the same time has certain

advantages. The Secretary of State points out that, in giving practical effect to the scheme, it will be necessary to make a change in the status of the Commissioner of Peshawar. It will be necessary, I consider, to considerably enhance the status of the Commissioner as regards trans-frontier affairs. He must be empowered to dispose of many matters which he has now to refer for orders to the Punjab Government. To enable him to have as wide a view as possible of what is passing across the frontier of the division, it will be advisable to place under his control the Chitral and Dir Agency and the relations with the tribes under that Agency. His status would be advantageously raised to something like that of the Governor-General's Agent for Baluchistan as regards trans-frontier affairs. This arrangement need not, I think, interfere with his status as Commissioner under the Punjab Government as regards the districts and tribes of the Peshawar Division which may remain as it is. The position of the Commissioner of Peshawar will thus become one of great responsibility, and much additional work will be thrown on his shoulders. A considerable increase in his salary must accompany the enhancement of his status, and no doubt he will require the assistance of a Personal Assistant to assist him in the disposal of much of his routine work.

Annex IV.

Note by Sir Mackworth Young, K.C.S.I., Lieutenant-Governor of the Punjab.

I am asked for my opinion as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government in the despatch from the Secretary of State, dated 5th August, 1898, and as to the changes in system which would be entailed by giving effect to the scheme therein indicated. The scheme is thus described in the despatch: "Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India." And in directing my attention to this scheme, the Government of India further define it to consist in "making the Commissioner of Peshawar and, through him, his several subordinates who are employed in conducting external relations with the tribes directly subordinate, in respect of such matters, to the Government of India."

2. The objection to such an arrangement put forward by the Government of India, *viz.*, that it "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer," is held to be formal rather than substantial, and it is argued that the Commissioner of Peshawar even now serves two masters in times of peace, while on various occasions of frontier disturbances he has corresponded direct with the Government of India.

3. The main ground of dissatisfaction with the present system appears from the passages above quoted to be that the Punjab Government is interposed between the authority of the Government of India and that of the Political Officers on the Punjab frontier. Further grounds for this dissatisfaction appear to be based upon the opinion that the officers entrusted with the delicate and difficult duties of maintaining friendly relations with, and control over, the trans-frontier tribes have not sufficient liberty of action and leisure for personal intercourse with them, and cannot devote much time and patience to these special objects; and that they can hardly combine such duties with the regular work of district officials, and that it is inconvenient that they should be subject to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion.

4. It is above all things necessary in a question involving such important issues that the facts should be correctly understood, and before going any

further I find it necessary to state, with the utmost deference, that the passages above quoted seem to me to indicate several misconceptions as to the facts. I may draw attention, with reference to this subject, to the opinions stated in an article of "The Times" of 23rd August last, for which high authority was claimed, but which have been shown to be based upon similar misconceptions. The most important of these opinions were traversed in an excellent letter signed "Expertus" which appeared in a later issue about 13th September. I regret that, owing to the necessity for replying at an early date to the reference from the Government of India, it has been impossible for me to obtain in time the opinions of several officers of extended frontier experience, but I have received an able letter from Mr. Merk, C.S.I., well known to the Government of India as a distinguished frontier officer who, though at present officiating as Commissioner of the Derajat Division, has been for 21 years almost continuously employed in the Peshawar Division, and who is intimately acquainted with the administration of that frontier and with the races, customs, languages and locations of its various inhabitants. I invite a careful perusal of his excellent paper, which also brings out several of the misconceptions to which I have alluded.

5. I shall now, in order to be as brief as possible, make definite statements relating to the matters on which, as it seems to me, misconception exists —

First.—*The position which the Commissioner of Peshawar occupies or has from time to time occupied bears no resemblance to that which he would occupy under the present proposal.* It is true that the Government of India communicate direct with the Commissioner of Peshawar in regard to matters relating to the Amir. I draw attention, however, to Mr. Merk's remark that "so purely ministerial is this branch of his duties that during his absence from Peshawar the Deputy Commissioner performs them." To this I may add that, except in regard to the collection and formulating of information regarding the affairs of Afghanistan—in fact, compiling his weekly diary—the duty performed by the Commissioner in this respect consists mainly of translating and forwarding letters between the Government of India and the Amir. But the most noteworthy fact in connection with this subject is that these duties have very little connection with the administration of the border, and do not involve the employment of the services of any other officer under the orders of the Punjab Government. The orders communicated direct to the Commissioner of Peshawar with reference to the Amir do not, as a matter of fact, relate to any questions with which the Punjab Government and the officers serving under it are directly concerned, and no possibility of conflict can arise so long as the Commissioner corresponds with the Government of India direct only on such matters. I shall show later on how different would be the effect of placing the Commissioner of Peshawar and his subordinates in direct relation with the Government of India in respect of border management. For the present it is sufficient to state that there is no analogy between the two cases, and that the employment of the Commissioner of Peshawar in the manner above described affords no precedent for the success of the proposal to control the trans-frontier tribes through officers under the orders of the Punjab Government without the intervention of that Government, unless it can be shown that the management of the trans-frontier tribes has no connection with the management of the British border. I deal with this question further on— (paragraphs 10-11).

6. Second.—*It is not the fact that on various occasions of frontier disturbances the Commissioner of Peshawar has corresponded direct with the Government of India.* I cannot find any instance of this. The Commissioner of Peshawar, as will be explained hereafter (paragraph 14), has to submit certain information on urgent matters direct to the Government of India; but I cannot discover that he has ever corresponded direct with the Government of India, otherwise than as provided in the orders on that subject.

7. Third.—*Speaking generally, it is a fact that the frontier officers who are entrusted with the duty of maintaining friendly relations with, and control over, the trans-frontier tribes, have large liberty of action and leisure for personal intercourse with them, and are able to devote much time and patience to these*

special objects. It is notorious that the two frontier Commissionerships of Peshawar and the Derajat are far the lightest worked in the province. In the reorganisation scheme of 1884, when the number of cis-Indus Commissionerships was reduced, and the number of districts included in them increased, the Peshawar Commissionership, notwithstanding that the Commissioner was relieved of sessions work, was not enlarged and only one district was added to the Derajat charge. The number of districts in each Commissionership is now as follows:—

Delhi	7	districts
Jullundur	5	,,
Lahore	6	,,
Rawalpindi	6	,,
Peshawar	3	,,
Derajat	4	,,

Since 1884 the following outlying political charges have been added; Kurram in 1892 to Peshawar, and Tochi and Wano in 1895 to the Derajat, but this does not seriously affect the propositions that the two frontier Commissioners have ample leisure for political work. Their communications on the questions which arise in connection with border politics have always been full and well considered. From long experience of the subject, I maintain that no branch of work entrusted to Commissioners is more efficiently performed. Whenever their personal presence or supervision has been required for interviewing jirgas on special occasions or for watching the development of trans-frontier events, their services have been freely available. There is absolutely no ground for the idea that they have insufficient leisure for patient dealing with trans-frontier tribes, though it is by no means always desirable that an officer of the standing of a Commissioner should personally interview the jirgas. I am not sure that I understand the desire of the Secretary of State that Political Officers on the frontier should have large liberty of action, but I apprehend that what is meant is that they should not be hampered by other duties, not that their power of independent action should be increased. The latter would be quite inconsistent with the centralisation of authority implied in the present proposals. In the earlier days of Punjab Administration, Frontier Commissioners undoubtedly enjoyed large liberty of action, but trans-border politics having become matters of Imperial concern, this liberty has of necessity been curtailed.

8. Passing from Commissioners to Deputy Commissioners and Political Officers, there is perhaps something, though still very little, to be said for the position that local Political Officers have not always sufficient leisure for tribal management. As pointed out by Mr. Merk, two-thirds to three-fourths of the Punjab frontier is in the hands of officers who have nothing else to do. The Political Agent, Dir and Swat, already under the direct orders of the Government of India, is of course an instance of the system desired by the Secretary of State, and the remarks regarding want of leisure, etc., do not apply to him. But apart from him the Political Officer in the Khyber, and the Political Officers in the Tochi and at Wano are solely engaged in tribal management, while the administrative duties of the Officer on Special Duty in Kurram are not so onerous as to hamper him in his discharge of the same duty. The creation of these appointments, all within the last 18 years and most of them within the last eight years, has had the effect of reducing the responsibilities for tribal management attaching to the Deputy Commissioners of Peshawar, Kohat, Bannu, and Dera Ismail Khan. The power to appoint an additional District Magistrate for districts to which the Frontier Crimes Regulation, 1887, applies, conferred upon the Local Government by section 5 of that Regulation, was designed to lighten the work of the Deputy Commissioner and set him more free for political duties. With the same object the strength of the staff in frontier districts has from time to time been carefully revised by the Local Government, and special officers have been appointed to the command of the Border Military Police in several frontier districts. The Deputy Commissioners of Hazara and Kohat have ample leisure for their political duties. The Deputy Commissioner of Peshawar has an onerous charge, but he has few political duties left. Buner, the Khudu Khel and

Gaduns are managed by the Assistant Commissioner in charge of the sub-division of Yusafzai; Swat and the Utman Khel, except the Laman Utman Khel, a small section, are in the hands of the Political Agent for Dir and Swat; the Political Officer in charge of the Khyber corresponds direct with the Commissioner, and the Deputy Commissioner is not concerned with its political management; and the tribes of the Kohat Pass are managed by the Deputy Commissioner of Kohat. The only tribes which remain under the control of the Deputy Commissioner of Peshawar are the Mohmands on the north-west, and on the south-west the Aka Khel Afridis and the Hassan Khel section and two other small sub-sections of the Adam Khel. As regards the Mohmands, proposals have been made for transferring them to the Political Officer in charge of the Khyber, and probably this should be done when the Khyber settlement is completed. During recent years, while the settlement with the Mohmands was in progress, the work was largely done by the Commissioner in person. The charge of the Peshawar district is undoubtedly quite enough for one officer, and the attention of the Punjab Government has long been directed to the necessity for relieving him of political work or of strengthening his hands in the district administration, so as to permit of his giving more time to such work. The measures taken have been to a great extent effectual. What remains to be done is only a matter of time and thought. It is possible that, if the political management of the Mohmands had last year been in the hands of an officer with more leisure than the Deputy Commissioner of Peshawar, he might have succeeded in persuading the Commissioner of Peshawar that a raid on Shabkadar was imminent, though I am not inclined to attribute our unpreparedness to his being overworked. Be this as it may, I am prepared to admit that the political management of the Mohmands is a matter which requires further consideration in connection with the settlement of the Khyber Pass, and any redistribution of political functions which may result from the present correspondence. And if the Secretary of State or the Government of India consider that the Deputy Commissioner of Peshawar or any other frontier Deputy Commissioner requires further relief to enable him to bestow more time upon the management of the tribes on his border, I shall be quite prepared to make proposals with this object, but such proposals would necessarily involve considerable extra expense, which the Provincial Government would not be in a position to meet without assistance.

9. I do not enter into details regarding the districts of the Derajat, as this is not desired by the Government of India, but in regard to the Peshawar Commissionership I am decidedly of opinion that, with the exception perhaps of the Deputy Commissioner of Peshawar whose onerous duties have long engaged and will continue to engage the attention of the Punjab Government, there is no foundation for the conclusion that the local Political Officers have not ample leisure for tribal management.

10. The fourth statement that I make is this—

The duty of maintaining friendly relations with, and control over, the trans-frontier tribes is inseparable from that of managing the tracts within the British border. The grounds for this statement are so well put by Mr. Merk that I reproduce his words:—

"Thousands of our subjects are constantly visiting independent territory, many thousands of the hillmen regularly migrate to our districts, whole clans live for half the year on this and for the other half of the year on that side of the border; where the residents within and without the frontier are not men of the same clan or of the same tribe, they are connected by the intimate ties of common race, of marriage, neighbourhood and of an association, territorial and social, which has endured for many generations. In short, there is no impassable gap or gulf, difficult to cross, between British and independent territory; the frontier is in reality only an arbitrary line drawn through the limits of a more or less homogeneous population. That being so, it will be readily understood what an infinity of questions, of disputes and disagreements of business arises from the daily intercourse of these people. This business must be settled promptly and with justice, or the peace of the border is endangered; it is business which is quite distinct from the Imperial questions in which British and independent interests, as such, are arrayed against each other. And upon the successful administration of the daily business of the frontier it chiefly depends whether, under ordinary circumstances, the border is heard of or not."

11. There are tracts in regard to which separate political charges have been framed to which the above remarks apply only to a minor degree. But

they apply with special force to the whole of the Peshawar and Kohat border from the Malakand to the Kurram, including the Khyber Pass and the Afridi and Orakzai tribes. The political management of the last-named tribes is closely bound up with the management of the British border. And although there are tracts in regard to which the position is less clear, this is more or less true all along the border. And Mr. Merk touches the point when he says that the business which arises in consequence of the close connection between the people on either side of the border is quite distinct from the Imperial questions in which British and independent interests are arrayed against each other. There are numerous references in regard to such matters in which a decision of the Local Government may be called for, but a pronouncement of the Foreign Department of the Government of India would be unnecessary and out of place. In short, a great deal of our management of the trans-border tribes is carried on in the daily course of border administration, and it is not expedient that it should be magnified into a Foreign Office question. On the other hand, the separation of the trans-frontier from the cis-frontier aspect of many questions now disposed of by our frontier officers is impossible. This was fully realised by Lord Lytton when proposing the creation of a Frontier Chief Commissionership, in the words:* "Mixed up as are the tribes within and beyond our borders, he (the Chief Commissioner) must evidently have charge of the immediate frontier districts as well as of all our trans-frontier relations. I confidently affirm the inseparable connection of portions of British territory with trans-frontier tracts and the necessity of entrusting the control of both to the same local officer."

* Minute of 22nd April 1877.

12. My fifth statement is—

That frontier officers in the Punjab have been much less liable to removal or transfer to other appointments under the ordinary exigencies of provincial redistribution or promotion than other officers of the Punjab Commission; and that a special service constituted with the object of furnishing officers solely for controlling the trans-frontier tribes would be a failure. I do not suppose that the above proposition will be seriously challenged. The writer of the article in "The times" of 23rd August, in support of his assertions that frontier officers are now frequently changed, that they are no longer specially selected for frontier work, and that the ablest of them look upon such work as a stepping-stone to pleasanter posts, alluded to the fact that between 1st April 1894 and August 1898 there had been 13 changes in the office of Commissioner of Peshawar. But as he was obliged to record, though there were 13 changes, there were only four officers, and the changes were in no single case brought about by the removal of any of those to pleasanter posts, while each of the four officers was a thoroughly experienced frontier officer. It is sufficient to mention their names, and record their total service and the length of their frontier service:—

	Years.	
	Total Service.	Service on Frontier.
Sir R. Udny, K.C.S.I. . . .	29	21½
Mr. Cunningham, C.I.E. . . .	26	15½
Mr. Merk, C.S.I.	23	15¾
Mr. King, C.S.I.	20	9½

These officers, all of them bearing the marks of approved service in the decorations they have earned, are undoubtedly the best men that the Punjab had to give for the office of Commissioner of Peshawar. That their names should have been cited by "The Times'" writer in support of his extraordinary

assertions seems to me singularly unfortunate for his argument. I should not have gone out of my way to deal with this instance, but that I am at a loss to find any ground for what is implied in the suggestion contained in the Secretary of State's despatch that it will not be found convenient that the officers entrusted with the duties of maintaining friendly relations with, and control over, the trans-frontier tribes, should be "subject to the removal or transfer to other appointments under the ordinary exigencies of provincial re distribution or promotion." The officers employed on the Punjab frontier are very rarely moved to charges in the interior of the province when they have once established their reputation as frontier officers. I think I may say that the only circumstances under which such transfers have been made are those which relate to the health of the officer or some other disqualification for frontier service. On the other hand, it will, I think, be readily admitted that a small service is difficult to man properly; that the pick of a large Commission is likely to be far superior to the best outturn of a limited number of specialists, and that a small corps of Punjab frontier politicals would not be in any respect a success. I am not arguing here against a Frontier Commission large enough to deal with a considerable tract of British territory added to the control of trans-frontier tribes, nor against a Department of the Foreign Office with a political contingent forming part of the political service; but a limited service of a dozen or even two dozen politicals recruited *ad hoc* to be retained *ad hoc*, and to be precluded from transfer otherwise than on promotion to higher spheres under the orders of the Government of India, would be a thorn in the side of the latter, and is doomed to failure. And it may, I think, be confidently asserted that the best field for selecting Punjab frontier officers is the Punjab Commission, and that, while as hitherto it is desirable that transfers from the interior of the province to the frontier and *vice versâ* in the higher grades of the Commission should be sparingly made, it would be undesirable to separate the two services in such a manner as to preclude transfers, where they are manifestly for the advantage of the public service.

13. I have thus endeavoured to clear away what I cannot but regard as misconceptions in respect of the existing state of affairs, and I now crave permission to say a few words regarding the Secretary of State's proposals. The first and most prominent feature of those proposals is the elimination of the Punjab Government in the chain of correspondence in regard to trans-frontier management between the Punjab local frontier officers and the Government of India. It is proposed to put the subordinates of the Local Government into direct communication with the Supreme Government on this subject. The advantage of this change is not stated, but I think I may assume that the main object is to get rid of what is rightly or wrongly held to be the Punjab view in regard to our trans-frontier management. What that view is has been well described by "Expertus" in the letter above quoted, and I cannot do better than give an extract from his remarks:—

> "I think I may claim for the Lieutenant-Governor and his officers that they have always been most loyal to the Government of India and have done their utmost to carry out the policy of that Government as if it was their own. What has from time to time occurred has been simply this—that when the Government of India has directed some forward move, the Lieutenant Governor and his officers being in immediate contact with the tribes have felt more impressed than the Government of India seemed to be with the difficulties and risks with the amount of force required at starting and to be permanently locked up, and so forth, and have represented this to the Government of India."

I need not say much on the value of the opinion of an officer in the position of the Lieutenant-Governor of the Punjab on questions relating to the control of the trans-frontier tribes. It is for the Government of India to estimate the value of such an opinion. As remarked by "Expertus," "the exclusion of the Punjab Government from all share in the frontier administration would undoubtedly simplify matters in two ways, *viz.*, by abridging discussion and removing opposition to forward movements, and by doing away with the supervision and control which the Lieutenant-Governor, who spends a good deal of time on the frontier and is in close contact with frontier affairs, now exercises. Whether the results of this simplification would be good or bad, I leave others to say." Although these remarks were directed to the

roposal to separate the frontier entirely from the Punjab Government, they eserve, I submit, respectful consideration with reference to the proposal to ontrol the trans-frontier tribes without the advice of the Lieutenant-Governor f the Punjab.

14. The second objection to the proposal is that as above stated the nanagement of trans-frontier tribes is so much mixed up with that of the djoining British frontier, that their complete separation is impossible. Thus nany matters will be reported direct to the Government of India which affect he responsibility of the Local Government, but in regard to which the Local Government will have no voice. This is to my mind absolutely fatal to the cheme. I do not think the inconvenience and impossibility of the arrangenent would be fully apparent for some time, as the frontier officers of experience would retain for some time their old ideas of subordination to the Local Government, but a few years would, I feel sure, be sufficient to reveal its impossibility. The Lieutenant-Governor will find his authority over the frontier listricts impaired and will be of little assistance to the Government of India n the task which will have devolved upon it. In support of this view I ppeal to opinions held on previous occasions with reference to the same subject.

The orders* of the Government of India directing the submission by all officers in the Punjab exercising political functions of information of a certain class direct to the Government of India were regarded by the late Sir Henry Durand as involving a radical change in the position and powers of the Local Government. He represented† that:

* Foreign Department, dated 20th July 1870.

† Punjab Government, dated the 22nd August 1870, paragraph 6.

"a very little consideration of practical working must convince any one acquainted with the system of the administration hitherto in force that subordinate officers, when they shall cease to be confined to direct communication with the Local Government, and shall acquire the practice of direct correspondence, both written and telegraphic, with the Government of India, will *ipso facto* be invested with a power of initiating through the superior Government their own views. These may or may not be consonant with those of the Local Government, and when opposed to them there will be no corrective. The superior Government, acting on first impressions, may find itself committed to the issue of instructions from which it may be difficult to recede, however little in harmony with the deliberate views of the Local Government which can only reach subsequently. The latter would thus be fettered by the action of its nominal subordinates and be placed in a very false position.

"Besides the above element of weakness, there is the fact which obtrudes itself upon general observation, and is already the subject of comment, namely, that there is no announcement that similar orders have been promulgated to the Bombay Government with regard to its officers on the Sind or Rajputana frontiers; nor to the Bengal Government with regard to its Assam and Arracan frontiers; nor to the Chief Commissioner of British Burma with regard to the Burmese, Karan, Shan, and Siamese frontiers. The contrast is held to indicate a change of policy reflecting distrust of, and want of confidence in, the Punjab Government and its officers."

It will be observed that Sir Henry Durand's apprehensions were based merely upon the direct transmission of information. A division of responsibility in the actual management of frontier affairs was not contemplated by him as a possibility. An instance of the effect of the orders regarding direct reports to the Government of India will be found in the correspondence marginally noted. Sir Robert Egerton represented that direct communications not of the urgent character mentioned in the correspondence of 1870 between the Commissioner of Peshawar and the Government of India had resulted in different orders being communicated to the former by the latter, and by the Punjab Government. He represented that such procedure was anomalous and might lead to confusion; that he knew "of no reason why the Commissioner of Peshawar should hold a position in regard to the Government of India independent of the Punjab Government." The Government of India entirely shared Sir R. Egerton's views "that the correspondence in question should be strictly limited to matters regarding which it is important that the Government of India should receive the earliest information," though it held the position of the Commissioner of Peshawar to be exceptional, as he was the sole agent of the

Punjab Government, dated the 9th November 1880.
Government of India, dated the 3rd February 1881.

Government of India for very important and usually urgent correspondence across the frontier, and that as regarded that correspondence it was unavoidable that he should continue to communicate direct with the Foreign Office. The correspondence for which the Commissioner of Peshawar was sole agent to the Government of India was, of course, correspondence with Kabul. It may, I think, be concluded that the Government of India on this occasion realised the justice of Sir Robert Egerton's contention that divided responsibility in the control of the Commissioner of Peshawar would result in confusion.

In 1892 there was some talk of separating off the political work of the Punjab Frontier Districts and placing it in the hands of officers who would be directly under the Government of India. Sir Dennis Fitzpatrick denounced the proposal in very strong terms, and pronounced it simply out of the question. I appeal to universal experience in support of the view that the authority of the Punjab Government would be dangerously weakened by such a measure. Punjab frontier officers have larger opportunities of attracting the notice of the Government of India under existing conditions than other officers—these opportunities would be greatly increased by a definite portion of their work being specially controlled by the Government of India to the exclusion of the Local Government, and, human nature being what it is, the tendency to play to the superior gallery would be irresistible.

15. The third objection to the proposal is that it will throw upon the Foreign Secretary to the Government of India a mass of work with which the Local Government is competent to deal, and the submission of which to the Government of India is quite unnecessary. How would the distribution of work be made in practice? I imagine by some such order as this, "All matters affecting our relations with trans-frontier tribes which Commissioners are unable to dispose of will be referred by them to the Government of India direct and not to the Local Government." I cannot suggest any other distribution. It would not do to say that all matters of importance should be so referred. The Local Government might pass an order in the initial stage which would hamper the Government of India later on. Nor would it do to say that all matters affecting the peace of the border should be so referred. Many matters occur in frontier administration which are unimportant at first, but assume importance as they develop. There are numberless possibilities of the peace of the border being affected by matters which are apparently totally unconnected with trans-border tribes, and which at first sight ought not to produce such an effect. Half the causes of trans-frontier unrest might be embodied in correspondence with the Local Government, and that part of the correspondence which was sent direct to the Government of India might be quite incomplete without it. I am really quite unable to make any suggestion for defining what matters should be referred to the Government of India which would not be open to one of two serious objections, *viz.*, that it would either swamp the Foreign Office or afford insufficient material for forming an opinion. The only possible method is that the reporting officer should be responsible for communicating intelligence of importance in sufficient detail to enable the Government of India to form an opinion. This is what the Local Government now does, and I do not understand what advantage is gained by placing the responsibility on a subordinate of the Local Government.

16. I have not been able to do what I was asked to do, *viz.*, to give an opinion as to the way in which the external relations with the tribes on the Peshawar border could be regulated under the conditions desired by Her Majesty's Government, or to discuss the changes of system which would be entailed by giving effect to the scheme above indicated. I do not think those relations can be regulated in the precise manner indicated, without introducing chaos into the frontier administration. If what is desired is to eliminate the Punjab Government from trans-frontier control, this can only be done by removing the frontier districts, or such portions of them as are closely connected with trans-frontier tribes, from the control of the Punjab Government, and forming this tract into a separate administration under the direct orders of the Government of India. I am not called upon to say anything on this subject, as it has been

negatived after the fullest consideration both by the Government of India and Her Majesty's Government, and I entirely concur in the reasons which have led to this conclusion. At the same time, it would, in my opinion, be far better to encounter all the objections urged to that scheme than to disintegrate the existing administration and introduce confusion where there is, at all events, order and discipline.

17. As I am concluding these remarks, I have received a telegram from Sir R. Udny and a letter from Mr. Anderson, both of which give a partial assent to the Secretary of State's scheme. Sir R. Udny approves of the elimination of the intermediate responsibility of the Local Government, but adds that there are minor points which have required a good deal of consideration. His opinion will be forwarded when received. Mr. Anderson, while expressing his opinion that the new scheme is open to serious objections, thinks that it has certain advantages. I need not notice his objections, as they have been fully stated in this note. The advantages he considers to be—

(1) That the status of the Commissioner will be enhanced in the eyes of the tribesmen, and they will thus be more amneable to his control.

(2) That correspondence will be saved and discussion reduced.

(3) That the relations of the trans-frontier tribes with the Amir of Kabul will thereby be brought under more direct control of the Government of India.

(4) It will be an advantage for Commissioners to be more directly under the Supreme Government in connection with other Departments, such, for example, as the Military Department.

I do not think the tribes will know the difference between a Commissioner who gets his orders direct from the Government of India or intermediately from the Local Government. But no doubt the status of the Commissioner would have to be raised if he were entrusted with more authority than at present. The question is whether the Government of India is prepared largely to raise his status and make him practically a Chief Commissioner. If so, I am afraid he will be difficult to control in regard to his other duties. The Financial Commissioner who is his superior officer in revenue matters holds a position only a little higher than that of Commissioner as it is. I have dealt with (2) above. I think (3) is already fully provided for. Every item of news regarding Kabul is already sent to the Government of India, and the Local Government never attempts to decide questions affecting the Amir. No. 4 shows, I think, what complications are likely to arise. It is not contemplated, I presume, to allow Commissioners to correspond with the Military Department of the Government of India direct in regard to "the employment of the military forces in support of the Political Officers in checking raids and promoting peace and order."

18. In conclusion, I can only state my conviction that, unless and until Her Majesty's Government decide to separate the frontier and place it under a Chief Commissioner or other officer in direct subordination to the Government of India, the existing machinery cannot with any advantage be altered. The Local Government at present works in loyal subordination to the Government of India, and while, on the one hand, submitting for its orders, together with the opinion of the Lieutenant-Governor, all matters of importance with regard to trans-frontier matters as well as matters arising in other Departments, stems the tide of correspondence by assuming responsibility in regard to matters within its competence. Though the views of the Local Government have not always been in accord with those of the Government of India, I confidently assert that it has never failed in loyal co-operation with the declared policy of the latter. I am not aware that the Government of India has made any complaint in regard to this matter, and I appeal to the present correspondence to show that, as regards the former management of trade affairs in the pass, the Government of India considered the Punjab management satisfactory and desired that it should be reproduced. If the Punjab Government has in the past practically acted as

a drag on the suggestions or proposals of the forward school of frontier politicians, the most strenuous advocates of which will be found in military ranks, I venture to suggest that the elimination of its counsels will not strengthen the position of the Government of India with whom rests the responsibility of deciding between conflicting views according to the best interests of the Empire, and to whom the views of the head of the local administration can hardly be a matter of indifference. But the view which under a strong sense of duty I feel bound to urge in connection with the present case, is that to place the Commissioner of Peshawar and District Officers in the Peshawar Division in respect of trans-frontier matters under the direct control of the Government of India would indicate a want of confidence in the Government of the Punjab and would introduce confusion into its administration.

(Sd.) W. M. YOUNG.

19th October 1898.

Enclosure 3 in No. 8.

Letter from L. W. Dane, Esquire, Officiating Chief Secretary to Government, Punjab and its Dependencies, to the Secretary to the Government of India, Foreign Department, dated Lahore, 7th November 1898.

Sir,

IN continuation of my letter dated 23rd October (Confidential), I am desired to submit the letters noted on the margin, which contain the opinions of Sir R. Udny, K.C.S.I., and Mr. F. D. Cunningham, C.I.E., on the question of the future administration of the Punjab Frontier and to convey the following remarks.

Letter dated 20th October 1898, from the Commissioner and Superintendent, Peshawar Division.
Letter dated 21st October 1898, from Mr. F. D. Cunningham, C.I.E., on Special Duty.

2. As regards the first four paragraphs of Sir R. Udny's letter, the Lieutenant-Governor has nothing to add. He proposes a distribution of the work, but does not deal with any of the objections to a dual system of frontier management which Sir Mackworth Young has endeavoured to explain in his memorandum dated 19th October 1898.

The remainder of his letter is a plea for —

(*a*) A specially selected body of Civil Officers for service in districts on the Afghan border.

(*b*) A largely increased staff of European assistants in the same districts.

3. Sir R. Udny's scheme for (*a*) is practically what has for some years been accepted by the Punjab Government, with the exception (1) that the inducements for frontier service in the shape of extra emoluments consists in the extra allowances for political charges, for the outposts of Mardan, Thal, Tank, Rajanpur, Mianwali, and Bhakkar, and the Pashtu and Biluchi allowances, and it has not been found necessary to ask for salaries graduated with reference to contemporaries cis-Indus; (2) that the demarcation between service trans-Indus and cis-Indus has not been quite so final or distinct as Sir R. Udny wishes, for the reason that officers sometimes develop special aptitude or the reverse for frontier service after a longer period than three years, and, as in the case of the judicial and executive separation, it is better for the service that there should not be such finality at an early stage of an officer's career. Sir R. Udny's list of officers serving on the frontier does not include the names of several officers who have served on the frontier, and who might serve there again. Their removal has been due to various causes. Sometimes to health, sometimes to

the desirability of giving the officer a training in the more regulated procedure of a cis-Indus districts, sometimes to the fact that an officer has been proved not sufficiently equipped for special work on the frontier, sometimes to the requirements of the Government of India, as in the case of Major Deane, C.S.I., and Major MacMahon, C.I.E., C.S.I., but rarely or never has the transfer been made in the interest of the cis-Indus as contrasted with the trans-Indus administration. Speaking generally, however, His Honour entirely concurs in the principles which Sir. R. Udny advocates for regulating service on the frontier.

4. But the great difficulty with which we have had to contend of late, a difficulty which lies beneath all Sir R. Udny's strictures and the removal of which must be a work of time, is the paucity of officers of a certain standing in the Commission. The circumstances which led to this depletion have frequently been brought to the notice of the Government of India, and I am now to enclose for facility of reference a copy of paragraphs 13 to 15 of Mr. Tupper's letter dated 1st July 1889, to the Secretary to the Government of India, Home Department, which will explain the state of affairs then existing. Up to 1878 the recruitment was fairly regular, but thereafter it fell off seriously. No less than seven junior civilians, who had been recruited under the new system by which candidates of the ages of 17 to 19 were admitted to the open competition, died also shortly after their arrival in the country, and some of the Statutory civilians did not prove a success and left the service. The result is that between 1880 and 1884, a period of five years, there are now only nine officers in the Commission instead of about thirty-one, which, under the normal scheme of recruitment, we should have obtained. A proposal to mend matters by drafting in competent men from other branches of the Government service was not accepted by the Government of India, and in consequence for the past ten years the greatest difficulty has been experienced in manning the posts in the Province. The frontier has suffered least as it has always been recognised to be a matter of vital necessity to keep competent officers there, but elsewhere all sorts of expedients have been resorted to and the districts have been filled temporarily by Provincial Service men and officers of two and three years' service. Since 1893, however, the number of recruits has risen to eleven and thirteen a year, and many of these are officers of great promise, so that in the near future it will be a simpler matter to adequately fill all the posts in the Province.

5. I am to point out that Sir R. Udny's second proposition in favour of a largely increased European staff on the frontier is nothing new. The question engrossed the attention of the Government of India and this Government in 1891, and the measures then taken are detailed in the despatch dated 23rd June 1891, from the Government of India, Department of Finance and Commerce, to the Secretary of State. The following extract, paragraph 3, of Mr. Fanshawe's letter dated 17th November 1891, to the Frontier Commissioners, clearly explains the aims which the Punjab Government then held in view. These are almost identical with those of Sir R. Udny, and Sir Mackworth Young considers that they still embody all that is really necessary, and that when they are attained a fully efficient frontier staff will always be available :—

3 The strength of the staff of the districts of your division will be in future as shown in the accompanying statements, in which also the *personnel* of the staff for the present cold weather is entered. For the reasons given in the notes annexed to my letter No. 129 of 20th March last, Sir James Lyall considers that this staff will be found sufficient in all cases, and will enable Deputy Commissioners to devote a proper share of their time to political and frontier work without detriment to their control and share of the general work of district administration. Deputy Commissioners will doubtless bear in mind that it is a necessary part of the revised scheme of frontier administration that they should trust all their subordinates specially appointed for this work with a good deal of responsibility and power. Unless this is done the relief which it is desired to give to District Officers themselves will be less than it should be In particular, the officers in charge of the Border Military Police should, if proper use is made of their services, be able to relieve the Deputy Commissioners of much unimportant work connected with border offences and tribal administration, and proposals should be submitted for investing them with the necessary magisterial powers for this work. A European assistant will be attached to the headquarters of all frontier districts whose staff does not include one at present so soon as the recruitment of the Commission will permit of this, and it is to be hoped that this will be arranged for by the commencement of next hot weather at latest. Similarly, all outposts will, as far as possible, be held by a European officer in future.

6. That these results have not been fully realised up to the present, is entirely due to the general depletion of the Commission explained above. When the Commission is properly manned, it will be a comparatively easy thing to provide suitable officers for frontier service and to increase the staff of European Assistants in Frontier districts. Meanwhile, the Punjab Government has done its best to provide substitutes from other Branches of the service, and the names of Messrs. Hastings, Donald, Waterfield, are not unknown to the Government of India as efficient Frontier officers. A scheme for securing the full training of Frontier Political Officers in the management of the Border tribes by placing junior officers of the Commission in command of the Border Military Police in Frontier districts is under consideration, and its submission to the Government of India is only delayed pending the development of the scheme for a Frontier Militia, which has been referred to the Punjab Government for consideration. If so desired, a proposal to throw open the command of the Border Military Police to Assistant Commissioners as well as to the Assistant District Superintendents of Police and Tahsildars, noted in the Government of India despatch above quoted, can be submitted for sanction at once.

7. In conclusion, I am to intimate that the Lieutenant-Governor has no remarks to offer on Mr. Cunningham's letter, as all the subjects therein discussed have been already dealt with in this letter or in Sir Mackworth Young's note dated 19th October 1898.

I have, etc.,

(Signed) L. W. DANE,

Officiating Chief Secretary to Government, Punjab.

Annex A.

Letter from Sir Richard Udny, K.C.S.I., Commissioner and Superintendent, Peshawar Division, to the Chief Secretary to Government, Punjab, dated Nathiagali, 20th October 1898.

IN reply to your endorsement of the 29th ultimo, I have the honour to say that I am strongly in favour of the proposal "to make the Commissioner of Peshawar, and through him several subordinates who are employed in conducting external relations with the tribes, directly subordinnate in such matters to the Government of India"; and after much consideration I am unable to see why the carrying out of this proposal should entail any change in the existing system.

2. As far as *purely external* relations with the trans-frontier tribes are concerned, I think it would be a distinct advantage for the Commissioner to be in direct communication with the Government of India, and it seems to me that, on the border of the Peshawar Division at any rate, the elimination of the intermediate responsibility of the Local Government would give rise to no practical inconvenience, provided that copies of the correspondence were furnished simultaneously to the Lieutenant-Governor in the few cases which might appear to affect the interests of our cis-border subjects, *e.g.*, where residents of British India had been maltreated in independent territory. The sending of such copies might safely be left to the discretion of the Commissioner, and the Government of India would doubtless note the omission to send them in any case in which they considered it necessary that His Honour should have an opportunity of offering his opinion.

3. Our other relations with the tribesmen, which are not purely external, are generally in respect of one or other of the following matters :—

(i) Raids or other offences committed in British territory either by trans-border tribesmen themselves or by British outlaws residing with them ;

(ii) Difficulties which occasionally arise in consequence of men who have homes on both sides of the border mixing themselves up with trans-frontier affairs or going across the border to commit offences there while residing in British territory, *e.g.*, in the case of the Mohmands on the Shabkadar frontier and Wazirs in the Bannu District.

(iii) Offences committed upon trans-border men in independent territory by purely British subjects who return to our side of the border afterwards;

(iv) Disputes between cis and trans-border men about the boundary of British India; and

(v) Disputes arising out of civil transactions between men of independent territory which are not taken into the ordinary Civil Courts, but decided by jirga under Section 10 of the Frontier Crimes Regulation.

4. In serious offences of class (i), which under existing orders are already reported both to the Local and Supreme Governments, all correspondence should go in duplicate to both Governments, though the cases would be settled under the direction of the Government of India alone. Minor offences of this class are ordinarily disposed of by the local officers without any report to Government at all, but any periodical statements of such cases which at present go to the Punjab Government would, I presume, in future be submitted to the Government of India.

In cases under class (ii) it would generally be unnecessary to send the Punjab Government copies of the correspondence, as the men concerned, though sometimes resident in British territory, are in respect of such matters practically trans-border tribesmen.

Cases of classes (iii) and (iv) are very rare, but it would probably be advisable that any correspondence about them should be in duplicate, the final decision under class (iii) being left to the Local Government, and under class (iv) to the Government of India in communication with the Local Government, as would be done in disputes of the same kind between a Native State under the Foreign Department and the conterminous Local Administration in British India.

Statements of cases under class (v) might, if desired, go to the Government of India, though there seems no reason why they should not be submitted, as they have been hitherto, to the Local Government along with the other quarterly statements under the Frontier Crimes Regulation.

I have not referred to cases of male or female refugees from independent territory, because the only notice we take of them is to require such refugees under Section 35 of the Frontier Crimes Regulation to reside at a distance from the border if any attempt upon their lives is apprehended from across the frontier, and this is a matter of internal administration.

5. As the whole question of frontier management is now under discussion, there are two other points upon which I should like to take this opportunity of saying a word, *viz.*—

(*a*) The necessity of a specially selected body of Civil Officers for service in districts on the Afghan border; and

(*b*) the necessity of largely increasing the staff of European Assistants in the same districts.

6. As regards (*a*), I have always held the strongest opinion, and my views are still the same as I expressed demi-officially in 1891 or 1892, *viz.*, that no officer should be sent to the frontier till he has received his full ordinary training—*i.e.*, until he has passed all his Departmental Examinations and gone through the usual course of Settlement instructions—that all officers thus qualified should be allowed to volunteer for the frontier provided that they must do so while still under three years' service, and that only those volunteers

should be accepted who appear likely, from their physique, strength of character, and power of associating with natives, to prove adapted for the work before them. Such volunteers should be enrolled on a special register, and warned that they are electing for *permanent* service on the frontier, where promotion must necessarily be slow because the body of officers will always be comparatively small, and because they will not be considered eligible for transfer to promotion cis-Indus; but I would make up for this to some extent by allowing Assistant Commissioners in border districts to draw higher pay when officers of their own standing in the Commission or junior to them were officiating as Deputy Commissioners in the Punjab, and this, with the knowledge that they belonged to a "*corps d'élite*" with more interesting and responsible work and with greater possibilities of advancement and distinction than ordinarily fall to the lot of the cis-Indus official, should be sufficient to keep men who have voluntarily chosen this line of service fairly contented. Hitherto I believe junior officers have not unfrequently been sent trans-Indus, and again withdrawn to the Punjab, without regard to their own inclinations. The result has been in some cases that they have managed to return cis-Indus on the first opportunity, while in other cases men who would gladly have remained on the frontier have been recalled either for the Secretariat or because their turn had come for promotion to charge of districts elsewhere; but according to my idea no officer once selected for the frontier should ever be withdrawn except for proved unfitness or for neglect to pass the Pashtu Examination within a reasonable time.

7. In this connection I append a statement* of all Civil Officers who are either serving on the Afghan frontier at present or who may be reckoned upon as available for work on this border though absent on furlough or (as in the case of Colonel Leigh) posted temporarily to a cis-Indus district; and by Afghan frontier I mean the five districts of Hazara, Peshawar, Kohat, Bannu and Dera Ismail Khan, where the trans-border tribesmen are of Afghan race, as distinguished from Dera Ghazi Khan, where the people are Biluch and the conditions are very different. From this statement it will be seen at once how irregularly the supply of frontier officers has been maintained, and that, if the six men of longest border experience (not counting myself as I am retiring immediately) were removed, we should have no one left of much more than six years' frontier training, while the great majority are very junior. In the period of thirteen years from February 1878 to February 1891 only five men were sent to the frontier who still remain there. From 1891 to 1895 we have one officer per year, and eight in 1896—1898, but under the existing system most of the latter would probably be recalled cis-Indus before long.

8. As regards the second point (*b*), it must be understood, as in the preceding paragraph, that I am speaking only of what (to use the old expression) may be called Covenanted Officers, *i.e.*, Covenanted Civilians or Military Officers in Civil employ, for Uncovenanted Officers can never, save under very exceptional circumstances, be promoted to the charge of districts or divisions, and, however able they may be, their frontier experience can rarely be utilised in these higher posts. Except, therefore, for purely judicial-work or the charge of treasuries, Uncovenanted Officers on the frontier fill positions which might otherwise be more usefully occupied by Covenanted men in training for higher service, and no Uncovenanted Officer (European or Native) should ever be placed in charge of a frontier sub-division, or in posts like those of the Political Officers in the Khyber, Kurram, Tochi or Wana, which also afford excellent training for the political duties of a Deputy Commissioner. Yet, at the present moment we find a European Extra Judicial Assistant (Mr. Homan) officiating as Deputy Commissioner of Dera Ismail Khan, while a Native Extra Assistant Commissioner (Sardar Mahsud) is at Tank, the frontier sub-division of the same district, and a European Police Officer, Mr. Donald (though this is probably only a temporary arrangement), is in the Khyber. Not long ago, too, we had Mr. Hastings (another Police Officer) in the Kurram, and at the time of the outbreak last year the Political Officer of the Khyber was a Native. Lastly, there have been occasions within my recollection when the important sub-divisions of Mardan

* Not printed.

and Thal were held either by a European or Native Extra Assistant Commissioner, and all these instances have been due to the impossibility of providing officers of sufficient standing and experience from the Covenanted line. Even the posts of the Commandants of Border Police, who usually act as Political Assistant to their Deputy Commissioners, are valuable for frontier training, and I think that, in future, these two might be held with advantage by regular officers of the Commission; but such officers ought never to be left long enough in them to forget, or acquire a distaste for, the ordinary work of interior district administration, and this, I may add, is a remark which applies equally to the Political charges in the Khyber, Kurram, Tochi and Wana.

2. If these views are accepted, it is evident that the number of Covenanted Assistants in the Afghan border districts must be largely increased. Even as it is the number is too small to allow of a fair proportion being always absent on furlough or leave. The result is that at the present moment three of the five districts are temporarily in charge of officers of less than two years' frontier standing (Messrs. Mant, Down and Grant), while in another—Dera Ismail Khan—the Deputy Commissioner, as I have said already, is not a Covenanted officer at all. As regards Assistant Commissioners, the case is still worse, for in four of the five districts there is no such officer at head-quarters, and in Peshawar, so notorious for its crime and lawlessness, there is but one (Mr. Gracey) who came up from cis-Indus two or three weeks ago. To remedy this state of things, and to secure a properly graduated service of trained men, there ought to be at least two Covenanted Assistants (or three, if one is to be Commandant of Border Police) at the head-quarters of every district, and four in Peshawar, a corresponding diminution of course being made in the number of European and Native Extra Assistant Commissioners. The permanent Convenanted staff on the Afghan frontier would then be constituted as follows:—

Commissioners	2
Deputy Commissioners	5
Political Officers in Khyber, Kurram, Tochi and Wana	4
Assistant Commissioners in charge of the Mardan, Thal and Tank Sub-Divisions	3
Commandants of Border Police in Peshawar, Kohat, Bannu and Dera Ismail Khan	4
Assistant Commissioners at head-quarters	12
TOTAL	30

and this would allow of a reasonable number of officers being absent on furlough or leave without necessitating the constant bringing up of new and untrained men from cis-Indus, which is at present unavoidable.

It may be urged that, if the number of subordinate officers is so much increased, and they are debarred from advancement cis-Indus, promotion to Officiating Deputy Commissionerships will be so slow that we shall have no men offering themselves for the frontier. This would no doubt be true if no steps were taken to remedy such a grievance, and it is therefore essential, as I have already pointed out, that a sliding scale of pay should be introduced giving an Assistant Commissioner the pay of a Deputy Commissioner whenever an officer junior to him is officiating in charge of a district cis-Indus.

It may also be said that, to keep men out of the charge of districts and in subordinate positions for seven or eight years would tend to disgust them and to dwarf their power of accepting responsibility; but, though they would take some time to rise to Deputy Commissionerships, they would not be all this time mere assistants; and it is a point of great importance to have men of a certain standing for Political charges like Kurram, etc., which on this account it has often been very difficult to fill from the Covenanted line. In the ordinary course an officer on first coming to the frontier should have two years of the usual work in Cutchery, which is the best of all schools for learning the language, and after that he might be put for a year in command of the Border Police. Then would

come a term of two or three years in charge of a sub-division, followed by, perhaps, a year or two in an independent charge like the Khyber or Kurram, by which time, if not before, a permanent district vacancy would probably be available. All this would give such ample variety of experience and responsibility, that I think no man with a liking for border service would find it compare unfavourably with a life even of a Deputy Commissioner cis-Indus, and still less so with the duties of an Assistant Commissioner, who is often little better than a Cutchery drudge.

Extract, paragraphs 13 to 15, of a letter dated Simla, 1st July 1889, from C. L. Tupper, Esq., Secretary to Government, Punjab, to the Secretary to the Government of India, Home Department.

13. Enclosed will be found a statement (Enclosure III*) from which it will be perceived that, whereas according to the prescribed figure of recruitment, *viz.*, 6·21 per annum, the Commission should have received 68·31 recruits in these years, the actual number of recruits was 52 only, and of these, owing to resignations, transfers to other Provinces and employments, and to deaths, only 32 remain. In the years 1885—1888, as will be perceived from the same statement, the recruitment has been sufficient or fairly so.

14. The Lieutenant-Governor would take this opportunity to beg that the services of the following officers now employed away from the Punjab may be restored to this Province when practicable, *viz.* —

(1) Mr. R. G. Thomson, Officiating Postmaster-General, Punjab.
(2) and (3) Messrs. Drew and Cappel, transferred to Bombay in 1882.
(4) Mr. L. W. King, now serving under the Government of India in the Political Department and just at present on furlough.

The Lieutenant-Governor would like to add to this list the names of Mr. Hurry and Lieutenant Martindale, now serving in Burma, but he does not wish to be pressing upon this point, as he believes that it would be very difficult for the Chief Commissioner of Burma to spare their services. I am to add as additional reasons for this request that the European strength of the Punjab Commission is at a dangerously low ebb, and that undoubtedly one of the reasons for the defects in the criminal administration which are under discussion is the want of a sufficient number of European Magistrates.

15. It remains to consider the measures which should be adopted to keep the future strength of the Punjab Commission up to the mark. This matter has been very fully discussed in personal consultation with yourself, and the result is that it is now proposed to raise the number of charges to which recruitment should be adjusted from 104 to 119. The reasons for this change are very fully explained in the annexed memorandum (Enclosure IV*) by the Secretary to this Government, showing in detail the results of the recent conference with yourself. In accordance with those proposals the figure of recruitment should be raised from 6·21 to 7·105. The Lieutenant-Governor hopes that this proposal will be sanctioned. He has also requested that the next supply of Covenanted Civilians may be five instead of four, the number viously intimated to you; and he thinks it would be an excellent thing if Military recruits could be given to the Punjab as soon as possible.

Annex B.

tter from F. D. Cunningham, Esq., C.I.E., Commissoner (on Special Duty) to the Officiating Chief Secretary to the Government of the Punjab, dated Peshawar, the 21st October 1898.

I have the honour to acknowledge receipt of a copy of a letter from the vernment of India, Foreign Department, dated 19th September, about erations proposed in the present system of managing relations with tribes ond the Peshawar border, so as to bring the conduct of these affairs more ctly under the control of the Government of India.

* Not printed.

2. The despatch of the Secretary of State announces that generally "Her Majesty's Government are of opinion that the present arrangements are not satisfactory," and that, with special reference to the Khyber, it is "not desirable merely to restore arrangements which were in force before the outbreak." Some change is, therefore, called for. There can be no question that of late, and especially in the year 1897, the fruits of the present system have not been all that could be wished; how far this is due to defects in the administrative system and how far to difficulties inherent in recent frontier policy and to deep-rooted antagonism between feeling beyond the border and the aims of government, is a question well worthy of consideration, though its discussion here would be out of place.

The decision of Her Majesty's Government calls for a change in the administrative machine, and the immediate question is whether, as regards the Peshawar border, that direct control which is desired can be secured by removing the Commissioner and the officers below him from subordination to the Punjab Government in respect of political matters, and by placing them to that extent under the direct orders of the Government of India.

The proposal has the obvious objection of weakening the control of the Local Government over its principal Revenue Officers and Magistrates in the Division. I should be sorry to say it would be unworkable; Indian officials are accustomed to serve many masters; the Deputy Commissioner in the Punjab is controlled in some Departments by the Commissioner, in other by the Sessions Judge and Chief Court, and he is answerable to a variety of other authorities. It is said that this dependence on many masters is practicable because all are under one head, the Local Government; so that the Deputy Commissioner cannot excuse deficiencies on one side by pleading press of work on another. To this it may be replied that, whatever other changes are introduced, assuming that the Deputy Commissioner is left in charge of the clans of his own border, as I hope to show he must and ought to be, he would still, for both internal and external work, be under the Commissioner; and though the Commissioner would serve two masters, yet ultimately all are under one supreme authority, the Government of India.

At the same time, though I think the proposal is not wholly unworkable, it has in it many tendencies to produce friction, and from the point of view of the Local Government may well be thought impracticable.

The Lieutenant-Governor would no longer look on officials in Peshawar as his servants, and it might happen that a transfer desired by him in the interest of the Revenue or Judicial administration would be vetoed by the Government of India. This again does not seem to me an insuperable objection, for analogous cases arise under the Provincial Government where Revenue and Judicial authorities take different views of the efficiency of the individual.

Nevertheless, it is impossible to deny that the proposal has in it certain seeds of friction and will put the Local Government in a very difficult position. Moreover, it will not be easy in practice to define the two spheres. To distinguish on paper relations with border clans from district work is easy, but many questions affecting directly the ryots within our border may indirectly concern their trans-frontier cousins.

To go no further back than the last year, the Kohat salt duty, the Agror Border Regulation, and matters connected with the Border Police, are cases in point.

3. But from the concluding part of paragraph 8 of the Secretary of State's despatch, I gather that, coupled with this change in the position of the Commissioner, it is suggested that the District Officer should be divorced from the management of political business on his own border.

I do no know whether this is an essential part of the proposal under discussion; if it be, I venture to think the scheme needs careful reconsideration. Speaking with a long experience—nearly a quarter of a century—of frontier work, I make bold to say that, whatever changes may be introduced above, the fundamental principle of Border administration should be to retain in one hand

executive control within, and the management of relations with clans on the fringe of hills beyond, the frontier. Any other system must involve immense loss of influence and waste of power.

The geographical line which marks the boundary is no barrier; in many parts the men beyond are of the same clan and race as our subjects within the border; in some they live on both sides, migrating with the seasons; in all parts foreigner and subject, whose villages and grazing-grounds adjoin, are closely connected by ties of interest, business, tenancy or marriage. Many trans-border clans have "jagirs" in our districts; all down the frontier the great families have assignments or pensions representing allowances granted by former Rulers—Mogal, Durrani or Sikh—to secure their loyalty and assistance. Though the heads of these families are no longer regularly employed as middlemen, yet they still have influence, and take care to maintain it; in every frontier trouble they are called in to assist, and often do most valuable work.

All these and many similar conditions give to the officer who is Magistrate and Collector, who is locally supreme in matters connected with Police, Criminal Justice and the administration of the Land Revenue system, a power to get work out of Chiefs and Khans within our border, to check intrigues starting in our territory, and to influence clansmen on the immediate "hinterland" of his district, such as no other official can exert.

Leisure to sit all day and every day with jirgas and men from across the border will not make up for want of power to decide their petitions about assessment of wells, suspension of revenue demands on lands owned by them in Peshawar, or to take action under the Frontier Crimes Regulation on their claims about debts due or broken engagements of betrothal and marriage.

These remarks refer to the clans who march with British territory; the further you go from our border the less does this argument apply. The fact that there are Political Agents in charge of Wano, Tochi, Dir and Swat, etc., and that they can manage those tracts successfully without having jurisdiction within our districts, does not prove the contrary, as their charges include clans far removed from the border line, and in any case the Khans of Dera Ismail Khan or Bannu understand that they may some day see the officer who is now Political Agent in Wano or Tochi come back to be Deputy Commssioner in the adjoining district.

4. It seems, however, to be anticipated that, with the creation of a set of Political Agents separate from the District Officers, there will be less change of *personnel* due to "removal or transfer to other appointments under the exigencies of provincial redistribution or promotion." This is possible; but at the same time it is probable that there is no part of any Indian province in which men have been kept longer within narrow limits than on the Punjab frontier. It is notorious that once on the frontier, always there. I have known men who did not wish to stay purposely neglect to learn Pashtu, on the ground that, if they once passed the examination, they would be kept for life in a part of the province from which they wished to escape. Take the Peshawar Division as an instance: the three officers* who have last held charge have been practically all their service on or beyond the frontier, and have at least as much knowledge as the experience of a quarter of a century can give.

* { Sir R. Udny. Myself. Mr. W. Merk.

Of the changes of tenure of this office since 1891, when Sir R. Udny became Commissioner, not one has been due to "exigencies of provincial redistribution or promotion;" they have been caused solely by the removal of an officer to special political work outside, to furloughs, ill-health, or privilege leave. And under no system can changes for these causes be avoided.

5. It seems to me, however, very doubtful whether the control of the Government of India will be increased to the extent expected merely by eliminating the Punjab Government and by drawing the Commissioner, Peshawar, into direct relations. If the Punjab Government had any frontier

policy of its own, or, having one, if it had authority to pursue it, if it had power to give orders in any but the most trivial matter, I could understand that, by removing it from the chain, the control of the Government of India would be increased in reality as well as in name. But I venture to think that, whatever their position in constitutional theory may be, the Lahore Government have not for many years past given orders in any but the most petty matter, affecting trans-border clans or politics.

With the exception of a few years in the Secretariat, the whole of my service of twenty-six years has been passed on or beyond the North-West Frontier, and for the past thirteen years in the Peshawar Division. Speaking of that part of the border, I cannot remember any question sufficiently important to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta. Under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India. The Deputy Commissioner as the local Political Officer disposes of many claims against trans-border men by reprisals or arrests in British territory, or by his influence with clans outside, and he settles these cases without report to the great advantage of Government. But when he thinks action on his part will not summarily dispose of a case, he may report it for orders, and in cases of this description I think that, in practice, the Commissioner and the Local Government give advice and not decisions; the final order even now comes from Calcutta.

The charge proposed will certainly eliminate one office, the function of which in these matters has become advisory rather than administrative, will so far tend to quicken despatch of business and the issue of orders, and will bring the Government of India nearer to the work to be done.

It is, however, clear that between the local officer on the spot and the Supreme Government there must be some authority interposed high enough to pass orders in small matters disposed of on general principles or in accordance with the declared policy of Government, and of experience and knowledge sufficient to give weight to his advice and conclusions.

If between the Deputy Commissioner and Government there is to be only the Commissioner, clearly his responsibility will be largely enhanced, and if the change is to work to advantage, his position must be raised, and he must be invested with powers beyond what he now ventures to assume.

6. To sum up, I am of opinion that the proposal to remove the Commissioner and his subordinates in political matters from the control of the Punjab Government and to place them directly under the Government of India is practicable and not unworkable, but that it has the grave disadvantages of risk of friction, and of impairing that control which is a condition of discipline and efficiency.

But I have no hesitation in saying that it would be a grievous mistake to divorce the Deputy Commissioner from the management of the border clans who march with his district.

Assuming that the reasons given in pragraph 3 are accepted, and that authority within and without the border is kept in one hand, it remains to be considered how the local Political Officer himself is to be directed and controlled. That between him and the Supreme Government some authority must be interposed is evident, otherwise the Foreign Department of the Government of India, which should deal with large questions and with cases likely to cause complications, will be inundated with trivial business.

I venture to think that there are two solutions, and that either of them would in effect be better than that of making the Commissioner of Peshawar an official Janus with one face to Calcutta and one towards Lahore.

These are either —

(i) to give the Punjab Government real authority and power to issue final orders in respect to affairs with clans on the immediate border fringe, and in all but matters likely to lead to serious results or to hostilities on a large scale; or

(ii) to remove the frontier districts* from the Punjab Government, and to place in charge of them an officer with the powers of Chief Commissioner for the interior, and the position of Agent to the Governor-General for the clans and countries beyond.

* Excluding of course the cis-Indus parts of Dera Ismail Khan and Bannu, and the whole of Dera Ghazi Khan.

The first of these two plans would work, but at this date it seems useless to suggest what would at once be ruled out of court as "retrograde," and, moreover, it does not fulfil the condition laid down by the Secretary of State, and is therefore out of the question.

The second would bring the management of the border under the Government of India in the most direct manner practicable. The population, revenue, trade and wealth of the province have so increased since the question of a separate Frontier Commissionership was mooted some twenty years ago under the Government of Lord Lytton, that what would be left to the Punjab after removing Hazara, Peshawar, Kohat, and a strip of the Derajat, is still sufficient to constitute an administrative area of the first class.

Towns have grown, Municipalities have been created under new and complex laws, the whole machinery of Local Self-Government has been started, hundreds of miles of railway and canals have been opened, the cultivated, and, what is more important, the irrigated area has been enlarged by scores of thousands of acres,—in a word development in all directions has been so great, that it is questionable whether there is not enough cis-Indus to occupy the full energies of a great administration.

I am writing without access to an office, and therefore do not attempt to give figures, but a comparison of the chief statistics of the province for 1878 with those of to-day would, I think, show that no "territorial rectifications or compensations" would be required, and that this supposed objection to the radical and effectual remedy does not in reality exist.

If, then, a strong administration directly under the Government of India is desired, in which frontier questions can be fully taken up on one consistent line without detriment to the needs and requirements of the greater part of a large province, this can best be secured by placing the frontier districts under a separate Chief Commissioner and Agent to the Governor-General. The Punjab Government would benefit by being relieved of an incubus, by the gain of time and power to devote to the administration of a rapidly growing province, and it would be rescued from what to many has appeared the invidious position into which it has been relegated by the course of events in the past ten or twenty years in regard to affairs on the North West Frontier.

7. While I believe that this would be the better alternative, I am not prepared to say that the other proposal put forward, to split the Commissioner of Peshawar into two persons, responsible to the Local Government in things internal, and to the Government of India in external matters, is unworkable. But there can be no doubt that it would make the position of the Punjab Government very difficult, and probably within a short time they would be constrained to ask the Government of India to take over the entire responsibility for the frontier districts, and for officials over whom the Lieutenant-Governor would no longer have that full control which alone can secure discipline and efficiency.

Even if the other alternative be ultimately accepted and the border districts be separated from the Punjab, there remains the question whether the unsatisfactory position of to-day on the North-West Frontier is wholly the result of the administrative system, and how far it may be caused in part at least by the natural opposition of tribesmen of independent territory to the policy of these later years. It is the duty of servants of Government to carry out the policy of Government whatever it be, not to criticise unless their views are asked, and I have no intention of suggesting criticisms, for Government best

knows its business and its ultimate aim. After all, if difficulties exist, they must be overcome; it is constant advance in spite of opposition which has created an Empire:

"Et dubitamus adhuc virtutem extendere factis"
"Aut metus Ausoniâ prohibet consistere terrâ"?

But when it is a question of condemning and altering an existing administrative system, it will surely not be out of place to note with proper deference that, in the policy which has led to the occupation and, as the tribesmen view it, to the practical annexation of Wano, Tochi and Malakand, there are elements so contrary to the feelings, traditions, and aspirations of the clans thus conciliated, so likely to arouse their fear of loss of independence, that this alone would account for some at least of the difficulties experienced in carrying out the aims of Government on the North-West Frontier, besides any that may have been created by the machinery of administration, which no doubt is capable of reform and improvement.

As the discussion has arisen out of a despatch upon the management of the Khyber, it is specially appropriate to remember that the arrangements started under the Punjab Government, when I had the honour to be the first Political Officer in charge of the pass, worked with success for nearly twenty years.

They broke down in the end, but under stress of a storm whose origin was unconnected with the Punjab or its Government. But twenty years is a long time in the history of any political system; the map of Europe rarely outlasts it unchanged; and the system to be reformed has at least this to its credit, that during that time the Khyber Pass was kept as safe as any part of the Grand Trunk Road from Peshawar to Calcutta.

Enclosure 4 in No. 8.

Minute by the Viceroy on the management of the Punjab Frontier, dated 6th November 1898.

1. At the end of August we received from the Secretary of State his reply to the despatch in which we communicated our proposals for the final settlement of outstanding questions with the Afridis, and for the future management of the Khyber Pass. The nature of the decision arrived at by Her Majesty's Government made it necessary for us to differentiate even more than before in our treatment of these two branches of the subject. So far as concerned the communication of the terms on which peaceful relations with the tribes might be re-established, we were authorised to act so soon as our definition of the terms had been approved by the Secretary of State. On the other hand, so far as future management was concerned, Her Majesty's Government came to no determination, but forwarded to us certain suggestions on which they invited our opinion.

2. Naturally the first branch of the subject, as the more pressing, first engaged our attention; but I am not dealing with it in this Minute, and it will suffice to record that on September 12th we were able to inform the Punjab Government of the nature of the terms, and of the manner in which we proposed to communicate them to the tribes. It was impossible to refer to future arrangements until this letter had gone; but a week later, *i.e.*, on September 19th, it was followed by another in which we requested the Local Government to supply us with the information necessary to determine how far the suggested alterations in existing arrangements were practicable. I mention these dates to show that there was no delay on our part in taking action along both the lines indicated in the despatch from the Secretary of State. Nor, in my opinion, has there been any undue delay on the part of the Local Government. It was essential that the Lieutenant-Governor should consult his officers who were actually in charge, or were well acquainted with the

circumstances, of the frontier districts. He warned me at once that this must take time, and I am indebted to him for pressing his enquiries so energetically as to be able to submit his report within little more than a month. The propositions which he had to consider were calculated to affect the province for which he is responsible in many ways, and it would have been unreasonable to except an opinion upon them without full time for consultation and deliberation. It is not, therefore, on account of any delay, which could have been avoided, that a difficulty has arisen in our determining before we leave Simla the conclusions on which the further observations desired by the Secretary of State might be founded. It was only on one supposition that the short time at our disposal might have sufficed. If the Lieutenant-Governor had seen his way to make proposals by which the objects aimed at in paragraph 8 of the Secretary of State's despatch might be attained, it would perhaps have been just possible for the Government of India to consider those proposals and forward them with observations to the Secretary of State. But the reply of the Lieutenant-Governor is that he cannot suggest any alterations in the directions indicated; on the contrary, that, in his opinion, they would introduce chaos into the frontier administration.

Under these circumstances we have nothing to work upon. The Government of India will now have to decide on one of two courses: either to endorse the verdict of the Lieutenant-Governor, or to formulate proposals of its own. It can do neither hastily, and any attempt to arrive at a premature pronouncement without careful sifting of the information already available, or which may be collected, would be unfair to hon. members, and could not be expected to yield results of any value.

4. This, however, leaves me in a position which differs in one essential respect from that of my colleagues. When the case comes before them hereafter, as it bound to come, I shall not be in a position to offer any opinion. It appears to me that, while it is my duty to abstain from inviting any formal or final discussion at this moment, it is equally my duty not to shirk my responsibility, but to submit to the Government of India and the Secretary of State, in a form which can be used officially, a statement of the reasons which in my judgment justify the policy which I have advised, and which on my present information I should still recommend. But I desire to speak for myself alone, and to make it clearly understood that the transmission of this minute and of the documents necessary to explain its argument to the Secretary of State, implies no approval by the Government of India of either it or them, but expressly reserves the whole case until it can be maturely and deliberately considered and determined.

5. Her Majesty's Government have affirmed that in their opinion "the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India." Unfortunately very little is said of the grounds on which this opinion is based. When, after defining the duties of frontier officers in terms to which no exception can be taken, the Despatch proceeds to say, "They can hardly combine such duties with the regular work of district officials," the assumption of course is that under present arrangements this combination is the rule. The Lieutenant-Governor challenges this assertion, and shows (1) that on a large portion of the frontier the combination does not exist at all, there being political officers for the political work, separate and distinct from, indeed not even subordinate to, the district official, *i.e.*, the Deputy Commissioner; (2) that where the combination does exist it is in parts of the country where the interests of the residents on the two sides of the border are so closely interwined that it is impossible to deal with them separately; and (3) that where under the circumstances aforesaid the work becomes too heavy for the district official, assistance has been given, and can be given, and at any rate the political work is not allowed to suffer. In connection with this subject the Lieutenant-Governor has examined in detail the statements found in an article in *The Times* newspaper, an avowed and, so far as I know, the only formulated indictment of the present system

which has yet appeared. I do not propose to follow him, and will content myself with saying that, so far as my own experience goes, it corroborates his presentation of the facts of the case, and that I feel bound to perfer the authority of the responsible head of the Province writing officially, to that of any anonymous correspondent.

6. A similar argument might be used with regard to the sentence in the despatch following next to that already quoted. The Lieutenant-Governor denies, and gives chapter and verse to show that it is not true, that frontier officials are transferred to other appointments in a manner that interferes with efficiency. There is nothing on the other side but assertion, and assertion by itself is not proof. Until, therefore, evidence to the contrary is adduced, it is but reasonable to believe that of the Lieutenant-Governor. But one is tempted to go a step further. Is it not possible to rate too highly the absence of removal or transfer? On the contrary, is there any worse evil in a service than stagnation? Mr. Anderson's remarks on this subject deserve consideration. Even Sir R. Udny, who avows himself a strong supporter of a special service for the frontier, clearly recognises that there would be difficulties, and proposes to meet them by arrangements, of which one thing is quite certain, *i.e.*, that they will be very costly. This paper has come in late, and there has been no time to examine it in detail; but it must be remembered that a similar state of affairs to that brought out by the statement annexed is by no means unknown elsewhere in India, and that one of the causes which contributes to it is a block in promotion, or in other words, one of the phases of the stagnation to which I take objection; and one which would be still more likely to arise in a small special service. What is wanted on the frontier is personal influence, but not necessarily the influence of the individual. No doubt instances could easily be quoted where a strong and sympathetic individuality has dominated the ruder natures with which it has been brought in contact. But we cannot predicate characteristics like these for all frontier officers, and it is only too probable that an officer, set down in a remote district for the best years of his life, will imbibe prejudices from his surroundings, or perhaps tend to fossilize, at any rate lose the versatility of resource and promptitude of action on which success in dealing with Native races so much depends. We escape from much of this difficulty if we look to the service rather than the individual officer, and aim at a service so organised as to receive a constant supply of officers well equipped for the duties they have to perform, rather than the mere selection of special officers for special posts. People sometimes talk as if all we had to do was to find the man to fill the post. It is by no means to under-rate the initial difficulty to point out that it is often the smallest of the series; for once the post is established on certain lines, specially if the first incumbent is a man with special characteristics, the field of selection is still further limited in the case of his Deputy or successor. Apart altogether from casualties or resignations, temporary vacancies must be comparatively numerous in an arduous service like that on the frontier, for it is impossible to deny men so placed opportunities of rest and relaxation. The difficulty, therefore, of replacing specially selected officers is no remote one, but may occur immediately, and recur constantly.

7. Leaving out of sight for the moment all questions of the official who is to control the whole system, two classes of officers are required for frontier work. For the actual dealings with the tribes young men are wanted whose activity of mind and body predisposes them to a life which, if isolated and monotonous, has a spice of adventure and of danger, and who are free from the ties which, *e.g.*, for a married man, render residence in the wilds irksome and expensive. But as it is impossible to combine these qualities with a mature experience, it is necessary also to provide local supervision, or in other words, the presence at local centres of officers of sufficient standing and knowledge to be able to direct the junior officers on the spot in cases of difficulty, especially in those which must be disposed of promptly, and where reference to a distant authority is impracticable. In the long narrow strip of tribal country stretching along the Punjab frontier from the Gomal northwards, it would not be easy to find an agency so effective for

this kind of local supervision as the men who attain to Commissionerships under the Punjab Government. The younger men might be recruited from the Staff Corps or elsewhere, though when that is advocated it is fair to remember that the Punjab Commission is already largely recruited from Staff Corps officers, the rule being that one Staff Corps officer is appointed to the Commission to every three of the Indian Civil Service. Two things seem perfectly evident—(1) that if a new Staff, separate and distinct from the Punjab Commission, is to be established, it must at the outset consist principally, if not entirely, of officers drawn from that Commission, because in no other way can the local experience be obtained; and (2) that, even if hereafter it is sought to cut adrift from Punjab influences, the ultimate source of supply must be practically the same for the new service as for the old.

8. The geographical configuration of the tribal country to which reference has been made above has no doubt contributed to the formation of an administration such as that just described, and makes it difficult to suggest any workable alternative. In a compact tract of comparatively open country like Baluchistan, inhabited by a number of tribes which, though differing from each other in some respects, are neither fanatical nor strong, it is possible to prescribe a general policy for the country as a whole. But that is not so with the tribes along the Punjab frontier, and the fact was very clearly brought out in the correspondence between the Government of India and the Local Government in 1896. The attitude of Sir Dennis Fitzpatrick was that there ought to be no attempt to generalise where there is no room for generalisation, but that the circumstances of each bit of the frontier must be separately considered with reference to its peculiar circumstances. The Government of India fully accepted the proposition that different parts of the frontier were in different states of development,—*vide* paragraph 6 of Mr. Barnes' letter of August 14th, 1896,—but Sir D. Fitzpatrick thought it so important that he dealt with the whole subject in great elaboration and detail in his reply dated October 26th, 1896.

9. If it be argued that, admitting the necessity of different treatment in different tracts, some of the sub-division of the executive staff might be avoided by making each tract self-contained, the answer is to be found in paragraph 11 of the Khyber despatch of June 23rd. Of each one of the districts into which the tribal country would divide itself could it be said, as of the Khyber, that "we could not afford to station there an officer of the standing and experience to be trusted in cases of importance and emergency. The district is too small for an expensive staff, and too important for any other than a thoroughly reliable authority." We cannot dispense with any of our outposts, Wano, Tochi, Kurram, Kohat, Khyber, and so on; each must be in charge of a British officer; doubling up is impracticable and without it the cost of senior officers is prohibitive. It may be said that the conclusions of Her Majesty's Government do not necessarily involve the displacement of the subordinate machinery, but only the transfer of the control to the Government of India. That may or may not be so; much depends on the working out of details. But it seemed necessary to examine present arrangements from the foundations, and to show that the guiding principles are intelligible and practical; for, as pointed out, the language of the Despatch is vague and general, and it is impossible from it to say for certain how far their retention in whole or in part in a new system is contemplated, and the area of controversy thereby restricted.

10. Proceeding now to the question of the transfer of control, it cannot be said that the reasons which have influenced Her Majesty's Government here are much more distinctly defined than their reasons for condemning the present system. The objections stated in our despatch to placing the Commissioner of Peshawar under the Government of India are quoted,* and the comment is that these objections appear more formal than real. But from what follows it is evident that there is some misapprehension as to the true position of the Commissioner of Peshawar. The Secretary of State maintains that the policy he suggests is not an untried one, because the Commissioner of Peshawar even now serves two

* This plan "would put the Commissioner of Peshawar in the position of serving two masters, and would divorce the control of affairs on the British side, of the border from the control of affairs on the further side, while the two directing authorities would work through the same officer."

masters in time of peace and corresponds direct with the Government of India on the occurrence of disturbances. The Lieutenant-Governor does not admit the correctness of this allegation, and he is strongly supported by Mr. Merk. The events of the last five years have again and again drawn my attention to the position of the Commissioner of Peshawar, and it is right that I should record my personal opinion that it is a mistake to suppose that the Government of India has exercised over him any control which could differentiate him from other officers under the Punjab Government. By arrangement they have made use of him for certain purposes, *e.g.*, in their correspondence with the Amir, but it would be most misleading to represent him as in consequence in charge directly or indirectly of any part of our relations with Afghanistan. It is true that at present the Commissioner of Peshawar is the channel through whom certain communications go to the Amir. He corresponds on local matters on his own responsibility, and he forwards by messenger certain communications which we send to him by telegraph. But in the latter case he is not consulted, unless we see fit to do so, on the nature of the message; and we only use him at all to secure secrecy and despatch. It cannot be intended to give this officer, however much his importance may be increased, a right of corresponding independently with the Amir. We have never allowed the Agent to the Governor-General in Baluchistan to do so, and it would be most dangerous not to keep this correspondence entirely in the hands of the Foreign Department.

11. So, again, in regard to direct correspondence on the outbreak of disturbance. The object then is that stated in the letter from the Government of India of February 3rd, 1881, quoted by the Lieutenant-Governor, *i.e.*, that the Government of India should receive the earliest information. It has always been recognised that so soon as military operations are undertaken or are even in prospect, it is necessary that the Government of India should obtain all important information direct, and the dual relation is then by no means confined to the Commissioner of Peshawar. It has been customary of late in the larger expeditions to entrust the chief political control to the General Officer Commanding, who thereupon corresponds with the Foreign Department as well as with his own military superiors, and the Chief Political Officer attached to the expedition acts under the orders of the General, though with a right reserved to him of submitting a statement of his individual opinion to the Government of India, should he think fit to do so on any special point. But the case of Mr. Bruce, who was Political Officer in Waziristan in 1894-95, is perhaps the best illustration. As an officer of the Punjab Government he began by sending information through the Local Government in the ordinary manner. The acute stage was reached while the Viceroy and Commander-in-Chief were on tour, and Mr. Bruce was then instructed to correspond direct with the Foreign Department. Here, as in the case of the Commissioner of Peshawar, the object was that in urgent matters information should reach the Government of India by the speediest channel, and early information is so essential that the Government of India must reserve to itself the power of employing any officers of Government to supply it. But it is a wholly different matter to assume control of an official under a Local Government in his administrative action—or to consult him without reference to the Local Government on questions of policy. That has not been the practice with the Commissioner of Peshawar, and I can best show how strongly it was impressed on my mind by mentioning an incident which occurred last year. I deemed it expedient on a certain question of policy to make a communication to the officers on the frontier on whom we chiefly relied for political information. I had no difficulty in acting on my own initiative except in the case of the Commissioner of Peshawar, but in his case I thought it right to confer first with the Lieutenant-Governor, and explain what it was that I proposed to say. It need scarcely be added that the Lieutenant-Governor took no objection, and I addressed Sir R. Udny accordingly; but in my judgment to obtain the previous concurrence of the Lieutenant-Governor was both technically correct and in itself advantageous.

12. It does not of course necessarily follow that because the Commissioner of Peshawar has not hitherto been under the control of two masters he might not be so placed for the future. It would be more of an experiment

than the Secretary of State seems to imagine, but the experiment might be worth trying. Before, however, it is tried we must examine carefully its chances of success. And I confess it is a plan which has had attractions for me. In 1896, when we had the management of the frontier under consideration, I myself put forward the proposal for the extension of the jurisdiction of the Commissioner of Peshawar, which has suggested to the Lieutenant-Governor in paragraph 7 of Mr. Barnes' letter of August 14th, with the addition, which was not adopted, that "this Commissioner might perhaps correspond direct with the Government of India on tribal affairs within his jurisdiction;" but I did so because I thought that thus "we should have secured most of the advantages of a separate province while avoiding the difficulties inseparable from dividing the tribes from the settled district that adjoin them." In the course of the discussion various arguments were adduced against the division between the different functions of the Commissioner of Peshawar. It was pointed out with great force that the idea of separating the ordinary civil administration of a district from the political charge would inevitably lead to friction amongst the officers themselves, as they would have to treat the people from different standpoints. It would also cause a want of finality in settlements of cases. Suitors would go backwards and forwards from the civil authority to the political authority, hoping that a later interview or petition might bring about a ruling more acceptable to them. The theory is that the political officer would be the medium of influence, and that, divorced from more routine civil duties, he would have leisure to push that influence. But influence over border men is not an abstract political entity; it is closely concreted with the incidents and conditions of their daily life, such as the settlement of their quarrels, the management of their land, disputed rights to water, grazing claims, love intrigues, and the numerous domestic incidents that make up life on the frontier, and which when settled under normal conditions, lead to violence and blood feuds; and it is in the settlement of disputes that would result in bloodshed if left to tribal custom that our frontier officers, if of the right sort, get openings for spreading their influence. If a frontier man wants to describe his model of a frontier officer, he says of him—"*He knows all our affairs.*" Such influence and such knowledge will not bear breaking up into different elements of paternal Government—one political and the other civil. Arguments such as these seemed fatal to the idea of placing the Commissioner in direct correspondence with the Government of India on tribal affairs only.

13. Now, again, the method which is suggested for bringing about a change, is that the Commissioner of Peshawar, and through him his several subordinates who are employed in conducting external relations with the various tribes on the frontier of the Peshawar Division, should, *in respect of such matters*, act directly under the Government of India.

14. The Lieutenant-Governor in his Note shows, I think, so clearly that it would be vain to go over the ground again, that the Commissioner and the Government of India cannot deal thoroughly and conclusively with external relations with the tribes without including some administrative work within our border. What the extent of that must necessarily be has not been defined, because the Lieutenant-Governor pronounces against the practicability of the system proposed; but whatever its extent, administrative work dealt with directly between the Government of India and a Commissioner of Division would be something different from what is done in any part of India. In all India there is between the Government of India and the administration of the country a Governor, Lieutenant-Governor, or Chief Commissioner, and if this is necessary elsewhere, no reason has been advanced for thinking that it will not be necessary on the frontier.

15. It is difficult to give instances of the sort of work which is referred to the Local Government in frontier matters, but which with a Local Government need not come to the Government of India; but, in order to give it as

far as may be in detail,* an examination has been made of the Proceedings of the Punjab Government in the Foreign branch or section for the year 1896, that year being selected as an ordinary one, undisturbed by any special frontier rising.

16. It is more than doubtful whether the Secretary of State, in entrusting to the Government of India "a wide discretion in framing the arrangements,

* On the very first page of the B papers (Frontier) for January 1896, will be found five cases, dealt with by the Punjab Government, which, if frontier management were removed from the Lieutenant-Governor's control, would presumably have come to the Government of India. The subjects of these cases were—

Complaints to Colonel Warburton against the Sartip of Dhakka.

Portion of land acquired for military purposes at Para Chinar allotted for building sites and other purposes.

Proposal to call one of the gates of the "City" of Para Chinar the Fitzpatrick Gate.

Petition to the Lieutenant-Governor from prisoners in the Kohat Jail.

Sanction granted to a Kurram Militia Drill Instructor to return to his regiment.

A further examination of the Frontier Proceedings shows numerous references disposed of by the Punjab Government. To cite a few of the different subjects of such references :—

Details connected with Khyber tolls.

Border Military Police establishment. Questions of their equipment, pay, allowances, etc.

Same class of questions as regards Kurram Militia and Khyber Rifles.

Reports on British military officers with such corps.

Correspondence between the Amir and Commissioner, Peshawar, on *unimportant* local matters. (There are occasionally such cases which the Punjab Government dispose of.)

Permits for rifles imported by British officers on the frontier.

Numerous petitions from tribesmen and Frontier Chiefs; also miscellaneous petitions relating to the frontier tracts, not one in twenty of which now comes before the Foreign Department

Statements of cases decided under the Frontier Tribes Regulations.

Peshawar, Kohat, Hazara, Khyber, and Kurram monthly political contingent bills.

Expenditure from District Funds.

Reports of death of leading men in the frontier districts

All questions of the grant of pensions to families of deserving jagirdars and such like. (At present the Foreign Department only gets these when the Local Government supports them. Under the proposed arrangement the Foreign Department would have to get all applications which the Commissioner supported.)

Questions relating to expenditure by frontier officers of an unusual nature. (Many such are within the competence of the Local Government to dispose of.)

Permission to Afghan refugees to visit Peshawar.

Payments of compensation to persons (other than Government servants) who suffer loss from petty tribal offences in cases where fine money is levied from offenders. At present Punjab Government has discretion.

Disputes between British and Afghan subjects at Peshawar.

Appeals from prisoners under sentence of death. The disposal of these has just been transferred to the Home Department. Would not these have to come back to the Foreign Department as Local Government under the new arrangement?

Questions relating to leave, promotion, etc., of local native officers, such as Tahsildars, etc.

The Commissioner's budget for frontier expenditure would have to be taken up in this Department, and all questions connected with it. (This would mean a lot of trouble.)

All matters connected with the Mohmands, the Back Mountain, Buner, the Nawab of Amb, Kohat Pass Afridis, Orakzais, Afridis, Kurram.

Grant of *khilats*.

The above headings have been taken from the Punjab Foreign Proceedings volumes for three months. The Home, Financial, and Revenue Proceedings have not been examined; but it is clear that all questions now referred to the Lieutenant-Governor under those heads would also have to come up to the Foreign Department unless the Commissioner's status were altered.

financial and executive, which may be found necessary," contemplated the separation from the Punjab Government of so much administrative work, or that the Commissioner should have the financial powers of a Local Government. Granted that this is necessary, the question must sooner or later resolve itself into one whether it is better to have as an intermediate Local Government the Lieutenant-Governor of the Punjab, or a Commissioner who will be a Chief Commissioner on the frontier.

17. Mr. Anderson thinks it possible for the Commissioner to be a Chief Commissioner as far as his duty lies directly under the Government of India and to remain a Commissioner of Division in his relations with the Punjab. To my mind his position has only to be so stated in order to show the impossibility of it. Sir R. Udny seems to contemplate an elaborate system of duplicate reports which would certainly end in confusion.

18. The Lieutenant-Governor, as the responsible head of the Province declares that the changes suggested would introduce chaos into the administration. Having been for five years in charge of the Foreign Department of the Government of India, I think I am entitled to speak for it, and I do not hesitate to say that the consequences there would be equally serious. The Foreign Department, as things stand, has no reason to fear attack; it will bear comparison with any similar department in the ability and diligence of the officers by whom it is manned, the accuracy of its information, or the promptitude and prudence with which the varied and complicated mass of business is despatched; but the staff, from the Viceroy and Foreign Secretary downwards, are not chosen for knowledge of administrative details, and to employ them to deal with business of the kind described above would be a useless waste of their time. This is no theoretical opinion, for we have gained a considerable experience in Baluchistan. Matters are now on a more sound and regular footing in that Agency, and since the revenues have been in a manner provincialised, the detailed work has decreased. But the Foreign Department used to be greatly occupied with details of revenue, police, and levy establishments, and I assert emphatically that the result was not satisfactory. If the Lieutenant-Governor is unable to suggest how the necessary changes can be effected on the frontier, I am equally unable to make any proposals for so reinforcing the Foreign Department as to enable it to cope with this addition to its labours. It is not merely a question of amount of work, for that might be overcome, but it is a class of work for which the organisation is absolutely unfitted. Recognising, as I do, the supreme importance of an efficient Foreign Department, I feel bound to deprecate any step that would overweight it, as I am sure the allotting of administrative work to it would do.

19. Sir Mackworth Young, in paragraph 16 of his note, states that, while he entirely concurs in the reasons for rejecting the proposal to form a separate administration for the frontier districts, he would prefer even that scheme with all its disadvantages to the disintegration of the Punjab administration. Any support, therefore, which he gives to the idea of a separate administration is given from a consideration of provincial interests, and is given only if these interests cannot be preserved otherwise. But for the purposes of this Minute it is necessary to examine the question from the point of view of Imperial interests. No one of course can deny that occasions have arisen, and may arise again, when the formation of a new charge, or agency, or province, either becomes a necessity or has overwhelming advantages. It may be necessitated by the increasing development or opening up of the country, which has made the burden too heavy for the shoulders on which it has hitherto rested, or by the adoption of a new and energetic policy which it is desired to push by the undivided attention of a special officer. It may be justified by the fact that the tract in question marks itself for separation by the physical features of the country, or by characteristics of its inhabitants which distinguish them from their neighbours and facilitate their collective treatment. It may come about by one of those accidents which bring us face to face with the hour and the man. Reasons like these could be found for placing Assam under a Chief Commissioner or Baluchistan under an

Agent to the Governor-General; I can find none in the circumstances of the tribal country on the Punjab frontier. The Punjab Government is a busy Government, as all Governments are in India, but it is not true that it is overburdened, and, if necessary, it could be strengthened by methods adopted elsewhere. There is no question of opening up the country, or inaugurating an active policy therein; such things are excluded by the despatch of January 28th. As already pointed out, geographical conditions and the tribal characteristics and animosities unite to make combination impossible. I hesitate to say much of individuals, but with a full sense of responsibility I affirm that, having watched closely the events on the frontier during the last five years and the actors in them, I can select no one who in my judgment has by his experience, natural ability, standing, or performance approved himself beyond dispute the right man in the right place if this difficult task has to be undertaken.

20. But it will be said that there is here a special reason in the traditional policy of the Punjab, the "close border" system of which so much has been written. It is not necessary to stir the embers of an ancient controversy, and to debate whether the cautious policy of former Lieutenant-Governors was right or wrong in the circumstances as they then existed. It should not be forgotten that those circumstances were not the circumstances of to-day, that our knowledge of the tribes, and their knowledge of us, was very different, and, above all, that the sphere of the Amir's interference was undefined and his attitude aggressive. It is perhaps not surprising to find that those who chafed at what they deemed a timid and ineffectual policy should have rooted in their minds the belief that officers under the Punjab Government must pursue the course and maintain the attitude which that policy imposed upon them, but it is none the less a mistaken belief. The officers serving under the Punjab Government are drawn from the same classes as other officers in India, and those from amongst them who rise to positions of authority, and the men who fill the post of Lieutenant-Governor, do so by the same process of selection which is in force throughout India, and which has made the British rule in India what it is. There is in reality one difference only between the training of a Punjab officer and that of his brethren elsewhere, and that is that he can, if he will, acquire a knowledge of the tribes living on the borders of his province. I could give numerous instances from my own experience of Punjab officers who had no inclination to hang back, and I am prepared to endorse most emphatically the claim that the Local Government has loyally co-operated in the declared policy of the Government of India. The late Lieutenant-Governor of the Punjab once said to me, when discussing this subject, "You have only to lift your finger and the break will be taken off in any place you think this desirable." That remark is more than an expression of personal loyalty; it contains in a few words a correct exposition of the only principle on which we can rest our arrangements, *i.e.*, that it is the business of the Government of India, and the Government of India alone, to formulate and prescribe a policy outside the borders of British India. People sometimes talk as if it was for the Lieutenant-Governor, the Agent to the Governor-General, the Commissioner, the Political Agent, to manage the district assigned to him, and that he must be "given a free hand." Statements of this kind cannot be accepted without qualification. It is possible to limit too strictly the intercourse of political officers with the tribes, and our letter of 1896 was designed to show how more intimate relations were perfectly consistent with management by the Punjab Government. It is also very desirable to give each political officer full opportunities of expounding his views, which are the result of his local knowledge, and to follow his advice so far as that can be safely done. But it is essential that over all there should be the general control and the general policy of the Government of India, to which all officers alike must conform, whether they agree with it or not.

21. This seems so self-evident a proposition that when Her Majesty's Government declare "that it is desirable that the conduct of external relations with the tribes on the Punjab frontier should be more directly than heretofore under the control and supervision of the Government of India," it is reasonable to suppose that there is no suggestion that the control is not now supervised by

the Government of India, though it is exercised indirectly and through the Lieutenant-Governor of the Punjab. I pass therefore to the consideration of the comparison between a control exercised indirectly through the Lieutenant-Governor and a similar control exercised through an Agent to the Governor-General. It may be admitted that in both cases the Foreign Department is relieved from a mass of administrative detail; but, as already stated, the relief is by no means as complete in the case of the Agent to the Governor-General as in that of the Lieutenant-Governor, for the simple reason that the full machinery of a Local Government is not available. The Baluchistan agency was fairly on its legs before I knew it, and is still more firmly established now, and yet it affords overwhelming proof of this proposition. If so, one can only conjecture what would be the result of a new agency on the Punjab frontier. But besides this there are two other matters on which it is my duty to speak frankly; and if it be thought that I magnify my office I can only say that I describe circumstances as I myself have found them. The closer supervision and control desired by Her Majesty's Government must be largely exercised by the Viceroy himself, both in his capacity as head of the Government and as having charge of the Foreign Department. It is of the highest importance that the relations between the Viceroy and the officer who, under his supervision, directs the control of their external relations should be close and personal. The Agent to the Governor-General, from the mere fact of his appointment, is expected to reside in his district; he may be called to Simla or Calcutta, or the Viceroy may, during his five years, meet him once, perhaps twice, on tour, and that is all. The Lieutenant-Governor resides several months every year at Simla, and is in constant communication with the Viceroy The Agent to the Governor-General of a district, such as that now under contemplation, would of course be a selected officer, deserving the fullest confidence, but the Lieutenant-Governor is an officer in the very highest grade, both by seniority and position. Now it is at the point where Imperial interests must override local considerations that the Viceroy's hand must be felt upon the reins. A certain course of action may be proposed which, looking to local circumstances, is beyond doubt the best; and yet Imperial policy may require that it should be abandoned. If at that moment the officer who must be overruled is one with whom there are opportunities of personal conference and consultation, the chances of friction and misunderstanding are infinitely less than if he is one with whom there can only be communication from a distance by letter, and who must on that account, and perhaps by reason of his standing, be addressed rather as a subordinate than as a colleague and friend.

22. It is probably only practical experience that can enable any one to realise the full advantage that can be secured, or the loss of influence that may result, from differences such as this in the arrangements whereby control is exercised. But there is one more difference between the Agent to the Governor-General and the Lieutenant-Governor which is fundamental, and which vitally affects the question, which of them is to be preferred for the present purpose? It has been objected that the Lieutenant-Governor has too many interests inside his province, and that it cannot be expected that he will be able to devote sufficient attention to affairs on and across the border. But is there not another side to that question? If we create this new post, choosing for it, as we are bound to do, a man of energy and ambition, what outlet is he to find for his activity? The career of a Sandeman, the creation of a new Baluchistan, is debarred to him; for the policy which he must carry out is essentially one of *quieta non movere*. It was a policy of non-annexation, of non-interference, which was declared by Her Majesty's Government in the despatch of January 28th, and was expounded on their behalf by the Prime Minister, the Secretary of State, and the future Viceroy. It is a policy of which I heartily approve, and which I claim has been pursued during my administration. Expeditions have been undertaken, and our advanced posts have been still further advanced, the former having been sent, and the latter established, in consequence of obligations which, so far as I am concerned, were inherited. We have assumed the protection of the Dauris in the Tochi valley against their turbulent neighbours, at their own request long and urgently preferred, but no tribe or section of a tribe

has been compelled against their will to surrender the local self-government which they formerly possessed, and which it is their desire to retain. It is because I wish to see this policy acted upon in the future, and because I regard it as the best hope of a peaceful and permanent settlement, that I deprecate the establishment on the frontier of an authority which from the nature of things must, in my judgment, endanger its continuance, and that I still prefer to rely on such an adaptation of the machinery we already possess as we proposed in our despatch, believing that, by so doing, we can with less risk and greater efficiency secure the objects which Her Majesty's Government have in view.

November 6th, 1898.

No. 9.

Despatch from the Secretary of State for India to His Excellency the Right Honourable the Governor-General of India in Council, dated India Office, London, 24th November 1898.

I have received and considered your Excellency's military despatch* of the 4th August last, in which you submit your views as to the military position to be maintained on the Miranzai border, in the Tochi valley, and at Wana, and the adjacent portion of the frontier.

2. I may assume generally that the proposals contained in this letter are concerned, not immediately with ulterior strategical necessities, but with the protection and pacification of the Punjab frontier; and from this standpoint I proceed to pass some observations upon them. In regard to the Miranzai border, you are of opinion that the retention of some regular troops is at present essential for the protection of this part of the border, and that though their eventual withhdrawal may be on some grounds desirable, it cannot now be considered. You therefore appointed a Committee to report upon the question of the defence of the Samana range, with the objects of protecting the Miranzai valley against tribal incursions, and of supporting the police posts in that region. Of the two schemes submitted by the Committee, your Government adopted one (A), which contemplates holding the range in such strength (concentrated at Fort Lockhart) as would admit of a small moveable column being at once available to support the police posts, the force being dependent on Kohat for its main support. You recommend this scheme generally for my approval, leaving the details to be further examined, and reserving for submission hereafter any point that may need my sanction, with exact estimates of the cost.

3. In the Tochi valley you are of opinion that the entire withdrawal of troops would be impracticable in the existing circumstances; but you believe that it may be possible before long to diminish the garrisons, and to concentrate the regular troops, placing the main garrison at Miranshah. In my telegram of the 14th September I informed your Excellency that I approved the selection of Miranshah for that purpose.

4. Having regard to the general peace of the country in the vicinity of Wana, you think that the withdrawal of the troops from that post should not at present be undertaken; although you desire to follow out the principle of the concentration of regular troops, if and when you are able to provide an efficient substitute in the subsidiary post.

5. I have, therefore now before me, in outline and in anticipation of details and estimates, a sketch of the military position wich your Government are prepared to establish for the protection of a very large area of tribal territory. The general purport of your letter is to recommend the retention for the present

* See above, page 66.

of strong garrisons in fortified posts on the Samana range, in the Tochi valley, and at Wana. The important question of holding the minor posts by levies, or by militia, is engaging your attention, with the object of organising them, if necessary, in the future.

6. In regard to the general principles which should govern these military arrangements for frontier defence, Your Excellency refers to a statement made in paragraph 4 of your Military letter of 23rd June 1898, which affirms and accepts the leading principles laid down in my despatch of the 28th January 1898, as underlying the frontier policy to which Her Majesty's Government are determined to adhere. The first of these principles, as given in paragraph 18 of the despatch, was that no new responsibility should be undertaken unless absolutely required by actual strategical necessities and the protection of the British Indian border. And the two main objects to be borne in mind were indicated to be the best possible concentration of your military force that would enable you to fulfil your responsibilities and the limitation of your interference with the tribes, so as to avoid the extension of administrative control over independent tribal territory. With the question of concentrating your troops Your Excellency's letter now under reply has dealt carefully and comprehensively; but the second of the two objects which I have just mentioned is not of such a nature as to bring it adequately within the scope of a scheme for military defence. The measures which you submit for my approval must be regarded as a part of the arrangements necessary for the control and protection of the frontier, while these again must depend mainly upon the general policy of your Government towards the tribes, which, as you are aware, is now under consideration; and I wish to be assured that this side of the whole question has been thoroughly examined. Accordingly, before deciding finally upon proposals which, if approved, might bring a large extent of trans-frontier country under the permanent protection of the British Government—a step which can hardly be taken without some material increase of our responsibilities—I think it best to remit the case again to Your Excellency for full consideration, upon the political and military principles laid down in my despatch of the 28th January last.

I have, etc.,

(Signed.) GEORGE HAMILTON.

No. 10.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 10th August 1899.

In our Military despatch of the 4th May 1899,* we informed Your Lordship that we had finally decided that the force holding Landi Kotal and controlling the Khyber should be, as heretofore, a local force, and that it should have a strength of 1,200 men in two battalions under a single Commandant and Adjutant, with two other British officers to each battalion. It was added that Your Lordship would be separately addressed as to the organisation of this force, and as to the political arrangements for keeping open the Khyber route. Subsequently, in our telegram of the 14th July, we asked Your Lordship's sanction to proceed at once to raise the Khyber Rifles to the strength proposed, and this was accorded in your telegram of the 2nd August.

2. We now have the honour to enclose copies of the correspondence cited in the accompanying list, showing in detail the arrangements sanctioned for the reorganisation of the corps, and the cost entailed.

* Not printed.

3. We have decided to maintain the existing arrangements for the kafila traffic, *viz.*, that there shall be two kafilas a week each way in the cold weather, and one a week each way in the hot weather. While, however, in practice the Pass will be open for kafilas only on stated days, we retain the right to use it on any or every day of the week for any other purpose for which it may be required.

4. We invite Your Lordship's attention to our Foreign Secretary's letter dated the 22nd June 1899, to the Officer Commanding the Khyber Force and Mr. F. D. Cunningham. We have in this letter laid down the principle that, in the Khyber and elsewhere along the frontier, the various corps of tribal militia or rifles, or military police, though semi-military in organisation, are more than semi-political in functions and object, and, as such, must necessarily (except in time of active warfare) be under civil authority and control. While, therefore, we have reserved full discretion to invest the Commandant of the Khyber Rifles, or any other officer displaying special aptitude for the work, with political authority in the Khyber Pass, we have decided that ordinarily there will be a separate Political Officer in the Pass, to whom in all political matters the Commandant of the Khyber Rifles will be subordinate.

Enclosure in No. 6. Other enclosures not printed.

5. Measures will be taken at once to raise the corps to sanctioned strength, and we anticipate that it may be possible to withdraw the military garrison from Landi Kotal before the end of the year.

We have, etc.,

(Signed) CURZON OF KEDLESTON.

„ T. RALEIGH.
„ R. GARDINER.

Enclosure in No. 10.

Letter from H. S. Barnes, Esq., C.S.I., Officiating Secretary to the Government of India in the Foreign Department, to Colonel N. F. FitzG. Chamberlain, Colonel on the Staff Commanding Khyber Force, and F. D. Cunningham, Esq., C.I.E., dated Simla, the 22nd June 1899.

In the third paragraph of my letter dated 1st June, you were informed that the question of the political control of the Khyber Pass was still under consideration, and that orders on this point and also on the question of the relations between the Political Officer and the Commandant of the Khyber Rifles would be communicated hereafter.

2. In the fourth paragraph of the same letter, it is stated that the *raison d'être* of the Khyber Rifles is political rather than military, and that it was considered important not to deprive them of their tribal character. This view is admitted throughout the correspondence, and the only point, on which there appears to have been some difference of opinion between General Egerton and Mr. Cunningham, was the question whether the Commandant of the Khyber Rifles under the new organisation should be *ex-officio* the political authority in the Pass, or whether there should be a separate Political Officer to whom the Commandant would be subordinate.

3. The Government of India, after full consideration, desire to take this opportunity to lay down the principle that, in the Khyber and elsewhere along the frontier, the Corps of tribal militia, or rifles, or military police, by whatsoever name they may be called, though semi-military in organisation, are more than semi-political in functions and object, and that as such they must necessarily (except in time of active warfare) be under civil authority and control. Sometimes this authority is exercised by a military officer in civil employ (who may also on occasion be in command of the Militia or Rifle Corps as well). Sometimes it is exercised through an officer of the Civil Service. In either case, the principle is the same. In the opinion of the Governor-General in Council, there can be no doubt that the principle is a correct one, and it should be adopted and acted upon along the entire length of the North-West border.

4. In these circumstances, the principle being admitted, the selection of the officer by whom the civil control is to be exercised is a matter of personal fitness. I am therefore to say that, while retaining full discretion to invest the Commandant of the Khyber Rifles, or any other officer displaying special aptitude for the work, with political authority in the Khyber Pass, the Government of India have decided that ordinarily there will be a separate Political Officer in the Pass, to whom the Commandant will be subordinate. As regards the relations between the Commandant and the Political Officer, I am to add that the Government of India are of opinion that the rules suggested in paragraph 5 of General Egerton and Mr. Cunningham's letter of the 14th March are suitable and may be adopted.

5. I am to remind you that no time should be lost in submitting the proposition statement called for in paragraph 6 of my letter of 1st June. As soon as the additional defence works which are to be constructed at Landi Kotal and in the Pass are completed, the regular troops now in the Pass will be withdrawn. It is therefore important that there should be as little delay as possible in passing the final orders to raise the Khyber Rifles to the strength now desired.

I have, etc.,

(Signed) H. S. BARNES,

Officiating Secretary to the Government of India.

No. 11.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 26th October 1899.

Your Lordship's despatch dated 25th November 1898 acknowledged the receipt of the letter from Lord Elgin's Government of the 4th August 1898, containing proposals in regard to the military position on the Miranzai border, in the Tochi valley, at Wana, and in the adjacent parts of the frontier. In commenting on the plans submitted, Your Lordship referred to the leading principles of policy laid down in your despatch dated 28th January 1898, and pointed out that, while the proposals made dealt carefully and comprehensively with one of the main objects which Your Lordship desired us to bear in mind, *viz.*, the best possible concentration of our military force that would enable us to fulfil our responsibilities, the measures to be undertaken must also be devised with due attention to the principle that our administrative control over tribal territory was not to be extended, and must harmonise with the general policy that it is decided to pursue towards the frontier tribes. Your Lordship therefore remitted the case to us for full consideration in connection with this general question.

2. We have lately, as desired by Your Lordship, discussed the position on this part of the frontier in connection with, and as part of, the definite policy which we have already initiated in the Chitral Valley and in the Khyber Pass, and which has received Your Lordship's sanction. In the course of this discussion, we have arrived at certain conclusions which have been briefly communicated to Your Lordship in the Viceroy's telegram of the 2nd July, and which have met with Your Lordship's general approval. We now propose to set forth in greater detail the scheme which we recommend, and to explain the principles by which we have been guided.

3. The first principle laid down by Her Majesty's Government in Your Lordship's despatch of the 28th January 1898, was that no new responsibility should be undertaken on the frontier unless absolutely required by actual strategical necessities and the protection of the British Indian border. At the same time, as already stated, our attention was more specially directed by Your Lordship to the concentration of our military forces, and to the avoidance of unnecessary interference with the tribes. On the other hand, by their previous recommendations, the Government of India at the end of last year were more or less committed to a policy which involved the construction of fortifications and the retention of the existing garrison in Chitral, the expenditure of several lakhs of rupees on a new fort at Landi Kotal, and on other fortified works in the Khyber, the construction of the bed for a light railway from Jamrud to Landi Kotal, the maintenance of a military garrison on the Samana range and in the Kurram valley, and an expenditure on forts and posts in these two places which under the scheme A recommended in the despatch of 4th August 1898, and including the additional lines required at Kohat, amounted to Rs. 6,85,958. Certain additions to this scheme since recommended by the present Commander-in-Chief would have raised this expenditure to over eleven lakhs of rupees. In the Tochi valley it was considered necessary to maintain a considerable, though diminished, garrison, and it was proposed to establish a central cantonment at Miran Shah which could only have been constructed at a heavy cost. Similarly, it was proposed to maintain a military garrison at Wana in Southern Waziristan for the protection of the Gomal route from Afghanistan. It is true that it was proposed in time to withdraw the regular troops from Landi Kotal in the Khyber, but with this exception there was to be little reduction in the number of troops cantoned beyond our administrative border. The principle of the concentration of our regular forces would, in these circumstances, have been imperfectly applied, and there was the further risk that the maintenance of regular garrisons in tribal territory would inevitably tend to increase, rather than to diminish, the extent of our interference.

4. Upon the reconsideration of the whole position to which we were invited by Your Lordship, we came to the conclusion that the recommendations previously submitted were susceptible of some modification in order to bring them into greater harmony with the principles that had been laid down. Accordingly, early in the present year, we prepared and forwarded revised proposals in regard to Chitral and the Khyber Pass, which, with Your Lordship's approval, are now in process of being carried out. These proposals were not made without due regard to our position and our impending arrangements elsewhere on the frontier. We endeavoured in framing them to make them conform to a definite and preconceived plan of general application, and they may be regarded as initiating a positive course of policy and action on the North-West Frontier, which, we hope, will be continuous and which rests on principles applicable in our opinion along the entire border. These principles are in accordance with the general axioms laid down in Your Lordship's despatch of 28th January, and they may be specifically defined as follows:—

(i) We desire to avoid locking up regular garrisons in costly fortified positions, at a distance from our base, where the troops themselves are practically lost to the offensive strength of India, and, in time of emergency, would probably require additional forces to be detached from the Indian army to their assistance. It is for this reason that we proposed to withdraw or reduce our

existing garrisons in Chitral and Landi Kotal, and have decided not to proceed with the fortifications at those places on the large scale at first proposed.

(ii) Inasmuch as after withdrawing or reducing our garrisons we cannot leave these positions or districts—all of which have been taken in a greater or less degree under our control—without military protection, we propose in each of them, as far as possible, to interest the inhabitants of the locality in their own defence, at the same time that we establish a lien upon their loyalty, by enrolling them as a tribal force to supply the local garrisons. In different parts of the frontier, according to the state of development of our relations with the tribes, or to the character of defence required, different methods will be adopted. Thus for instance in Chitral, we have decided to utilise native levies, already existing under a system of feudal service, and to pay them a salary for holding small posts, in our interests, on the road between the Lowarai Pass and Chitral. Their organisation and equipment are entirely native. This is the most primitive and rudimentary system, and is only supplementary to a military occupation in which it has been resolved on wider grounds to persist. In the Khyber Pass we have reached a more advanced stage. Here the Khyber Rifles will replace the troops, and, as recently reorganised, they will consist of a body of men, recruited in certain proportions from the tribes, disciplined and equipped on more military lines, and commanded by British military officers. Nevertheless they are not a purely military body, and they are under the control of the civil power.

In all these cases the principle is the same, and is, we think, one of general application along the frontier, as well as of practical wisdom. By relieving the Indian army from the task of garrisoning and defending these outlying positions, it will be possible, when war breaks out on or beyond the frontier, to concentrate the majority of our troops upon the principal lines of advance. By enrolling the local garrisons as levies, or militia, or police, we reduce the publicity and exaggeration inseparable from proceedings of the regular army upon the frontier, while in the event of any contretemps, we escape the commotion and reproach that are apt to be excited by military disaster. Finally, we take into our pay, and thereby acquire a hold upon the allegiance of the tribesmen who, while their local patriotism is conciliated by employment as the guardians of their native hills, develop at the same time under the influence of a quasi-military discipline an ever increasing loyalty to the British Government.

(iii) Having withdrawn our regular garrisons from these advanced posts and having substituted for them tribal forces, we cannot allow the latter to be imperilled or destroyed by local risings or by external attack. Accordingly at bases within or contiguous to the administrative frontier of India, we propose to maintain moveable columns ready to march to the relief or defence of the advanced positions, and, where possible, to connect the frontier cantonments with the military resources of India by light railways pushed forward from already existing railway systems. Thus, for the support of the Chitral position, we keep a garrison at the Malakand, and for the present, a moveable column at Khar. It has also been decided to construct a light railway from Nowshera to Dargai. In support of the Khyber there is a moveable column at Peshawar, and we have decided, with Your Lordship's sanction, to extend the railway on the standard gauge as far as Jamrud.

We have stated these principles at some length, because, if they are approved, their record may be of use for future guidance. It is also desirable that Your

Lordship should clearly apprehend the objects at which we desire to aim, and the unity of plan which underlies both our past and present recommendations.

5. We now propose to apply these considerations to that part of the frontier which is dealt with in Your Lordship's despatch of the 25th November 1898. We have carefully re-examined the proposals made by Lord Elgin's Government, and we see no reason why this part of the border should be dealt with on different principles from those which we have adopted in the sections of the frontier which have already come under our notice. There are also indications in the despatch of 4th August 1898 that a policy of progressive withdrawal and the substitution of tribal militia for regular troops had already been in the background of the intentions of our predecessors. We have therefore, after full discussion, come to the following conclusions :—

(i) That it is possible and will be safe at an early period to withdraw the military garrisons from the forts on the Samana range.

(ii) That the troops shall be replaced by a battalion of military police about 460 strong, to be called the Samana Rifles, and to be commanded by police officers. This form of tribal militia or military police will be intermediary between the native levies of Chitral and the more military organisation of the Khyber Rifles. In our view precise uniformity of system is not essential on a frontier, so long and with such varying conditions both of local population and the degree of British control as the North-West border, and we think it far from undesirable that different experiments should be made in different parts. This police battalion will be largely recruited from the Orakzai tribesmen, who will thus be enlisted on our side in guarding their own border.

(iii) That similarly there will be no serious difficulty or risk in withdrawing the regular troops from the Kurram valley, where we have a loyal population to deal with ; their place being taken by an increase to the existing Kurram Militia. It is proposed that this increase should take the form of a second battalion, 400 strong, under police officers, the existing battalion being given a more military organisation, and being provided with additional officers.

(iv) That for the support both of the Samana position and the Kurram valley a new cantonment be established in Miranzai, the position which has been recommended as most suitable being the open plain at an elevation of over 3,000 feet, which lies between Doaba and Torawari. The establishment of this cantonment is, we consider, a necessary condition of the withdrawal of the regular troops from these two advanced positions. Indeed, His Excellency the Commander-in-Chief considers that such a cantonment would have been necessary even if we had decided to adhere to the scheme A which was recommended in our despatch of the 4th August last. Its construction will have the further advantage of obviating the demand for the additional Native Infantry lines which it would otherwise have been necessary to build at Kohat.

(v) That while the obligations into which we have entered render it impracticable to consider the question of a total withdrawal from either the Tochi valley in Northern Waziristan, or from Wana or the other obligatory positions in the Gomal and Shahur valley in Southern Waziristan, a prolonged or permanent military occupation of these places by the troops of the Indian army is not necessitated by political or strategical considerations.

(vi) That, in pursuance of the policy initiated elsewhere on the frontier, the troops may be gradually withdrawn from all these places at as early a date as is consistent with safety and expediency.

(vii) That to replace the troops, two new Militia Corps, similar to the Khyber Rifles and the Kurram Militia, shall be raised under British officers and largely recruited from the local tribes. One of these corps will hold the Tochi valley, the other will have its head-quarters at Wana, and will hold the necessary posts on the Gomal and Shahur routes. It is proposed not to maintain the present system of Sillahdari levies, but to absorb into the militia most of the men who are now engaged, employing a small portion of the new corps for civil and political duties, and continuing only such allowances to the local Maliks as the Local Government may think necessary, in order to enable us to count on their support and good-will in maintaining the peace of the country.

(viii) That in consequence of these arrangements, it will not be necessary to proceed with the proposed fortified cantonment at Miran Shah, but for the support of the Tochi position a moveable column will be maintained at Bannu.

6. We have been in communication with the Government of the Punjab in connection with these proposals, and they have on the whole met with the concurrence of His Honour the Lieutenant-Governor. We enclose, for Your Lordship's information, copies of the correspondence as detailed in the accompanying list. In the case of the militia for the Samana and the Kurram, we have not yet received the final conclusions of the Local Government, in the form of the necessary proposition statements, though the arrangements are in an advanced state of preparation. Our Foreign Secretary's letters to the Punjab Government of the 14th and 18th July explain the points on which we still await information. The estimated net cost of the Samana Battalion is Rs. 78,507, and of the additions to the Kurram Militia Rs. 1,29,126 a year. These totals may be slightly increased in the final proposals which we shall receive, but the net cost of the two schemes will not, we think, exceed Rs. 2,20,000 a year. In accordance with the general sanction given in Your Lordship's telegram of 25th July, and as soon as we receive the replies of the Punjab Government, we propose to sanction these two schemes, and to proceed without delay with the enlistment of the Samana Rifles and of the additional militia for the Kurram valley. We anticipate that it may be possible to withdraw the troops from the Samana range and the Kurram in about nine months from the date of sanction to these two schemes. As regards the new cantonment which it is proposed to place at Torawari, we think it desirable to test the suitability of the site before incurring a large expenditure on buildings and other works. We have decided, therefore, to place there in camp a moderate force consisting of not less than one regiment of Native Cavalry, one Native Infantry regiment, and a Mountain battery. These troops will be provided later on with adequate shelter during the hot weather, and, if the site proves to be satisfactory, we will proceed gradually to construct permanent barracks and other buildings.

7. Our proposals in regard to Waziristan are in a less advanced state, and will take a longer time to complete Our Foreign Secretary's letter to the Government of the Punjab of 7th August explains our views in detail, and before we can furnish Your Lordship with more precise and detailed proposals, it will be necessary to await the report of the Committee which we have directed the local Government to convene. But the information given in the papers which we forward will, we think, be sufficient to enable Your Lordship to form an approximate estimate of the cost of the scheme when completed. Assuming the absorption in the new corps of the greater number of the existing Sillahdari levies, the nett cost of a militia corps in the Tochi of a strength of 700 rifles and 50 cavalry is estimated at Rs. 87,452 a year. The nett cost of the larger scheme of 1,000 rifles and 60 cavalry suggested by the Commissioner of the Derajat would be about Rs. 1,35,000. We must await the proposals of the Committee and the Local Government as to the exact strength which may be required, but assuming the strength of each of the two corps in Waziristan to be not less than 800 or more than 1,000 rifles, the nett cost for both will be from 2 to 2¾ lakhs

per annum. We would ask Your Lordship's permission to sanction such a strength for each corps, as in communication with the Local Government we may find to be necessary, within a limit of 3 lakhs a year nett increase of expenditure. The initial expenditure in connection with these corps cannot be large, as it is assumed they will take over the buildings now occupied by the troops.

8. It will be convenient at this stage to furnish Your Lordship with some estimate of the difference in cost of the arrangements now proposed, and of those which were in existence or were contemplated in January of this year. Such an estimate can, from the nature of the case, be only approximate, but the figures which we have been able to collect, and which are given in the three statements* herewith enclosed, are sufficient to demonstrate that the policy now contemplated must result at once in a very considerable, and in the long run in a permanent, relief to the Indian exchequer. Excluding the cost of the new cantonment in Miranzai, which will be dealt with hereafter when we are satisfied as to the most suitable site, and also the cost of the temporary camp, which it is impossible at present to estimate, but which should not be large, the difference in the initial expenditure on posts and fortifications, which we now propose, and that of the larger programme of military works contemplated last year, is no less than 26½ lakhs of rupees.

* Enclosures not printed.

The saving in the recurring expenditure will also be substantial. If we find it possible to carry out to the full all our present proposals, the withdrawal of troops from the advanced positions which they now hold, and the substitution of militia corps and levies will result in the end in an annual saving of 2¾ lakhs. A large portion of this saving will accrue at once, or within a very short interval, inasmuch as one regiment is now being withdrawn from Chitral, the troops at Landi Kotal will, we anticipate, return to India before the end of the year, and as already stated the withdrawal of the Kurram and Samana garrisons will, we hope, be possible within about nine months from the present time. We have already referred to the other obvious advantages of the present proposals, *viz.*, the addition to our defensive strength on the border by the enlistment of the tribesmen in local corps for the police of their own hills, and the increase to our offensive power by the recall and concentration of the troops of the regular army. The extent of the relief which will be thus afforded may be measured by the fact that, without counting the two battalions which would in any case have been withdrawn from Landi Kotal, they will set free for service elsewhere about five battalions of native infantry.

We have, etc.,

[Enclosure not printed.]

No. 12.

Despatch from the Secretary of State for India to His Excellency the Right Hon'ble the Governor-General of India in Council, dated India Office, London, the 4th January 1900.

North-Western Frontier. Military arrangements for Samana, Kurram, and Waziristan.

I have considered in Council Your Excellency's letter No. 208 of the 26th October last, in which you explain the principles by which you have been guided in formulating your recommendations for the concentration of your military forces on the North-Western Frontier, and set forth in detail the measures which you propose to adopt.

2. In my telegram of the 13th October 1897, I expressed the view that "the present opportunity should be used for defining our permanent position and policy"; and in the 18th paragraph of my Despatch of the 28th January 1898, I pointed out that one of the main objects to be kept in view should be the "limitation of your interference with the tribes so as to "avoid the extension of administrative control over independent tribal territory."

3. Subsequently, in reply to your predecessor's Military Letter of the 4th August 1898, I again referred to the question of the limitation of interference with the tribes as having an important bearing on your military proposals, and remitted the recommendations of the Government of India for further consideration upon the political as well as the military principles laid down in my Despatch of January 1898.

4. In your letter now under reply you report the military arrangements made upon an important section of the North-Western Frontier, and you explain that they have been framed upon a definite plan intended for general application, which you desire to carry out as representing the continuous policy to be followed in dealing with questions of the protection of our own territory and the police of the border. The main object of these arrangements is the withdrawal of garrisons of regular troops from fortified positions beyond the frontier, or their reduction as circumstances may allow; and the substitution of milita recruited from the tribes of the country, disciplined and equipped to a certain extent upon military models, and usually commanded by British officers. In some cases untrained native levies are to be employed in maintaining posts of communication.

5. These measures, and the policy upon which they are based, appear to me to be in accordance with the principles laid down in my Despatches to you on the subject, particularly in the 18th and 19th paragraphs of my Despatch, dated 28th January 1898, in regard to the discharge of the duties and responsibilities devolving upon the British Government in its relations with the frontier tribes.

6. I sanction the proposals submitted to me, and the expenditure which is estimated to be necessary, and I have pleasure in conveying to you, on the part of Her Majesty's Government, their recognition of the judgment, ability, and promptitude with which your Government has taken up and dealt with these important questions.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 13.

Letter from Government of India, Foreign Department, to the Right Honourable Lord George F. Hamilton, Her Majesty's Secretary of State for India, dated Simla, the 13th September, 1900.

In your despatch of August 5th, 1898, in which you discussed the future administration of the North-West Frontier of India, as affected by the war of the preceding year, Your Lordship used these words: "Her Majesty's Government are of opinion that the present arrangements are not satisfactory, and that it is desirable that the conduct of external relations with the tribes on the Punjab Frontier should be more directly than heretofore under the control and supervision of the Government of India." Your Lordship, in inviting the attention of Lord Elgin's administration to certain suggestions for the attainment of this object, went on to remark: "The matter is too important for me to arrive at any final decision without giving to it the fullest consideration. I shall receive with interest any further observations which Your Excellency may desire to n
the suggestions of this despatch."

2. The proposals alluded to, relating to a change in the political control of the tribes on the Peshawar Border, by an alteration in the position of the Commissioner of Peshawar, were referred to the Punjab Government in the autumn of 1898. The replies of the Lieutenant-Governor and of the principal Frontier officers of the Local Administration, together with a Minute by the Viceroy, Lord Elgin, were forwarded to Your Lordship in a despatch dated the 10th November 1898. Lord Elgin explained in his Minute that, while anxious before leaving India to submit his own opinions in an official form, he desired to speak for himself alone, and not in any way to pledge the Government of India, for whose mature and deliberate consideration the whole case must be expressly reserved.

3. This consideration we have now, in the light of further experience, and of a most careful examination of all the factors of the problem, given to it; and we submit to Your Lordship the conclusions at which we have arrived.

4. We are even more profoundly convinced than was Your Lordship of the unsatisfactory nature of the present position. It is as unsatisfactory from the point of view of the Punjab Government as it can be from that of the Government of India. The former is called upon to carry out a Frontier policy for which it is not in the last resort responsible, and with which it is not specially qualified to deal. The latter is responsible for a Frontier policy which is not carried out by its own agents, and is to a large extent removed from its direct supervision. Labour without responsibility is the experience of the Local Government; responsibility without control is that of the Government of India. This situation, which is equally invidious for both parties, has been aggravated in recent years by the circumstances that have brought a larger number of the Frontier tribes under the influence of the Government of India, and have compelled the institution of political relations with them, not always or easily to be adjusted to the scope and capabilities of a Provincial Administration. Some radical change in the existing system of Frontier management appears to us to be required, if there is to be either firmness, promptitude, or continuity of Frontier policy in the future.

5. The entire question has for some time engaged the close attention of His Excellency the Viceroy, who has personally visited the Frontier in order to examine the situation upon the spot. He has now submitted his views and proposals in an exhaustive Minute, which has been considered by us, and which we forward to Your Lordship with an expression of our unanimous and hearty agreement with its main propositions.

6. The problem is one which is capable of being dealt with in one of three fashions. It might be possible to reduce the difficulties and dangers of the present situation by conferring a considerably larger measure of independent authority and control over the Frontier administration upon the Punjab Government. We could not ourselves recommend such a proposal, for the reason that any addition to the powers of the Local Government must involve a corresponding subtraction from those of the Government of India; and that to increase the responsibility of the former at the expense of the latter would defeat the entire object that we have in view. But in any case we are precluded from even considering this alternative by the express injunction of Your Lordship, already quoted, which postulates a closer and not a more perfunctory control by the Government of India in the future.

7. Of the various compromises that are capable of being suggested between such a scheme and that of the creation of a new administration, we will only observe that we are in complete agreement with the Lieutenant-Governor and the officers of the Punjab Government in their rejection of the particular proposal that was indicated in Your Lordship's despatch of August 5th, 1898, and with His Excellency the Viceroy in the criticism that he has passed upon other and cognate suggestions in his Minute.

8. There remains only the third alternative; that of the construction of a new Agency or province, to be under the immediate control of the Government of India, and to be created out of those Trans-Indus districts of the Punjab in which British officers are brought into direct contact with, and become

responsible for, the management of the Frontier tribes. We are convinced that our duties, whether towards them, or to our own subjects on this side of the border, are more likely to be discharged with the resolution, despatch, and freedom of personal discretion that are essential to success in dealing with such questions, by an Agent to the Governor-General, acting in direct touch with the local officials on the one hand and the Government of India on the other, than will be possible so long as the more complex mechanism and the stereotyped procedure of a first class Provincial Government continue to be interposed between the Frontier and ourselves.

9. His Excellency the Viceroy has worked out with much care the suggested scope and character of the new administration. We concur with him in thinking that the main desideratum to be borne in mind, consistently with the root principle of our policy, is the least possible disturbance of existing arrangements. His scheme appears to us to have been devised with this object, and to be capable of execution not only without detriment, but even with advantage, to the interests of the existing province and its officers.

10. Should the project, in its general outlines, meet with the approval of Your Lordship and of Her Majesty's Government, we would not propose to carry it into effect without the fullest consultation with the Punjab Government. It might be susceptible of modification and improvement at their hands. It should not be regarded, even from our own point of view, as fixed or finite, until it has been subjected to the scrutiny of those who, from their local knowledge, will be better able than ourselves to advise upon details, both administrative and geographical. The exact boundaries and sub-division of the detached districts, the constitution of the political, civil, and judicial service of the new Agency, and the effect produced upon the Punjab Commission, are all matters upon which we should desire to enter into friendly discussion with the Lieutenant-Governor. Should we receive your Lordship's permission to do so, we entertain little doubt of being able to submit to you, with no great delay, the full and final details of the projected reform.

11. As regards its financial cost, we call to mind that your Lordship, in your despatch of August 5th, 1898, conceded to the Government of India "a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to the considerations" to which you had invited our attention. It is too early at the present stage to pronounce with any definiteness as to the outlay that is likely to be entailed by still inchoate proposals. We are not without hopes, however, that, even when they are fully developed, we shall not be called upon to profit by the latitude which has been so generously allowed to us, but shall be able to commend our scheme as consistent with the interests of economical as well as efficient administration.

12. Finally, in submitting these proposals, we desire to impress upon Her Majesty's Government that we regard them as essential to the prosecution of the larger scheme of Frontier policy upon which, with their approval, we have lately embarked: that they are put forward, not in any experimental interests, but with the firm conviction that they will be conducive to a consistent and peaceable continuance of our present and harmonious relations with the majority of the border tribes: and that, while, if accepted, they will emphasise the due responsibility of the Government of India for Frontier policy and concerns, they will also be the means of investing the officers who conduct those affairs on the spot with that wider liberty of action and leisure for personal intercourse with the Pathan peoples which have long been recognised as an indispensable condition of Frontier success.

We have, etc.,

Enclosure in No. 13.

Minute by the Viceroy on Frontier Administration.

During the year and-a-half that have elapsed since January 1899, the Government of India have matured and are now carrying into execution a new policy for the military charge and control of the North-West Frontier. We have reduced the regular garrison in Chitral, have concentrated our troops at Drosh, in close proximity to the British end of the Dir-Chitral line of communication, and have supplemented our military strength in the country by native levies, raised from the Mehtar's subjects. We have at the same time strengthened the Malakand position by the construction of a rail-road from Nowshera to Dargai.

2. In the Khyber we have successfully withdrawn the whole of the regular troops, both British and Native, from all positions in the Pass; and have replaced them by two battalions (1,250 in all) of the reorganised and enlarged Khyber Rifles, with an increased number of British officers, and an improved scale of pay. We have abandoned the costly and extensive fortifications which it was at one time proposed to build in the Pass and at its further extremity; and have, at a greatly reduced outlay, constructed the additional or improved defences that are required for the Afridi garrison. We have desisted from the plan of laying either the bed of a railway or a railway itself up the Khyber Pass, and have contented ourselves with a modest extension of the existing North-West Railway for the distance of 10 miles that separates Peshawar from Jamrud. Flying columns, maintained beyond the Malakand and at Peshawar, provide for the rapid reinforcement of these two sections of the frontier.

3. Between Peshawar and Kohat we have arranged peaceably for the construction of the long desired cart-road through the Kohat Pass, a work which is about to be undertaken with the consent and co-operation of the Pass tribes. We further contemplate, at as early a date as our resources will bear the outlay, the linking of Kohat by railway with Kushalgarh upon the Indus, at which point connection by rail already exists with the military base of Rawalpindi.

4. South of Kohat a force of tribal militia, 450 strong, largely recruited from the Orakzai tribesmen and entitled the Samana Rifles, has been raised under British officers as an extra battalion of the Border Military Police, and is intended, as soon as the conditions permit, to replace our regular garrisons now maintained on the Samana Range.

5. In the Kurram valley, the Kurram Militia have been augmented in numbers and reorganised in two battalions (1,250 strong) under British officers. It is believed that the high state of efficiency which they have already attained will very shortly admit of the withdrawal of the regular garrison which has been maintained in the Kurram valley since it was taken over in 1892. Both the Samana and the Kurram positions will be supported by the light railway which it is in contemplation to build from Kohat to Thal.

6. Further to the south measures are now being taken for the realisation of a similar policy. Two battalions of Waziristan Militia of 800 each are in course of being raised, the one for the Tochi valley or Northern Waziristan, the other for the Gomal valley or Southern Waziristan. They are intended, as soon as the requisite degree of discipline and efficiency has been attained, to replace the large garrisons of regular troops which have been kept in those valleys since 1895.

7. The principle that underlies all these dispositions is the same. While entailing no abdication of the responsibilities, military or political, which have been assumed by the Government of India at an earlier date, and which could not, either with safety or in honour, be now repudiated, they are intended to extricate from advanced positions the large numbers of regular troops who have for some years been stationed there; to consolidate instead of diffusing our military strength upon the border; and to promote a spirit of local harmony and co-operation by the enlistment, in the service of the British Government, but in the defence of their own country, of the wild but not intractable inhabitants

of these regions. It is hoped, if the scheme be given a fair start, that its possible risks may be more than compensated by its unquestioned advantages of reduced outlay, of increased tactical mobility, and of tribal contentment. Above all, the scheme which I have sketched, which has been inspired, not by a Local Government, but by the Supreme Government, and which is under the control not of the military authorities, but of the Foreign Department, *i.e.*, of the Viceroy, is intended to emphasise the responsibility, which the Government of India has assumed and of which it cannot ever safely divest itself, for the pacification and control of regions which lie upon the borders of the Empire, and which, if any part of the Indian frontier be at any time exposed to attack, will in all probability be the immediate focus of military and political danger.

8. I now desire to supplement these plans, which have so far been attended by consequences as favourable as could possibly have been hoped for (though I shrink from any dogmatism as to the future) by submitting the proposal, which is their natural complement and climax, and upon which they are in my judgment dependent for the prospect of continuing success—*viz.*, the constitution of a form of administration in the tracts in question which shall bring to bear upon them the authority and influence of the Government of India in a manner more prompt, more imperative, and more direct, than will ever be found possible, so long as the elaborate organisation of a Local Government of the first class intervenes between it and them. I have not brought forward this scheme until I have satisfied myself, by more than a year and-a-half of patient enquiry and observation in this country and in the Departments of Government, of the complexities, the anomalies, and, as they appear to me, the ineradicable flaws, of the existing system; nor have I ventured to indicate what in my opinion should be the keystone of the frontier arch, until I have endeavoured securely to lay the foundations upon which its piers must rest.

9. This is by no means the first time that the proposal has been made to create a new and separate administration for the North-West Frontier. On the contrary, schemes of varying character and magnitude have been submitted to and debated by the Government of India throughout the last quarter of a century; and it may safely be said that there is no Frontier authority of any eminence during that period who has not discussed, while there are but few who have not approved the principle of such a change. This remarkable unanimity * testifies to the depth and range of the conviction upon which the desire for reform has been based and effectively relieves any fresh disputant from the charge either of rashness or of innovation. On the other hand, the fact that all previous endeavours have proved abortive, and that the existing system, though so widely and authoritatively condemned, has continued to survive, suggests that the problem itself is far from easy of solution, and that, before it be again approached, a brief survey of earlier efforts and, if possible, an analysis of the causes of their failure, may be helpful to the present argument.

* Among those who have at different times held these views, I may mention Sir Bartle Frere, Sir Henry Durand, Lord Roberts, Sir James Browne, Sir Robert Warburton, Sir Robert Sandeman, Sir William Lockhart. I exclude those whose views have been formed independently of Frontier experience, such as Lord Lytton, Sir Charles Aitchison, Sir George Chesney, Lord Lansdowne.

History of past attempts.

10. From the date of the Mutiny until 1889, the discussion of a separate Frontier province and administration was invariably mixed up with, and arose in the first place out of, the proposal to incorporate Sind with the Punjab. Sind had been conquered in 1843, when—the Punjab not having as yet been annexed, and Bengal, which embraced administratively the whole of the north of India, being too remote—it was added, in spite of the distance and the intervening sea, to the Government of Bombay. Even when the Punjab was annexed in 1849, and when, after the Mutiny, it was constituted a Lieutenant-Governorship, it was decided by the Secretary of State not to attach Sind to it, owing to the excellent administration which the latter province was at the time receiving from its Commissioner, Mr. Bartle Frere, under the Government of Bombay. In later years, in 1863 and in 1876, Sir Bartle Frere himself became one of the

strongest advocates of the fusion which his own abilities had successfully availed to postpone. During the Viceroyalty of Lord Northbrook, the incorporation of Sind with the Punjab was, in April 1876, formally recommended to the Secretary of State, and was accepted in principle by him, though a final expression of opinion was deferred until the newly-appointed Viceroy, Lord Lytton, had visited the frontier.

11. The result of this visit was the appearance of Lord Lytton's wellknown Minute of April 22nd, 1877, which at once raised the question on to a different level by suggesting the creation of a separate Trans-Indus District, under a representative of the Viceroy, as the sole exponent of Imperial policy in India. The anomalies and drawbacks of the existing situation were vigorously delineated; and the outlines of the new administration were clearly sketched. The province was to consist of the six Frontier Districts of the Punjab, *viz.*, Hazara, Peshawar, Kohat, Bannu (except the Cis-Indus tracts), Dera Ismail Khan (with the same exception) and Dera Ghazi Khan, and also Trans-Indus Sind (with the exception of Karachi). At the head was to be a Chief Commissioner of the North-West Frontier and Agent to the Governor-General, to reside at Peshawar, with the powers of a Local Government, and with a Judicial Commissioner possessing the powers of a Chief Court. Under him were to be two Commissioners, one for the Punjab Frontier Districts except Dera Ghazi Khan (*i.e.*, for the Pathan population of the border); the other for Baluchistan, Dera Ghazi Khan, and Trans-Indus Sind (*i.e.*, for the Baluch population). Into the constitution of the lower grades of the administrative hierarchy, which was to be furnished, with an increased scale of pay, from the Punjab Commission, I need not enter. The covering despatch which was sent with this Minute to the Secretary of State, dated May 17th, 1877, recommended the adoption of its proposals, and the compensation of Bombay for the loss of Sind by the administrative absorption of the whole or part of the Central Provinces—thereby introducing an element of discord which effectually ruined this and all similar proposals for many years to come.

12. The Secretary of State in replying, on November 29th, 1877, accepted the main proposals of Lord Lytton's Government, remarking that the conditions under which the Frontier had been given to the Punjab were obsolete, and that the proposals themselves were "measures of defence and security, not of aggression." Nevertheless, looking to the heavy financial cost of Lord Lytton's complete scheme and to the desirability of not embarking upon too large a change, he recommended, as a smaller and less ambitious proposal, the elimination of the Chief Commissioner or single supreme authority, and the creation of two Commissionerships for the Trans-Indus Districts of the Punjab and Sind (the one for the Pathan, the other for the Baluch tribes). The incumbents of both posts were to be appointed by the Viceroy, but in respect of all internal affairs were to take their orders from the Punjab Government. The Northern or Pathan Districts Commissioner was to be the superior in status, with the rank of Agent to the Governor-General and Frontier Commissioner, and with the right to correspond directly with the Viceroy. The Southern Commissioner was to be subordinate to, and to correspond with, his Northern colleague.

13. I call special attention to this proposal, as to which it was admitted that it involved "a duplicate responsibility which is in theory objectionable and may be attended with occasional inconvenience," because it was the first suggestion of a form of compromise which has re-appeared at intervals since, which possesses undoubted superficial attractions, but which has invariably been condemned by those enjoying the closest practical acquaintance with the frontier. Sir C. Aitchison, who was at that time Foreign Secretary and who subsequently became Lieutenant-Governor of the Punjab, noted that "it would probably be difficult to devise a scheme more full of the seeds of future misunderstanding, confusion, and divided responsibility." Sir R. Egerton, the Lieutenant-Governor of the Punjab, remarked—"It is almost impossible to exaggerate the inconvenience which might arise from this division of authority. It would have the worse effect upon the internal administration of the Frontier districts." Other members of the Government described it as quite unworkable and as radically bad.

14. Lord Lytton, however, thinking that half a loaf was better than no bread, was prepared, with certain re-adjustments, to accept the modified scheme. A correspondence ensued with the Punjab Government as to the best methods of carrying it out. The arrangements were nearly completed, and Sir F. (now Lord) Roberts had even been designated as the first Northern or Chief Commissioner of the frontier, when, in the winter of 1878, war broke out with Afghanistan.

15. In the ensuing year, when the war was apparently ended, the project was revived. Then came the Cavagnari massacre and the second Afghan expedition. When peace had been re-established, and the future administrative dispositions required to be made, Lord Lytton had left India. His successor, Lord Ripon, recommended to Her Majesty's Government the abandonment of the entire scheme, both for the separation of the Trans-Indus Districts from the Punjab Government and for the transfer of Sind; and both projects accordingly disappeared from view.

16. Some years elapsed before, in the concluding year of Lord Dufferin's and in the opening year of Lord Lansdowne's administration, either project was revived. The transference of Sind to the Punjab was then again proposed. Matters had, however, changed in the interim. With the creation of the Baluchistan Agency under Sir Robert Sandeman, Sind had ceased to be a frontier, and had become an internal province. Willing as Bombay might be to consider the exchange of Sind for the Central Provinces, the Chief Commissioner of the latter submitted an argument which, in the altered condition of circumstances, was fatal to any such proposal. Early in 1889, accordingly, this scheme, which for over 30 years had at fitful intervals re-appeared upon the scene, finally vanished from view. I do not propose, and I cannot imagine that any of my successors will ever propose, to revive it. The interests of Sind, now that it is no longer a Frontier Province, if they have no special connection other than a historical one, which is not to be despised, with Bombay, have, on the other hand, no connection with the Punjab other than that of geographical contiguity with the outskirts of that province. Sind is, I believe, content with its present, and rather peculiar, administration, the foundations of which were laid by Sir Bartle Frere, and I see no reason for disturbing it. Still less ground would there be either for partitioning or for handing over to another Government the Central Provinces. That Administration has, since its constitution, greatly increased in size, in numbers of population, and in importance. It has no natural connection with Bombay. It requires the undivided services of a single Governor. A series of capable administrators have established its indisputable right to an independent existence.

17. The discusssion, which had been resumed in the Viceroyalty of Lord Lansdowne, as to the desirability of creating a new Frontier Province, terminated in a decision not at present to proceed further with any such scheme, but to leave to the Punjab Government the responsibility of carrying out, in the middle or Pathan section of the Frontier, a more active policy than had hitherto been in vogue, with the view of establishing friendly relations with the tribes upon this part of the border, similar to those which were alleged already to exist in Dardistan and Baluchistan. Twelve years earlier Lord Lytton had written in his Minute:—

"I believe that our North-West Frontier presents at this moment a spectacle unique in the world; at least I know of no other spot where, after 25 years of peaceful occupation, a great civilised power has obtained so little influence over its semi-savage neighbours, and acquired so little knowledge of them, that the country within a day's ride of its most important garrison is an absolute *terra incognita*, and that there is absolutely no security for British life a mile or two beyond our border."

18. How little change had been effected in the interim may be illustrated by the almost exact reproduction of the same complaint in the same language in the letter, dated 17th October 1889, in which Lord Lansdowne's Government laid down its new injunctions for the guidance of the Local Government:—

"The Government of India cannot consider its present relations with the trans-frontier tribes on the Punjab border as either suitable or satisfactory, and the absence of any friendly understanding between them and the neighbouring British officers may at any time prove a source of serious danger and anxiety. The country within a day's ride of one of our most

important garrisons is indeed almost a *terra incognita*, and there is no security for British life a few miles beyond the border. Punitive expeditions have been frequent, but have been attended with very few permanent results, and there is probably no other spot in the world where, after 35 years of peaceful occupation, a great civilised power has obtained so little influence over its semi-savage neighbours or has acquired so little knowledge of them."

19. This correspondence was not attended by any appreciable results. It was an attempt to recommend to the Punjab Government methods other than those to which it had been accustomed, and did not accordingly meet with an effusive welcome at its hands. From a perusal of many such discussions of which this is only one, I derive the impression that any attempt, in the case either of the Punjab or Baluchistan Administrations, to indicate to the one a preference for the system followed by the other foredooms the discussion to practical sterility. It is so easy to demonstrate a difference of conditions that any argument as to similarity of treatment is capable of being hotly contested, and is certain to be fruitless. Much of the failure to devise any better method in the past has been due to the unconscious affront to local susceptibilities, caused by the suggestion of an analogy, which is thought to be, and perhaps sometimes is, misleading.

20. In the concluding months of Lord Lansdowne's administration, a great change was introduced in the entire circumstances of the Frontier, and notably in the question which I am here discussing, by the conclusion of the Durand Agreement at Kabul in November 1893, whereby a line of division, subsequently demarcated through the greater part of its extent, was drawn between the British and Afghan possessions, from Chitral to the borders of Seistan. On the British side of the line was left, notably in Waziristan, a great block of tribal territory, with which the Amir henceforward had no right of interference, and which, without being thereby either absorbed or annexed by the Government of India, passed into its indisputable sphere of influence. The establishment of control over its people or even of friendly relations with them may be rapid or slow, complete, imperfect or illusory. But the territory so demarcated has ceased to belong to any other political system and has fallen within the Protectorate of a Power which, while it may not be anxious to assume, cannot in the last resort repudiate, its paramount responsibility. So clearly was the entire change in the conditions produced by this Agreement seen by Lord Lansdowne that, on leaving India, he left the following opinion on record:—

"I hold that, irrespective of the objections to a system of dual control (*i.e.*, by the two Local Governments of the Punjab and Baluchistan), it is not desirable that the great Frontier region for which we have become responsible to the north of the Gomal should be administered by an already overworked Local Government, only a few of whose officers are really familiar with Frontier affairs, while all of them are overladen with routine work. All the circumstances seem to me to point to the creation of a single Frontier charge entrusted to the management of a single officer under the immediate direction of the Government of India."

21. In the early years of Lord Elgin's administration, an attempt was once more made to escape from the necessities of a radical change by again suggesting to the Punjab Government the initiation of a policy of friendly intercourse with the tribes for whom we had thus assumed political responsibility and for the strengthening of the political service on the border. Into the discussion that followed with the Punjab Government I need not enter. Suffice it to say that it was not followed, so far as I can ascertain, by any practical changes, either in the principles or in the form of administration. Then ensued the Frontier risings of 1897, and the Frontier war culminating in the Tirah Campaign.

22. At the conclusion of the war, the Secretary of State, in his despatch of August 5th, 1898, summing up the situation as it then stood, used these remarkable words:—

"Her Majesty's Government are of opinion that the present arrangements are not satisfactory; and that it is desirable that the conduct of external relations with the tribes on the Punjab Frontier should be more directly than heretofore under the control and supervision of the Government of India."

23. In order to secure this end, the Secretary of State then invited the attention of the Government of India to the suggestion that the Commissioner of Peshawar, and the officers employed in conducting external relations with the tribes under him, should act directly under the Government of India. The Commissioner should be appointed by the Viceroy with special reference to these responsibilities, and should send copies of his reports to the Lieutenant-Governor of the Punjab. In all other respects, *i.e.*, in all matters of civil administration, he and his officers would continue as now to be under the Local Government.

24. It will be observed that this proposal was an almost exact reproduction of the scheme that had been put forward by another Secretary of State 21 years before, and that had perished at the outbreak of the Afghan war.

25. The 1877 scheme contemplated the appointment of two Commissioners, the one for Baluchistan, the other at Peshawar. Both were to be appointed by the Viceroy, but in respect of all internal affairs were to take orders from the Punjab Government. The Northern Commissioner was to correspond directly with the Government of India. I have already quoted the severe criticisms which were passed in India upon the earlier scheme, even though it was accepted, *faute de mieux*, by Lord Lytton. The only material difference in the 1898 scheme was that the Southern Commissioner having already been created in the interim in the person of the Agent to the Governor General and Chief Commissioner for Baluchistan, the proposal was restricted to the Northern or Pathan section of the border. The reception which was accorded to it may be judged from the correspondence that was sent home to the Secretary of State by Lord Elgin's Government in November 1898, shortly before I came out to India, and that contained the opinions of the Viceroy, the Lieutenant-Governor of the Punjab, and the leading Frontier officers of that Government. The whole of these authorities, with one exception, were opposed to the scheme on grounds which may be inferred from the previous discussion. It was held (1) that by such a system friction would be developed between the Supreme and the Local Governments, since the former would desire, as Commissioner of Peshawar, a man skilled in Frontier politics, while the latter might prefer an administrator trained to deal with revenue, police, and crime; (2) that it would be found impossible in practice to sever the political or trans-frontier duties of such an officer from his administrative or cis-frontier work, and that in fact his influence with the tribes in their political aspect was inseparable from his administrative control over them, or their friends and neighbours, on the British side of the border; (3) that great difficulties would be encountered (in respect of recruitment, promotion and replacement) in so small a political service as would require to be constituted in order to carry out the plan; (4) that the authority of the Punjab Government would be impaired by the inevitable tendency of those of its officers who served two masters, to play to the superior gallery; (5) that the Foreign Department of the Government of India would be swamped with work; (6) that it would be difficult to find a man for the place. With all of these arguments I do not agree, or at least not to the same extent; but I regard their cumulative effect as overwhelming; whilst after visiting the Frontier, and making special enquiries about the matter on the spot, I entertain little doubt that the first objection, *viz.*, the impossibility of severing the external relations of the tribes from their internal administration, and of placing the former under one Government, while the latter remains under another—or, as I have heard it put, of separating hill politics from plain politics,—is alone sufficient to condemn the proposal.

26. Since these replies were sent home to the Secretary of State, nothing further has transpired, and we are now at liberty to make to him any proposals that we please for the removal of blemishes or the reform of abuses in the present system, and for the carrying out of his instructions to bring more directly under our own control and supervision the conduct of external relations with the border tribes.

27. The historical recapitulation in which I have indulged will, I think, have established the following propositions, as a starting point from which we may safely proceed :—

(1) Throughout the past quarter of a century, there has been a steadily growing feeling that the affairs of the Frontier, which are in a peculiar degree the province of the Government of India, are not best managed by a Local Government, neither specially recruited, nor exceptionally qualified, for the purpose.

(2) These general considerations have been greatly enhanced in urgency and value by the political changes which have resulted in recent years in the addition of great territorial and tribal responsibilities to the Punjab Government, and in the concentration of the main external anxieties of the Viceroy in particular, and of the Government of India in general, upon that section of the Indian Frontier which is administered by the Punjab Government.

(3) The desired changes are not capable of being brought about by the issue of instructions to the Punjab Government to carry out the policy of the Government of India on its behalf. In no country in the world is administrative loyalty more sincere or more profound than in India: but it is from the nature of things impossible for a Local Government to carry out a foreign policy which it neither originates in the first place, nor is responsible for in the last, with the same influence, zeal, or despatch as would the authors of the policy itself. The comparative futility of the admonitions which have at various times been addressed to the Punjab Government in this context, confirms the necessity of a wider and more organic change.

(4) Such a change, if brought about, should, in view of previous experience, aim at the minimum rather than the maximum disturbance of the *status quo*.

(5) It should not be handicapped at the outset by questions of territorial or political compensation to injured parties. For this purpose such injury must itself, as far as possible, be avoided or minimised. In other words, Sind, Baluchistan, Kashmir—all of which it has at different times been proposed to throw into the crucible from which the new province was to emerge—should be treated as possessing fixed destinies, and as lying outside the present discussion.

With this prelude I will now proceed to discuss, firstly, the reasons which lead me, individually, to think that the time has now arrived when the constitution of a new Frontier administration can no longer wisely be delayed; secondly, the form which that administration should take; and, thirdly, the merits or demerits of the proposal.

Reasons for creation of a new Frontier Province.

28. The first objection that I take to the present system is one which in theory must be obvious, but the full force of which in practice no one can adequately realise who has not had direct experience of it. Under the methods of Indian Government, the conduct of foreign affairs in India is vested in the Viceroy. He is the head of the Foreign Department; or, if the Indian analogy be pursued, the Member of Council for that Department; if the home analogy be followed, the Secretary of State for Foreign Affairs. Now in India foreign affairs—while they embrace many intricate and important questions concerning Native States, and while, in the sphere of external policy, they include our relations with China in Yunnan, with Tibet, with Afghanistan, with Maskat, with the Arab tribes in the Aden Protectorate, and with the Persian Gulf—in the main arise out of, or are connected with, the Frontier tribes and problems; whilst, if we take the whole of the land frontiers of India from the Shan States on the extreme east to the borders of Persian Baluchistan on the extreme west, the most critical, most anxious, and most explosive section of the entire Frontier

is that between the Swat river and the Gomal valley, or precisely the section which is handed over to the Punjab Government. Upon this stretch of boundary, inhabited by the most numerous, fanatical, and turbulent of the Pathan tribes, the Foreign Minister of India, who is also the Viceroy, cannot issue an order, or make an appointment except through the medium of the Punjab Government, nay he cannot - with certain exceptions, hereafter to be noted—make an appointment at all. The Commissioners and Deputy Commissioners, the Political Officers, and Commandants of Border Police, in whose hands rests the entire local responsibility upon the Frontier, are nominated not by him, but by the Lieutenant-Governor. The Chief Secretary to the Punjab Government, who is the principal adviser of the Lieutenant-Governor, is selected, without reference to the Viceroy, by the latter. The Viceroy cannot even remove an indifferent or unsuitable official since promotion in the Punjab is regulated by the conditions of a service of which not he, but the Lieutenant-Governor, is the efficient head. If a debate arises in Parliament as to a Frontier outbreak or a tribal expedition, it will be the Viceroy, and the Viceroy alone, who will be held accountable. Public opinion censures him for failure, or congratulates him upon success. To a certain extent public opinion is right; since, owing to circumstances to which I shall presently allude, the Local Government ventures upon few steps of any importance without reference to the higher authority. But among those who hold up the head of the Government of India to praise or to blame, how many are there who know that he has been working throughout not through his own agents, but through those of another Government, that at each stage he has required to carry the assent of a subordinate, but withal most influential authority, and that in all probability in the early stages (for most Frontier disturbances spring from small beginnings) he has had neither responsibility, knowledge, nor information? I venture to affirm that there is not another country or Government in the world which adopts a system so irrational in theory, so bizarre in practice, as to interpose between its Foreign Minister and his most important sphere of activity, the barrier, not of a subordinate official, but of a subordinate Government, on the mere geographical plea that the latter resides in closer proximity to the scene of action—a plea which itself breaks down when it is remembered that for five months in the year the Supreme and the Local Governments are both located at the same spot, Simla.

29. Now there might be some excuse, perhaps even some solid ground, for such an arrangement, if the Local Government and its officials, who are the intermediaries through whom the Government of India are compelled to act, were themselves deeply versed in Frontier knowledge and experience. It might not unreasonably be argued that a Viceroy and Council, recruited partly from England, partly from the different provinces of India, must know less of the Frontier than a Lieutenant-Governor and Chief Secretary who have probably been brought up in the Punjab, and have been familiar with the tribes from early manhood. But is this the case? Quite the reverse. In practice it is found that as a rule neither the Lieutenant-Governor nor his Chief Secretary knows anything of the Frontier at all; and that they are selected for their high offices, the former by the Viceroy, the latter by the Lieutenant-Governor himself, on account of their general administrative capacity, and ability to do justice to the many aspects of a singularly complex civil administration. Thus, if I take the list of the Lieutenant-Governors and Chief Secretaries of the Punjab, who have held those offices during the past 23 years since Lord Lytton first mooted his scheme of a Trans-Indus province, I find that their Frontier record has been as follows:—

Lieutenant-Governors.

Sir Robert Egerton (1877—1882) had never been in a Frontier District throughout his service, except as Additional Commissioner of Peshawar from November 1863 to March 1864.

Sir Charles Aitchison (1882—1887) had never been in a Frontier District throughout his service.

Sir James Lyall (1887—1892) had never served upon the Frontier.

Sir Dennis Fitzpatrick (1892 -1897) had never served upon the Frontier.

Sir Mackworth Young (1897—1900) had never served upon the Frontier, except for 16 months as a 3rd grade Assistant Commissioner of one year's service in 1865-66.

30. Thus the entire cumulative period of Frontier service which can be claimed by a succession of five Lieutenant-Governors has been 20 months, out of a total cumulative service enjoyed by these officers, at the period of their appointments to the rule of the Province, of 151 years.*

* This total is made up as follows: Length of service (upon appointment as Lieutenant-Governor) of Sir R. Egerton, 21 years; Sir C. Aitchison, 26 years; Sir J. Lyall, 29 years; Sir D. Fitzpatrick, 34 years; Sir M. Young, 35 years; or a total of 151 years.

31. If I take the Chief Secretaries during the same period, I find the following:—

Sir Lepel Griffin (1878 - 1880) had never served upon the Frontier.

Sir Mackworth Young (1880—1886) as above stated.

Mr. C. L. Tupper (1890 1895), previously officiating, had spent 16 months as 3rd grade Assistant Commissioner, engaged in settlement work, at Dera Ghazi Khan.

Mr. H. C. Fanshawe (1895-96) had spent 7 months, as Settlement Officer, at Dera Ismail Khan.

Mr. L. Dane (1896—1899) had been for 1 month 3rd grade Assistant Commissioner at Dera Ghazi Khan and Settlement Collector of Peshawar (1893 - 1896).

32. It will thus be seen that not one of the Chief Secretaries of the Punjab Government during the same period had, at the time of his appointment, enjoyed any political service upon the Frontier whatsoever. All without exception have been selected for their administrative or other abilities. It is manifest, therefore, that the plea that, in committing the charge of the Frontier to the Punjab Government, the Government of India is making up for any ignorance on its own part by special aptitudes or knowledge in respect of Frontier affairs on the part of the principal agents whom it employs is one that cannot be sustained. There are probably at any one moment in the Foreign Department of the Government of India men with a wider knowledge of the Frontier and its tribes than are to be found in the Punjab Secretariat in an entire decade. Moreover, even were such local knowledge forthcoming at Lahore, it would surely be open to argument that a Lieutenant-Governor or a Chief Secretary or a combination of the two, so endowed, would not necessarily be qualified to deal with the larger problems of foreign policy upon which all tribal issues in the last resort depend, and which must inevitably be more accurately gauged by the Government of India and its head, than they can be by the officers of a provincial administration. Some of the officers of the Punjab Government, in commenting upon the Secretary of State's suggested compromise, have enlarged upon the advantage to them of consulting the personal knowledge and authority of the Lieutenant-Governor when he is on tour upon the Frontier. I do not desire for one moment to disparage the results or benefits of such consultations. But from what I have said, I should imagine the advantage to be quite as often communicated to the Lieutenant-Governor as derived from him; whilst, assessing it at the maximum, how much more valuable, I feel inclined to say, would it be, were it the result of the presence of an Agent to the Governor General, not paying an occasional visit to the Frontier, but permanently resident upon it, not ignorant of the tribes, before he attained his high office, but possessing a long and intimate acquaintance with them. If, however, it be said that any lack of knowledge on the part of the superiors is compensated by the intelligent abilities of their subordinates on the Frontier itself, it may be pointed out that the services of the latter would equally be at the disposal of the Government of India, under a reformed system, without the intervening stratum of experienced but not expert authority; whilst it is unfortunately the case that, owing to the wider scope of promotion that is open to members of the Punjab Commission, who are engaged in revenue and financial work, there is an inclination among ambitious men to devote themselves to these fields of service rather than to the more irksome and less remunerative conditions of Trans-Indus existence. It was further shown by Sir R. Udny (Commissioner of Peshawar) in his letter

of 20th October 1898 that while, under the Punjab system, the theory is that the Frontier is administered, in the lower grades, by officers of Frontier experience, in practice this is very far from being the case. Between 1878 and 1891, only five men were sent to the Frontier who still remained upon it (not having been reverted) in 1898. It was a constant occurrence that no Covenanted Officers were forthcoming for the Frontier; and that Uncovenanted Officers and even natives had to be sent in their place. The charge, therefore, of insufficient experience, which has been shown to apply in the highest quarters, is not without substance in the lower grades also.

33. I have not paused to discuss the cynical suggestion that may occur to some students of British administration, that there may be some deliberation in the policy, that constitutes as the Viceroy's chief adviser in Frontier policy, an officer who in the majority of cases has had no practical experience of the Frontier himself. If there is a case in which the conclusions of the uninformed are perilous, it is that of tribal policy. It is impossible to imagine a field of political action in which the capable outsider, relying upon general *savoir faire*, or experience of men, is likely to come to more disastrous grief. A collateral illustration of this truth may be found in the fact that all the men who have attained the greatest celebrity by their successful handling of the tribes have been men who have not come fresh to the task, but have devoted years of their life to the study and assimilation of tribal ideas and ways. I may instance Sir John Lawrence, General John Jacob, John Nicholson, Sir Herbert Edwardes, Colonel Mackeson, Sir R. Warburton, Reynell Taylor, Sir R. Sandeman.

34. Such being the character of the agency through which the Government of India is at present required to carry out its Frontier policy, I next ask what are the main features and results of the system as a working scheme. I do not hesitate to say that they are departmental irresolution, the dissipation instead of the concentration of responsibility, and long and injurious delays. Some of these consequences are inseparable from the system. Others have grown up as accretions upon it.

35. It will be admitted that in any administration the longer the official chain—and the more numerous the obligatory links of reference—the less likelihood is there of prompt and efficacious action. It will also be conceded that, if there is a field of policy in which rapidity of decision and swiftness of execution are essential, it is that of the Frontier. And yet in practice, before the pettiest affair, arising, *e.g.*, out of a border raid, can be settled, the following are the stages, and their probable duration, through which the matter must pass. The local Political Officer, or the Deputy Commissioner, where the latter is the local Political Officer, reports the case in the first place to the Commissioner, who is probably at some distance, and who, if it be summer time, may be away in the hills. In former days the Political Officer was obliged to report to the Deputy Commissioner and the latter to the Commissioner. But this intervening link has, except in certain cases, been abolished. The Commissioner, upon receipt of the report, has to consider the case, to look up the recent history of the tribe, or to investigate precedents. He then sends up the original report, with his own report upon it (as a rule proposing something rather different from his subordinate), to the Punjab Government. Before it reaches the latter, in all likelihood a fortnight will have elapsed. The case then passes through the Punjab Secretariat. Precedents and policies are again examined; in a department which, as I have shown, is not as a rule rich in Frontier experience there is an inevitable tendency to become the slaves of formulæ and of precedents; finally, after the probable lapse of another fortnight, the case with some fresh or alternative suggestion, may reach the Government of India. If a reference has been required in the interim, as is frequently the case, to the military authorities, another three or four weeks may have been spent in a reduplication of the same chain. An enquiry will have been addressed in the first place to the Lieutenant-General Commanding the Forces in the Punjab. He must refer the case to the General Officer Commanding the Punjab Frontier Force, and the latter to the Officer Commanding in the locality concerned. The answers must be returned through the same compulsory stages. The case having reached the Government of India, all the various papers and proposals, which have by now attained somewhat bulky

dimensions, must pass through the Foreign Department in the normal course for analysis, illustration, and annotation. Finally, orders are issued upon it by the Viceroy to the Local Government, these having to be transmitted back through the familiar chain; until many weeks, and too often many months, after the commission of the original offence, a decision arrives upon a matter which ought in all probability to have been composed on the spot in a few days. If it be said that such a history must be the exception and not the rule, I reply by admitting the charge; since in the majority of cases the delay entailed will undoubtedly be not less, but much greater, than that which I have depicted. I have dealt above with simple cases only. In the event of a complicated case, such as an increase of establishment, the raising of a new body of levies, or the shifting of a military post, what with the numerous references and cross-references, and the inseparable departmental delays, it will be surprising if the matter can be carried through in less than a year. I may instance my own scheme for a Tribal Militia in Waziristan. The original orders of the Government of India were issued to the Punjab Government on August 7th, 1899. A Committee was to be constituted to draw out the details of the scheme. Its report left matters in a state of considerably greater confusion. A mass of undigested papers, proposing something entirely different from what the Government of India had laid down, reached us in March 1900. I had to proceed myself to the Frontier in April, in order to extricate the case, by personal conference with the officials concerned, from the tangle in which it had become involved; and only now, one year after inception, is the scheme of the Government of India beginning to take rudimentary shape.

36. That the description which I have given is applicable not to rare or isolated instances, but to the vast majority of Frontier cases, may be demonstrated by a passage from the letter, dated October 21st, 1898, in which Mr. F. D. Cunningham, the Commissioner of Peshawar, and himself one of the senior Punjab officials, expressed his opinions upon the suggestion made by the present Secretary of State for altering the status of that office. He said:—

"If the Punjab Government had any Frontier policy of its own, or having one, if he had authority to pursue it, if it had power to give orders in any but the most trivial matter, I could understand that by removing it from the chain the control of the Government of India would be increased in reality as well as in name. But I venture to think that, whatever their position in constitutional theory may be, the Lahore Government have not for many years past given orders in any but the most petty matter, affecting trans-border clans or politics.

"With the exception of a few years in the Secretariat, the whole of my service of 26 years has been passed on or beyond the North-West Frontier, and for the past 13 years in the Peshawar Division. Speaking of that part of the border, I cannot remember any question sufficiently important to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta. Under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India. The Deputy Commissioner as the local Political Officer disposes of many claims against trans-border men by reprisals or arrests in British territory, or by his influence with clans outside, and he settles these cases without report to the great advantage of Government. But when he thinks action on his part will not summarily dispose of a case, he may report it for orders, and in cases of this description I think that in practice the Commissioner and the Local Government give advice and not decisions: the final order even now comes from Calcutta"

37. This extract brings me to a secondary feature of the existing system. It might have been supposed, and it has frequently been argued, that the intervention of a Local Government between the Government of India and the Frontier, involves a wise and necessary decentralisation. I have shown, on the contrary, that it results in excessive centralisation. The Local Government is apprehensive as to the issues of a policy for which, while the initial responsibility may perhaps be placed upon its own shoulders, it is not unnaturally anxious to shift the ulterior responsibility to those of the Government of India. And this apprehension is reflected in its attitude towards its own officers, to whose independence of action but slender scope is apt to be given, and who, particularly if they happen to be new to the Frontier, having perhaps been transferred thither from the charge of an inland district, are loth to assume an initiative which is certain to be discountenanced by the superior, and may bring them into trouble with the supreme, authority. Thus the first merit of a

well-ordered decentralisation, namely the graduated diffusion as opposed to the rigid concentration of responsibility, is sacrificed.

38. There is another consideration which in practice has a disturbing and in the long run a sinister influence upon the promptitude and continuity of Frontier policy. Minute and incessant as are the references from the Punjab to the Supreme Government, averse though the former be from independent initiative or responsibility, there must yet in the nature of things be a great number of cases in which the Government of India are reluctant, at any rate in the earlier stages, to intervene, partly because they have little practical alternative but to accept the advice of the Local Government, through whose officers—and through them alone—their information is derived; still more from an indisposition to be constantly overruling or dictating to so powerful and highly-placed a subordinate. If the Local Government be interfered with at each stage, it is open to it to turn round later on, and to complain that it has never been given a free hand; that it has not been trusted; and that any failure or misfortune that may have ensued has been due not to any fault on its own part, but to the fact that it has been overridden. My predecessor, in his Minute of November 6th, 1898, laid stress upon the arguments, in defence of the existing system, that it is a great advantage that the Lieutenant-Governor of the Punjab should be resident for several months in every year at Simla, where the Viceroy can enjoy opportunities of private conference with him; and that it is less easy to overrule a subordinate than a colleague and a friend. Without dissenting from the great advantages of such consultation, I yet venture to disagree *in toto* with both propositions. It seems to me an indefensible duplication of labour and delay, that for several months in every year, the Government of India, which is the real arbiter of Frontier policy, should be compelled to issue its orders respecting the Frontier not to the officials on the spot, but to another Government, whose officers are separated by only three miles from its own; while I cannot conceive it to be open to question that, if the advice of the inferior authority be not taken, such a course of action is at once more easily adopted, and more ungrudgingly obeyed, if that authority be in direct subordination to the Government of India and to the Viceroy, than if he be a Lieutenant-Governor, and the head of a quasi-independent administration. I do not see how any Governor-General could deny that, if he desires a policy to be pursued or a step to be taken in Baluchistan, which is under the administration of an Agent to the Governor-General, directly subordinate to himself, however unpalatable such a policy or step might be to the Agent to the Governor General, it will be carried out with incomparably less friction and delay than in a similar case in the Punjab, where the dignity and susceptibilities of a Local Government and of its head demand the most scrupulous and respectful consideration.

39. For the reasons, therefore, which have been given, I hold the existing system by which the Frontier is managed through the medium of the Punjab Government to stand condemned. It has been reprobated by all the greatest Frontier authorities for the last quarter of a century. It attenuates without diminishing the ultimate responsibility of the Government of India. It protracts without strengthening their action. It interposes between the Foreign Minister of India and his subordinate agents, not an Ambassador, or a Minister, or a Consul, but the elaborate mechanism of a Local Government, and the necessarily exalted personality of a Lieutenant-Governor. If this is an influential, I have yet shown it in practice to be not an expert medium. Worked as the system has been with unfailing loyalty and with profound devotion to duty, it has yet been the source of friction, of divided counsels, of vacillation, of exaggerated centralisation, of interminable delay. Whether it has presented to the Government of India a cautious and continuous Frontier policy, whether it has saved India from Frontier expeditions and wars, whether, however imperfect as an administrative machine, it has produced meritorious political results, are questions which an appeal to history will easily settle, and which will be touched upon before the close of this memorandum.

Possible forms of new Administration.

40. Having thus argued the inefficacy of the present system, I proceed to consider how best it may be replaced, always bearing in mind my earlier

dictum as to the desirability of producing the minimum dislocation in long established methods and traditions. It has sometimes been suggested that the existing organisation of the Punjab Government might still be retained for Frontier purposes with certain improvements or alterations. The Lieutenant-Governor might, it has been urged, be specially chosen for Frontier knowledge. The answer is simple. Even if a single such officer were forthcoming in the Punjab Commission, a succession could not possibly be found. Such a system would moreover be most unfair upon the remainder of the service, and upon the interests of the province as a whole, of which the Frontier constitutes a relatively small part. The same arguments apply to the choice of a Chief Secretary endowed with the knowledge in which his chief might be lacking. If he were, useful for the Frontier, he would be less useful for the remainder, *i.e.*, for the bulk of the war. Again, if a Special Secretary or Commissioner were appointed for Frontier business, he would not diminish by a single link the existing chain. Neither would the suggestion, which has also been made, of granting much greater financial latitude and a larger staff to the Punjab Government meet the case. It might enable the Local Government to cope more rapidly and successfully with Frontier work. But it would not make it any the more faithful an exponent of the policy of the Government of India. I regard all these proposals as illusory and deceptive. They are open to the common objection that the more they give to the Punjab Government, the more they take away from the Government of India, and that they conflict with the initial proposition laid down by the Secretary of State and already quoted, namely, "that it is desirable that the conduct of external relations with the tribes on the Frontier shall in the future be more directly than heretofore under the control and supervision of the Government of India."

41. I next pass to a number of possible compromises, which have at various times been suggested or which admit of being discussed, between the present system and that of a new and independent administration. One of these proposals, *viz.*, that which was suggested by the present Secretary of State in his despatch of August 5th, 1898, I have already examined in my review of the earlier history of the Frontier problem. It was the suggestion that the Commissioner of Peshawar and his several subordinates who are employed in conducting external relations with the Frontier tribes, should, in respect of such matters, act under the Government of India, and that the Commissioner should be appointed by the latter, remaining, in other respects, as hitherto, under the Punjab Government. I have shown that this scheme was condemned by the almost unanimous opinion of the Frontier officers who were invited to report upon it, in the main on account of the impracticability of separating trans-frontier from cis-frontier work, amid communities who may be described as living perpetually astride of the border. I concur in these views, and I may add that the scheme possessed the further drawbacks, in my judgment (1) that it would introduce two different systems, with two different sets of officers, upon the Pathan Frontier; since it was only proposed that the Commissioner of Peshawar should be appointed by and should act under the Government of India; the Commissioner of the Derajat, under whose charge are the whole of the Waziri tribes, by far the most restless denizens of the border, being apparently left as now a servant of the Punjab Government, appointed by and reporting only to it; (2) that with the single exception of the Commissioner of Peshawar the Frontier policy of the Government of India would still be conducted by agents not its own; (3) that unless the status of the Commissioner were raised, and he were given some of the powers of a local administration, an insupportable amount of detail would (in the difficulty of deciding between the external and the internal relations of the tribes) be thrown upon the Government of India. It may be noted that any such scheme had been condemned by the Government of India as long ago as May 17th, 1877, the despatch of which date, covering Lord Lytton's Minute, contained the following emphatic declaration:—

"We are of opinion that the separation of political from administrative duties is practically impossible when these two classes of duties are interwoven as closely as they now are in the government of the Frontier. To place the Frontier officers under the local Government *quoad* their administrative duties, and under the Government of India *quoad* their political duties, is a system fraught with inconvenience and one which has already proved the source of serious embarrassment to this Government."

The allusion in the last sentence was, I apprehend, to the system that prevailed in the third quarter of the century in Sind, the Commissioner of which received his administrative orders from the Bombay Government and his orders as to foreign policy from the Government of India The system having hopelessly broken down, the Commissioner of Sind (Sir W. Merewether) was in 1876 relieved of all responsibility for Kalat, *i.e.*, Frontier affairs, which were handed over to Colonel Munro, the Commissioner of the Derajat.

42. A second compromise which has been suggested is that the Frontier, or the Trans-Indus portions of the Punjab, should be treated somewhat as Sind now is, being placed under a single Commissioner who might even be appointed by the Government of India, and who should remain under the Punjab Government, as the Commissioner of Sind is under the Bombay Government, but should enjoy some of the administrative and financial powers of a Local Government, being assisted by a Judicial Commissioner. He would refer to the Government of India for Frontier matters, and to the Local Government for internal and district affairs. The objections to such a scheme are the familiar and, as I think, insuperable difficulties of serving two masters, and of discriminating between external and internal affairs. There would be the further drawback that a Commissioner selected by the Government of India for his political abilities might not satisfy the standards of the Local Government in respect of capacity for local administration, revenue, and finance. Above all it must be patent that such a compromise would satisfy neither party, that it could possess no permanent vitality, and that it would only be a stepping-stone to some larger change.

43. There is a third compromise, which, in the course of my study of the present question since I have been in India, at one time possessed attractions for myself. It was to take all the trans-frontier charges, from Chitral to the Gomal, now under the control either of the Government of India or of the Punjab Government, *viz.*, (1) Dir, Swat and Chitral, (2) the Khyber, (3) Samana, (4) the Kurram, (5) the Tochi, (6) Wana; and to place the Political Officers for all these districts under a single high officer, who equally with them should be appointed by the Government of India, and should report exclusively to the latter upon all political and external affairs, the civil and administrative organisation of the Punjab Government remaining untouched, and the conduct of cis-border affairs continuing to be vested in the hands of its Commissioners and Deputy Commissioners. In my conversations, however, with Frontier officials, both last year and this, I could not discover a single supporter of this scheme. It was pointed out to me in the unanswerable words of Sir Alfred Lyall, written nearly 20 years ago, that "it is an established principle from Peshawar to Karachi that the Frontier can only be managed properly if both sides of it are in the hands of the same British authority"; it was said that the tribes themselves would not understand the system of two co-ordinate groups of officials, the one dealing with their external, the other with their internal relations, and that they would be disposed to play off the one against the other; and it was asserted that the result could not fail to be friction, and perhaps even worse, between the officers who served the Supreme, and those who served the Local Government.

44. I have also heard it suggested that the six Frontier charges, which I have mentioned above, might be placed under Political Officers nominated by, and reporting to the Government of India, but subordinate to no local official of superior rank. I could not recommend such a scheme. In addition to the drawbacks of possible disagreement with the Punjab officials, which were regarded as fatal to the compromise last examined, it would, by breaking up the Frontier into separate districts, under no single or common head, introduce discord, instead of homogeneousness or unity, into our Frontier policy, and would enormously increase the work that devolves upon the Government of India. It is, I think, a *sine qua non* of any new system, that it should interpose between the Supreme Government and its local agents, some authority possessed of high status and influence.

45. The examination to which I have subjected the various possible forms of compromise will, I think, have shown that the remedy is not to be found in

any such direction. It is of no use to attempt a patchwork reorganisation; or to dovetail into each other the features and methods of two administrations, with such essentially different characteristics and objects. No natural respect for the susceptibilities of the Local Government, nor even the desire, which I have myself avowed, to pursue the line of least resistance in making the contemplated change, should deter us from looking facts in the face, or from recognising that it can only be by an organic change, that evils, which are themselves not accidental but organic, can be cured. I hope, therefore, to have established the presumption that the reform which we have in view can only be effected by the creation of some new administrative unit, independent of and separated from the Punjab Government. It remains to be discussed what shape such a new administration should take.

Form of administration recommended.

46. Lord Lytton's scheme in 1877 contemplated an immense new Trans-Indus province, stretching from Hazara to the Indian Ocean, and including the Trans-Indus portions of the Punjab, Baluchistan, and Sind. The Resident in Kashmir, though under the Government of India, was also to correspond with the Chief Commissioner upon Frontier matters relating to Chitral, Badakhshan (*sic*), etc. Such a charge would, had it then been created, before long have proved too much for the shoulders of any single man. The idea has since been rendered obsolete by the remarkable change in the conditions of the problem. No one now proposes the severance of Sind from Bombay. Baluchistan has its own administration, which is important and self-sufficient. Moreover, its developments and aspirations lie rather on the western border, and in the direction of Afghanistan and Seistan, than on the Punjab side. The incorporation of Baluchistan with a Trans-Indus charge would be of no advantage to the former province, and would associate the latter with a partner, whose earlier start in the world would overshadow and stunt the growth of the more youthful administration. Kashmir is separately provided for; and its own Frontier problems, which extend from Ladakh in the north-east to the Shandur Pass on the north-west, are sufficient to engross the attention of the British Resident at Srinagar. It is, therefore, unnecessary to contemplate, even for a moment, any revival of the idea of a great Frontier administration, which should gather up into a single skin the many and complex threads of the whole of the North-West and West Frontier of the Indian Empire. Such an idea might still appeal to the imagination of the enthusiast; but it is not practicable in fact.

47. Even eliminating Baluchistan and Sind, I have heard recommended the creation of a great Frontier Province which should include the whole of the Trans-Indus Districts as far south as Dera Ghazi Khan, and, crossing to the left bank of the Indus, should further embrace the districts of Rawalpindi (as the military base of Peshawar and Kohat) and Jhelum. I could not endorse any such proposal. It would involve a needless dismemberment of the Punjab, would create a new province by which the older one would be completely overshadowed, and would involve the organisation of a new and extensive Commission.

48. The province which I would propose to constitute would consist, with a slight exception, of the whole of the Trans-Indus Districts of the Punjab as far south as and including Dera Ismail Khan. The exception (subject to the approval of the Punjab Government) would be the Mianwali Sub-division of the Bannu District which is astride the Indus, the trans-riverain *tahsil* of Isa Khel being inhabited by non-Pushtu-speaking Pathans and having little or no connection with the Frontier. The Cis-Indus portions of Dera Ismail Khan, which exceed in size, and are approximately equal in population to, the Trans-Indus Districts, would be left to the Punjab Government. It might also be a matter of discussion with that Government, whether any, and if so what, portions of the Trans-Indus *tahsils* of Dera Ismail Khan should similarly be excluded from my scheme. There are three such *tahsils*, those of Tank, Kulachi, and Dera Ismail Khan. The first of these is a purely Frontier district, and

must in any case be detached. The two others contain a mixed population; and it is possible that some division of them between the old and the new administrations may be found desirable or necessary, although a sentimental value may attach to the inclusion of the capital city, Dera Ismail Khan, in the new Agency. I would also leave Dera Ghazi Khan to the Punjab—it could be grouped in a single charge with Multan—in the main because its Frontier relations arise out of contract not with Pathans but with Baluchis, and because I should prefer that the new administration should as far as possible be concerned with the former. It has sometimes been argued that Dera Ghazi Khan should preferably, by reason of its Baluchi connections, be handed over to Baluchistan. This may perhaps be its ultimate destination. But for the present, and as long as there is no Trans-Indus railway communication in this part, I think that Quetta and the Agent to the Governor-General for Baluchistan are too far away, and that it would be better not to sever the old established connection with the Punjab.

49. Passing to the Northern confines of the proposed province, I would make it strictly Trans-Indus, *i.e.*, I would not take away from the Punjab the Hazara District, with its administrative centre of Abbottabad, even though this be a Frontier District. Its interests are very different from those of the north-west border, as commonly understood; its inhabitants are of different origin; and the Kaghan Valley, which is its main northern prolongation, is now thoroughly pacified.

50. It would be a matter for consideration whether the Black Mountain tribes which are Cis-Indus should continue as now to be managed by the Deputy Commissioner of Hazara, under the Punjab Government, or should pass with their Trans-Indus neighbours, the Bunerwals and the tribes of the Mahabun, to the charge of the Political Officer at the Malakand. Expediency should be the test of this decision.

51. The Mohmands and any other tribes who are now under the Deputy Commissioner of Peshawar should probably, with the exception of those who may be handed over to the Political Officer at the Malakand, be added to the charge of the Political Officer in the Khyber.

52. The new frontier Province would then consist of the following Trans-Indus Districts of the Punjab: (1) Peshawar, (2) Kohat, (3) Bannu, (4) Dera Ismail Khan; and of the following Political Agencies, at present either directly under the Government of India, or under the Punjab Government, (1) Dir, Swat and Chitral, with head-quarters at the Malakand, (2) Khyber, (3) Kurram, (4) Tochi, (5) Wana.

53. The Chief of this administration would be a Chief Commissioner and Agent to the Governor General, who should be appointed by, and should be directly subordinate to, the Government of India. His position would be closely analogous to that of the Chief Commissioner and Agent to the Governor-General in Baluchistan, *i.e.*, he would possess some of the powers of a local administration, and his pay should probably be on the same scale, *i.e.*, Rs. 4,000 a month. He would reside at Peshawar, where he would take over the office of the present Commissioner. He would probably require the services of two Assistants. The judicial and revenue work of so populous, and in some respects highly organised, a province would doubtless render it impossible to combine the supreme charge of both functions, as in Baluchistan, in the hands of a single Revenue and Judicial Commissioner. A Judicial Commissioner, and a Revenue Commissioner, would both be required. If the former is to take the place of the Chief Court, as the supreme appellate tribunal for the new province, he should clearly be a man of high legal attainments and independent position. There are some who may deprecate the substitution of a more simple system for the complex paraphernalia of the Chief Court, and the amenities of facile litigation. I am not in agreement with them. I know of no vice which is more fatal in a Frontier district than litigiousness; and I should prefer summarily to arrest, rather than to foster, its growth. The new staff at Peshawar, if thus

organised, would, therefore, exceed in numbers and probable cost the present higher ranks of the Punjab Commission who are there employed, by the following totals :—

Present Administration.			*Proposed Administration.*		
	₹			₹	
Commissioner of Peshawar	2,750	*per mensem.*	Chief Commissioner and Agent to the Governor General	4,000	*per mensem.*
Commissioner of the Derajat	2,750	,,	Two Assistants	1,600	,,
Divisional Judge	2,250	,,	Judicial Commissioner	3,000	,,
			Revenue Commissioner	2,750	
Total	7,750		Total	11,350	

54. On the other hand, while there would be some such increase in the head-quarters establishment, I entertain every hope that, in other branches of the administration, a material reduction would be capable of being effected. I will indicate three directions in which this might be possible : (1 Inasmuch as the new arrangement contemplates the substitution of a Judicial Commissioner, as the supreme tribunal, for the Chief Court at Lahore, some simplification of judicial procedure ought, in my opinion, to follow upon the general reduction in the judicial scale ; and if this be achieved, then there should follow upon it a corresponding reduction of the judicial staff. (2) In a Frontier Agency where successful administration will depend chiefly upon the character and influence of the British officers employed, and where a wider discretion will, I hope, be given to them in the future than has hitherto been permitted, it should be possible to abolish the mischievous practice of dealing with the tribes through native officials, and to effect some reduction in the number of native subordinates, which has a tendency to grow under the ordinary provincial system. (3) From the figures which will presently be given, it will be seen that the portions of the Bannu and Dera Ismail Khan Districts, which I propose to withdraw from the Punjab, are considerably less both in size and population than the single District of Dera Ismail Khan (as administered by the Punjab) is at present. It is conceivable, therefore, that some re-arrangement may be feasible by which the number of districts taken over might be reduced from four to three. I do not say that Bannu, without the Mianwali Sub-division, and Dera Ismail Khan, without its Cis-Indus tracts, can be grouped together in a single district. It would be premature to make any such suggestion at present. If, however, any portion of the Trans-Indus tahsils of Dera Ismail Khan were left to the Punjab, such a concentration would be more easy. In any case, a reduction of the number of administrative units will be worthy of serious consideration ; and, if feasible, would certainly carry with it a marked reduction both in establishment and in cost.

55. I had contemplated drawing up a Proposition Statement to accompany this Minute, showing the existing strength and salaries of the superior ranks of the Punjab administration at present engaged in those portions of the province which it is proposed to subtract, and comparing with them the probable corresponding totals for the new Agency. I feel, however, after several attempts in this direction, that such statement would, at the present stage, only be a misleading guide. My reasons are these. It is as yet unsettled what are the precise districts or tracts, if the principle of my proposals be accepted, that will be detached from the Punjab. It is unsettled how, when detached, they will be grouped. It is also uncertain in what manner the Punjab Government would re-group the Cis-Indus tracts left to it, or what change or increase of establishment such re-adjustment might require. Further, it is too early, for the reasons already given, to give figures as to the possible reductions in the new province. Lastly, a statement of the existing position would be a not altogether reliable test, from the facts that the pay and allowances of the actual incumbents of posts upon the Frontier are liable to continual variation with changes of *personnel* ; and that the list of officers so employed is apt to contain some, who may, as in the case of Settlement Officers, only be engaged upon temporary work.

56. From a careful comparison, however, of the probable requirements of the new Agency with the existing establishment maintained by the Punjab, I feel in a position to say that the total cost of civil administration at the start is not likely to be greater than under present conditions, while, if my anticipations (in paragraph 54) are realised, there is even reason to hope that a saving may be effected.

57. I now proceed to state how I would propose to officer the new province. Lord Lytton, in his scheme of 1877, contemplated a list, separate from that of the Punjab, but with facilities for interchange between the two; *i.e.*, he advocated the creation of a fresh or branch Commission. Such a scheme might be practicable and even necessary, if a very extensive province were being called into being. But a small Commission, such as a relatively small province might require, would be attended by patent drawbacks, the recognition of which has in practice helped to kill the various proposals for a new Frontier administration that have previously been made. These drawbacks would arise in connection with recruitment, replacement, and promotion. With a small civil list, an occasional failure is very serious, and is not easily redressed by transfer or removal. Further, as Sir M. Young has observed—"The pick of a large Commission is likely to be far superior to the best outturn of a limited number of specialists."

58. I propose to escape all these difficulties, and at the same time to ensure for the administration of the new province the best ability that the Civil Service can produce, by relieving the Punjab Commission of the duty of providing its establishment and by bringing the latter upon the graded list of the Political Department of the Government of India. This would involve a reduction of the present numbers of the Punjab Commission and a proportionate increase to the Political list. My proposals would of course apply only to the higher or *cadre* posts, and not necessarily to all of these. It would perhaps be found wise in the first instance to borrow the Divisional and District Judges for the new Agency from the Punjab, and afterwards from the Punjab or from other provinces, since we could offer no prospects to such officers in the Political Department. Indeed if a Judicial Commissioner be appointed, it is not certain that any Divisional Judges would be necessary. Similarly we might borrow officers from the same source, when required, for settlement work. Finally, as regards miscellaneous departments, such as Police, Jails, Medical, Educational, Irrigation, and Public Works, and the subordinate establishments of all Departments, the best plan would probably be to take over temporarily the whole or the greater part of the existing staff of the Punjab Government now employed in the area of the new province, and gradually to work out such changes as experience might dictate. *Per contra* if in this way we were to provide appointments for members of the Punjab Commission, the Local Government might be willing in return to continue to find places for educated Pathans of good family, a certain number of whom, under the existing system, rise to high positions in the Civil Service of the Punjab.

59. The effect of these changes upon the Punjab Commission and upon the Political Department, respectively, would be somewhat as follows. At the present time there are in the area covered by the new Agency 16 superior posts (including District and Divisional Judges), *i.e.*, posts carrying a substantive pay of more than ₹1,000 a month. To fill these posts (allowing for the percentage of incumbents who would ordinarily be absent on leave and for those in training) there are required 31 officers. The monthly cost of these officers under the Punjab system has been worked out at ₹46,300. If this area be brought directly under the Government of India, and if the necessary appointments, graded as nearly as possible on the corresponding scale, be added to the Political Department, the same number (31) of officers will be required, and the monthly cost will amount to ₹46,600, or a difference of only ₹300. These calculations are of course, in the present stage, only approximate. Both tables would be affected if the judicial appointments were to remain upon the Punjab list. Enough has been said, however, to show that, in so far as officers are concerned, the change of system could be made without involving any injury. The pay and prospects of the officers in the Punjab Commission would, it can be

shown, be left approximately as they are. On the other hand, the prospects of the officers of the new administration, and of the Political Department generally, would be vastly improved; since there would be open to the former a far wider field of employment and promotion under the Foreign Department of the Government of India than is at present possible within the confines of a single province and a restricted Commission; while service on the Frontier, which is now, with a few exceptions, closed to the officers on the Political list, should become an object of ambition for the most promising young men whom the Political Department can attract to its ranks.

Merits or Demerits of the Proposal.

60. Having thus not merely sketched the outlines but filled in the principal administrative details of the new province, I now pass to my last subject of enquiry, namely, the objections that may be taken to its creation, and the compensating advantages.

61. The Secretary of State, in his despatch of August 5th, 1898, indicated four possible objections to the project of a separate Trans-Indus charge. The first of these was that by breaking up the established administrative units of British India, the revenue system already introduced would be disturbed. This is not an objection to be despised. The Peshawar District, for instance, contains some of the richest and most highly assessed land in the Punjab, covered in parts by a network of canals, the working of which is no simple matter. The whole District has been surveyed on a scale of 24" to the mile, and the maps are accompanied by elaborate land records which must be kept up to date. Neglect of these would produce insecurity of tenures and rights, and might soon result in chaos. Specially trained officers would be required for this work, such as are not ordinarily found in the Political Department. I concede this difficulty, which will also apply, though in a less degree, to the Districts of Kohat, Bannu, and Dera Ismail Khan. But I hope to have provided against it. I do not propose the handing over of technical work to unskilled hands. In these respects we must still look to the parent province. The revenue system of the new Agency would not merely be that of the larger administration of which it at present forms a part, but it would be administered, at any rate to begin with, and possibly continuously, by the same men. No one would propose to inaugurate a new province by disorganising or revolutionising the old revenue system. Continuity in this respect is prudent, and has been provided for.

62. The second objection mentioned by the Secretary of State to a Frontier province was that it would entail a succession of territorial rectifications and compensations. This objection also I have shown not to apply. No other province beyond the Punjab is touched by my scheme; and it remains only to be considered whether the Punjab itself will be mutilated or dismembered by it to a serious or unreasonable degree.

63. The following table will show the approximate extent of the area and population, as calculated from the Census returns of 1891, and of the land revenue, of the districts which it is proposed to withdraw :—

	Area, square miles.	Population.	Revenue.
			R
Peshawar District	2,444	703,768	11,02,626
Kohat	2,771	203,175	1,90,849
Bannu (excluding Mianwali Sub-Division)	1,664	204,469	2,58,000
Dera Ismail Khan (excluding Cis-Indus Tahsils).	3,812	254,163	3,24,372
Total .	10,691	1,365,575	18,75,847

In connection with the above figures, I may mention that the Cis-Indus *tahsils* of the abovenamed districts and the Trans-Indus tracts, which I do not propose to subtract from the Punjab, are of the following dimensions :—

	Area, square miles.	Population.	Revenue.
			R
Mianwali Sub-division of Bannu . .	2,183	167,807	1,93,000
Cis Indus Tahsils of Dera Ismail Khan .	5,628	232,038	3,24,372
Dera Ghazi Khan District . . .	5 606	404,031	5,15,697
Total .	13,417	803,876	10,33,069

Out of the total area, either Trans-Indus, or connected administratively with the Trans-Indus Districts, which is at present administered by the Punjab Government, I therefore leave to the latter more than one-half, with rather more than a third of the revenue, and one third of the total population. Comparing the subtracted area with the figures for the entire province, which were in 1891 :

Area, square miles.	Population.	Revenue.
		R
148,966	25,130,127	2,75,32,972

it will be seen that I propose to take away from the Punjab Government, if the maximum of my proposals is accepted, and if no restitution, partial or otherwise, is made to the Punjab of the Trans-Indus *tahsils* of Dera Ismail Khan, only $\frac{1}{14}$th of its total area, $\frac{1}{15}$th of its total revenue, and a little less than $\frac{1}{18}$th of its entire population.

64. Now of these districts it should be remembered that they do not belong either geographically, ethnologically, or historically to the Punjab. They are inhabited by entirely different peoples. They exhibit a different mode and standards of life. They were only conquered and annexed to the Punjab by Ranjit Singh. So detached are they in reality from the remainder of the Province that in 1857 during the Mutiny, when our general position in that part of India was in some doubt, Sir John Lawrence was prepared to surrender Peshawar to the Afghans ; while in the following year, he proposed the rendition of Kohat also, on the grounds of economy and of the unhealthy climate. In other words, the first and most famous Lieutenant-Governor of the Punjab himself proposed, though in different circumstances, a portion of that dismemberment of his province which I now advocate.

65. Still more do these considerations apply in the case of those parts of the present Punjab administration lying outside the administrative border of British India, which have in recent years, and notably since the Durand Agreement of 1893, been added to the jurisdiction of that Government. It should be remembered that the conditions under which the Punjab Government was placed in charge of the Frontier at all were widely different from those which now obtain. They were clearly explained by Lord Salisbury, when Secretary of State for India, in his despatch to Lord Lytton's Government of November 29th, 1877.

"The Punjab Government was interposed between the Governor-General and the Frontier officers at a time when communication between Calcutta and the Punjab was tedious and difficult, when the state of affairs beyond our territory caused little solicitude, and when the duties imposed upon the Government of Lahore were not such as to prevent the Frontier from receiving a large share of its attention."

66. When this Despatch was penned, great changes had already taken place. The telegraph and the railway had brought the Frontier into close and

rapid connection with the head-quarters of the Supreme Government. The Punjab had itself, since its original constitution, as a Chief Commissionership, received the notable addition of the Delhi District from the North-Western Provinces. Frontier questions had gained greatly in number and importance; and the advance of Russia across the regions that previously separated her from the Afghan border had been continuous and alarming. If this was the metamorphosis of conditions that could be recorded in 1877, how unmeasurably greater is it now. It may truly be said that every subsequent change in the frontiers of India has been a change dictated, not by considerations arising out of or directly affecting the interests of the Punjab Government, but by imperial considerations, and by them alone. The consolidation of Baluchistan into a separate administration, the inclusion of Chitral and Dir within the British sphere, the signature of the Durand Agreement and the consequent political protectorate over Waziristan, have revolutionised the position on the Frontier. Moreover, while they are the results of a policy, with which the Local Government has only incidentally been concerned, they have themselves created a further group of problems with which a Local Government is ill qualified to deal. To such an extent is this the case that a considerable part of these territorial acquisitions has already been withdrawn from, or has not been incorporated with, the Punjab Government. The Agency for Dir, Swat and Chitral is directly under the Government of India. So is the Khyber. In the tribal territory further to the south, so strongly has the necessity of severing tribal management from administrative pre-occupations and of putting the political work into the hands of Political Officers, specially appointed for the purpose, forced itself even upon the Punjab Government that already, as pointed out by Sir M. Young in his note of 19th October 1898, "two-thirds to three-fourths of the Punjab Frontier is in the hands of officers who have nothing else to do." There could not be a clearer admission of the extent to which the Frontier work has ceased to be administrative, *i.e.*, to fall within the necessary sphere of a Local Government, and has become political, *i.e.*, has entered the legitimate sphere of the Supreme Government. It is indeed only the logical expansion of the present system (in itself illogical) by which the Frontier work is in part now performed by Political Officers under the Punjab Government, and the logical completion of the system by which the remainder of the Frontier is already under the direct charge of the Government of India, that the whole of it should be transferred to the latter, *i. e.*, to the real controller of its destinies.

67. There is another respect in which the situation has greatly changed since 1877, and which renders the question of any compensation to the Punjab Government for the proposed losses superfluous. Not merely have the administrative problems demanding the attention of the Local Government grown in number and complexity—to such an extent that complaints have frequently to be made of the degree to which the Punjab Secretariat is overworked, and that the work of the Lieutenant-Governor is probably nearly double what it was 25 years ago—but the population of the province is rapidly increasing, and must continue to increase, not alone by the normal increment arising from natural causes, but by the reclamation of immense new tracts of habitable country. It is estimated that the great scheme of canalisation, connected with the Chenab River, has, during the last few years, brought under cultivation for the first time an area of over 1,000,000 acres, with a population of 700,000 persons,—figures which are expected to rise, within a few years, to 1,500,000 acres, and 1,500,000 persons. The Jhelum scheme, now in course of execution, will similarly augment the area of cultivation by over 500,000 acres and should accommodate an increased population of about 400,000 persons. These two increments alone will far more than balance the loss of population which my scheme entails upon the Punjab. The Lower Bari-Doab scheme, which is next on the list, and the surveys for which are about to be commenced, will add another 500,000 acres, and the same number of population.

68. Finally, it is hoped that before very long the immense Sind-Sagar scheme may be undertaken, which is intended to irrigate the staring blank space on the map on the left bank of the Indus between Kalabagh and Multan, and which is expected to reclaim an area of 1,750,000 acres. The realisation of this project, as of its predecessors, will add enormously not merely to the population of the

province, but to the revenue and settlement work devolving upon the local officers, and to the responsibilities of the Punjab Secretariat. They will more than compensate for what it is now proposed to take away. They will probably, before any great length of time has elapsed, demand the replenishment of the Punjab Commission by as many officers as it is now under suggestion to withdraw.

69. So well known are these considerations in the Punjab itself that the necessity for territorial rectifications or compensations would probably no longer be urged by its own officers. One of the foremost of these, Mr. F. D. Cunningham, the Commissioner of Peshawar, has indeed, in his letter of 21st October 1898, already quoted, gone so far as to argue in the opposite sense. Coming as they do from the senior Frontier officer of the Punjab Commission, these views are worthy of quotation here—

"The population, revenue, trade and wealth of the province have so increased since the question of a separate Frontier Commissionership was mooted some 20 years ago under the Government of Lord Lytton, that what would be left to the Punjab after removing Hazara, Peshawar, Kohat and a strip of the Derajat is still sufficient to constitute an adminstrative area of the first class.

"Towns have grown, Municipalities have been created under new and complex laws, the whole machinery of Local Self-Government has been started, hundreds of miles of railway and canals have been opened, the cultivated, and, what is more important, the irrigated area has been enlarged by scores of thousands of acres,—in a word, development in all directions has been so great that it is questionable whether there is not enough cis-Indus to occupy the full energies of a great administration.

"I am writing without access to an office, and therefore do not attempt to give figures, but a comparison of the chief statistics of the province for 1878 with those of to-day would, I think, show that no 'territorial rectifications or compensations' would be required, and that this supposed objection to the radical and effectual remedy does not in reality exist."

70. I hope, therefore, to have shown conclusively that the time-honoured objection to a new Frontier province which I have been discussing, is one that has become obsolete in the lapse of time, and that need deter us for a moment from the acceptance of the proposed change.

71. Should it be said, however, that, though not detrimental to the prestige or interests of the Punjab, such a change cannot but be condemned by the officers of the administration which it is proposed to supersede, it is easy to show from their recorded opinions that, so far from this being the case, the erection of a new Frontier province is a solution which, if there is to be any alteration in the *status quo*, is not only contemplated, but is even heartily approved by all. Mr. Merk, Commissioner of the Derajat, said in his letter of 7th October 1898 (paragraph 9)—

"If the Punjab Government is dissociated from Frontier management, it is plain that the Commissioner must be raised to the position and powers of a Local Government on the analogy of the Agent to the Governor-General at Quetta."

72. Mr. Anderson, Officiating Commissioner of the Derajat, said in his letter of 17th October 1898—

"It will be necessary, I consider, to considerably enhance the status of the Commissioner of Peshawar as regards trans-frontier affairs. He must be empowered to dispose of many matters which he has now to refer for orders to the Punjab Government To enable him to have as wide a view as possible of what is passing across the frontier of the division, it will be advisable to place under his control the Chitral and Dir Agency and the relations with the tribes under that Agency His status would advantageously be raised to something like that of the Agent to the Governor-General for Baluchistan as regards trans-frontier affairs."

73. Sir R. Undy's (Commissioner of Peshawar) letter of 20th October 1898, paragraphs 5—9, which criticised the Punjab system, was also in reality an argument for the creation of a separate Frontier Commission.

74. Mr. Cunningham (Commissioner of Peshawar) went further and laid down clearly that there could be only two solutions to the problem; either to give

T

the Punjab real and final authority in respect of Frontier matters (reducing *pro tanto* the power of the Government of India), a solution which he admitted to be "out of the question"; or

"To remove the Frontier districts (excluding the Cis-Indus parts of Dera Ismail Khan and Bannu, and the whole of Dera Ghazi Khan) from the Punjab Government, and to place in charge of them an officer with the power of Chief Commissioner for the interior and the position of Agent to the Governor-General for the clans and countries beyond..... If a strong administration directly under the Government of India is desired, in which Frontier questions can be fully taken up on one consistent line without detriment to the needs and requirements of the greater part of a large province, this can best be secured by such a plan. The Punjab Government would benefit by being relieved of an incubus, by the gain of time and power to devote to the administration of a rapidly growing province; and it would be rescued from what to many has appeared the invidious position into which it has been relegated by the course of events in the past 10 or 20 years on the North West frontier."

75. Sir M. Young himself also saw clearly that the object desired by the Secretary of State could not be gained by any compromise, but was only feasible in one way. In his note of 19th October 1898 he wrote (paragraph 16) :—

"If what is desired is to eliminate the Punjab Government from trans-frontier control, this can only be done by removing the Frontier districts or such portions of them as are closely connected with trans-frontier tribes from the control of the Punjab Government, and forming this tract into a separate administration under the direct orders of the Government of India."

And again (paragraph 18)—

"I can only state my conviction that, unless and until Her Majesty's Government decide to separate the Frontier and place it under a Chief Commissioner or other officer in direct subordination to the Government of India, the existing machinery cannot with any advantage be altered."

76. Similarly Lord Elgin, though, like the Lieutenant-Governor, he was opposed to such a solution, admitted in his Minute of 6th November 1898 that, granted the necessity for a considerable devolution of powers, "the question must sooner or later resolve itself into one whether it is better to have as an intermediate Local Government, the Lieutenant-Governor of the Punjab, or a Commissioner who will be a Chief Commissioner on the Frontier."

77. These various quotations indicate that, in the opinion of the majority of the Punjab Frontier officers of the highest standing and even of those authorities who are opposed to the principle of the suggested change, there is but one mind as to the fact, that if the Local Government is to be deprived, for whatever reasons, of the principal functions which it now discharges with reference to the Frontier, there is only one method by which such a change can be satisfactorily carried out, *viz.*, by the institution of the new administration which it is the object of this Minute to advocate.

78. I now pass to the third objection that was indicated by the Secretary of State in the following words :—

"It may also be inexpedient to deprive the Government of the Punjab, and thus also the Government of India, of a valuable opportunity of training officers for Frontier service, and of gaining a knowledge of the feelings and habits of tribes which are constantly sending settlers into British districts."

It will, I think, be obvious from the scheme that I have submitted that the opportunity which the Secretary of State desires, so far from being diminished, will be immensely enhanced by placing the officers of the new province upon the Political list of the Government of India. There will henceforward be no risk either of an officer being sent to the Frontier who has hitherto been engrossed in civil work, or of an officer being withdrawn from it, because the exigencies either of the public service or of grade promotion demand his return to the interior parts of the province. On the contrary, an officer who displays exceptional aptitudes for tribal politics and management will be under no risk of being withdrawn, unless it be to some more responsible post, of a similar character, either in Baluchistan, or under the Foreign Department in other parts of India. On the other hand, if an individual be found deficient in the special talents that are required for the Frontier, it will be much easier to find work for him elsewhere than it is at present. To the officers of the entire Department will be

given a fresh goal of ambition. To those who attain it will be given a wider field of reward. I anticipate that in a few years' time the new Frontier province will draw towards itself the very best ability that the civil and military services in India can produce, and that it will be the nursery of a new school of Political Officers, who will revive both the memories and the credit of an earlier time.

79. With regard to the fourth objection cited by the Secretary of State in the following terms :—

"It is open to question whether it is altogether advisable to place in the hands of a single Commissioner the whole executive power on both sides of this most important section of the Empire's external frontier, without the restraint, which a trained experience of financial and administrative responsibilities on a large scale imposes upon an authority charged with the Government of a first class province."

I may say that exactly the same objection was raised when Baluchistan was converted into a separate administration, and that it proved to be entirely groundless; and that I would not myself propose for one moment to appoint as head of the new province any officer who was destitute of financial and administrative experience. This is a commodity that is unfortunately procurable without recourse to the Government of a first class province. It is as frequently forthcoming in our second class as in our first class administrations. Moreover, as I have shown in the case of the Punjab, its present advantages are apt to be somewhat dearly purchased at the cost of inexperience in other and not less vital concerns.

80. There remains the fifth objection of the Secretary of State, touched upon rather than emphasised in the following paragraph :—

"There is no part of India where the need of a strong administration, equipped with all the resources of Government and capable of resisting aggression is more likely to be felt than on the North-West Frontier."

81. There can be no doubt that the phrase of the Secretary of State indicates an objection to the scheme of a new Frontier province, which has been widely entertained in the past, and, more than any other argument, has hitherto availed to defeat its adoption. I refer to the belief that such a scheme would, in some way or other, favour a forward and aggressive policy, and that the Government of India would exercise less control over the activity of its Frontier officers, than under a system which interposes the buffer of a Local Government between itself and them. I can only say that I regard such a belief as an entire illusion; and that if I held it, I should not now be composing this Minute. Twenty-three years ago Lord Salisbury, as Secretary of State, foresaw the same objection to Lord Lytton's scheme (which was, I think, by reason of its magnitude, far more exposed to such a charge than is mine) and emphatically repudiated it. The proposed formation of a new Frontier charge was, he said, "a measure of defence and security, not of aggression." I cannot better explain or defend the proposals which I now submit.

82. If the intervention of the Punjab Government acts as a barrier against aggressive schemes, I would ask how it has come about that in the 50 years that have elapsed between the annexation of the Punjab and the present day, during the whole of which time the Frontier has been under the control of the Punjab Government, there have been no fewer than 40 military expeditions against the tribes of that frontier, or one expedition for every 15 months of the entire period; how, notwithstanding the pacific dispositions of the Punjab Government, there has nevertheless taken place, under its patronage and eye, the series of military advances upon the border which have carried us forward on to the Samana, into the Kurram, and far into Northern and Southern Waziristan; and how above all it came about that the Government of India were involved, only three years ago, in the greatest Frontier conflagration that has ever been known. I am not saying for one moment that the Punjab Government ought to be held solely, or even mainly, responsible for all these events. The Government of India cannot evade or disown its share. All that I do say is that the plea that we are saved by the intervention of the Local Government from a forward policy, from punitive expeditions, or from Frontier war, is one that will not stand the test of a moment's examination.

T 2

83. I will even go further and say that whereas an Agent to the Governor-General for the Frontier could without difficulty be controlled, by reason of his subordinate position, by the Government of India, and whereas a forward or aggressive policy, if initiated under his rule, would rightly be laid not at his door but at that of the Government of India, I can conceive that an ambitious Lieutenant Governor, if such a phenomenon were to occur, might be very difficult to control. The Punjab has fortunately hitherto been free from any such source of danger. But the fact that a succession of cautious and prudent Lieutenant Governors have been quite powerless to save the Frontier from the disturbances which I have mentioned, is a proof that there must be something unsound, not in the men, but in the system.

84. To me it seems absurd to argue that, if a local administration be brought more strictly under the influence of the supreme authority, it will therefore become more mischievous and unruly. I should infer that precisely the opposite will be the case. If an avoidable war now breaks out upon the Frontier, the Government of India cannot censure or recall the Lieutenant-Governor of the Punjab. It divides the responsibility with him, though very likely innocent of any complicity in its earlier stages. If, however, an Agent to the Governor-General were to compromise the Supreme Government by any rash or bellicose action, I cannot conceive that there would be any hesitation in bringing him smartly to account.

85. I am not aware that since the Dir-Swat-Chitral Agency has been under the direct control of the Government of India, there has been any development of aggressive tendencies in that quarter. On the contrary, we have enjoyed peace, on what is by far the most critical section of the Frontier, for three years. Similarly, it is under the control of the Government of India that we have re-pacified the Khyber, which the earlier system had not saved from the fatal convulsion of 1897. Neither does the creation of Baluchistan into an independent administration appear to me to have been attended by the martial expansion which might, according to the plea that I am examining, have followed upon so hazardous a step.

86. I will not further pursue this argument than to say that it is in the most confident belief that the future Frontier administration of the Government of India will, under the change that I advocate, be more, and not less under control; that disputes, culminating in wars, with the tribes will be less, and not more frequent; and that India will thereby escape the perils of a policy of bisected responsibility, of vacillation, of drift, and of delay, that I urge the separation from the Punjab Government of the Frontier districts and peoples.

87. There remain three further arguments which have sometimes been employed against the proposed reform. The first is that the more direct control of the Government of India signifies greater centralisation. I have shown in an earlier part of this Minute that the very reverse will be the case. I regard the present administration of the Frontier by the Local Government, with its suppression of local responsibility, and its perpetual reference to the Punjab Secretariat, as centralisation in a most aggravated and pernicious form. What more mischievous evidence of centralisation could be afforded than the ladder of compulsory and dilatory reference, which I have before described, whose foot is across the Frontier, but whose head is at Simla or Lahore? Under a separate administration, I believe that one-half of the references which now pass up and down this ladder of delay will be settled promptly upon the spot by a superior officer of sufficient authority to decide, and sufficient local knowledge to do so without risk; while in the case of such matters as still require reference to the Government of India, the process will be by so much accelerated as the number of intervening rungs will have been reduced.

88. The second argument is the allegation that with a new province under the Government of India, the Foreign Department of the latter will be swamped with a mass of work which it will be incapable of digesting, and which will cripple its capacity in other quarters. Sir M. Young laid stress in his Note upon the number of references which we are spared by the intervention of the

Local Government. Perhaps the best test that I can apply is the number of receipts and issues that pass through the Foreign Department from the Punjab Government—I take those which relate to the Frontier alone—as compared with the whole number relating to internal administration as well as to Frontier affairs, with which we deal from the entire province of Baluchistan. In the year 1899 they were as follows:—

—	Receipts.	Issues.
Punjab Frontier—		
Political	720	316
Administrative	115	119
TOTAL .	835	435

—	Receipts.	Issues.
Baluchistan—		
Political	301	186
Administrative	326	357
TOTAL .	627	543

89. It, therefore, appears that the entire business, internal and external, devolving upon the Foreign Department for the province of Baluchistan is less than the external business alone, which comes up to it from the Punjab Government. It is of course true that Baluchistan is a by far less populous and less advanced province than the Trans-Indus portions of the Punjab would be; and that no strict analogy can be drawn between the political or administrative business of the two Governments. I quote the figures, however, to show to what moderate and reasonable dimensions the work that is entailed upon the Foreign Department by the Baluchistan Agency has shrunk, in the face of the argument that was so freely employed at the time of its constitution,—*viz.*, that the Foreign Department would not be equal to the additional strain. The figures also show how slender in practice the devolution upon the Punjab Government has become. I do not of course argue that the Frontier business of the Foreign Department will not, if a new administration be created, be increased. Such will, at any rate for a time at the beginning, in all probability be the case. We may require for a short period the assistance of an extra hand in the Foreign Office. But this transitional epoch will not be of long duration. As the Local Government becomes consolidated, so will the references on administrative and internal affairs rapidly diminish, as they have done in Baluchistan. The Frontier and political references may also be expected to dwindle as local responsibility is developed; and in a few years time I entertain little doubt that the Foreign Department will be less hampered and besieged by Frontier affairs than it is at the present moment.

90. Finally, if the question of financial cost be raised, I might point out that we already possess the authority of the Secretary of State for the submission of proposals that may entail an increase in our charges for administration. In his despatch of the 5th August 1898, he wrote, with reference to his own proposal, already discussed: "I am aware that any such alteration of system may require additional expenditure"; and "I shall not object to the exercise by your Government of a wide discretion in framing the arrangements, financial and executive, which may be found necessary for giving effect to these considerations." But, as a matter of fact, we have no occasion at present to profit by

this latitude, since I have shown good reason for believing that the scheme which I have proposed, so far from increasing, may possibly even diminish our annual outlay. The financial objection which has impeded the realisation of earlier projects need not, therefore, be considered at the present time.

91. I have now examined and argued the various objections that have been raised in times past to proposals similar to that which I now make, or that may be raised to mine. I trust that I have shown them to be not only much less formidable than has hitherto been believed to be the case, but for the most part destitute of serious foundation. On the other hand, I hope also to have shown that the scheme for the constitution of a new Frontier province, that I have put forward, possesses these positive merits. It will express and enforce the direct responsibility of the Government of India for Frontier affairs. It will enable the Viceroy to conduct the most important business of the Department of which he is the personal chief. It will free the management of Frontier politics from the delays that are inseparable from a chain of reference, whose strength is sacrificed to its length. It will promote greater rapidity and consequently greater freedom of action. Its tendency should be not towards aggression, but towards peace: since war with the tribes is commonly the result of ignorance or indecision at earlier stages. It will entrust tribal management exclusively to those who know the tribes. It should train up a school of officers, worthy of the most critical but splendid duty that is imposed upon any of the officers of the Queen's Government in India. For myself I will only add that, having initiated a definite policy on the North-West Frontiers of India, which I believe to contain the germs of possible success, I ask to be relieved of the conditions which appear to me to jeopardise its operation at every turn, and to be presented with those by which alone, in my opinion, its future can be reasonably assured.

(Signed) CURZON.

August 27th, 1900.

No. 14.

Despatch from the Secretary of State for India to His Excellency the Right Honourable the Governor General of India in Council, dated India Office, London, 20th December 1900.

I have received and given my attentive consideration in Council to the despatch of Your Excellency's Government, dated the 13th of September 1900.

2. Your Excellency in Council records your conviction that the present system of Frontier control is entirely unsatisfactory, interposing as it does hesitation, delay, and difficulties in the execution of a policy for which the Supreme Government is directly responsible, subject to the orders of Her Majesty's Government, but the execution of which is entrusted to the Local Government of the Punjab. You consider, upon a careful review of the past history of the Frontier, that if firmness, promptitude, or continuity of policy in the future are to be secured, a radical change in the present procedure is needed, and you draw attention to the additional burden which the Durand Agreement has put upon the Frontier administration by rendering it to a large extent responsible for the conduct and misdeeds of those living inside the line of demarcation settled by that agreement. Your Excellency sketches in outline a scheme for the construction of a new agency immediately under the control of the Government of India, which seems to you desirable, and which after a full consideration, your Government endorses as the only scheme that in principle will avoid the evils of the present system. This scheme, regarding the details of which you propose to consult the Government of the Punjab, is described with some fulness of outline in a Minute written by Your Excellency, and dated the 27th of August 1900. It contemplates the creation of a Frontier

Province under the direct control of a Chief Commissioner and Agent to the Governor-General, who would have charge, not only of the four districts now under the Punjab Government, namely, Peshawar, Kohat, Bannu, Dera Ismail Khan, with the tribal country that lies beyond their limits, but also of the Political Agencies of Dir, Swat, and Chitral, the Khyber, Kurram, Tochi, and Wana. The area detached from the Punjab Province would approximate to $\frac{1}{14}$th of its total area, with $\frac{1}{15}$th of its total revenue, and $\frac{1}{18}$th of its entire population. Your proposals differ from those which have at former times been discussed, in their avoidance of several dislocations of the existing provincial systems, but there are a few details, such as the possible transfer of the control over the Black Mountain Tribes from the Deputy Commissioner of Hazara, which are expressly reserved for final consideration. Although the cost of the new staff which would be required at Peshawar would exceed that of the present establishment by 3,600 rupees a month, it is expected that the total cost of the civil administration will not exceed, and may, perhaps, be less than, that which is now incurred. While the holders of the subordinate administrative posts would be drawn from the Punjab or other provinces, you propose to provide for the wants of the higher posts and the political appointments by an increase to the strength of your Foreign Department, and you have discussed the probable effect of these changes upon the prospects of the Punjab Commission.

3. Her Majesty's Government recognise that the adoption of the policy of concentration inculcated in my telegram, dated 13th October 1897, and more fully set forth in my despatch of the 28th of January 1898, paragraph 18, has modified the previous situation, and may require organic changes in administration. The Government of India, in pursuance of the two objects specified by me in that despatch, namely, concentration of your military force, and the limitation of interference with the tribes, so as to avoid the extension of administrative control, has carried out a series of changes along the Frontier, which have received the approval of Her Majesty's Government. In my despatch, dated the 5th of August 1898, I anticipated that the alteration of system introduced into the Khyber Pass would involve further arrangements, both financial and executive, in order to ensure their success, and I indicated certain transfers of authority which might deserve consideration, especially as they would reduce to a minimum any disturbance of the provincial administration in the Punjab. I learn, however, that the Government of the Punjab is strongly opposed to these limited re-arrangements, and the larger scheme proposed by Your Excellency is based upon this conclusion.

4. Your Excellency has referred to the objections which, as I pointed out in my despatch of 5th August 1898, may be raised against the severance of settled districts from the Government of the Punjab, and against the direct control of the Government of India which it is proposed to substitute for that of the Local Government over them and the neighbouring Frontier. To a considerable extent the second and the third of the objections indicated in my despatch of the 5th of August 1898 are provided against in Your Excellency's scheme. I recognise that, in avoiding any alteration of the position of Sind, and in limiting the transfer of districts from the Punjab to those mentioned, your Government will avoid an undesirable series of territorial rectifications and compensations; and that, when the control of the Government of the Punjab is for the most part confined to Cis-Indus districts, the advantage of training its officers in tribal tracts beyond, but adjoining, the administrative Frontier of the Punjab will cease to be of much practicable value. But there are certain unavoidable drawbacks associated with the proposed scheme which will require very careful consideration in order that they may be minimised, and to which the first and fourth of the objections above mentioned were intended to refer.

5. The staff of the new Frontier Province will not be large, and the Governor-General's Agent at its head will have two very different sets of duties to perform and supervise. In respect of the Frontier tribes his duties will be political, and his policy will be under the direct control of your Government. But, in the case of the settled districts, which you propose to detach from the Punjab, it is clearly undesirable that the people having already enjoyed the benefit of a highly organised administration with its careful land

settlements, its laws and regulations, and the various institutions of a progressive Civil Government, should be thrown back from the stage which they have already reached. The Governor of a large province not only possesses a special and large experience of British administration, but can summon to his aid and counsels heads of Departments and Commissioners of Divisions whose advice may be of the utmost value. The Governor-General's Agent will not, without special arrangements, be able to count upon such assistance. I have not overlooked the fact that your Excellency intends to draw upon the Punjab for skilled officers in the subordinate branches or in the technical departments, but I am not satisfied that this will meet the whole case; for the important question of superior direction remains to be dealt with. Nor does recent experience in Baluchistan appear to me to be altogether relevant, since no part of that agency can claim to have a district, or part of a district, in any respect so advanced and settled as the Trans-Indus British districts which you propose to detach from the Punjab.

6. The question of the recruitment of officers for the new agency, to which I have referred above, will obviously be one of very great importance. The nature of the duties to be performed, and the necessarily limited numbers of the staff, make it essential that a very high standard of individual efficiency should be attained and preserved in administrative as well as in political duties. It seems to be probable that in so small a province it will not be easy to keep the staff at the requisite level of efficiency, unless picked officers are largely imported from other provinces; a measure which can hardly fail to produce discouragement among the regular staff of the province by retarding promotion in the lower grades. I should be glad to be more fully informed as to the measures by which Your Excellency proposes to deal with this difficulty, and to be assured that you are satisfied as to their probable effect.

7. There is another point to which I wish to draw Your Excellency's attention. In remarking that the need of a strong administration equipped with all the resources of Government would be felt on the Frontier, I did not refer to the political administration. I referred to the advantages that must accrue to the Frontier districts of British India from the application to them of the ways and means at the command of a first-class administrative unit. The construction of roads, bridges, rest-houses, and hospitals, and generally the assignment of provincial resources to a particular district, may be of the utmost value, and are best secured if the district is an integral part of a large province. In times of disturbance or threatened danger a large province can draft in additional police, procure transport, change local officers, and do much to prepare for trouble before they arise or assume the form of military operations. If it is necessary to transfer settled districts from the control of the Punjab Government, and to place them under the same administration as the adjoining tribal country, it is important that the possible results of such a policy should be fully considered and provided for.

8. Your Excellency in Council will, no doubt, weigh these points carefully in working out the details of your scheme. If, on close examination of the various changes and adaptations inseparable from the constitution of a new Commission, apart from the Punjab Government, it is found that they do in fact involve no additional expense, the result will be undoubtedly satisfactory. But I can hardly anticipate, judging from general experience, that Your Excellency's preliminary estimate will not have to be modified in this respect; and although I do not desire to lay down any fixed limit in the matter, I trust that no pains will be spared to prevent the imposition of any unnecessary burden on the revenues. In the meanwhile Her Majesty's Government approve generally of your proposal, as tending to express and enforce the direct responsibility of your Government for Frontier affairs, and to free the management of Frontier politics from the delay inseparable from the present system. So far as the details of your project, which I shall await, appear likely to secure these objects, they will receive my favourable consideration.

9. In the 29th paragraph of Your Excellency's Minute the argument is pressed that the transfer of the Frontier administration from the Punjab Government to the Government of India will involve no diminution of special

aptitude for and knowledge of Frontier affairs. I am convinced that your remarks were in no way intended to depreciate the eminent abilities of the Lieutenant-Governors who are named in that paragraph, or to undervalue the substantial services which all Lieutenant-Governors of the Punjab, beginning with Sir John Lawrence, have rendered in the discharge of the difficult duties connected with these affairs, although none of them had any previous personal experience of political work on the North-Western Frontier. I gather that the general object of Your Excellency's Minute is to prove the present system to be unworkable, and not to reflect unfavourably upon the manner in which the Punjab Government has attempted to work it; and I desire it to be understood that my approval of Your Excellency's proposals is based on my acceptance of the main conclusions which I find that Your Excellency in Council has adopted, that the present system of Frontier management, however worked, is unsatisfactory, that some radical change in that system is required, and that this change should take the form described at length in Your Excellency's Minute.

I have, &c.,

(Signed) GEORGE HAMILTON.

No. 15.

Opinion recorded by Sir Dennis Fitzpatrick, K.C.S.I., Member of the Council of India, dated 17th January 1901.

PUNJAB FRONTIER ADMINISTRATION.

Having at the meeting of the Council, held on the 18th December 1900, dissented from the resolution regarding my proposal to insert an additional paragraph in the draft Despatch relating to the scheme for constituting a Chief Commissionership of the North-Western Frontier, I desire that my opinion may be entered in the minutes of the proceedings, together with the following reasons for it which I laid before the Council on the occasion referred to.

1. I find myself in a somewhat peculiar position with reference to this draft Despatch to India. I agree in the conclusion at which Lord Curzon has arrived, that the Punjab Frontier administration must be placed directly under the Government of India, indeed I have long foreseen that that would one day be necessary. Further I agree with Lord Curzon in thinking that the only workable arrangement* is to separate off the Punjab Frontier districts bodily and make them into a Chief Commissionership. But I at the same time see a certain danger attending the change proposed, and I should have thought that a word of caution as to that danger ought to have been inserted in the Despatch. Moreover, when I look into the arguments and observations contained in Lord Curzon's Minute, I find that, while some of them are sound and sufficient to establish his point, others are of such a nature as to convey an erroneous or distorted impression as to the positions occupied for many years past by the Government of the Punjab and the Government of India respectively with reference to Frontier questions, and as to the relations between them so far as concerns those questions. I feel some hesitation about discussing these matters, for, having myself held the office of Lieutenant-Governor down to not quite three years ago, I am liable to be suspected of prejudice; but, on the other hand, if, possessing the knowledge I do, I hold my tongue, I may be supposed to have accepted and endorsed all Lord Curzon's arguments and observations as well as his conclusions. It is impossible for me to allow this to be supposed, and for

* I ought to state that I was absent from here at the time the Secretary of State's Despatch of the 5th August 1898, proposing the alternative arrangement now dropped, was prepared and issued.

this reason, as also because it will serve to make the whole position clearer, I am anxious to place before the Secretary of State and my colleagues a statement of the condition of things that, so far as my knowledge extends, has actually and as a matter of fact prevailed under the system which we are all now agreed should be abolished.

2. To begin with, it must be admitted that in spite of the anxiety of the Punjab Government to carry out the policy of the Government of India and of the consideration shown to the Lieutenant-Governor by successive Viceroys, differences of opinion have from time to time prevailed, which, though they seemed at one time on the point of being thrashed out in a friendly spirit, have evidently not as yet been cleared up. But in order that an exaggerated importance may not be attached to those differences of opinion, it is necessary to explain that the Punjab Government has had nothing to do with the discussion of the great general question as to the merits of what is called the "forward policy." So far as I know, no Lieutenant-Governor of the Punjab has ever been consulted on that great question, and I doubt whether any one of them has ever quite understood what the "forward policy," when taken in its full extent and as advocated by various authorities from time to time, exactly means. All that it concerns the Lieutenant-Governor to know is the fact that the Government of India desire to establish some amount of control over the trans-border tribes, up to a certain geographical limit, and that since the Durand line has been laid down, and so long as it may continue to have any meaning, that line is understood to be the limit.

3. As to the nature and extent of the control so to be established, the views of the Government of India seem to have expanded considerably after the Durand delimitation agreement. As shown in the dissent appended by Sir C. Pritchard, Sir J. Westland, and Sir A. MacDonnell to the Government of India Despatch of the 31st July 1894 (Parliamentary Paper C. 8713, Vol. I., pp. 25-27), the Government of India had by the time that Despatch was written come to take a far wider view of our responsibilities than was required by anything in the Durand agreement, or than was contemplated either by those who in 1892 proposed to the Secretary of State that such an agreement should be negotiated, or by the Secretary of State in accepting their proposals. Later on the views of the Government of India seem to have expanded still further. They appear to have got as far as this, that we were bound to establish over the tribes not merely such control as was needed for our own protection and to enable us to check raids against the Ameer on certain parts of the Durand line, but further, such control as might be necessary in order to stop the internal quarrels of the tribesmen among themselves, and authoritatively settle their disputes; and that the Government of India, notwithstanding the emphatic warnings against interference and extensions of administrative control given by the Secretary of State after the disastrous events of 1897, still hold that view, is clear from certain recent discussions. I mention all this not for the purpose of casting any reflection on the wisdom of the general policy adopted by the Government of India, which it would be out of place to discuss here, but simply to make the position with which I have to deal intelligible. Whatever the policy of the Government of India might be, it was, of course, the bounden duty of the Government of the Punjab, as the subordinate, to carry it out loyally and to the best of its ability, and it would be only as to the *modus operandi* and the rate at which particular portions of the work should be pushed on that it would be permissible for the Lieutenant-Governor to raise any questions.

4. As a matter of fact, it was only in regard to these subordinate, though by no means unimportant, matters that questions arose between the Punjab Government and the Government of India, and it is necessary to note the position in which those two authorities have generally stood towards each other when they have been inclined to differ. We have all known cases of a subordinate administration with a hinterland on its border over which it has been burning to expand, while its superior has been endeavouring to restrain its ardour. We need not look beyond the limits of Her Majesty's Indian Empire to find a case which is, to a certain extent, an illustration of this. The Baluchistan Agency has pushed on, drawing the Government of India after it, at

times in spite of the resistance of that Government, until it has got right up to the Gomal on one side and right up to the Durand line on another; further, it has recently extended its posts out along the Nushki Seistan line to the border of Persia. On the Punjab Frontier it has been the reverse. It is the Government of India that has been pushing the local administration forward, and that administration, though it has always loyally obeyed the call, has sometimes done so under a sort of protest.

The main reason of this is simple enough. The Government of India looks at the whole North-Western Frontier line from the Black Mountain round to the neighbourhood of Kurrachee from a remote point of view, and like a person looking at a long coast line from a great distance out at sea, has been at times apt to suppose that there is a greater uniformity about it than there really is; and in particular it has sometimes found it difficult to understand why methods which have been so successful along the line from the neighbourhood of the Gomal southwards, should not be employed with equal success to the north of that river, and especially in the Waziri country. The Punjab Government is in a very different position. In paragraph 29 of his Minute, Lord Curzon gives a list of the Lieutenant-Governors of the Punjab from Sir Robert Egerton down to Sir Mackworth Young, showing that none of them had in the earlier part of their service been employed on the North-Western Frontier. He might have gone further, and said that no Lieutenant-Governor from and including Lord Lawrence down had ever been so employed. It may be supposed, from what he says in his 33rd paragraph, that Lord Lawrence was an exception, but that is not so. No one of us would presume to compare himself with Lord Lawrence in other respects, but in this particular we were all in the same predicament. It does not, however, follow from this that Lord Curzon is right when he says that in practice it is found, as a rule, that no Lieutenant-Governor of Punjab knows anything of the frontier at all. A Lieutenant-Governor has not, of course, the sort of knowledge of the frontier that you find in an officer who has spent much of his service on the frontier, and talks Pushtu fluently, as all our best officers nowadays do—the sort of knowledge that we may hope to find in the new Chief Commissioner now to be appointed; but, to say nothing of what he soon learns in the ordinary course of his daily work, and on the many occasions on which the frontier officers come to him to discuss matters personally, the Lieutenant-Governor commonly spends the whole cold weather, with the exception of a short period at Christmas, in camp, and he gives the frontier a good deal more than its share of his camping time. He has the frontier officers living in his camp, it may be for several weeks at a time, riding the march with him every morning, in and out of his tent all day, bringing up the leading men to interview him in the afternoon, and probably renewing the discussion of pending questions round the table after dinner. It is these officers, and not, as Lord Curzon seems to suppose, the members of the Secretariat staff, however able these latter may be, that are the Lieutenant-Governor's advisers on frontier affairs, and from them, or in their company, he before long succeeds in learning a not inconsiderable amount about frontier affairs. A great deal, no doubt, is second-hand knowledge, but a certain amount he acquires for himself, especially when, as often happens, some of the important men understand Hindustani. His knowledge is exactly the same sort of knowledge that all of us who have held the post of Chief Commissioner of Assam have had of the numerous tribes that surround that province on all sides but one, and are under our control.

5. Now, having thus at least a considerable knowledge of the position, the Lieutenant-Governor has had on certain occasions, as *e.g.*, when some of the forward moves mentioned by Lord Curzon were proposed, and also when the advance to the Malakand and the Chitral road and certain demarcations of the Durand line on the ground were under discussion, to represent to the Government of India that such measures would present certain difficulties and be attended with a considerable amount of risk. It is always an ungrateful task for a subordinate to have to suggest difficulties about carrying out the orders of his superior, and it is one from which a subordinate of lower rank

than a Lieutenant-Governor might sometimes shrink; but about the duty of a subordinate, of whatever rank, in such a position, there can be no room for doubt. It was thus the duty of the Lieutenant Governor to point out that the tribes we had to deal with, unlike the Pathans who fell under our sway on the annexation of the Punjab, had never been brought under the control of any ruler, and that, owing to various causes, they were far more difficult to control than those further south. One of these causes, I may mention, was the great strength of those tribes, and the bitter hostility against any interference on our part felt by the tribesmen generally as distinguished from the limited number of them who could hope to rise on our shoulders, or receive allowances from us. This after a little time came to be better understood. Another of these causes was the democratic constitution of those tribes, and the absence of powerful tumandars or maliks (leading men) through whom they could be controlled. It took longer to get this understood. An idea got started that you could make maliks (tribal leaders) out of almost anything, and it thus became necessary to explain that a strong malik was a natural product of the tribe, and that it was very difficult to make one grow strong by artificial cultivation. In 1896 the Government of India returned to the point and insisted that "experience has shown that in every Pathan tribe, however democratic, there are responsible headmen who are capable of maintaining order if they are properly supported." This proposition had to be combated by giving detailed explanations and illustrations. Reference was made to a report received not long before, showing that the maliks we have subventioned in the upper Tochi declared they could do nothing unless we placed a military force at their very elbow, and to petitions received from our Mahsud maliks, declaring that our countenance and support, far from strengthening them, had led to their being placed under a ban, and begging us to occupy Kanigoram and Makin, in the heart of their hills—places which we could not even visit except with a very large military force. It was further explained that, even in our own district of Peshawar, many of the Pathan zamindars would not stand any one of their number being raised above his natural position over them by our authority. What was then said was amply borne out by what subsequently occurred.

It was exemplified in the case of the Mohmunds in a most striking manner within a month or two later. We had, under the orders of the Government of India, to conclude an arrangement with those Mohmunds who had fallen on our side of the Durand line. When Mr. Merk proceeded to arrange preliminaries with them, they started by declaring that there were no maliks among them, that there might be seniors and juniors, but that, for the purpose of concluding an arrangement of that sort, they were all the same. I was marching along the Peshawar Frontier, and it was arranged that Mr. Merk, who had with infinite labour settled all preliminaries, should bring them before me at Shabkadr. About 900 of them claimed to come down to meet me and discuss the matter, and when they arrived they absolutely refused to put forward any men to represent them, even to the extent of being allowed to sit in front at the meeting. Almost the whole number sat down before us just as they managed to find room, and such of them as got near enough all tried to talk together. Thanks to Mr. Merk's skill, an arrangement was somehow concluded, but I felt bound to express some doubt as to its being effectual. What happened at that very place, Shabkadr, in less than a year after we all know.

It was, I may mention, chiefly with reference to the Waziris that this discussion as to the constitution of the tribes and the position of the headmen arose between the Punjab Government and the Government of India, and if anyone still thinks that the Government of India would be right in holding that in the case of a tribe like the Mahsud Waziris "there are responsible headmen "who are capable of maintaining order if they are properly supported," I would refer him to Mr. Merk's note of the 24th of July last, received here the other day with the Government of India's Despatch No. 145, dated 18th October 1900, from which it will be seen that there are really no persons who can be called maliks among the Mahsuds, and that we must deal with the "ulus," *i.e.*, with the tribesmen *en masse*, merely making such use as we can of

any men who seem to have gained an influential position at the moment—a mode of procedure which, though it may answer for some purposes, will for others, I fear, prove altogether hopeless.

I have thought it well to mention all this about the maliks because it affords a good illustration of the sort of discussion that is apt to arise between the Local Government and the Government of India, and it is only by getting down from vague generalities to details that it is possible to make the position intelligible.

6. So much as to the nature of the position to be dealt with on the parts of the frontier to which I refer. Now as to the policy from time to time enjoyed on the Punjab Government towards the tribes there. Apart from the correspondences relating to particular cases, there were two correspondences, one in 1888-89 in Sir James Lyall's time and another in 1896 in my time, in which the general question of our policy towards these tribes was discussed, and in each instance the correspondence was started by a letter from the Government of India urging the Lieutenant-Governor to greater efforts to extend our control over them. Both these correspondences are worth referring to in this connection, but the second of them has a more direct bearing on the present position because, at the time it passed, the important change effected by the Durand demarcation had taken place, and, moreover, the intermediate discussions that had occurred in particular cases had brought out clearly the points on which the Government of India and the Government of the Punjab were at one, and the points which had still to be cleared up between them.

7. In the 21st paragraph of his Minute Lord Curzon, apparently referring to this latter correspondence, writes as follows :—"In the early years of Lord Elgin's administration an attempt was once more made to escape from the necessities of a radical change by again suggesting to the Punjab Government the initiation of a policy of friendly intercourse with the tribes for whom we had thus assumed political responsibility, and of the strengthening of the political service of the border. Into the discussion that followed with the Punjab Government I need not enter, suffice it to say that it was not followed, so far as I can ascertain, by any practical changes either in the principles or in the form of administration." Now, if Lord Curzon is here referring to the correspondence I have just mentioned—and I do not know to what else he can be referring—I must point out that, while his remarks are verbally accurate, they are likely to convey a wholly erroneous impression to his readers. Anyone reading his Minute would be led to suppose that the Government of India had, on the occasion referred to, made an attempt to induce the Punjab Government to initiate a change of policy, and had failed to get it to move. What actually occurred was this : The Government of India in Mr. Barnes' letter, No. 2197, dated 14th August 1896, to the Government of the Punjab, set forth certain general principles which, in their opinion, should be followed in dealing with the tribes on the North-Western Frontier of the Punjab, and asked for an expression of opinion as to how those principles could be best applied, and what modifications, if any, of the existing system were required. The Punjab Government complied with this request by forwarding a note, in which the whole position on various sections of the frontier was fully reviewed, and definite proposals for carrying out, on certain of those sections, the policy indicated in the Government of India letter were submitted for the approval and orders of the Government of India. The Punjab proposals were forwarded to the Government of India with the Punjab Chief Secretary's letter No. 14, dated 28th October 1896, and the reason why they were not "followed," to use Lord Curzon's words, "by any practical changes" was a very simple one, namely, that the Government of India never answered that letter. I understand they, at first deferred answering it, as they preferred to wait for certain additional proposals which were promised, and which were not ready for submission until a couple of months later. This brought the matter down to the beginning of 1897, and then the time of my vacating office was so near that I suppose they thought it well to wait and see whether my successor approved of my scheme. Then a few months later

came the great rising of the tribes, and after that rising was suppressed the Government of India made a completely new departure. The whole thing is dead and gone now so far as any question of taking direct official action on it is concerned, but as that correspondence affords, within a short compass, a clearer and more detailed view than can be got elsewhere of the respective positions of the Government of India and the Government of the Punjab, of their relations (then very amicable relations) to one another, and of the opinions held by them respectively, I cannot help regretting that it has never been made public.

8. It would be out of the question for me to give anything like an abstract of that correspondence, but I think it well to refer to two or three points brought out in it in order to make the position as it then existed clearer.

The first of these points is that as to the rate at which the policy should be pushed on.

The view of the Government of India, as expressed in their letter of August 1896, appeared to be that we should endeavour to extend our control generally over the tribes up to the Durand line, and that we should everywhere exert ourselves more actively than we had previously been doing. As to this, after referring to the feeling of the tribes and the probability of opposition from them, the Lieutenant-Governor, while submitting definite proposals for extending our influence and establishing closer control in certain tracts, ventured to represent (in the note above mentioned) that the moment was not a favourable one for urging our frontier officers generally to greater activity. He wrote as follows:—

"I should be averse to issuing any orders which might seem to our officers to sound the advance along the whole line at a moment like this, when we are not yet out of the wood in Waziristan and on the Chitral road, when we have the great Mohmund business impending, and when the Lieutenant-General Commanding the Punjab is already crying out that the force under his command is not sufficient to meet the demands made on it by the forward movements we have already made. At the same time I feel bound to acknowledge the very full manner in which the Government of India, in their present letter, recognise the wide difference between the conditions that prevail on different parts of our frontier and the anxiety displayed throughout to enjoin moderation and caution, and I have in consequence every hope that, when we come to discussing matters in detail, it will turn out that there is really far less difference between my view and theirs than might at first sight be supposed. I have only to add that, however this may be, I shall, during the short time that remains to me here, exert myself to give effect to the views of the Government of India, whatever they may be, exactly as if they were my own."

9. Another question, and one of the first magnitude, was started by the Government of India letter of August 1896, and, as it seems to be still under discussion, I think it well to refer to it, I mean the question as to what instructions we should give our officers regarding quarrels and fighting among the tribesmen themselves in a tribal tract where we have not assumed any sort of administrative control, and where such quarrels and fighting in no way whatever affect us or any interests which we are bound to protect. It was admitted on all hands that our officers, whenever they saw an opportunity of doing so, should interpose in a friendly manner and use their good offices to promote peace; but it was also admitted on all hands that the effect of this sort of interposition would in most tracts be limited, and that, if peace was really to be established among the tribesmen themselves, it could only be done by a political officer interposing authoritatively, *i.e.*, as the Government of India expressed it, "*by forbidding bloodshed and insisting on a peaceful settlement*" The question was how far we were to direct or allow our officers to interpose in the class of cases referred to in this latter way. The Government of India seemed to treat this question with a somewhat light heart, and to be prepared to give Political Officers a free hand to do in regard to it as they might think fit under all the circumstances in which they might find themselves placed. It therefore became necessary to point out that we were, in the class of cases

referred to, under no obligation of any sort to interpose authoritatively; that the suggestion that we should do so was an entirely new departure; that wherever we attempted to do so we should be drawn into a sort of interference with the internal affairs of the tribes, which, when once started, must from its very nature soon become of all others the most close and systematic, and would land us in reponsibilities which we could not discharge without having a strong backing of military force, and perhaps entering into occupation of the country. The root of the whole matter I may explain lies in this:—That if you take upon yourself authoritatively to forbid certain persons or certain sections of a tribe from attacking others not only must you, in order to prevent your face being blackened before the whole countryside, insist upon your order being obeyed and compel obedience to it if necessary by force, but further, as you have prevented those to whom it is addressed from redressing their wrongs in the only way open to them, you are bound, as a matter of common justice, to arrange that they shall have effective redress in some other way, and thus you will have all their quarrels with their many ramifications on your hands. If you interfere authoritatively at all you must be prepared to do justice all round. Having regard to considerations of this kind, it was recommended by the Punjab Government on the occasion referred to that a political officer should be authorised to interfere authoritatively to prevent fighting only in tracts where the Local Government and the Government of India, after considering our position, should decide that it was expedient that we should so interfere. Elsewhere what we sometimes call the "Khyber System" (as distinguished from the "Sandeman System") would prevail; that is to say, the system so successfully carried out for many years by Sir R. Warburton in the Khyber, under which it was not considered our business to interfere authoritatively with the fighting of the tribesmen among themselves, even within sight of Jumrood, so long as such fighting did not give rise to any danger to the peace of the road or any other interest which we were bound to protect. It should be added that at the same time, in order to meet as far as possible the views of the Government of India, proposals were submitted for at once giving the power of interfering authoritatively in certain tracts.

I had an opportunity of discussing this point with Lord Elgin when I went to bid him farewell at Delhi towards the end of 1896, and I gathered that he was disposed to accept the above view, but, as I have said, the fates were against our correspondence being brought to an issue, and I gather that on this all important point the Government of India and the Local Government are still at variance; indeed, from the recent correspondence regarding the internal feuds between the Mahsood and Darwesh Khel Waziris it would seem that the Government of India regard the distinction between authoritative and merely friendly interposition which has been long observed in the Punjab, and the momentary neglect of which has on some occasions led to embarrassing results, as a mere figment of some theorist's imagination.

10. I have only one more point to refer to in this connection. There were some passages in the Government of India letter of August 1896 calculated to create an impression that the Government of the Punjab was given to holding its political officers with a tightness which was altogether unnecessary, allowing them little discretion, and requiring them to refer every individual case for orders; and I see Lord Curzon now, in more than one passage of his Minute, makes the same charge. Now I may mention that when this charge was made in 1896 it was explained that it was based on a certain misapprehension, and I see in paragraph 36 of Lord Curzon's Minute a quotation from a note by Mr. Frederick Cunningham, in which a very similar explanation is given. That explanation is, that, except in particular classes of cases, the Punjab Government allows its political officers a very free hand indeed, and that when it requires them to refer to it for instructions this is, as a rule, not because it wants to deal with the case itself, but because the Government of India expects such cases to be referred to it for orders. Mr. Cunningham, no doubt somewhat overstating the point, speaks in the passage quoted by Lord Curzon of the Punjab Government as not having "power to give orders in any but the most trivial matters," and adds that he "cannot remember any question sufficiently important

to be reported to the Commissioner by the Deputy Commissioner, which in its turn the Local Government did not think necessary to refer to Calcutta," and winds up in his epigrammatic way by saying that "under the present system the real authorities that issue orders are the Deputy Commissioner and the Government of India." Now I may observe in passing that even after allowing for a certain amount of exaggeration, by which Mr. Cunningham seems to reduce, not only the Local Government, but also himself and the other very able men who have held the office of Commissioner, to the position of mere ciphers, there is enough left in this statement to supply a strong additional argument in favour of the change now proposed by Lord Curzon; but I am not at this moment concerned with that. At the period to which I am now referring there was no proposal for such a change. The question was one merely of decentralising, of giving a wider discretion to the local officers, and I think it well to mention what was then suggested to the Government of India on this point, because it holds good still and will hold good after the change now proposed. One of the chief causes which compel the Government of India, and as a necessary consequence the Punjab Government, to keep such a tight hold has always been that the general lines of the policy to be pursued are not sufficiently settled—that we are to a great extent drifting without a plan. So long as that is so you cannot safely allow a local officer any large measure of discretion. Hence it was suggested, and not for the first time, by the Punjab Government, that we should consider each section of the frontier separately, that we should determine what objects we should aim at there, what sacrifices we would be prepared to make, and what risks we would be prepared to run, in order to attain those objects, and what methods of action we should adopt, and that we should issue to the officers concerned general instructions of certain degree of definiteness in accordance with the conclusions at which we might arrive. Our officers would thus have some idea of what they were at liberty to do on their own authority and what they should refer for orders. It was, indeed, admitted that there might be cases, though they would be very rare and exceptional cases, where we might dispense with anything of this kind. What was said on this last point was as follows:—

"There may now and again be a frontier tract over which it is manifestly desirable to establish a close control rapidly at whatever cost, and in the case of which we may consider that the simplest plan is to appoint a strong and reliable officer, and leave him to take his own course, without hampering him with any definite instructions, merely throwing the reins on his neck and letting him carry us along as seems best to him; but these would be rare and exceptional cases, and for any Government to take such a course generally along an extensive line of frontier or to any large extent would be simply to abdicate its most important functions and to incur risks, the extent of which it would be impossible to estimate."

11. Having thus given an idea of the sort of matters on which the Punjab Government ventured to express an opinion different to that which the Government of India was disposed to take, I have next to consider how far such expression of opinion by the Government of the Punjab did any harm and how far it did any good.

As to the harm, I think it may safely be said that until recently there were no complaints of its leading to any undue delay or to any friction in dealing with particular cases. The Government of India and the Government of the Punjab knew their respective places in the system perfectly well. When any course of action was proposed the Government of the Punjab stated its opinion, sometimes adding that that opinion was one formed from the limited point of view of local considerations, and leaving the Government of India, who had to look at matters from the broader point of view of military and Imperial considerations, to decide.* Upon this the Government of India commonly decided, as it was perfectly in its right in doing, without entering into further discussion.

* I suspect it is to this Lord Curzon alludes when, in the 37th paragraph of his Minute, he speaks of the Punjab Government as "anxious to shift the ulterior responsibility to the shoulders of the Government of India;" but it is hard to see how the Punjab Government could have taken any other course than that I have described. They rarely had a sufficient opportunity of fully learning the considerations that influenced the Government of India.

In this connection I cannot do better than quote the description of the position Lord Elgin gives in paragraph 20 of his Minute of 6th November 1898:—"I am prepared," he says, "to endorse most emphatically the claim that the Local Government has loyally co-operated in the declared policy of the Government of India. The late Lieutenant-Governor of the Punjab once said to me when discussing this subject, 'You have only to lift your finger, and the brake will be taken off in any place you think desirable.' That remark is more than an expression of personal loyalty, it contains in a few words a correct exposition of the only principle on which we can rest our arrangements, *i.e.*, that it is the business of the Government of India, and the Government of India alone, to formulate and prescribe a policy outside the borders of British India."

Lord Curzon in paragraph 38 of his Minute writes in a different tone. He says, "I do not see how any Governor-General could deny that if he desires a policy to be pursued or a step to be taken in Baluchistan, which is under the administration of an Agent to the Governor-General, directly subordinate to himself, however unpalatable such a policy or step might be to the Agent to the Governor-General, it will be carried out with incomparably less friction and delay than in a similar case in the Punjab, where the dignity and susceptibilities of a Local Government and of its head demand the most scrupulous and respectful consideration."

Now how far there is good ground for this change of tone it is difficult for us to judge, especially as we do not know what there may be to be said on the Punjab side of the question by the present Lieutenant-Governor, who, strange to say, does not appear to have been consulted regarding the proposals now under consideration; but, however this may be, I think that the mere fact that Lord Curzon takes the view of the present position that he does, and expresses that view in the way he does in various passages of his Minute, affords a considerable argument in favour of the change he proposes, unless, indeed, it can be clearly shown that the retention of the Local Government in the management of the frontier serves some highly important purpose, and I must say I doubt whether any argument against the change can be founded on this latter ground.

12. No doubt, the Punjab Government has, in the past, played an important part, and I hope generally a useful part, in moulding the details of a scheme after that scheme has been determined on, but that is a thing a Chief Commissioner could do equally well and possibly better. The real question is whether the Punjab Government has been able to do more than that, and this question is discussed by Lord Curzon in paragraphs 82 and 83 of his Minute. In these paragraphs, after referring to the matter of punitive expeditions, which I must reserve for separate notice presently, he goes on to speak of the military advances over the border which have carried us forward on to the Samana, into the Kurram, and far into North and South Waziristan, and of what came later, namely, that the Government of India were involved only three years ago in the greatest frontier conflagration that has ever been known. I may observe that the advance into the Kurram cannot properly be mentioned in this connection, as it stands on a totally different footing from the other forward movements, and on the other hand that the advance to the Malakand and the Chitral road ought to have been mentioned; but, however that may be, Lord Curzon asks how it is that, notwithstanding the peaceful disposition of the Punjab Government, things of that sort occurred, and his conclusion is that the plea that we are saved by the intervention of the Local Government from such things is one that will not stand a moment's examination. Now I do not know whether anyone would, at the present day, raise such a plea. Lord Elgin has indeed expressed an apprehension that a frontier Chief Commissioner, such as it is now proposed to appoint, might force the pace, but that it is a totally different thing. It is a case of *facilis descensus*. Either of the two parties that are coupled together may easily drag the other down; but it is not so easy for either to hold the other back. It is, however, unnecessary to pursue this. It is enough to say that I entirely agree with Lord Curzon's conclusion, and I may add that even if the Punjab Government were able to hold back the Government of India

in its forward progress, I do not think it could be decently argued that the Punjab Government should be retained in the system for that purpose. If it is desirable to exercise any control over the Government of India for this or any other purpose, such control should be exercised from above and not by a subordinate.

It is chiefly for these reasons, namely, that the relations of the Government of India and the Government of the Punjab in regard to frontier affairs have now become strained, and that the part the Punjab Government can now-a-days take in the management of those affairs is far from being one of first rate importance, that I accept Lord Curzon's proposal for the separation of the frontier.

13. I desire to add only one word more as to the general position in the past; and I do so in order to prevent misapprehension. I trust it will not be supposed from anything I have said that I mean to claim for the Punjab Government the position of a sort of Cassandra—"*Dei jussu non unquam credita Teucris.*" I have, indeed, endeavoured to show that the discussions that arose between the Government of India and the Government of the Punjab were to a considerable extent the result of the estimate formed by the latter of the local difficulties and risks of the forward policy; and that that estimate erred only by being a good deal below the mark is amply proved by all that has since happened. But it by no means follows from this that the Government of India were not wise in facing those difficulties and risks. Whether they were or not depends on the merits of the forward policy and the rate at which it is thought necessary to push it on in order that it may accomplish its objects in due time, and these are matters which it would be altogether beside my present purpose to discuss.

14. I now desire to say a few words on certain passages in Lord Curzon's Minute, which seem to me to reflect unfairly on the present system, or on the way in which it has been worked by the Punjab Government or its officers. To begin with, Lord Curzon, not content with showing that the Punjab Government failed to stop the forward movement, seeks, towards the end of paragraph 82 of his Minute, to saddle that Government with some share, though not the main share, of the responsibility for those movements, and a little higher up he speaks of those movements as carried out under the "patronage" of the Punjab Government. What he means by this I altogether fail to understand. You might almost as well say that, if I ordered my servant to brush my hat and he proceeded to do so, that the hat was being brushed "under his patronage." The fact is notorious that the forward moves in question were carried out in the execution of a vast system of policy established long before by the highest powers that be, and that, with the exception of the move to the Malakand and the Chitral road, on which the great political parties in England split, they had one way or another the sanction of both those parties. The Lieutenant-Governor of the Punjab had little to do but obey orders, except in so far as it may have been his duty to aid in settling details, and, as already explained, sometimes to point out the difficulties and risks involved.

15. Then as regards the great frontier conflagration of three years ago, for which also Lord Curzon holds the Government of the Punjab in some degree responsible—I think that, in spite of all the eloquence displayed on both sides in the debates in Parliament two years ago, most persons have come to the conclusion that that conflagration was not due to any particular forward movement, or to any defect in the detailed arrangements for carrying it out, but to so many forward movements having been compressed into so short a space of time, which was more than the mass of the tribes could stand; in other words, that the case was simply one in which the cup was filled up and overflowed.

We are not, however, called upon now to discuss at large the question of the proper apportionment of the responsibility for the events of 1897. We have to deal only with the merits of the present system as compared with those of the proposed system, under which the management of the whole frontier would be under the Government of India; and if it is meant to suggest that the outbreaks that occurred in 1897 in the frontier tracts under the control of the Government of the Punjab would probably not have occurred if the work of taking over and

managing those tracts had been kept by the Government of India in its own hands, the observation at once suggests itself that one of the earliest and most serious of the outbreaks that occurred in 1897 occurred not in a tract under the control of the Government of the Punjab, but in the country around and beyond the Malakand, a tract which had been from the start under the control of the Government of India itself.

16. Possibly what Lord Curzon means to suggest is that the conflagration of 1897 was the result of our taking regular troops with us to hold the positions into which we advanced, and that if, instead of doing that, we had organised militia corps recruited to a large extent from the people of the country, as he is now doing for North and South Waziristan, all would have gone smoothly. If this is his idea, I must say it is a very questionable one. I do not desire to express any opinion on the great experiment he is now about to try, and which, if it stands the test of times of trouble in a country like Waziristan, will do him infinite credit. It is enough for the purposes of the present discussion to say that there is not, so far as I know, the smallest reason to suppose that, if the administration of the frontier had been entirely in the hands of the Government of India at the time the forward moves were made, any such experiment would have been attempted. I am not aware that anyone connected with the Government of India or the Head-quarters Staff of the Army in those days ever thought of trying anything of the kind. The truth is that the idea of holding tracts like those of North and South Waziristan by militia corps of the sort referred to was never, so far as I know, taken up by any of the powers that be until it was found that our new acquisitions were of much less value, especially from a military point of view, than had been imagined; that we could not spare regular troops to garrison them without increasing the regular army, and that service in them was highly unpopular, both with the officers and men of that army. Lord Curzon seems, in paragraph 7 of his Minute, to make it a reproach to the Government of the Punjab that they never proposed to adopt any such scheme. Why they did not, it would be easy enough to explain if doing so would now serve any useful object; but it is enough for our present purpose to say that the matter was one of quite sufficient magnitude to engage the attention of Lord Curzon's predecessors and their advisers, and that they, too, did not propose anything of the sort.

17. I have only one matter more to refer to in connection with Lord Curzon's Minute, and that is the question put in paragraph 82, regarding what are commonly called punitive expeditions. He says:—"If the intervention of the Punjab Government acts as a barrier against aggressive schemes, I would ask how has it come about that in the 50 years that have elapsed between the annexation of the Punjab and the present day, during the whole of which time the frontier has been under the control of the Punjab Government, there have been no fewer than 40 military expeditions against the tribes of that frontier?" I have kept this question separate from the other questions asked in that paragraph of the Minute, because it has to be answered in a totally different way, and in a way in which it has been repeatedly answered before. Lord Curzon does not give a list of the expeditions to which he refers, or of the dates at which they took place. He treats the whole thing in a lump, but I have no doubt he is right in saying that there were from first to last forty expeditions, great and small. Further, I have no doubt that, as regards the great majority in number of them, it is chiefly for the Punjab Government and not the Government of India to explain how they came to be necessary, for the great majority of them took place in the days when the Government of India left the management of the frontier to a very much larger extent than it has done recently in the hands of the Punjab Government. But the explanation of the Punjab Government, which, as I have said, is not now given for the first time, is this, that when we first took over the Punjab the frontier tribes had been in the habit of raiding pretty much at their good will and pleasure. They had to be taught what our strength was, and one of the most effectual ways of teaching them was by punitive expeditions. They took a long period to learn their lesson, and during that period punitive expeditions were numerous, but, as time went on, the necessity for them diminished; and, to refer to the condition of things ultimately arrived at, I find that speaking of raids and punitive expeditions, in a note

which I wrote in 1896, I said "raids in any force to speak of across the frontier of British India,* which were formerly so common, are now practically unknown, and we have to deal only with crime of the type which always does and must prevail even in British India, where we have to do with turbulent people. Punitive expeditions properly so called have * * * practically done their work, and have now almost ceased to be necessary." I added, "The only punitive expeditions properly so called, that have been undertaken within the last 15 years, *i.e.*, since we settled down after the second Kabul war, are the first Samana expedition and the first Black Mountain expedition. That is to say, these were the only two expeditions that were necessitated by spontaneous aggressiveness on the part of the tribes. The other expeditions that have taken place during the period referred to have been connected with some forward movement or demonstration on our part."

18. It remains to speak of the addition proposed by me to the draft Despatch. I have already paragraph 12 *supra*) referred to a certain apprehension expressed by Lord Elgin, in paragraph 22 of his Minute of the 6th November 1895, as to the possible effect of establishing on the North-Western Frontier a special authority of the sort now proposed. What he said was as follows :—"If we create this new post, choosing for it, as we are bound to do, a man of energy and ambition, what outlet is he to find for his activity? The career of a Sandeman, the creation of a new Biluchistan, is debarred to him; for the policy which he must carry out is essentially one of *quieta non movere*. It was a policy of non-annexation, of non-interference, which was declared by Her Majesty's Government in the Despatch of 28th January (1895), and was expounded on their behalf by the Prime Minister, the Secretary of State, and the future Viceroy.....It is because I wish to see this policy acted upon in the future, and because I regard it as the best hope of a peaceful and permanent settlement, that I deprecate the establishment on the frontier of an authority which, from the nature of things, must, in my judgment, endanger its continuance." Now, I myself do not think that, at the point we have now reached, we can allow any apprehension of that kind to stand in the way of what is proposed; but, at the same time, I feel bound to state that, in my opinion, the danger referred to is real, and that it is one against which we have to be on our guard. Lord Curzon, it will be seen (in paragraphs 80 *et seq.* of his Minute) utterly scouts the idea of there being any such danger, but, though he has dealt with the matter at considerable length, he has not, I think, seen where the danger really lies. I do not myself think that there is any danger for a long time to come of any authority, high or low, deliberately planning and proposing an advance into any fresh tract beyond the frontier. We may, indeed, be forced to advance into fresh tracts. Having, for example, occupied the Goomal and Tochi valleys, we may be forced into occupying the great Mahsood hill tract which lies between them, as, indeed, the Mahsood maliks told us some years ago we should eventually be compelled to do; or again, having advanced to the Malakand and opened the Chitral road, we may be forced into occupying the surrounding country; but such things would now be looked upon by all responsible persons as most serious misfortunes, which we should strain every nerve to avert. Indeed, I see, from some papers recently received regarding the establishment of the Northern Waziristan Militia, that it is proposed by Lord Curzon to restrict our area of effective occupation in the Tochi valley within narrower limits than many of us would think practicable, having regard to the responsibilities we have taken upon ourselves there.

But though we are not likely to see any fresh forward moves deliberately planned for some time to come, there is another danger against which we have to be on our guard, namely, the danger that the local authorities might, especially by over-interference in the internal affairs of the tribes of the sort referred to above (paragraph 9), draw us gradually into responsibilities which it would be found impossible to fulfil, except by

* It will be observed that I spoke only of raids across the frontier of British India. Since we have advanced into the Goomal and into the Tochi, we have had three additional frontiers exposed to raiding, and the raids on them have been very numerous. In fact, on these three new frontiers we are now very much in the position in which we were fifty years ago on the frontier of British India.

occupying some additional tract, or establishing administrative control over it with the support of a military force of some sort. Now, whatever may be the shortcomings of the present system, it has at least been free from any danger of that sort. Lord Curzon himself evidently believes that, whatever a Lieutenant-Governor may be in other respects, he is at least pretty certain to be above, or perhaps I should say below, being ambitious.* But with a Chief Commissioner, specially appointed to administer the border, it would be apt to be somewhat different. I do not mean to suggest that he would be influenced by mere personal ambition or a desire to distinguish himself—we could all name men of that stamp, but they are happily the exceptions—what I mean is, that he would be apt to feel that his chief *raison d'être* was to establish a firmer grip over the tribes than the Punjab Government had succeeded in doing, and that he would be inclined to better his instructions—that he might, to use frontier expressions, be overanxious to "run the show," "to lift the purdah of the tribes," "to get well in among them," and "to wheel them into line;" and he would know, as we all know, that the most effectual way to do this, provided you can manage it without causing an explosion, is to get your hand well into their internal affairs. No doubt the official instructions to him would continue to be that he should abstain from all unnecessary interference, that he should exercise his control from without, that he should merely teach the tribesmen to govern themselves and manage their own affairs according to our views, and so on. But it is difficult to teach people like the tribesmen in question to do these things, and there would be always a tendency for the work to fall substantially into the only hands able to do it, and for the responsibility to be thrown on to the only shoulders strong enough to bear it, that is to say, into the hands and on to the shoulders of our officials. This would not so much matter if we had only a small tract of tribal territory to deal with; but the transborder tract which will be placed under the new Chief Commissioner is about 500 miles in length, and, even limited as it is at present by the Durand line, is of considerable, and in some places of formidable, breadth. It is, moreover, almost everywhere a country of extraordinary difficulty from a physical point of view, and the numerous tribes inhabiting it are about as hard to manage as any you would find on the face of the earth. No doubt, having started on the lines we have, it may be our ultimate destiny to occupy all that country up to the Durand line, and even that line cannot be counted on as a limit for all times and circumstances. But the rate of progress is to a large extent under our control, and if we let ourselves be drawn on too rapidly, we may before long find ourselves on various sections of the frontier with more on our hands at one and the same time than we can well manage; moreover, even taking the most sanguine view of the experiment now being tried in North and South Waziristan, we may find ourselves in places and in circumstances where it would be impossible to rely on levies raised to any considerable extent from the tribes, and where we should need the support of regular troops. This being the position, I should have thought it desirable on the eve of this new departure to reiterate the injunctions contained in the Despatch of January 1898; and I should have thought this the more desirable because it seems to me, as I have already stated, that the Government of India are on the one hand inclined to take a somewhat exaggerated view of the obligations thrown on us by the Durand Convention, and on the other hand are not sufficiently alive to the difficulties of the position. I should further, with reference to what I have said above, at the end of paragraph 10, have thought it well to say that while the Secretary of State concurred with Lord Curzon in thinking that any minute interference of the Government in the details of frontier work was objectionable, he at the same time thought it necessary to bear in mind the observations made by Lord Elgin in paragraph 20 of his Minute of 6th November 1898, and to be on our guard against pushing too far the theory that the local authority should be "given a free hand."

* He says, in paragraph 83, evidently dealing with the point as one of curious speculation, "I can conceive that an ambitious Lieutenant-Governor, if such a phenomenon were to occur, etc."

(Signed) D. FITZPATRICK.

The 17th January 1901.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, the 16th March, 1901.

On Saturday, the 9th March, a shallow depression was entering Sind and weather was slightly unsettled in Baluchistan. On Sunday, the depression had advanced into Rajputana and had given light showers at Quetta and Peshawar and cloud in Upper India, but it was of very little importance and filled up without giving any more rain. Winds, however, continued blowing from southerly directions in Baluchistan, where skies remained thickly clouded, and the barometer showed a tendency to fall in Kashmir, indicating the approach of another feeble disturbance from the west which apparently passed through Afghanistan and caused a brisk to rapid fall of the barometer in Kashmir on Monday accompanied with light falls of rain and snow in the North-West Himalayas and light showers of rain at Quetta and in the plains of the North-West Punjab. The heaviest falls reported were ·54 inch at Murree and ·37 inch at Quetta. Light rain and snow continued during the day in Kashmir but the depression had apparently filled up by Tuesday morning and fine dry weather set in over North-West India, which lasted during the remainder of the week. Humidity decreased generally—and at many stations by large amounts—in North-West India and Bombay and some very low humidity percentages were reported from those areas on Wednesday and Thursday, the most remarkable being 22 at Veraval and 26 at Bombay. The actually lowest percentages were 14 at Cherat, 17 at Deesa and 18 at Mount Abu.

No rain was reported from the south of the Peninsula during the first part of the week, but on Friday showers were reported from Negapatam, Tinnevelly and Ceylon and with the setting in of easterly winds on the Coromandel Coast rain increased during the next 24 hours and showers were fairly general in South India on Saturday, Cochin receiving ·95 inch, Calicut ·87 inch and Wellington ·74 inch.

Temperature has been below the normal in North-East India, the central parts of the country and in the east of the Peninsula, the defect being most marked in the eastern districts of the North-Western Provinces, Bundelkhand, Baghelkhand and the adjoining districts of Bengal and of the Central Provinces. Temperature has been unusually high on the Sind, Kathiawar and Bombay Coasts, the area of largest excess of temperature advancing north-westwards along the coast from Ratnagiri to Kurrachee. Mean temperature was 9° in excess at Ratnagiri on Tuesday: it was 8° in excess at this station on Wednesday, but at Veraval the excess had risen to 12°. Temperature then fell on the Bombay Coast but continued in very large excess at Veraval on Thursday and on Friday had fallen at Veraval and had risen to 8° above the normal at Kurrachee. On Saturday the excess at Kurrachee had increased to 11½°, the excess being chiefly due to the maximum or day temperature which was 102° 9 or 16° above the normal of the day.

Rain.—Very little rain is reported this week. The division of South Madras has received an average fall of ·73 inch and the Baluchistan Hills ·53 inch. The only divisions that have received amounts equal to or in excess of the normal are Lower Burma, Baluchistan, the Konkan, the Bombay Deccan, Khandesh, Malabar, the East Coast and South and South Central Madras. In the majority of these divisions the normal rainfall is either *nil* or below a tenth of an inch in amount.

The largest amounts received at individual stations during the week are:—

Bengal—Goalundo	4·67 inches.
Malabar—Brentelmana	1·67 „
East Coast (South)—Tanjore	1·63 „

The last three columns of the table at the end show that during the period commencing with March 3rd or during the past fortnight, rainfall has been practically normal or in excess in Lower Burma, North Bengal, the Bengal Hills, Bihar, South Oudh, the East, East Submontane, Central and West divisions of the North-Western Provinces, the south-east, north, submontane and hills divisions of the Punjab, Central India (East) Berar, the Central Provinces, Malabar, Coorg, the Konkan, Khandesh, the North and South divisions of the East Coast and South and South Central Madras.

PROVINCE.	DIVISION.	RAINFALL DATA FOR WEEK ENDING MARCH 16TH, 1901. Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	RAINFALL DATA FROM MARCH 3RD TO MARCH 16TH, 1901. Average actual rainfall of season to date.	Average normal rainfall, March 3rd to March 16th.
